This factor, class struggle, cannot be underestimated. In fact, the main reason for the 1970s breakdown was social struggle by working people. The only limit to the rate of growth required by Keynesianism to function is the degree to which final output consists of consumption goods for the presently employed population instead of investment. As long as wages rise in line with productivity, capitalism does well and firms invest (indeed, investment is the most basic means by which work, i.e. capitalist domination, is imposed). However, faced with a workforce which is able to increase its wages and resist the introduction of new technologies then capitalism will face a crisis. The net effect of full employment was the increased rebellious of the working class (both inside and outside the workplace). This struggle was directed against hierarchy in general, with workers, students, women, ethnic groups, anti-war protesters and the unemployed all organising successful struggles against authority. This struggle attacked the hierarchical core of capitalism as well as increasing the amount of income going to labour, resulting in a profit squeeze (see section C.7). By the 1970s, capitalism and the state could no longer ensure that working class struggles could be contained within the system.

This profits squeeze reflected the rise in inflation. While it has become commonplace to argue that Keynesianism did not predict the possibility of exploding inflation, this is not entirely true. While Keynes and the mainstream Keynesians failed to take into account the impact of full employment on class relations and power, his left-wing followers did not. Influenced by Michal Kalecki, the argued that full employment would impact on power at the point of production and, consequently, prices. To quote Joan Robinson from 1943:

> *"The first function of unemployment (which has always existed in open or disguised forms) is that it maintains the authority of master over man. The master has normally been in a position to say: 'If you don't want the job, there are plenty of others who do.' When the man can say: 'If you don't want to employ me, there are plenty of others who will', the situation is radically altered. One effect of such a change might be to remove a number of abuses to which the workers have been compelled to submit in the past ... [Another is that] the absence of fear of unemployment might go further and have a disruptive effect upon factory discipline ... [He may] us[e] his newly-found freedom from fear to snatch every advantage that he can ...*
>
> *"The change in the workers' bargaining position which would follow from the abolition of unemployment would show itself in another and more subtle way. Unemployment ... has not only the function of preserving discipline in industry, but also indirectly the function of preserving the value of money ... there would be a constant upward pressure upon money wage-rates ... the vicious spiral of wages and prices might become chronic ... if it moved too fast, it might precipitate a violent inflation."* [**Collected Economic Papers**, vol. 1, pp. 84–5]

Thus left-wing Keynesians (who later founded the Post-Keynesian school of economics) recognised that capitalists *"could recoup themselves for rising costs by raising prices."* [**Op. Cit.**, p. 85] This perspective was reflected in a watered-down fashion in mainstream economics by means of the Philips Curve. When first suggested in the 1958, this was taken to indicate a stable relationship between unemployment and inflation. As unemployment fell, inflation rose. This relationship fell apart in the 1970s, as inflation rose as unemployment rose.

Neo-classical (and other pro-"free market" capitalist) economics usually argues that inflation is purely a monetary phenomenon, the result of there being more money in circulation than is needed for the sale of the various commodities on the market. This was the position of Milton Friedman and his Monetarist school during the 1960s and 1970s. However, this is not true. In general, there is no relationship between the money supply and inflation. The amount of money can increase while the rate of inflation falls, for example (as we will discuss in the next section, Monetarism itself ironically proved there is no relationship). Inflation has other roots, namely it is *"an expression of inadequate profits that must be offset by price and money policies ... Under any circumstances, inflation spells the need for higher profits."* [Paul Mattick, **Economics, Politics and the Age of Inflation**, p. 19] Inflation leads to higher profits by making labour cheaper. That is, it reduces *"the real wages of workers... [which] directly benefits employers... [as] prices rise faster than wages, income that would have gone to workers goes to business instead."* [J. Brecher and T. Costello, **Common Sense for Hard Times**, p. 120]

Inflation, in other words, is a symptom of an on-going struggle over income distribution between classes. It is caused when capitalist profit margins are reduced (for whatever reason, subjective or objective) and the bosses try to maintain them by increasing prices, i.e. by passing costs onto consumers. This means that it would be wrong to conclude that wage increases "cause" inflation as such. To do so ignores the fact that workers do not set prices, capitalists do. Any increase in costs could, after all, be absorbed by lowering profits. Instead working class people get denounced for being "greedy" and are subjected to calls for "restraint" — in order for their bosses to make sufficient profits! As Joan Robinson put it, while capitalist economies denies it (unlike, significantly, Adam Smith) there is an *"inflationary pressure that arises from an increase*

in the share of gross profits in gross income. How are workers to be asked to accept 'wage restraint' unless there is a restraint on profits? ... unemployment is the problem. If it could be relived by tax cuts, generating purchasing power, would not a general cut in profit margins be still more effective? These are the questions that all the rigmarole about marginal productivity is designed to prevent us from discussing." [**Collected Economic Papers**, vol. 4, p. 134]

Inflation and the response by the capitalist class to it, in their own ways, shows the hypocrisy of capitalism. After all, wages are increasing due to "natural" market forces of supply and demand. It is the **capitalists** who are trying to buck the market by refusing to accept lower profits caused by conditions on it. Obviously, to use Benjamin Tucker's expression, under capitalism market forces are good for the goose (labour) but bad for the gander (capital). The so-called "wages explosion" of the late 1960s was a symptom of this shift in class power away from capital and to labour which full employment had created. The growing expectations and aspirations of working class people led them not only to demand more of the goods they produced, it had start many questioning why social hierarchies were needed in the first place. Rather than accept this as a natural outcome of the eternal laws of supply and demand, the boss class used the state to create a more favourable labour market environment (as, it should be stressed, it has always done).

This does not mean that inflation suits all capitalists equally (nor, obviously, does it suit those social layers who live on fixed incomes and who thus suffer when prices increase but such people are irrelevant in the eyes of capital). Far from it — during periods of inflation, lenders tend to lose and borrowers tend to gain. The opposition to high levels of inflation by many supporters of capitalism is based upon this fact and the division within the capitalist class it indicates. There are two main groups of capitalists, finance capitalists and industrial capitalists. The latter can and do benefit from inflation (as indicated above) but the former sees high inflation as a threat. When inflation is accelerating it can push the real interest rate into negative territory and this is a horrifying prospect to those for whom interest income is fundamental (i.e. finance capital). In addition, high levels of inflation can also fuel social struggle, as workers and other sections of society try to keep their income at a steady level. As social struggle has a politicising effect on those involved, a condition of high inflation could have serious impacts on the political stability of capitalism and so cause problems for the ruling class.

How inflation is viewed in the media and by governments is an expression of the relative strengths of the two sections of the capitalist class and of the level of class struggle within society. For example, in the 1970s, with the increased international mobility of capital, the balance of power came to rest with finance capital and inflation became the source of all evil. This shift of influence to finance capital can be seen from the rise of rentier income. The distribution of US manufacturing profits indicate this process — comparing the periods 1965–73 to 1990–96, we find that interest payments rose from 11% to 24%, dividend payments rose from 26% to 36% while retained earnings fell from 65% to 40%. Given that retained earnings are the most important source of investment funds, the rise of finance capital helps explain why, in contradiction to the claims of the right-wing, economic growth has become steadily worse as markets have been liberalised — funds that could have been resulted in real investment have ended up in the finance machine. In addition, the waves of strikes and protests that inflation produced had worrying implications for the ruling class as they showed a working class able and willing to contest their power and, perhaps, start questioning **why** economic and social decisions were being made by a few rather than by those affected by them. However, as the underlying reasons for inflation

remained (namely to increase profits) inflation itself was only reduced to acceptable levels, levels that ensured a positive real interest rate and acceptable profits.

Thus, Keynesianism sowed the seeds of its own destruction. Full employment had altered the balance of power in the workplace and economy from capital to labour. The prediction of socialist economist Michal Kalecki that full employment would erode social discipline had become true (see section B.4.4). Faced with rising direct and indirect costs due to this, firms passed them on to consumers. Yet consumers are also, usually, working class and this provoked more direct action to increase real wages in the face of inflation. Within the capitalist class, finance capital was increasing in strength at the expense of industrial capital. Facing the erosion of their loan income, states were subject to economic pressures to place fighting inflation above maintaining full employment. While Keynes had hoped that *"the rentier aspect of capitalism [was] a transitional phase"* and his ideas would lead to *"the euthanasia of the rentier,"* finance capital was not so willing to see this happen. [**The General Theory**, p. 376] The 1970s saw the influence of an increasingly assertive finance capital rise at a time when significant numbers within ranks of industrial capitalists were sick of full employment and wanted compliant workers again. The resulting recessions may have harmed individual capitalists (particularly smaller ones) but the capitalist class as a whole did very well of them (and, as we noted in section B.2, one of the roles of the state is to manage the system in the interests of the capitalist class **as a whole** and this can lead it into conflict with **some** members of that class). Thus the maintenance of sufficiently high unemployment under the mantra of fighting inflation as the de facto state policy from the 1980s onwards (see section C.9). While industrial capital might want a slightly stronger economy and a slightly lower rate of unemployment than finance capital, the differences are not significant enough to inspire major conflict. After all, bosses in any industry *"like slack in the labour market"* as it *"makes for a pliant workforce"* and, of course, *"many non-financial corporations have heavy financial interests."* [Doug Henwood, **Wall Street**, pp. 123–4 and p. 135]

It was these processes and pressures which came to a head in the 1970s. In other words, post-war Keynesianism failed simply because it could not, in the long term, stop the subjective and objective pressures which capitalism always faces. In the 1970s, it was the subjective pressure which played the key role, namely social struggle was the fundamental factor in economic developments. The system could not handle the struggle of human beings against the oppression, exploitation, hierarchy and alienation they are subject to under capitalism.

C.8.3 How did capitalism adjust to the crisis in Keynesianism?

Basically by using, and then managing, the 1970s crisis to discipline the working class in order to reap increased profits and secure and extend the ruling classes' power. It did this using a combination of crisis, free(r) markets and adjusted Keynesianism as part of a ruling elite lead class war against labour.

In the face of crisis in the 1970s, Keynesianist redirection of profits between capitals and classes had become a burden to capital as a whole and had increased the expectations and militancy of working people to dangerous levels. The crisis of the 1970s and early 1980s helped control working class power and unemployment was utilised as a means of saving capitalism and imposing the costs of free(r) markets onto society as whole. The policies implemented were ostensibly to combat high inflation. However, as left-wing economist Nicholas Kaldor summarised, inflation

may have dropped but this lay *"in their success in transforming the labour market from a twentieth-century sellers' market to a nineteenth-century buyers' market, with wholesome effects on factory discipline, wage claims, and proneness to strike."* [**The Scourge of Monetarism**, p. xxiii] Another British economist described this policy memorably as *"deliberately setting out to base the viability of the capitalist system on the maintenance of a large 'industrial reserve army' [of the unemployed] ... [it is] the incomes policy of Karl Marx."* [Thomas Balogh, **The Irrelevance of Conventional Economics**, pp. 177–8] The aim, in summary, was to swing the balance of social, economic and political power back to capital and ensure the road to (private) serfdom was followed. The rationale was fighting inflation.

Initially the crisis was used to justify attacks on working class people in the name of the free market. And, indeed, capitalism was made more market based, although with a "safety net" and "welfare state" for the wealthy. We have seen a partial return to *"what economists have called freedom of industry and commerce, but which really meant the relieving of industry from the harassing and repressive supervision of the State, and the giving to it full liberty to exploit the worker, whom was still to be deprived of his freedom."* The *"crisis of democracy"* which so haunted the ruling class in the 1960s and 1970s was overcome and replaced with, to use Kropotkin's words, the *"liberty to exploit human labour without any safeguard for the victims of such exploitation and the political power organised as to assure freedom of exploitation to the middle-class."* [Kropotkin, **The Great French Revolution**, vol.1, p. 28 and p. 30]

Fighting inflation, in other words, was simply code used by the ruling class for fighting the class war and putting the working class back in its place in the social hierarchy. *"Behind the economic concept of inflation was a fear among elites that they were losing control"* as the *"sting of unemployment was lessened and workers became progressively less docile."* [Doug Henwood, **After the New Economy**, p. 204] Milton Friedman's Monetarism was the means by which this was achieved. While (deservedly) mostly forgotten now, Monetarism was very popular in the 1970s and was the economic ideology of choice of both Reagan and Thatcher. This was the economic justification for the restructuring of capitalism and the end of social Keynesianism. Its legacy remains to some degree in the overriding concern over inflation which haunts the world's central banks and other financial institutions, but its specific policy recommendations have been dropped in practice after failing spectacularly when applied (a fact which, strangely, was not mentioned in the eulogies from the right that marked Friedman's death).

According to Monetarism, the problem with capitalism was money related, namely that the state and its central bank printed too much money and, therefore, its issue should be controlled. Friedman stressed, like most capitalist economists, that monetary factors are **the** most important feature in explaining such problems of capitalism as the business cycle, inflation and so on. This is unsurprising, as it has the useful ideological effect of acquitting the inner-workings of capitalism of any involvement in such developments. Slumps, for example, may occur, but they are the fault of the state interfering in the economy. Inflation was a purely monetary phenomenon caused by the state printing more money than required by the growth of economic activity (for example, if the economy grew by 2% but the money supply increased by 5%, inflation would rise by 3%). This analysis of inflation is deeply flawed, as we will see. This was how Friedman explained the Great Depression of the 1930s in the USA, for example (see, for example, his *"The Role of Monetary Policy"* [**American Economic Review**, Vol. 68, No. 1, pp. 1–17]).

Thus Monetarists argued for controlling the money supply, of placing the state under a *"monetary constitution"* which ensured that the central banks be required by law to increase the quantity

of money at a constant rate of 3–5% a year. This would ensure that inflation would be banished, the economy would adjust to its natural equilibrium, the business cycle would become mild (if not disappear) and capitalism would finally work as predicted in the economics textbooks. With the *"monetary constitution"* money would become *"depoliticised"* and state influence and control over money would be eliminated. Money would go back to being what it is in neo-classical theory, essentially neutral, a link between production and consumption and capable of no mischief on its own. Hence the need for a *"legislated rule"* which would control *"the behaviour of the stock of money"* by *"instructing the monetary authority to achieve a specified rate of growth in the stock of money."* [**Capitalism and Freedom**, p. 54]

Unfortunately for Monetarism, its analysis was simply wrong. It cannot be stressed enough how deeply flawed and ideological Friedman's arguments were. As one critique noted, his assumptions have *"been shown to be fallacious and the empirical evidence questionable if not totally misinterpreted."* Moreover, *"none of the assumptions which Friedman made to reach his extraordinary conclusions bears any relation to reality. They were chosen precisely because they led to the desired conclusion, that inflation is a purely monetary phenomenon, originating solely in excess monetary demand."* [Thomas Balogh, **Op. Cit.**, p. 165 and p. 167] For Kaldor, Friedman's claims that empirical evidence supported his ideology were false. *"Friedman's assertions lack[ed] any factual foundation whatsoever."* He stressed, *"They ha[d] no basis in fact, and he seems to me have invented them on the spur of the moment."* [**Op. Cit.**, p. 26] There was no relationship between the money supply and inflation.

Even more unfortunately for both the theory and (far more importantly) vast numbers of working class people, it was proven wrong not only theoretically but also empirically. Monetarism was imposed on both the USA and the UK in the early 1980s, with disastrous results. As the Thatcher government in 1979 applied Monetarist dogma the most whole-heartedly we will concentrate on that regime (the same basic things occurred under Reagan as well but he embraced military Keynesianism sooner and so mitigated its worse effects. [Michael Stewart, **Keynes and After**, p. 181] This did not stop the right proclaiming the Reagan boom as validation of "free market" economics!).

Firstly, the attempt to control the money supply failed, as predicted by Nicholas Kaldor (see his 1970 essay *"The New Monetarism"*). This is because the money supply, rather than being set by the central bank or the state (as Friedman claimed), is a function of the demand for credit, which is itself a function of economic activity. To use economic terminology, Friedman had assumed that the money supply was "exogenous" and so determined outside the economy by the state when, in fact, it is "endogenous" in nature (i.e. comes from **within** the economy). [**The Essential Kaldor**, p. 483] This means that any attempt by the central bank to control the money supply, as desired by Friedman, will fail.

The experience of the Thatcher and Reagan regimes indicates this well. The Thatcher government could not meet the money controls it set. It took until 1986 before the Tory government stopped announcing monetary targets, persuaded no doubt by the embarrassment caused by its inability to hit them. In addition, the variations in the money supply showed that Friedman's argument on what caused inflation was also wrong. According to his theory, inflation was caused by the money supply increasing faster than the economy, yet inflation **fell** as the money supply increased. Between 1979 and 1981–2, its growth rose and was still higher in 1982–3 than it had been in 1978–9 yet inflation was down to 4.6% in 1983. As the moderate conservative MP Ian Gilmore pointed out, *"[h]ad Friedmanite monetarism... been right, inflation would have been about*

16 per cent in 1982–3, 11 per cent in 1983–4, and 8 per cent in 1984–5. In fact … in the relevant years it never approached the levels infallibly predicted by monetarist doctrine." [Ian Gilmore, **Dancing With Dogma**, p. 57 and pp. 62–3] So, as Henwood summarises, *"even the periods of recession and recovery disprove monetarist dogma."* [**Wall Street**, p. 202]

However, the failed attempt to control the money supply had other, more important effects, namely exploding interest and unemployment rates. Being unable to control the supply of money, the government did the next best thing: it tried to control the demand for money by rising interest rates. Unfortunately for the Tories their preferred measure for the money supply included interest-bearing bank deposits. This meant, as the government raised interest rates in its attempts to control the money supply, it was profitable for people to put more money on deposit. Thus the rise in interest rates promoted people to put money in the bank, so increasing the particular measure of the money supply the government sought to control which, in turn, lead them to increase interest rates. [Michael Stewart, **Keynes in the 1990s**, p. 50]

The exploding interest rates used in a vain attempt to control the money supply was the last thing Britain needed in the early 1980s. The economy was already sliding into recession and government attempts to control the money supply deepened it. While Milton Friedman predicted *"only a modest reduction in output and employment"* as a *"side effect of reducing inflation to single figures by 1982,"* in fact Britain experienced its deepest recession since the 1930s. [quoted by Michael Stewart, **Keynes and After**, p. 179] As Michael Stewart dryly notes, it *"would be difficult to find an economic prediction that that proved more comprehensively inaccurate."* Unemployment rose from around 5% in 1979 to 13% in the middle of 1985 (and would have been even higher but for a change in the method used for measuring it, a change implemented to knock numbers off of this disgraceful figure). In 1984 manufacturing output was still 10% lower than it had been in 1979. [**Op. Cit.**, p. 180] Little wonder Kaldor stated that Monetarism was *"a terrible curse, a visitation of evil spirits, with particularly unfortunate, one could almost say devastating, effects on"* Britain. [*"The Origins of the New Monetarism,"* pp. 160–177, **Further Essays on Economic Theory and Policy**, p. 160]

Eventually, inflation did fall. From an anarchist perspective, however, this fall in inflation was the result of the high unemployment of this period as it weakened labour, so allowing profits to be made in production rather than in circulation (see last section for this aspect of inflation). With no need for capitalists to maintain their profits via price increases, inflation would naturally decrease as labour's bargaining position was weakened by the fear mass unemployment produced in the workforce. Rather than being a purely monetary phenomena as Friedman claimed, inflation was a product of the profit needs of capital and the state of the class struggle. The net effect of the deep recession of the early 1980s and mass unemployment during the 1980s (and 1990s) was to control working class people by putting the fear of being fired back. The money supply had nothing to do with it and attempts to control it would, of necessity, fail and the only tool available to governments would be raising interest rates. This would reduce inflation only by depressing investment, generating unemployment, and so (eventually) slowing the growth in wages as workers bear the brunt of the recessions by lowering their real income (i.e., paying higher prices on the same wages). Which is what happened in the 1980s.

It is also of interest to note that even in Friedman's own test case of his basic contention, the Great Depression of 1929–33, he got it wrong. For Friedman, the *"fact is that the Great Depression, like most other periods of severe unemployment, was produced by government mismanagement rather than by any inherent instability of the private economy."* [**Op. Cit.**, p. 54] Kaldor pointed

out that *"[a]ccording to Friedman's own figures, the amount of 'high-powered money'... in the US increased, not decreased, throughout the Great Contraction: in July 1932, it was more than 10 per cent higher than in July, 1929 ... The Great Contraction of the money supply ... occurred **despite** this increase in the monetary base."* [*"The New Monetarism"*, **The Essential Kaldor**, pp. 487–8] Other economists also investigated Friedman's claims, with similar result. Peter Temin, for example, critiqued them from a Keynesian point of view, asking whether the decline in spending resulted from a decline in the money supply or the other way round. He noted that while the Monetarist *"narrative is long and complex"* it *"offers far less support for [its] assertions than appears at first. In fact, it assumes the conclusion and describes the Depression in terms of it; it does not test or prove it at all."* He examined the changes in the real money balances and found that they increased between 1929 and 1931 from between 1 and 18% (depending on choice of money aggregate used and how it was deflated). Overall, the money supply not only did not decline but actually increased 5% between August 1929 and August 1931. Temin concluded that there is no evidence that money caused the depression after the stock market crash. [**Did Monetary Forces Cause the Great Depression?**, pp. 15–6 and p. 141]

There is, of course, a slight irony about Friedman's account of the Great Depression. Friedman suggested that the Federal Reserve actually caused the Great Depression, that it was in some sense a demonstration of the evils of government intervention. In his view, the US monetary authorities followed highly deflationary policies and so the money supply fell because they forced or permitted a sharp reduction in the monetary base. In other words, because they failed to exercise the responsibilities assigned to them. This is the core of his argument. Yet it is important to stress that by this he did not, in fact, mean that it happened because the government had intervened in the market. Ironically, Friedman argued it happened because the government did **not** intervene fast or far enough thus making a bad situation much worse. In other words, it was not interventionist enough!

This self-contradictory argument arises because Friedman was an ideologue for capitalism and so sought to show that it was a stable system, to exempt capitalism from any systemic responsibility for recessions. That he ended up arguing that the state caused the Great Depression by doing nothing (which, ironically, was what Friedman usually argued it should do) just shows the power of ideology over logic or facts. Its fleeting popularity was due to its utility in the class war for the ruling class at that time. Given the absolute failure of Monetarism, in both theory and practice, it is little talked about now. That in the 1970s it was the leading economic dogma of the right explains why this is the case. Given that the right usually likes to portray itself as being strong on the economy it is useful to indicate that this is **not** the case — unless you think causing the deepest recessions since the 1930s in order to create conditions where working class people are put in their place so the rich get richer is your definition of sound economic policy. As Doug Henwood summarises, there *"can be no doubt that monetarism ... throughout the world from the Chilean coup onward, has been an important part of a conscious policy to crush labour and redistribute income and power toward capital."* [**Wall Street**, pp. 201–2]

For more on Monetarism, the work of its greatest critic, Nicholas Kaldor, is essential reading (see for example, *"Origins of the new Monetarism"* and *"How Monetarism Failed"* in **Further Essays on Economic Theory and Policy**, *"The New Monetarism"* in **The Essential Kaldor** and **The Scourge of Monetarism**).

So under the rhetoric of "free market" capitalism, Keynesianism was used to manage the crisis as it had previously managed the prosperity. "Supply Side" economics (combined with neo-

classical dogma) was used to undercut working class power and consumption and so allow capital to reap more profits off working class people by a combination of reduced regulation for the capitalist class and state intervention to control the working class. Unemployment was used to discipline a militant workforce and as a means of getting workers to struggle **for** work instead of **against** wage labour. With the fear of job loss hanging over their heads, workers put up with speedups, longer hours, worse conditions and lower wages and this increased the profits that could be extracted directly from workers as well as reducing business costs by allowing employers to reduce on-job safety and protection and so on. The labour "market" was fragmented to a large degree into powerless, atomised units with unions fighting a losing battle in the face of a recession made much worse by government policy (and justified by economic ideology). In this way capitalism could successfully change the composition of demand from the working class to capital.

Needless to say, we still living under the legacy of this process. As we indicated in section C.3, there has been a significant shift in income from labour to capital in the USA. The same holds true in the UK, as does rising inequality and higher rates of poverty. While the economy is doing well for the few, the many are finding it harder to make ends meet and, as a result, are working harder for longer and getting into debt to maintain their income levels (in a sense, it could be argued that aggregate demand management has been partially privatised as so many working class people are in debt). Unsurprisingly 70% of the recent gain in per capita income in the Reagan-Bush years went to the top 1% of income earners (while the bottom lost absolutely). Income inequality increased, with the income of the bottom fifth of the US population falling by 18% while that of the richest fifth rose by 8%. [Noam Chomsky, **World Orders, Old and New**, p. 141] Combined with bubbles in stocks and housing, the illusion of a good economy is maintained while only those at the top are doing well (see section B.7 on rising inequality). This disciplining of the working class has been successful, resulting in the benefits of rising productivity and growth going to the elite. Unemployment and underemployment are still widespread, with most newly created jobs being part-time and insecure.

Indirect means of increasing capital's share in the social income were also used, such as reducing environment regulations, so externalising pollution costs onto current and future generations. In Britain, state owned monopolies were privatised at knock-down prices allowing private capital to increase its resources at a fraction of the real cost. Indeed, some nationalised industries were privatised **as monopolies** for a period allowing monopoly profits to be extracted from consumers before the state allowed competition in those markets. Indirect taxation also increased, reducing working class consumption by getting us to foot the bill for capitalist restructuring as well as military-style Keynesianism. Internationally, the exploitation of under-developed nations increased with $418 billion being transferred to the developed world between 1982 and 1990 [Chomsky, **Op. Cit.**, p. 130] Capital also became increasingly international in scope, as it used advances in technology to move capital to third world countries where state repression ensured a less militant working class. This transfer had the advantage of increasing unemployment in the developed world, so placing more pressures upon working class resistance.

This policy of capital-led class war, a response to the successful working class struggles of the 1960s and 1970s, obviously reaped the benefits it was intended to for capital. Income going to capital has increased and that going to labour has declined and the "labour market" has been disciplined to a large degree (but not totally we must add). Working people have been turned, to a large degree, from participants into spectators, as required for any hierarchical system. The

human impact of these policies cannot be calculated. Little wonder, then, the utility of neo-classical dogma to the elite — it could be used by rich, powerful people to justify the fact that they are pursuing social policies that create poverty and force children to die. As Chomsky argues, *"one aspect of the internationalisation of the economy is the extension of the two-tiered Third World mode to the core countries. Market doctrine thus becomes an essential ideological weapon at home as well, its highly selective application safely obscured by the doctrinal system. Wealth and power are increasingly concentrated. Service for the general public — education, health, transportation, libraries, etc. — become as superfluous as those they serve, and can therefore be limited or dispensed with entirely."* [**Year 501**, p. 109]

The state managed recession has had its successes. Company profits are up as the *"competitive cost"* of workers is reduced due to fear of job losses. The Wall Street Journal's review of economic performance for the last quarter of 1995 is headlined *"Companies' Profits Surged 61% on Higher Prices, Cost Cuts."* After-tax profits rose 62% from 1993, up from 34% for the third quarter. While working America faces stagnant wages, Corporate America posted record profits in 1994. **Business Week** estimated 1994 profits to be up *"an enormous 41% over [1993],"* despite a bare 9% increase in sales, a *"colossal success,"* resulting in large part from a *"sharp"* drop in the *"share going to labour,"* though *"economists say labour will benefit — eventually."* [quoted by Noam Chomsky, *"Rollback III"*, **Z Magazine**, April 1995] Labour was still waiting over a decade later.

Moreover, for capital, Keynesianism is still goes on as before, combined (as usual) with praises to market miracles. For example, Michael Borrus, co-director of the Berkeley Roundtable on the International Economy (a corporate-funded trade and technology research institute), cites a 1988 Department of Commerce study that states that *"five of the top six fastest growing U.S. industries from 1972 to 1988 were sponsored or sustained, directly or indirectly, by federal investment."* He goes on to state that the *"winners [in earlier years were] computers, biotechnology, jet engines, and airframes"* all *"the by-product of public spending."* [quoted by Chomsky, **World Orders, Old and New**, p. 109] As James Midgley points out, *"the aggregate size of the public sector did not decrease during the 1980s and instead, budgetary policy resulted in a significant shift in existing allocations from social to military and law enforcement."* [*"The radical right, politics and society"*, **The Radical Right and the Welfare State**, Howard Glennerster and James Midgley (eds.), p. 11] Indeed, the US state funds one third of all civil R&D projects, and the UK state provides a similar subsidy. [Chomsky, **Op. Cit.**, p. 107] And, of course, the state remains waiting to save the elite from their own market follies (for example, after the widespread collapse of Savings and Loans Associations in deregulated corruption and speculation, the 1980s pro-"free market" Republican administration happily bailed them out, showing that market forces were only for one class).

The corporate owned media attacks social Keynesianism, while remaining silent or justifying pro-business state intervention. Combined with extensive corporate funding of right-wing "think-tanks" which explain why (the wrong sort of) social programmes are counter-productive, the corporate state system tries to fool the population into thinking that there is no alternative to the rule by the market while the elite enrich themselves at the public's expense. This means that state intervention has not ended as such. We are still in the age of Keynes, but social Keynesianism has been replaced by military Keynesianism cloaked beneath the rhetoric of "free market" dogma. This is a mix of free(r) markets (for the many) and varying degrees of state intervention (for the select few), while the state has become stronger and more centralised (*"prisons also offer a Keynesian stimulus to the economy, both to the construction business and white collar employment;*

the fastest growing profession is reported to be security personnel." [Chomsky, **Year 501**, p. 110]). In other words, pretty much the same situation that has existed since the dawn of capitalism (see section D.1) — free(r) markets supported by ready use of state power as and when required.

The continued role of the state means that it is unlikely that a repeat of the Great Depression is possible. The large size of state consumption means that it stabilises aggregate demand to a degree unknown in 1929 or in the 19th century period of free(r) market capitalism. This is **not** to suggest that deep recessions will not happen (they have and will). It is simply to suggest that they will **not** turn into a deep depression. Unless, of course, ideologues who believe the "just-so" stories of economic textbooks and the gurus of capitalism gain political office and start to dismantle too much of the modern state. As Thatcher showed in 1979, it is possible to deepen recessions considerably if you subscribe to flawed economic theory (ideology would be a better word) and do not care about the impact it is having on the general public — and, more importantly, if the general public cannot stop you).

However, as we discuss in section C.10 the net effect of this one-sided class war has not been as good as has been suggested by the ideologues of capitalism and the media. Faced with the re-imposition of hierarchy, the quality of life for the majority has fallen (consumption, i.e. the quantity of life, may not but that is due to a combination of debt, increased hours at work and more family members taking jobs to make ends meet). This, in turn, has lead to a fetish over economic growth. As Joan Robinson put it in the 1970s when this process started the *"economists have relapsed into the slogans of laisser faire — what is profitable promotes growth; what is most profitable is best. But people have began to notice that the growth of statistical GNP is not the same thing as an increase in welfare."* [**Collected Economic Papers**, vol. 4, p. 128] Yet even here, the post-1970s experience is not great. A quarter century of top heavy growth in which the vast majority of economic gains have gone to the richest 10% of the population has not produced the rate of GDP growth promised for it. In fact, the key stimulus for growth in the 1990s and 2000s was bubbles, first in the stock market and then in the housing market. Moreover, rising personal debt has bolstered the economy in a manner which are as unsustainable as the stock and housing bubbles which, in part, supported it. How long the system will stagger on depends, ultimately, on how long working class people will put up with it and having to pay the costs inflicted onto society and the environment in the pursuit of increasing the wealth of the few.

While working class resistance continues, it is largely defensive, but, as in the past, this can and will change. Even the darkest night ends with the dawn and the lights of working class resistance can be seen across the globe. For example, the anti-Poll Tax struggle in Britain against the Thatcher Government was successful as have been many anti-cuts struggles across the USA and Western Europe, the Zapatista uprising in Mexico was inspiring as was the Argentine revolt against neo-liberalism and its wave of popular assemblies and occupied workplaces. In France, the anti-CPE protests showed a new generation of working class people know not only how to protest but also nonsense when they hear it. In general, there has been continual strikes and protests across the world. Even in the face of state repression and managed economic recession, working class people are still fighting back. The job for anarchists to is encourage these sparks of liberty and help them win.

C.9 Would laissez-faire capitalism reduce unemployment?

In order to answer this question, we must first have to point out that "actually existing capitalism" tries to manage unemployment to ensure a compliant and servile working class. This is done under the name of fighting "inflation" but, in reality, it about controlling wages and maintaining high profit rates for the capitalist class. Market discipline for the working class, state protection for the ruling class, in other words. As Edward Herman points out:

> *"Conservative economists have even developed a concept of a 'natural rate of unemployment,' a metaphysical notion and throwback to an eighteenth century vision of a 'natural order,' but with a modern apologetic twist. The natural rate is defined as the minimum unemployment level consistent with price level stability, but, as it is based on a highly abstract model that is not directly testable, the natural rate can only be inferred from the price level itself. That is, if prices are going up, unemployment is below the 'natural rate' and too low, whether the actual rate is 4, 8, or 10 percent. In this world of conservative economics, anybody is 'voluntarily' unemployed. Unemployment is a matter of rational choice: some people prefer 'leisure' over the real wage available at going (or still lower) wage rates ...*
>
> *"Apart from the grossness of this kind of metaphysical legerdemain, the very concept of a natural rate of unemployment has a huge built-in bias. It takes as granted all the other institutional factors that influence the price level-unemployment trade-off (market structures and independent pricing power, business investment policies at home and abroad, the distribution of income, the fiscal and monetary mix, etc.) and focuses solely on the tightness of the labour market as the controllable variable. Inflation is the main threat, the labour market (i.e. wage rates and unemployment levels) is the locus of the solution to the problem."* [**Beyond Hypocrisy**, p. 94]

Unsurprisingly, Herman defines this "natural" rate as *"the rate of unemployment preferred by the propertied classes."* [**Op. Cit.**, p. 156] The theory behind this is usually called the ***"Non-Accelerating Inflation Rate of Unemployment"*** (or NAIRU). Like many of the worse aspects of modern economics, the concept was raised Milton Friedman in the late 1960s. At around the same time, Edmund Phelps independently developed the theory (and gained the so-called "Nobel Prize" in economics for so doing in 2006). Both are similar and both simply repeat, in neo-classical jargon, the insight which critics of capitalism had argued for over a century: unemployment is a necessary aspect of capitalism for it is essential to maintaining the power of the boss over the worker. Ironically, therefore, modern neo-classical economics is based on a notion which it denied for over a century (this change may be, in part, because the ruling elite thinks it has won the class war and has, currently, no major political and social movements it has to refute by presenting a rosy picture of the system).

Friedman raised his notion of a *"Natural Rate of Unemployment"* in 1968. He rooted it in the neo-classical perspective of individual expectations rather than, say, the more realistic notion of class conflict. His argument was simple. There exists in the economy some *"natural"* rate associated with the real wage an ideal economy would produce (this is *"the level that would be ground out by the Walrasian system of general equilibrium equations,"* to quote him). Attempts by the government to reduce actual unemployment below this level would result in rising inflation. This is because there would be divergence between the actual rate of inflation and its expected rate. By lowering unemployment, bosses have to raise wages and this draws unemployed people into work (note the assumption that unemployment is voluntary). However, rising wages were passed on by bosses in rising prices and so the **real** wage remains the same. This eventually leads to people leaving the workforce as the real wage has fallen back to the previous, undesired, levels. However, while the unemployment level rises back to its *"natural"* level, inflation does not. This is because workers are interested in real wages and, so if inflation is at, say, 2% then they will demand wage increases that take this into account. If they expect inflation to increase again then workers will demand **more** wages to make up for it, which in turn will cause prices to rise (although Friedman downplayed that this was because **bosses** were increasing their prices to maintain profit levels). This will lead to rising inflation **and** rising unemployment. Thus the expectations of individuals are the key.

For many economists, this process predicted the rise of stagflation in the 1970s and gave Friedman's Monetarist dogmas credence. However, this was because the *"Bastard Keynesianism"* of the post-war period was rooted in the same neo-classical assumptions used by Friedman. Moreover, they had forgotten the warnings of left-wing Keynesians in the 1940s that full unemployment would cause inflation as bosses would pass on wage rises onto consumers. This class based analysis, obviously, did not fit in well with the panglossian assumptions of neo-classical economics. Yet basing an analysis on individual expectations does not answer the question whether these expectations are meet. With strong organisation and a willingness to act, workers can increase their wages to counteract inflation. This means that there are two main options within capitalism. The first option is to use price controls to stop capitalists increasing their prices. However, this contradicts the scared laws of supply and demand and violates private property. Which brings us to the second option, namely to break unions and raise unemployment to such levels that workers think twice about standing up for themselves. In this case, workers cannot increase their money wages and so their real wages drop.

Guess which option the capitalist state went for? As Friedman made clear when he introduced the concept there was really nothing *"natural"* about the natural rate theory as it was determined by state policy:

> *"I do not mean to suggest that it is immutable and unchangeable. On the contrary, many of the market characteristics that determine its level are man-made and policy-made. In the United States, for example, legal minimum wage rates ... and the strength of labour unions all make the natural rate of unemployment higher than it would otherwise be."* [*"The Role of Monetary Policy,"* pp. 1–17, **American Economic Review**, Vol. 68, No. 1, p. 9]

Thus the "natural" rate is really a social and political phenomenon which, in effect, measures the bargaining strength of working people. This suggests that inflation will fall when working

class people are in no position to recoup rising prices in the form of rising wages. The "Natural Rate" is, in other words, about class conflict.

This can be seen when the other (independent) inventor of the "natural" rate theory won the so-called Nobel prize in 2006. Unsurprisingly, the **Economist** magazine was cock-a-hoop. [*"A natural choice: Edmund Phelps earns the economics profession's highest accolade"*, Oct 12th 2006] The reasons why became clear. According to the magazine, *"Phelps won his laurels in part for kicking the feet from under his intellectual forerunners"* by presenting a (neo-classical) explanation for the breakdown of the so-called *"Phillips curve."* This presented a statistical trade-off between inflation and unemployment (*"unemployment was low in Britain when wage inflation was high, and high when inflation was low"*). The problem was that economists *"were quick — too quick — to conclude that policymakers therefore faced a grand, macroeconomic trade-off"* in which, due to *"such a tight labour market, companies appease workers by offering higher wages. They then pass on the cost in the form of dearer prices, cheating workers of a higher real wage. Thus policy makers can engineer lower unemployment only through deception."* Phelps innovation was to argue that *"[e]ventually workers will cotton on, demanding still higher wages to offset the rising cost of living. They can be duped for as long as inflation stays one step ahead of their rising expectations of what it will be."* The similarities with Friedman's idea are obvious. This meant that the *"stable trade-off depicted by the Phillips curve is thus a dangerous mirage"* which broke down in the 1970s with the rise of stagflation.

Phelps argued that there was a *"natural"* rate of unemployment, where *"workers' expectations are fulfilled, prices turn out as anticipated, and they no longer sell their labour under false pretences."* This *"equilibrium does not, sadly, imply full employment"* and so capitalism required *"leaving some workers mouldering on the shelf. Given economists' almost theological commitment to the notion that markets clear, the presence of unemployment in the world requires a theodicy to explain it."* The religious metaphor does seem appropriate as most economists (and **The Economist**) do treat the market like a god (a theodicy is a specific branch of theology and philosophy that attempts to reconcile the existence of evil in the world with the assumption of a benevolent God). And, as with all gods, sacrifices are required and Phelps' theory is the means by which this is achieved. As the magazine noted: *"in much of his work he contends that unemployment is necessary to cow workers, ensuring their loyalty to the company and their diligence on the job, at a wage the company can afford to pay"* (i.e., one which would ensure a profit).

It is this theory which has governed state policy since the 1980s. In other words, government's around the world have been trying to *"cow workers"* in order to ensure their obedience (*"loyalty to the company"*). Unsurprisingly, attempts to lower the *"natural rate"* have all involved using the state to break the economic power of working class people (attacking unions, increasing interest rates to increase unemployment in order to temporarily *"cow"* workers and so on). All so that profits can be keep high in the face of the rising wages caused by the natural actions of the market!

Yet it must be stressed that Friedman's and Phelps' conclusions are hardly new. Anarchists and other socialists had been arguing since the 1840s that capitalism had no tendency to full employment either in theory or in practice. They have also noted how periods of full employment bolstered working class power and harmed profits. It is, as we stressed in section C.1.5, the fundamental disciplinary mechanism of the system. Somewhat ironically, then, Phelps got bourgeois economics highest prize for restating, in neo-classical jargon, the model of the labour market expounded by, say, Marx:

"If [capital's] accumulation on the one hand increases the demand for labour, it increases on the other the supply of workers by 'setting them free', while at the same time the pressure of the unemployed compels those that are employed to furnish more labour, and therefore makes the supply of labour to a certain extent independent of the supply of labourers. The movement of the law of supply and demand of labour on this basis completes the despotism of capital. Thus as soon as the workers learn the secret of why it happens that the more they work, the more alien wealth they produce ... as soon as, by setting up trade unions, etc., they try to organise a planned co-operation between employed and unemployed in order to obviate or to weaken the ruinous effects of this natural law of capitalistic production on their class, so soon capital and its sycophant, political economy, cry out at the infringement of the 'eternal' and so to speak 'sacred' law of supply and demand. Every combination of employed and unemployed disturbs the 'pure' action of this law. But on the other hand, as soon as ... adverse circumstances prevent the creation of an industrial reserve army and, with it, the absolute dependence of the working-class upon the capitalist class, capital, along with its platitudinous Sancho Panza, rebels against the 'sacred' law of supply and demand, and tries to check its inadequacies by forcible means." [**Capital**, Vol. 1, pp. 793–4]

That the **Economist** and Phelps are simply echoing, and confirming, Marx is obvious. Modern economics, while disparaging Marx, has integrated this idea into its macro-economic policy recommendations by urging the state to manipulate the economy to ensure that "inflation" (i.e. wage rises) are under control. Economics has played its role of platitudinous sycophant well while Phelps' theory has informed state interference (*"forcible means"*) in the economy since the 1980s, with the expected result that wages have failed to keep up with rising productivity and so capital as enriched itself at the expense of labour (see section C.3 for details). The use of Phelps' theory by capital in the class war is equally obvious — as was so blatantly stated by **The Economist** and the head of the American Federal Reserve during this period:

"there's supporting testimony from Alan Greenspan. Several times during the late 1990s, Greenspan worried publicly that, as unemployment drifted steadily lower the 'pool of available workers' was running dry. The dryer it ran, the greater risk of 'wage inflation,' meaning anything more than minimal increases. Productivity gains took some of the edge of this potentially dire threat, said Greenspan, and so did 'residual fear of job skill obsolescence, which has induced a preference for job security over wage gains' ... Workers were nervous and acting as if the unemployment rate were higher than the 4% it reached in the boom. Still, Greenspan was a bit worried, because ... if the pool stayed dry, 'Significant increases in wages, in excess of productivity growth, [would] inevitably emerge, absent the unlikely repeal of the law of supply and demand.' Which is why Greenspan & Co. raised short-term interest rates by about two points during 1999 and the first half of 2000. There was no threat of inflation ... nor were there any signs of rising worker militancy. But wages were creeping higher, and the threat of the sack was losing some of its bite." [Doug Henwood, **After the New Economy**, pp. 206–7]

Which is quite ironic, given that Greenspan's role in the economy was, precisely, to *"repeal"* the *"law of supply and demand."* As one left-wing economist puts it (in a chapter correctly entitled

"The Workers Are Getting Uppity: Call In the Fed!"), the Federal Reverse (like all Central Banks since the 1980s) *"worries that if too many people have jobs, or if it is too easy for workers to find jobs, there will be upward pressure on wages. More rapid wage growth can get translated into more rapidly rising prices — in other words, inflation. So the Fed often decides to raise interest rates to slow the economy and keep people out of work in order to keep inflation from increasing and eventually getting out of control."* However, *"[m]ost people probably do not realise that the Federal Reserve Board, an agency of the government, intervenes in the economy to prevent it from creating too many jobs. But there is even more to the story. When the Fed hits the brakes to slow job growth, it is not doctors, lawyers, and CEOs who end up without jobs. The people who lose are those in the middle and the bottom — sales clerks, factory workers, custodians, and dishwashers. These are the workers who don't get hired or get laid off when the economy slows or goes into a recession."* [**The Conservative Nanny State**, p. 31] Thus the state pushes up unemployment rates to slow wage growth, and thereby relieve inflationary pressure. The reason should be obvious:

> *"In periods of low unemployment, workers don't only gain from higher wages. Employers must make efforts to accommodate workers' various needs, such as child care or flexible work schedules, because they know that workers have other employment options. The Fed is well aware of the difficulties that employers face in periods of low unemployment. It compiles a regular survey, called the 'Beige Book,' of attitudes from around the country about the state of the economy. Most of the people interviewed for the Beige Book are employers.*
>
> *"From 1997 to 2000, when the unemployment rate was at its lowest levels in 30 years, the Beige Book was filled with complaints that some companies were pulling workers from other companies with offers of higher wages and better benefits. Some Beige Books reported that firms had to offer such non-wage benefits as flexible work hours, child care, or training in order to retain workers. The Beige Books give accounts of firms having to send buses into inner cities to bring workers out to the suburbs to work in hotels and restaurants. It even reported that some employers were forced to hire workers with handicaps in order to meet their needs for labour.*
>
> *"From the standpoint of employers, life is much easier when the workers are lined up at the door clamouring for jobs than when workers have the option to shop around for better opportunities. Employers can count on a sympathetic ear from the Fed. When the Fed perceives too much upward wage pressure, it slams on the brakes and brings the party to an end. The Fed justifies limiting job growth and raising the unemployment rate because of its concern that inflation may get out of control, but this does not change the fact that it is preventing workers, and specifically less-skilled workers, from getting jobs, and clamping down on their wage growth."* [**Op. Cit.**, pp. 32–3]

This has not happened by accident. Lobbying by business, as another left-wing economist stresses, *"is directed toward increasing their economic power"* and business *"has been a supporter of macroeconomic policies that have operated the economy with higher rates of unemployment. The stated justification is that this lowers inflation, but it also weakens workers' bargaining power."* Unsurprisingly, *"the economic consequence of the shift in the balance of power in favour of business ... has served to redistribute income towards profits at the expense of wages, thereby lowering demand and raising unemployment."* In effect, the Federal Reserve *"has been using monetary policy as a*

form of surrogate incomes policy, and this surrogate policy has been tilted against wages in favour of profits" and so is regulating the economy *"in a manner favourable to business."* [Thomas I. Palley, **Plenty of Nothing**, p. 77, p. 111 and pp. 112–3] That this is done under the name of fighting inflation should not fool us:

> *"Mild inflation is often an indication that workers have some bargaining strength and may even have the upper hand. Yet, it is at exactly this stage that the Fed now intervenes owning to its anti-inflation commitment, and this intervention raises interest rates and unemployment. Thus, far from being neutral, the Fed's anti-inflation policy implies siding with business in the ever-present conflict between labour and capital over distribution of the fruits of economic activity ... natural-rate theory serves as the perfect cloak for a pro-business policy stance."* [**Op. Cit.**, p. 110]

In a sense, it is understandable that the ruling class within capitalism desires to manipulate unemployment in this way and deflect questions about their profit, property and power onto the state of the labour market. High prices can, therefore, be blamed on high wages rather than high profits, rents and interest while, at the same time, workers will put up with lower hours and work harder and be too busy surviving to find the time or the energy to question the boss's authority either in theory or in practice. So managing the economy by manipulating interest rates to increase unemployment levels when required allows greater profits to be extracted from workers as management hierarchy is more secure. People will put up with a lot in the face of job insecurity. As left-wing economist Thomas Balogh put it, full employment *"generally removes the need for servility, and thus alters the way of life, the relationship between classes ... weakening the dominance of men over men, dissolving the master-servant relation. It is the greatest engine for the attainment by all of human dignity and greater equality."* [**The Irrelevance of Conventional Economics**, p. 47]

Which explains, in part, why the 1960s and 1970s were marked by mass social protest against authority rather than von Hayek's *"Road to Serfdom."* It also explains why the NAIRU was so enthusiastically embraced and applied by the ruling class. When times are hard, workers with jobs think twice before standing up to their bosses and so work harder, for longer and in worse conditions. This ensures that surplus value is increased relative to wages (indeed, in the USA, real wages have stagnated since 1973 while profits have grown massively). In addition, such a policy ensures that political discussion about investment, profits, power and so on (*"the other institutional factors"*) are reduced and diverted because working class people are too busy trying to make ends meet. Thus the state intervenes in the economy to **stop** full employment developing to combat inflation and instability on behalf of the capitalist class.

That this state manipulation is considered consistent with the "free market" says a lot about the bankruptcy of the capitalist system and its defenders. But, then, for most defenders of the system state intervention on behalf of capital is part of the natural order, unlike state intervention (at least in rhetoric) on behalf of the working class (and shows that Kropotkin was right to stress that the state **never** practices "laissez-faire" with regard to the working class — see section D.1). Thus neo-liberal capitalism is based on monetary policy that explicitly tries to weaken working class resistance by means of unemployment. If "inflation" (i.e. labour income) starts to increase, interest rates are raised so causing unemployment and, it is hoped, putting the plebes back in their place. In other words, the road to private serfdom has been cleared of any barriers imposed

on it by the rise of the working class movement and the policies of social democracy implemented after the Second World War to stop social revolution. This is the agenda pursued so strongly in America and Britain, imposed on the developing nations and urged upon Continental Europe.

Although the aims and results of the NAIRU should be enough to condemn it out of hand, it can be dismissed for other reasons. First and foremost, this "natural" rate is both invisible and can move. This means trying to find it is impossible (although it does not stop economists trying, and then trying again when rate inflation and unemployment rates refute the first attempt, and then trying again and again). In addition, it is a fundamentally a meaningless concept — you can prove anything with an invisible, mobile value — it is an non-refutable concept and so, fundamentally, non-scientific. Close inspection reveals natural rate theory to be akin to a religious doctrine. This is because it is not possible to conceive of a test that could possibly falsify the theory. When predictions of the natural rate turn out wrong (as they repeatedly have), proponents can simply assert that the natural rate has changed. That has led to the most recent incarnation of the theory in which the natural rate is basically the trend rate of unemployment. Whatever trend is observed is natural — case closed.

Since natural rate theory cannot be tested, a sensible thing would be to examine its assumptions for plausibility and reasonableness. However, Milton Friedman's early work on economic methodology blocks this route as he asserted that realism and plausibility of assumptions have no place in economics. With most economists blindly accepting this position, the result is a church in which entry is conditional on accepting particular assumptions about the working of markets. The net effect is to produce an ideology, an ideology which survives due to its utility to certain sections of society.

If this is the case, and it is, then any attempts to maintain the "natural" rate are also meaningless as the only way to discover it is to watch **actual** inflation levels and raising interest rates appropriately. Which means that people are being made unemployed on the off-chance that the unemployment level will drop below the (invisible and mobile) "natural" rate and harm the interests of the ruling class (high inflation rates harms interest incomes and full employment squeezes profits by increasing workers' power). This does not seem to bother most economists, for whom empirical evidence at the best of times is of little consequence. This is doubly true with the NAIRU, for with an invisible, mobile value, the theory is always true after the fact — if inflation rises as unemployment rises, then the natural rate has increased; if inflation falls as unemployment rises, it has fallen! As post-Keynesian economist James K. Galbraith noted in his useful critique of the NAIRU, *"as the real unemployment rate moves, the apparent NAIRU moves in its shadow"* and its *"estimates and re-estimates seem largely a response to predictive failure. We still have no theory, and no external evidence, governing the fall of the estimated NAIRU. The literature simply observes that inflation hasn't occurred and so the previous estimate must have been too high."* He stresses, economists have held *"to a concept in the face of twenty years of unexplained variation, predictive failure, and failure of the profession to coalesce on procedural issues."* [**Created Unequal**, p. 180] Given that most mainstream economists subscribe to this fallacy, it just shows how the "science" accommodates itself to the needs of the powerful and how the powerful will turn to any old nonsense if it suits their purpose. A better example of supply and demand for ideology could not be found.

So, supporters of "free market" capitalism do have a point, "actually existing capitalism" has created high levels of unemployment. What **is** significant is that most supporters of capitalism consider that this is a laissez-faire policy! Sadly, the ideological supporters of pure capital-

ism rarely mention this state intervention on behalf of the capitalist class, preferring to attack trade unions, minimum wages, welfare and numerous other "imperfections" of the labour market which, strangely, are designed (at least in rhetoric) to benefit working class people. Ignoring that issue, however, the question now arises, would a "purer" capitalism create full employment?

First, we should point out that some supporters of "free market" capitalism (most notably, the "Austrian" school) claim that real markets are not in equilibrium at all, i.e. that the nature state of the economy is one of disequilibrium. As we noted in section C.1.6, this means full employment is impossible as this is an equilibrium position but few explicitly state this obvious conclusion of their own theories and claim against logic that full employment can occur (full employment, it should be stressed, has never meant 100% employment as they will always be some people looking for a job and so by that term we mean close to 100% employment). Anarchists agree: full employment can occur in "free market" capitalism but not for ever nor even for long periods. As the Polish socialist economist Michal Kalecki pointed out in regards to pre-Keynesian capitalism, *"[n]ot only is there mass unemployment in the slump, but average employment throughout the cycle is considerably below the peak reached in the boom. The reserve of capital equipment and the reserve army of unemployed are typical features of capitalist economy at least throughout a considerable part of the [business] cycle."* [quoted by Malcolm C. Sawyer, **The Economics of Michal Kalecki**, pp. 115–6]

It is doubtful that "pure" capitalism will be any different. This is due to the nature of the system. What is missing from the orthodox analysis is an explicit discussion of class and class struggle (implicitly, they are there and almost always favour the bosses). Once this is included, the functional reason for unemployment becomes clear. It serves to discipline the workforce, who will tolerate being bossed about much more with the fear that unemployment brings. This holds down wages as the threat of unemployment decreases the bargaining power of workers. This means that unemployment is not only a natural product of capitalism, it is an essential part of it.

So cycles of short periods approaching full employment and followed by longer periods of high unemployment are actually a more likely outcome of pure capitalism than continued full employment. As we argued in sections C.1.5 and C.7.1 capitalism needs unemployment to function successfully and so "free market" capitalism will experience periods of boom and slump, with unemployment increasing and decreasing over time (as can be seen from 19th century capitalism). So as Juliet Schor, a labour economist, put it, usually *"employers have a structural advantage in the labour market, because there are typically more candidates ready and willing to endure this work marathon [of long hours] than jobs for them to fill."* Under conditions of full-employment *"employers are in danger of losing the upper hand"* and hiring new workers *"suddenly becomes much more difficult. They are harder to find, cost more, and are less experienced."* These considerations *"help explain why full employment has been rare."* Thus competition in the labour market is *"typically skewed in favour of employers: it is a buyers market. And in a buyer's market, it is the sellers who compromise."* In the end, workers adapt to this inequality of power and instead of getting what they want, they want what they get (to use Schor's expression). Under full employment this changes. In such a situation it is the bosses who have to start compromising. And they do not like it. As Schor notes, America *"has never experienced a sustained period of full employment. The closest we have gotten is the late 1960s, when the overall unemployment rate was under 4 percent for four years. But that experience does more to prove the point than any other example. The trauma caused to business by those years of a tight labour market was considerable. Since then,*

there has been a powerful consensus that the nation cannot withstand such a low rate of unemployment." Hence the support for the NAIRU to ensure that *"forced idleness of some helps perpetuate the forced overwork of others."* [**The Overworked American**, p. 71, p. 75, p. 129, pp. 75–76 and p. 76]

So, full employment under capitalism is unlikely to last long (nor would full employment booms fill a major part of the business cycle). In addition, it should be stressed that the notion that capitalism naturally stays at equilibrium or that unemployment is temporary adjustments is false, even given the logic of capitalist economics. As Proudhon argued:

> *"The economists admit it [that machinery causes unemployment]: but here they repeat their eternal refrain that, after a lapse of time, the demand for the product having increased in proportion to the reduction in price [caused by the investment], labour in turn will come finally to be in greater demand than ever. Undoubtedly,* ***with time,*** *the equilibrium will be restored; but I must add again, the equilibrium will be no sooner restored at this point than it will be disturbed at another, because the spirit of invention never stops."* [**System of Economical Contradictions**, pp. 200–1]

That capitalism creates permanent unemployment and, indeed, needs it to function is a conclusion that few, if any, pro-"free market" capitalists subscribe to. Faced with the empirical evidence that full employment is rare in capitalism, they argue that reality is not close enough to their theories and must be changed (usually by weakening the power of labour by welfare "reform" and reducing "union power"). Thus reality is at fault, not the theory (to re-quote Proudhon, *"Political economy — that is, proprietary despotism — can never be in the wrong: it must be the proletariat."* [**Op. Cit.** p. 187]) So if unemployment exists, then its because real wages are too high, not because capitalists need unemployment to discipline labour (see section C.9.2 for evidence that this argument is false). Or if real wages are falling as unemployment is rising, it can only mean that the real wage is not falling fast enough — empirical evidence is never enough to falsify logical deductions from assumptions!

(As an aside, it is one of amazing aspects of the "science" of economics that empirical evidence is never enough to refute its claims. As the Post-Keynesian economist Nicholas Kaldor once pointed out, *"[b]ut unlike any scientific theory, where the basic assumptions are chosen on the basis of direct observation of the phenomena the behaviour of which forms the subject-matter of the theory, the basic assumptions of economic theory are either of a kind that are unverifiable... or of a kind which are directly contradicted by observation."* [**Further Essays on Applied Economics**, pp. 177–8])

Of course, reality often has the last laugh on any ideology. For example, since the late 1970s and early 1980s right-wing capitalist parties have taken power in many countries across the world. These regimes made many pro-free market reforms, arguing that a dose of market forces would lower unemployment, increase growth and so on. The reality proved somewhat different. For example, in the UK, by the time the Labour Party under Tony Blair come back to office in 1997, unemployment (while falling) was still higher than it had been when the last Labour government left office in 1979 (this in spite of repeated redefinitions of unemployment by the Tories in the 1980s to artifically reduce the figures). 18 years of labour market reform had **not** reduced unemployment even under the new definitions. This outcome was identical to New Zealand's neo-liberal experiment, were its overall effect was unimpressive, to say the least: lower

growth, lower productivity and feeble real wage increases combined with rising inequality and unemployment. Like the UK, unemployment was still higher in 1997 than it had been in 1979. Over a decade of "flexible" labour markets had increased unemployment (more than doubling it, in fact, at one point as in the UK under Thatcher). It is no understatement to argue, in the words of two critics of neo-liberalism, that the *"performance of the world economy since capital was liberalised has been worse than when it was tightly controlled"* and that *"[t]hus far, [the] actual performance [of liberalised capitalism] has not lived up to the propaganda."* [Larry Elliot and Dan Atkinson, **The Age of Insecurity**, p. 274 and p. 223] In fact, as Palley notes, *"wage and income growth that would have been deemed totally unsatisfactory a decade ago are now embraced as outstanding economic performance."* [**Op. Cit.**, p. 202]

Lastly, it is apparent merely from a glance at the history of capitalism during its laissez-faire heyday in the 19th century that "free" competition among workers for jobs does not lead to full employment. Between 1870 and 1913, unemployment was at an average of 5.7% in the 16 more advanced capitalist countries. This compares to an average of 7.3% in 1913–50 and 3.1% in 1950–70. [Takis Fotopoulos, *"The Nation-State and the Market"*, pp. 37–80, **Society and Nature**, Vol. 2, No. 2, p. 61] If laissez-faire did lead to full employment, these figures would, surely, be reversed.

As discussed above, full employment **cannot** be a fixed feature of capitalism due to its authoritarian nature and the requirements of production for profit. To summarise, unemployment has more to do with private property than the wages of our fellow workers or any social safety nets working class movements have managed to pressure the ruling class to accept. However, it is worthwhile to discuss why the "free market" capitalist is wrong to claim that unemployment within their system will not exist for long periods of time. In addition, to do so will also indicate the poverty of their theory of, and "solution" to, unemployment and the human misery they would cause. We do this in the next section.

C.9.1 Would cutting wages reduce unemployment?

The "free market" capitalist (i.e., neo-classical, neo-liberal or "Austrian") argument is that unemployment is caused by the real wage of labour being higher than the market clearing level. The basic argument is that the market for labour is like any other market and as the price of a commodity increases, the demand for it falls. In terms of labour, high prices (wages) causes lower demand (unemployment). Workers, it is claimed, are more interested in money wages than real wages (which is the amount of goods they can buy with their money wages). This leads them to resist wage cuts even when prices are falling, leading to a rise in their real wages and so they price themselves out of work without realising it. From this analysis comes the argument that if workers were allowed to compete 'freely' among themselves for jobs, real wages would decrease and so unemployment would fall. State intervention (e.g. unemployment benefit, social welfare programmes, legal rights to organise, minimum wage laws, etc.) and labour union activity are, according to this theory, the cause of unemployment, as such intervention and activity forces wages above their market level and so force employers to "let people go." The key to ending unemployment is simple: cut wages.

This position was brazenly put by "Austrian" economist Murray Rothbard. He opposed any suggestion that wages should **not** be cut as the notion that *"the first shock of the depression must fall on profits and not on wages."* This was *"precisely the reverse of sound policy since profits pro-*

vide the motive power for business activity." [**America's Great Depression**, p. 188] Rothbard's analysis of the Great Depression is so extreme it almost reads like a satirical attack on the laissez-faire position as his hysterical anti-unionism makes him blame unions for the depression for, apparently, merely existing (even in an extremely weakened state) for their influence was such as to lead economists and the President to recommend to numerous leading corporate business men **not** to cut wages to end the depression (wages were cut, but not sufficiently as prices also dropped as we will discuss in the next section). It should be noted that Rothbard takes his position on wage cutting despite of an account of the business cycle rooted in bankers lowering interest rates and bosses over-investing as a result (see section C.8). So despite not setting interest rates nor making investment decisions, he expected working class people to pay for the actions of bankers and capitalists by accepting lower wages! Thus working class people must pay the price of the profit seeking activities of their economic masters who not only profited in good times, but can expect others to pay the price in bad ones. Clearly, Rothbard took the first rule of economics to heart: the boss is always right.

The chain of logic in this explanation for unemployment is rooted in many of the key assumptions of neo-classical and other marginalist economics. A firm's demand for labour (in this schema) is the marginal physical product of labour multiplied by the price of the output and so it is dependent on marginal productivity theory. It is assumed that there are diminishing returns and marginal productivity as only this produces a downward-sloping labour demand curve. For labour, it is assumed that its supply curve is upwards slopping. So it must be stressed that marginal productivity theory lies at the core of "free market" capitalist theories of output and distribution and so unemployment as the marginal product of labour is interpreted as the labour demand curve. This enforces the viewpoint that unemployment is caused by wages being too high as firms adjust production to bring the marginal cost of their products (the cost of producing one more item) into equality with the product's market-determined price. So a drop in labour costs theoretically leads to an expansion in production, producing jobs for the "temporarily" unemployed and moving the economy toward full-employment. So, in this theory, unemployment can only be reduced by lowering the real wages of workers currently employed. Thus the unfettered free market would ensure that all those who want to work at the equilibrium real wage will do so. By definition, any people who were idle in such a pure capitalism would be voluntarily enjoying leisure and **not** unemployed. At worse, mass unemployment would be a transitory disturbance which will quickly disappear if the market is flexible enough and there are no imperfections in it (such as trade unions, workers' rights, minimum wages, and so on).

Sadly for these arguments, the assumptions required to reach it are absurd as the conclusions (namely, that there is no involuntary unemployment as markets are fully efficient). More perniciously, when confronted with the reality of unemployment, most supporters of this view argue that it arises only because of government-imposed rigidities and trade unions. In their "ideal" world without either, there would, they claim, be no unemployment. Of course, it is much easier to demand that nothing should be done to alleviate unemployment and that workers' real wages be reduced when you are sitting in a tenured post in academia save from the labour market forces you wish others to be subjected to (in their own interests).

This perspective suffered during the Great Depression and the threat of revolution produced by persistent mass unemployment meant that dissident economists had space to question the orthodoxy. At the head of this re-evaluation was Keynes who presented an alternative analysis and solution to the problem of unemployment in his 1936 book **The General Theory of Em-**

ployment, Interest and Money (it should be noted that the Polish socialist economist Michal Kalecki independently developed a similar theory a few years before Keynes but without the neo-classical baggage Keynes brought into his work).

Somewhat ironically, given the abuse he has suffered at the hands of the right (and some of his self-proclaimed followers), Keynes took the assumptions of neo-classical economics on the labour market as the starting point of his analysis. As such, critics of Keynes's analysis generally misrepresent it. For example, right-liberal von Hayek asserted that Keynes *"started from the correct insight that the regular cause of extensive unemployment is real wages that are too high. The next step consisted in the proposition that a direct lowering of money wages could be brought about only by a struggle so painful and prolonged that it could not be contemplated. Hence he concluded that real wages must be lowered by the process of lowering the value of money,"* i.e. by inflation. Thus *"the supply of money must be so increased as to raise prices to a level where the real value of the prevailing money wage is no longer greater than the productivity of the workers seeking employment."* [**The Constitution of Liberty**, p. 280] This is echoed by libertarian Marxist Paul Mattick who presented an identical argument, stressing that for Keynes *"wages were less flexible than had been generally assumed"* and lowering real wages by inflation *"allowed for more subtle ways of wage-cutting than those traditionally employed."* [**Marx and Keynes**, p. 7]

Both are wrong. These arguments are a serious distortion of Keynes's argument. While he did start by assuming the neo-classical position that unemployment was caused by wages being too high, he was at pains to stress that even with ideally flexible labour markets cutting real wages would **not** reduce unemployment. As such, Keynes argued that unemployment was **not** caused by labour resisting wage cuts or by "sticky" wages. Indeed, any "Keynesian" economist who does argue that "sticky" wages are responsible for unemployment shows that he or she has not read Keynes — Chapter two of the **General Theory** critiques precisely this argument. Taking neo-classical economists at its word, Keynes analyses what would happen **if** the labour market were perfect and so he assumes the same model as his neo-classical opponents, namely that unemployment is caused by wages being too high and there is flexibility in both commodity and labour markets. As he stressed, his *"criticism of the accepted [neo-]classical theory of economics has consisted not so much in finding logical flaws in its analysis as in pointing out that its tacit assumptions are seldom or never satisfied, with the result that it cannot solve the economic problems of the actual world."* [**The General Theory**, p. 378]

What Keynes did was to consider the **overall** effect of cutting wages on the economy as a whole. Given that wages make up a significant part of the costs of a commodity, *"if money-wages change, one would have expected the [neo-]classical school to argue that prices would change in almost the same proportion, leaving the real wage and the level of unemployment practically the same as before."* However, this was not the case, causing Keynes to point out that they *"do not seem to have realised that ... their supply curve for labour will shift bodily with every movement of prices."* This was because labour cannot determine its own real wage as prices are controlled by bosses. Once this is recognised, it becomes obvious that workers do not control the cost of living (i.e., the real wage). Therefore trade unions *"do not raise the obstacle to any increase in aggregate employment which is attributed to them by the [neo-]classical school."* So while workers could, in theory, control their wages by asking for less pay (or, more realistically, accepting any wage cuts imposed by their bosses as the alternative is unemployment) they do not have any control over the prices of the goods they produce. This means that they have **no** control over their real wages and so **cannot** reduce unemployment by pricing themselves into work by accepting

lower wages. Given these obvious facts, Keynes concluded that there was *"no ground for the belief that a flexible wage policy is capable of continuous full employment ... The economic system cannot be made self-adjusting along these lines."* [**Op. Cit.**, p. 12, pp. 8–9, p. 15 and p. 267] As he summarised:

> *"the contention that the unemployment which characterises a depression is due to a refusal by labour to accept a reduction of money-wages is not clearly supported by the facts. It is not very plausible to assert that unemployment in the United States in 1932 was due either to labour obstinately refusing to accept a reduction of money-wages or to its demanding a real wage beyond what the productivity of the economic machine was capable of furnishing ... Labour is not more truculent in the depression than in the boom — far from it. Nor is its physical productivity less. These facts from experience are a* ***prima facie*** *ground for questioning the adequacy of the [neo-]classical analysis."* [**Op. Cit.**, p. 9]

This means that the standard neo-classical argument was flawed. While cutting wages may make sense for one firm, it would not have this effect throughout the economy as is required to reduce unemployment as a whole. This is another example of the fallacy of composition. What may work with an individual worker or firm will not have the same effect on the economy as a whole for cutting wages for all workers would have a massive effect on the aggregate demand for their firms products.

For Keynes and Kalecki, there were two possibilities if wages were cut. One possibility, which Keynes considered the most likely, would be that a cut in money wages across the whole economy would see a similar cut in prices. The net effect of this would be to leave real wages unchanged. The other assumes that as wages are cut, prices remain prices remained unchanged or only fell by a small amount (i.e. if wealth was redistributed from workers to their employers). This is the underlying assumption of "free market" argument that cutting wages would end the slump. In this theory, cutting real wages would increase profits and investment and this would make up for any decline in working class consumption and so its supporters reject the claim that cutting real wages would merely decrease the demand for consumer goods without automatically increasing investment sufficiently to compensate for this.

However, in order make this claim, the theory depends on three critical assumptions, namely that firms can expand production, that they will expand production, and that, if they do, they can sell their expanded production. This theory and its assumptions can be questioned. To do so we will draw upon David Schweickart's excellent summary. [**Against Capitalism**, pp. 105–7]

The first assumption states that it is always possible for a company to take on new workers. Yet increasing production requires more than just labour. Tools, raw materials and work space are all required in addition to new workers. If production goods and facilities are not available, employment will not be increased. Therefore the assumption that labour can always be added to the existing stock to increase output is plainly unrealistic, particularly if we assume with neo-classical economics that all resources are fully utilised (for an economy operating at less than full capacity, the assumption is somewhat less inappropriate).

Next, will firms expand production when labour costs decline? Hardly. Increasing production will increase supply and eat into the excess profits resulting from the fall in wages (assuming, of course, that demand holds up in the face of falling wages). If unemployment did result in a lowering of the general market wage, companies might use the opportunity to replace their current

workers or force them to take a pay cut. If this happened, neither production nor employment would increase. However, it could be argued that the excess profits would increase capital investment in the economy (a key assumption of neo-liberalism). The reply is obvious: perhaps, perhaps not. A slumping economy might well induce financial caution and so capitalists could stall investment until they are convinced of the sustained higher profitability will last.

This feeds directly into the last assumption, namely that the produced goods will be sold. Assuming that money wages are cut, but prices remain the same then this would be a cut in real wages. But when wages decline, so does worker purchasing power, and if this is not offset by an increase in spending elsewhere, then total demand will decline. However, it can be argued that not everyone's real income would fall: incomes from profits would increase. But redistributing income from workers to capitalists, a group who tend to spend a smaller portion of their income on consumption than do workers, could reduce effective demand and increase unemployment. Moreover, business does not (cannot) instantaneously make use of the enlarged funds resulting from the shift of wages to profit for investment (either because of financial caution or lack of existing facilities). In addition, which sane company would increase investment in the face of falling demand for its products? So when wages decline, so does workers' purchasing power and this is unlikely to be offset by an increase in spending elsewhere. This will lead to a reduction in aggregate demand as profits are accumulated but unused, so leading to stocks of unsold goods and renewed price reductions. This means that the cut in real wages will be cancelled out by price cuts to sell unsold stock and unemployment remains. In other words, contrary to neo-classical economics, a fall in wages may result in the same or even more unemployment as aggregate demand drops and companies cannot find a market for their goods. And so, *"[i]f prices do not fall, it is still worse, for then real wages are reduced and unemployment is increased directly by the fall in the purchase of consumption goods."* [Joan Robinson, **Further Contributions to Economics**, p. 34]

The "Pigou" (or *"real balance"*) effect is another neo-classical argument that aims to prove that (in the end) capitalism will pass from slump to boom quickly. This theory argues that when unemployment is sufficiently high, it will lead to the price level falling which would lead to a rise in the real value of the money supply and so increase the real value of savings. People with such assets will have become richer and this increase in wealth will enable people to buy more goods and so investment will begin again. In this way, slump passes to boom naturally.

However, this argument is flawed in many ways. In reply, Michal Kalecki argued that, firstly, Pigou had *"assumed that the banking system would maintain the stock of money constant in the face of declining incomes, although there was no particular reason why they should."* If the money stock changes, the value of money will also change. Secondly, that *"the gain in money holders when prices fall is exactly offset by the loss to money providers. Thus, whilst the real value of a deposit in bank account rises for the depositor when prices fell, the liability represented by that deposit for the bank also rises in size."* And, thirdly, *"that falling prices and wages would mean that the real value of outstanding debts would be increased, which borrowers would find it increasingly difficult to repay as their real income fails to keep pace with the rising real value of debt. Indeed, when the falling prices and wages are generated by low levels of demand, the aggregate real income will be low. Bankruptcies follow, debts cannot be repaid, and a confidence crisis was likely to follow."* In other words, debtors may cut back on spending more than creditors would increase it and so the depression would continue as demand did not rise. [Malcolm C. Sawyer, **The Economics of Michal Kalecki**, p. 90]

So, the traditional neo-classical reply that investment spending will increase because lower costs will mean greater profits, leading to greater savings, and ultimately, to greater investment is weak. Lower costs will mean greater profits only if the products are sold, which they might not be if demand is adversely affected. In other words, a higher profit margins do not result in higher profits due to fall in consumption caused by the reduction of workers purchasing power. And, as Michal Kalecki argued, wage cuts in combating a slump may be ineffective because gains in profits are not applied immediately to increase investment and the reduced purchasing power caused by the wage cuts causes a fall in sales, meaning that higher profit margins do not result in higher profits. Moreover, as Keynes pointed out long ago, the forces and motivations governing saving are quite distinct from those governing investment. Hence there is no necessity for the two quantities always to coincide. So firms that have reduced wages may not be able to sell as much as before, let alone more. In that case they will cut production, add to unemployment and further reduce demand. This can set off a vicious downward spiral of falling demand and plummeting production leading to depression, a process described by Kropotkin (nearly 40 years before Keynes made the same point in **The General Theory**):

> *"Profits being the basis of capitalist industry, low profits explain all ulterior consequences.*
>
> *"Low profits induce the employers to reduce the wages, or the number of workers, or the number of days of employment during the week... As Adam Smith said, low profits ultimately mean a reduction of wages, and low wages mean a reduced consumption by the worker. Low profits mean also a somewhat reduced consumption by the employer; and both together mean lower profits and reduced consumption with that immense class of middlemen which has grown up in manufacturing countries, and that, again, means a further reduction of profits for the employers."* [**Fields, Factories and Workshops Tomorrow**, p. 33]

So, as is often the case, Keynes was simply including into mainstream economics perspectives which had long been held by critics of capitalism and dismissed by the orthodoxy. Keynes' critique of Say's Law essentially repeated Marx's while Proudhon pointed out in 1846 that *"if the producer earns less, he will buy less"* and this will *"engender .. . over-production and destitution."* This was because *"though the workmen cost [the capitalist] something, they are [his] customers: what will you do with your products, when driven away by [him], they shall consume no longer?"* This means that cutting wages and employment would not work for they are *"not slow in dealing employers a counter-blow; for if production excludes consumption, it is soon obliged to stop itself."* [**System of Economical Contradictions**, p. 204 and p. 190] Significantly, Keynes praised Proudhon's follower Silvio Gesell for getting part of the answer and for producing *"an anti-Marxian socialism"* which the *"future will learn more from"* than Marx. [**Op. Cit.**, p. 355]

So far our critique of the "free market" position has, like Keynes's, been within the assumptions of that theory itself. More has to be said, though, as its assumptions are deeply flawed and unrealistic. It should be stressed that while Keynes's acceptance of much of the orthodoxy ensured that at least some of his ideas become part of the mainstream, Post-Keynesians like Joan Robinson would latter bemoan the fact that he sought a compromise rather than clean break with the orthodoxy. This lead to the rise of the post-war neo-classical synthesis, the so-called "Keynesian" argument that unemployment was caused by wages being "sticky" and the means

by which the right could undermine social Keynesianism and ensure a return to neo-classical orthodoxy.

Given the absurd assumptions underlying the "free market" argument, a wider critique is possible as it reflects reality no more than any other part of the pro-capitalist ideology which passes for mainstream economics.

As noted above, the argument that unemployment is caused by wages being too high is part of the wider marginalist perspective. Flaws in that will mean that its explanation of unemployment is equally flawed. So it must be stressed that the marginalist theory of distribution lies at the core of its theories of both output and unemployment. In that theory, the marginal product of labour is interpreted as the labour demand curve as the firm's demand for labour is the marginal physical product of labour multiplied by the price of the output and this produces the viewpoint that unemployment is caused by wages being too high. So given the central role which marginal productivity theory plays in the mainstream argument, it is useful to start our deeper critique by re-iterating that, as indicated in section C.2, Joan Robinson and Piero Sraffa had successfully debunked this theory in the 1950s. *"Yet for psychological and political reasons,"* notes James K. Galbraith, *"rather than for logical and mathematical ones, the capital critique has not penetrated mainstream economics. It likely never will. Today only a handful of economists seem aware of it."* [*"The distribution of income"*, pp. 32–41, Richard P. F. Holt and Steven Pressman (eds.), **A New Guide to Post Keynesian Economics**, p. 34] Given that this underlies the argument that high wages cause high unemployment, it means that the mainstream argument for cutting wages has no firm theoretical basis.

It should also be noted that the assumption that adding more labour to capital is always possible flows from the assumption of marginal productivity theory which treats "capital" like an ectoplasm and can be moulded into whatever form is required by the labour available (see section C.2.5 for more discussion). Hence Joan Robinson's dismissal of this assumption, for *"the difference between the future and the past is eliminated by making capital 'malleable' so that mistakes can always be undone and equilibrium is always guaranteed. .. with 'malleable' capital the demand for labour depends on the level of wages."* [**Contributions to Modern Economics**, p. 6] Moreover, *"labour and capital are not often as smoothly substitutable for each other as the [neo-classical] model requires ... You can't use one without the other. You can't measure the marginal productivity of one without the other."* Demand for capital and labour is, sometimes, a **joint** demand and so it is often to adjust wages to a worker's marginal productivity independent of the cost of capital. [Hugh Stretton, **Economics: A New Introduction**, p. 401]

Then there is the role of diminishing returns. The assumption that the demand curve for labour is always downward sloping with respect to aggregate employment is rooted in the notion that industry operates, at least in the short run, under conditions of diminishing returns. However, diminishing returns are **not** a feature of industries in the real world. Thus the assumption that the downward slopping marginal product of labour curve is identical to the aggregate demand curve for labour is not true as it is inconsistent with empirical evidence. *"In a system at increasing returns,"* noted one economist, *"the direct relation between real wages and employment tends to render the ordinary mechanism of wage adjustment ineffective and unstable."* [Ferdinando Targetti, **Nicholas Kaldor**, p. 344] In fact, as discussed in section C.1.2, without this assumption mainstream economics cannot show that unemployment is, in fact, caused by real wages being too high (along with many other things).

Thus, if we accept reality, we must end up *"denying the inevitability of a negative relationship between real wages and employment."* Post-Keynesian economists have not found any empirical links between the growth of unemployment since the early in 1970s and changes in the relationship between productivity and wages and so there is *"no theoretical reason to expect a negative relationship between employment and the real wage, even at the level of the individual firm."* Even the beloved marginal analysis cannot be used in the labour market, as *"[m]ost jobs are offered on a take-it-or-leave-it basis. Workers have little or no scope to vary hours of work, thereby making marginal trade-offs between income and leisure. There is thus no worker sovereignty corresponding to the (very controversial) notion of consumer sovereignty."* Over all, *"if a relationship exists between aggregate employment and the real wage, it is employment that determines wages. Employment and unemployment are product market variables, not labour market variables. Thus attempts to restore full employment by cutting wages are fundamentally misguided."* [John E. King, *"Labor and Unemployment,"* pp. 65–78, Holt and Pressman (eds.), **Op. Cit.**, p. 68, pp. 67–8, p. 72, p. 68 and p. 72] In addition:

> *"Neo-classical theorists themselves have conceded that a negative relationship between the real wage and the level of employment can be established only in a one-commodity model; in a multi-commodity framework no such generalisation is possible. This confines neo-classical theory to an economy without money and makes it inapplicable to a capitalist or entrepreneurial economy."* [**Op. Cit.**, p. 71]

And, of course, the whole analysis is rooted in the notion of perfect competition. As Nicholas Kaldor mildly put it:

> *"If economics had been a 'science' in the strict sense of the word, the empirical observation that most firms operate in imperfect markets would have forced economists to scrap their existing theories and to start thinking on entirely new lines ... unfortunately economists do not feel under the same compulsion to maintain a close correspondence between theoretical hypotheses and the facts of experience."* [**Further Essays on Economic Theory ad Policy**, p. 19]

Any real economy is significantly different from the impossible notion of perfect competition and *"if there exists even one monopoly anywhere in the system ... it follows that others must be averaging less than the marginal value of their output. So to concede the existence of monopoly requires that one either drop the competitive model entirely or construct an elaborate new theory ... that divides the world into monopolistic, competitive, and subcompetitive ('exploited') sectors."* [James K. Galbraith, **Created Unequal**, p. 52] As noted in section C.4.3, mainstream economists have admitted that monopolistic competition (i.e., oligopoly) is the dominant market form but they cannot model it due to the limitations of the individualistic assumptions of bourgeois economics. Meanwhile, while thundering against unions the mainstream economics profession remains strangely silent on the impact of big business and pro-capitalist monopolies like patents and copyrights on distribution and so the impact of real wages on unemployment.

All this means that *"neither the demand for labour nor the supply of labour depends on the real wage. It follows from this that the labour market is not a true market, for the price associated with it, the wage rate, is incapable of performing any market-clearing function, and thus variations in the wage rate cannot eliminate unemployment."* [King, **Op. Cit.**, p. 65] As such, the *"conventional*

economic analysis of markets ... is unlikely to apply" to the labour market and as a result *"wages are highly unlikely to reflect workers' contributions to production."* This is because economists treat labour as no different from other commodities yet *"economic theory supports no such conclusion."* At its most basic, labour is **not** produced for profit and the *"supply curve for labour can 'slope backward' — so that a fall in wages can cause an increase in the supply of workers."* In fact, the idea of a backward sloping supply curve for labour is just as easy to derive from the assumptions used by economists to derive their standard one. This is because workers may prefer to work less as the wage rate rises as they will be better off even if they do not work more. Conversely, very low wage rates are likely to produce a very high supply of labour as workers need to work more to meet their basic needs. In addition, as noted at the end of section C.1.4, economic theory itself shows that workers will not get a fair wage when they face very powerful employers unless they organise unions. [Steve Keen, **Debunking Economics**, pp. 111–2 and pp. 119–23]

Strong evidence that this model of the labour market can be found from the history of capitalism. Continually we see capitalists turn to the state to ensure low wages in order to ensure a steady supply of labour (this was a key aim of state intervention during the rise of capitalism, incidentally). For example, in central and southern Africa mining companies tried to get locals to labour. They had little need for money, so they worked a day or two then disappeared for the rest of the week. To avoid simply introducing slavery, some colonial administrators introduced and enforced a poll-tax. To earn enough to pay it, workers had to work a full week. [Hugh Stretton, **Op. Cit.**, p. 403] Much the same was imposed on British workers at the dawn of capitalism. As Stephen Marglin points out, the *"indiscipline of the labouring classes, or more bluntly, their laziness, was widely noted by eighteenth century observers."* By laziness or indiscipline, these members of the ruling class meant the situation where *"as wages rose, workers chose to work less."* In economic terms, *"a backward bending labour supply curve is a most natural phenomenon as long as the individual worker controls the supply of labour."* However, *"the fact that higher wages led workers to choose more leisure ... was disastrous"* for the capitalists. Unsurprisingly, the bosses did not meekly accept the workings of the invisible hand. Their *"first recourse was to the law"* and they *"utilised the legislative, police and judicial powers of the state"* to ensure that working class people had to supply as many hours as the bosses demanded. [*"What do Bosses do?"*, pp. 60–112, **Review of Radical Political Economy**, Vol. 6, No. 2, pp. 91–4]

This means that the market supply curve *"could have any shape at all"* and so economic theory *"fails to prove that employment is determined by supply and demand, and reinforces the real world observation that involuntary unemployment can exist"* as reducing the wage need not bring the demand and supply of labour into alignment. While the possibility of backward-bending labour supply curves is sometimes pointed out in textbooks, the assumption of an upward sloping supply curve is taken as the normal situation but *"there is no theoretical — or empirical — justification for this."* Sadly for the world, this assumption is used to draw very strong conclusions by economists. The standard arguments against minimum wage legislation, trade unions and demand management by government are all based on it. Yet, as Keen notes, such important policy positions *"should be based upon robust intellectual or empirical foundations, rather than the flimsy substrate of mere fancy. Economists are quite prone to dismiss alternative perspectives on labour market policy on this very basis — that they lack any theoretical or empirical foundations. Yet their own policy positions are based as much on wishful thinking as on wisdom."* [**Op. Cit.**, pp. 121–2 and p. 123]

Within a capitalist economy the opposite assumption to that taken by economics is far more likely, namely that there **is** a backward sloping labour supply curve. This is because the decision to work is **not** one based on the choice between wages and leisure made by the individual worker. Most workers do **not** choose whether they work or not, and the hours spent working, by comparing their (given) preferences and the level of real wages. They do **not** practice voluntary leisure waiting for the real wage to exceed their so-called *"reservation"* wage (i.e. the wage which will tempt them to forsake a life of leisure for the disutility of work). Rather, most workers have to take a job because they do not have a choice as the alternative is poverty (at best) or starvation and homelessness (at worse). The real wage influences the decision on how much labour to supply rather than the decision to work or not. This is because as workers and their families have a certain basic living standard to maintain and essential bills which need to be paid. As earnings increase, basic costs are covered and so people are more able to work less and so the supply of labour tends to fall. Conversely, if real earnings fall because the real wage is less then the supply of labour may **increase** as people work more hours and/or more family members start working to make enough to cover the bills (this is because, once in work, most people are obliged to accept the hours set by their bosses). This is the opposite of what happens in "normal" markets, where lower prices are meant to produce a **decrease** in the amount of the commodity supplied. In other words, the labour market is not a market, i.e. it reacts in different ways than other markets (Stretton provides a good summary of this argument [**Op. Cit.**, pp. 403–4 and p. 491]).

So, as radical economists have correctly observe, such considerations undercut the "free market" capitalist contention that labour unions and state intervention are responsible for unemployment (or that depressions will easily or naturally end by the workings of the market). To the contrary, insofar as labour unions and various welfare provisions prevent demand from falling as low as it might otherwise go during a slump, they apply a brake to the downward spiral. Far from being responsible for unemployment, they actually mitigate it. For example, unions, by putting purchasing power in the hands of workers, stimulates demand and keeps employment higher than the level it would have been. Moreover, wages are generally spent immediately and completely whilst profits are not. A shift from profits to wages may stimulate the economy since more money is spent but there will be a delayed cut in consumption out of profits. [Malcolm Sawyer, **The Economics of Michal Kalecki**, p. 118] All this should be obvious, as wages (and benefits) may be costs for some firms but they are revenue for even more and labour is not like other commodities and reacts in changes in price in different ways.

Given the dynamics of the labour "market" (if such a term makes much sense given its atypical nature), any policies based on applying "economics 101" to it will be doomed to failure. As such, any book entitled **Economics in One Lesson** must be viewed with suspicion unless it admits that what it expounds has little or no bearing to reality and urges the reader to take at least the second lesson. Of course, a few people actually do accept the simplistic arguments that reside in such basic economics texts and think that they explain the world (these people usually become right-"libertarians" and spend the rest of their lives ignoring their own experience and reality in favour of a few simple axioms). The wage-cutting argument (like most of economics) asserts that any problems are due to people not listening to economists and that there is no economic power, there are no "special interests" — it is just that people are stupid. Of course, it is irrelevant that it is much easier to demand that workers' real wages be reduced when you are sitting in a tenured post in academia. True to their ideals and "science", it is refreshing to see how many of

these "free market" economists renounce tenure so that their wages can adjust automatically as the market demand for their ideologically charged comments changes.

So when economic theories extol suffering for future benefits, it is always worth asking who suffers, and who benefits. Needless to say, the labour market flexibility agenda is anti-union, anti-minimum wage, and anti-worker protection. This agenda emerges from theoretical claims that price flexibility can restore full employment, and it rests dubious logic, absurd assumptions and on a false analogy comparing the labour market with the market for peanuts. Which, ironically, is appropriate as the logic of the model is that workers will end up working for peanuts! As such, the "labour market" model has a certain utility as it removes the problem of institutions and, above all, power from the perspective of the economist. In fact, institutions such as unions can only be considered as a problem in this model rather than a natural response to the unique nature of the labour "market" which, despite the obvious differences, most economists treat like any other.

To conclude, a cut in wages may deepen any slump, making it deeper and longer than it otherwise would be. Rather than being the solution to unemployment, cutting wages will make it worse (we will address the question of whether wages being too high actually causes unemployment in the first place, in the next section). Given that, as we argued in section C.8.2, inflation is caused by insufficient profits for capitalists (they try to maintain their profit margins by price increases) this spiralling effect of cutting wages helps to explain what economists term *"stagflation"* — rising unemployment combined with rising inflation (as seen in the 1970s). As workers are made unemployed, aggregate demand falls, cutting profit margins even more and in response capitalists raise prices in an attempt to recoup their losses. Only a very deep recession can break this cycle (along with labour militancy and more than a few workers and their families).

Thus the capitalist solution to crisis is based on working class people paying for capitalism's contradictions. For, according to the mainstream theory, when the production capacity of a good exceeds any reasonable demand for it, the workers must be laid off and/or have their wages cut to make the company profitable again. Meanwhile the company executives – the people responsible for the bad decisions to build lots of factories — continue to collect their fat salaries, bonuses and pensions, and get to stay on to help manage the company through its problems. For, after all, who better, to return a company to profitability than those who in their wisdom ran it into bankruptcy? Strange, though, no matter how high their salaries and bonuses get, managers and executives **never** price **themselves** out of work.

All this means that working class people have two options in a slump — accept a deeper depression in order to start the boom-bust cycle again or get rid of capitalism and with it the contradictory nature of capitalist production which produces the business cycle in the first place (not to mention other blights such as hierarchy and inequality). In the end, the only solution to unemployment is to get rid of the system which created it by workers seizing their means of production and abolishing the state. When this happens, then production for the profit of the few will be ended and so, too, the contradictions this generates.

C.9.2 Is unemployment caused by wages being too high?

As we noted in the last section, most capitalist economic theories argue that unemployment is caused by wages being too high. Any economics student will tell you that labour is like any other

commodity and so if its price is too high then there will be less demand for it, so producing an excess supply of it on the market. Thus high wages will reduce the quantity of labour demanded and so create unemployment — a simple case of "supply and demand."

From this theory we would expect that areas and periods with high wages will also have high levels of unemployment. Unfortunately for the theory, this does not seem to be the case. Even worse for it, high wages are generally associated with booms rather than slumps and this has been known to mainstream economics since at least 1939 when in March of that year **The Economic Journal** printed an article by Keynes about the movement of real wages during a boom in which he evaluated the empirical analysis of two labour economists (entitled *"Relative Movements of Real Wages and Output"* this is contained as an Appendix of most modern editions of **The General Theory**).

These studies showed that *"when money wages are rising, real wages have usually risen too; whilst, when money wages are falling, real wages are no more likely to rise than to fall."* Keynes admitted that in **The General Theory** he was *"accepting, without taking care to check the facts"*, a *"widely held"* belief. He discussed where this belief came from, namely leading 19th century British economist Alfred Marshall who had produced a *"generalisation"* from a six year period between 1880–86 which was not true for the subsequent business cycles of 1886 to 1914. He also quotes another leading economist, Arthur Pigou, from 1927 on how *"the upper halves of trade cycles have, on the whole, been associated with higher rates of real wages than the lower halves"* and indicates that he provided evidence on this from 1850 to 1910 (although this did not stop Pigou reverting to the *"Marshallian tradition"* during the Great Depression and blaming high unemployment on high wages). [**The General Theory**, p. 394, p. 398 and p. 399] Keynes conceded the point, arguing that he had tried to minimise differences between his analysis and the standard perspective. He stressed that while he assumed countercyclical real wages his argument did not depend on it and given the empirical evidence provided by labour economists he accepted that real wages were pro-cyclical in nature.

The reason why this is the case is obvious given the analysis in the last section. Labour does not control prices and so cannot control its own real wage. Looking at the Great Depression, it seems difficult to blame it on workers refusing to take pay cuts when by 1933 *"wages and salaries in U.S. manufacturing were less than half their 1929 levels and, in automobiles and steel, were under 40 percent of the 1929 levels."* In Detroit, there had been 475,000 auto-workers. By 1931 *"almost half has been laid off."* [William Lazonick, **Competitive Advantage on the Shop Floor**, p. 271] The notion of all powerful unions or workers' resistance to wage cuts causing high unemployment hardly fits these facts. Peter Temin provides information on real wages in manufacturing during the depression years. Using 1929 as the base year, weekly average real wages (i.e., earnings divided by the consumer price index) fell each year to reach a low of 85.5% by 1932. Hourly real wages remained approximately constant (rising to 100.1% in 1930 and then 102.6% in 1931 before falling to 99% in 1932). The larger fall in weekly wages was due to workers having a shorter working week. The *"effect of shorter hours and lower wages was to decrease the income of employed workers."* Thus the notion that lowering wages will increase employment seems as hard to support as the notion that wages being too high caused the depression in the first place. Temin argues, *"no part of the [neo-]classical story is accurate."* [**Did Monetary Forces Cause the Great Depression?**, pp. 139–40] It should be noted that the consensus of economists is that during this period the evidence seems to suggest that real wages **did** rise overall. This was because the prices of commodities fell faster than did the wages paid to workers. Which

confirms Keynes, as he had argued that workers cannot price themselves into work as they have no control over prices. However, there is no reason to think that high real wages caused the high unemployment as the slump itself forced producers to cut prices (not to mention wages). Rather, the slump caused the increase in real wages.

Since then, economists have generally confirmed that real wage are procyclical. In fact, *"a great deal of empirical research has been conducted in this area — research which mostly contradicts the neo-classical assumption of an inverse relation between real wages and employment."* [Ferdinando Targetti, **Nicholas Kaldor**, p. 50] Nicholas Kaldor, one of the first Keynesians, also stressed that the notion that there is an inverse relationship between real wages and employment is *"contradicted by numerous empirical studies which show that, in the short period, changes in real wages are positively correlated with changes in employment and not negatively."* [**Further Essays on Economic Theory and Policy**, p. 114fn] As Hugh Stretton summarises in his excellent introductory text on economics:

> *"In defiance of market theory, the demand for labour tends strongly to vary **with** its price, not inversely to it. Wages are high when there is full employment. Wages — especially for the least-skilled and lowest paid — are lowest when there is least employment. The causes chiefly run from the employment to the wages, rather than the other way. Unemployment weakens the bargaining power, worsens the job security and working conditions, and lowers the pay of those still in jobs.*
>
> *"The lower wages do not induce employers to create more jobs ... most business firms have no reason to take on more hands if wages decline. Only empty warehouses, or the prospect of more sales can get them to do that, and these conditions rarely coincide with falling employment and wages. The causes tend to work the other way: unemployment lowers wages, and the lower wages do not restore the lost employment."* [**Economics: A New Introduction**, pp. 401–2]

Will Hutton, the British neo-Keynesian economist, summarises research by two other economists that suggests high wages do not cause unemployment:

> *"the British economists David Blanchflower and Andrew Oswald [examined] ... the data in twelve countries about the actual relation between wages and unemployment — and what they have discovered is another major challenge to the free market account of the labour market. Free market theory would predict that low wages would be correlated with low local unemployment; and high wages with high local unemployment.*
>
> *"Blanchflower and Oswald have found precisely the opposite relationship. The higher the wages, the lower the local unemployment — and the lower the wages, the higher the local unemployment. As they say, this is not a conclusion that can be squared with free market text-book theories of how a competitive labour market should work."* [**The State We're In**, p. 102]

Unemployment was highest where real wages were lowest and nowhere had falling wages being followed by rising employment or falling unemployment. Blanchflower and Oswald stated that their conclusion is that employees *"who work in areas of high unemployment earn less, other things constant, than those who are surrounded by low unemployment."* [**The Wage Curve**, p. 360]

This relationship, the exact opposite of that predicted by "free market" capitalist economics, was found in many different countries and time periods, with the curve being similar for different countries. Thus, the evidence suggests that high unemployment is associated with low earnings, not high, and vice versa.

Looking at less extensive evidence, if minimum wages and unions cause unemployment, why did the South-eastern states of the USA (with a **lower** minimum wage and weaker unions) have a **higher** unemployment rate than North-western states during the 1960s and 1970s? Or why, when the (relative) minimum wage declined under Reagan and Bush in the 1980s, did chronic unemployment accompany it? [Allan Engler, **The Apostles of Greed**, p. 107] Or the **Low Pay Network** report *"Priced Into Poverty"* which discovered that in the 18 months before they were abolished, the British Wages Councils (which set minimum wages for various industries) saw a rise of 18,200 in full-time equivalent jobs compared to a net loss of 39,300 full-time equivalent jobs in the 18 months afterwards. Given that nearly half the vacancies in former Wages Council sectors paid less than the rate which it is estimated Wages Councils would now pay, and nearly 15% paid less than the rate at abolition, there should (by the "free market" argument) have been rises in employment in these sectors as pay fell. The opposite happened. This research shows that the falls in pay associated with Wages Council abolition had not created more employment. Indeed, employment growth was more buoyant prior to abolition than subsequently. So whilst Wages Council abolition did not result in more employment, the erosion of pay rates caused by their abolition resulted in more families having to endure poverty pay. Significantly, the introduction of a national minimum wage by the first New Labour government did not have the dire impact "free market" capitalist economists and politicians predicted.

It should also be noted that an extensive analysis of the impact of minimum wage increases at the state level in America by economists David Card and Alan Kreuger found the facts contradicted the standard theory, with rises in the minimum wage having a small positive impact on both employment and wages for all workers. [**Myth and Measurement: The New Economics of the Minimum Wage**] While their work was attacked by business leaders and economists from think-tanks funded by them, Card and Kreuger's findings that raising the lowest wages had no effect on unemployment or decreased it proved to be robust. In particular, when replying to criticism of their work by other economists who based their work, in part, on data supplied by a business funded think-tank Card and Krueger discovered that not only was that work consistent with their original findings but that the *"only data set that indicates a significant decline in employment"* was by some amazing coincidence *"the small set of restaurants collected by"* the think tank. [*"Minimum Wages and Employment: A Case Study of the Fast-Food Industry in New Jersey and Pennsylvania: Reply"*, pp. 1397–1420, **The American Economic Review**, Vol. 90, No. 5, p. 1419] For a good overview of *"how the fast food industry and its conservative allies sought to discredit two distinguished economists, and how the attack backfired"* when *"the two experts used by the fast food industry to impeach Card and Krueger, effectively ratified them"* see John Schmitt's *"Behind the Numbers: Cooked to Order."* [**The American Prospect**, May-June 1996, pp. 82–85]

(This does not mean that anarchists support the imposition of a legal minimum wage. Most anarchists do not because it takes the responsibility for wages from unions and other working class organisations, where it belongs, and places it in the hands of the state. We mention these examples in order to highlight that the "free market" capitalist argument has serious flaws with it.)

Empirical evidence does not support the argument the "free market" capitalist argument that unemployment is caused by real wages being too high. The phenomenon that real wages tend to increase during the upward swing of the business cycle (as unemployment falls) and fall during recessions (when unemployment increases) renders the standard interpretation that real wages govern employment difficult to maintain (real wages are *"pro-cyclical,"* to use economic terminology). This evidence makes it harder for economists to justify policies based on a direct attack on real wages as the means to cure unemployment.

While this evidence may come as a shock to those who subscribe to the arguments put forward by those who think capitalist economics reflect the reality of that system, it fits well with the anarchist and other socialist analysis. For anarchists, unemployment is a means of disciplining labour and maintaining a suitable rate of profit (i.e. unemployment is a key means of ensuring that workers are exploited). As full employment is approached, labour's power increases, so reducing the rate of exploitation and so increasing labour's share of the value it produces (and so higher wages). Thus, from an anarchist point of view, the fact that wages are higher in areas of low unemployment is not a surprise, nor is the phenomenon of pro-cyclical real wages. After all, as we noted in section C.3, the ratio between wages and profits are, to a large degree, a product of bargaining power and so we would expect real wages to grow in the upswing of the business cycle, fall in the slump and be high in areas of low unemployment.

The evidence therefore suggests that the "free market" capitalist claim that unemployment is caused by unions, "too high" wages, and so on, is false. Indeed, by stopping capitalists appropriating more of the income created by workers, high wages maintain aggregate demand and contribute to higher employment (although, of course, high employment cannot be maintained indefinitely under wage slavery due to the rise in workers' power this implies). Rather, unemployment is a key aspect of the capitalist system and cannot be got rid off within it. The "free market" capitalist "blame the workers" approach fails to understand the nature and dynamic of the system (given its ideological role, this is unsurprising). So high real wages for workers increases aggregate demand and reduces unemployment from the level it would be if the wage rate was cut. This is supported by most of the research into wage dynamics during the business cycle and by the *"wage curve"* of numerous countries. This suggests that the demand for labour is independent of the real wages and so the price of labour (wages) is incapable of performing any market clearing function. The supply and demand for labour are determined by two different sets of factors. The relationship between wages and unemployment flows from the latter to the former rather than the reverse: the wage is influenced by the level of unemployment. Thus wages are not the product of a labour market which does not really exist but rather is the product of *"institutions, customs, privilege, social relations, history, law, and above all power, with an admixture of ingenuity and luck. But of course power, and particularly market or monopoly power, changes with the general of demand, the rate of growth, and the rate of unemployment. In periods of high employment, the weak gain on the strong; in periods of high unemployment, the strong gain on the weak."* [Galbraith, **Created Unequal**, p. 266]

This should be obvious enough. It is difficult for workers to resist wage cuts and speeds-up when faced with the fear of mass unemployment. As such, higher rates of unemployment *"reduce labour's bargaining power vis-a-vis business, and this helps explain why wages have declined and workers have not received their share of productivity growth"* (between 1970 and 1993, only the top 20% of the US population increased its share of national income). [Thomas I. Palley, **Plenty of Nothing**, p. 55 and p. 58] Strangely, though, this obvious fact seems lost on most economists. In

fact, if you took their arguments seriously then you would have to conclude that depressions and recessions are the periods during which working class people do the best! This is on two levels. First, in neo-classical economics work is considered a disutility and workers decide not to work at the market-clearing real wage because they prefer leisure to working. Leisure is assumed to be intrinsically good and the wage the means by which workers are encouraged to sacrifice it. Thus high unemployment must be a good thing as it gives many more people leisure time. Second, for those in work their real wages are higher than before, so their income has risen. Alfred Marshall, for example, argued that in depressions money wages fell but not as fast as prices. A *"powerful friction"* stopped this, which *"establish[ed] a higher standard of living among the working classes"* and a *"diminish[ing of] the inequalities of wealth."* When asked whether during a period of depression the employed working classes got more than they did before, he replied *"[m]ore than they did before, on the average."* [quoted by Keynes, **Op. Cit.**, p. 396]

Thus, apparently, working class people do worse in booms than in slumps and, moreover, they can resist wage cuts more in the face of mass unemployment than in periods approaching full employment. That the theory which produced these conclusions could be taken remotely seriously shows the dangers of deducing an economic ideology from a few simple axioms rather than trusting in empirical evidence and common sense derived from experience. Nor should it come as too great a surprise, as "free market" capitalist economics tends to ignore (or dismiss) the importance of economic power and the social context within which individuals make their choices. As Bob Black acidly put it with regards to the 1980s, it *"wasn't the **workers** who took these gains [of increased productivity], not in higher wages, not in safer working conditions, and not in shorter hours — hours of work have **increased** ... It must be, then, that in the 80s and after workers have 'chosen' lower wages, longer hours **and** greater danger on the job. Yeah, sure."* [*"Smokestack Lightning,"* pp. 43–62, **Friendly Fire**, p. 61]

In the real world, workers have little choice but to accept a job as they have no independent means to exist in a pure capitalist system and so no wages means no money for buying such trivialities as food and shelter. The decision to take a job is, for most workers, a non-decision – paid work is undertaken out of economic necessity and so we are not in a position to refuse work because real wages are too low to be worth the effort (the welfare state reduces this pressure, which is why the right and bosses are trying to destroy it). With high unemployment, pay and conditions will worsen while hours and intensity of labour will increase as the fear of the sack will result in increased job insecurity and so workers will be more willing to placate their bosses by obeying and not complaining. Needless to say, empirical evidence shows that *"when unemployment is high, inequality rises. And when unemployment is low, inequality tends to fall."* [James K. Galbraith, **Op. Cit.**, p. 148] This is unsurprising as the *"wage curve"* suggests that it is unemployment which drives wage levels, not the other way round. This is important as higher unemployment would therefore create higher inequality as workers are in no position to claim back productivity increases and so wealth would flood upwards.

Then there is the issue of the backward-bending supply curve of labour we discussed at the end of the last section. As the "labour market" is not really a market, cutting real wages will have the opposite effect on the supply of labour than its supporters claim. It is commonly found that as real wages fall, hours at work become longer and the number of workers in a family increases. This is because the labour supply curve is negatively slopped as families need to work more (i.e., provide more labour) to make ends meet. This means that a fall in real wages may **increase** the supply of labour as workers are forced to work longer hours or take second jobs simply to

survive. The net effect of increasing supply would be to **decrease** real wages even more and so, potentially, start a vicious circle and make the recession deeper. Looking at the US, we find evidence that supports this analysis. As the wages for the bottom 80% of the population fell in real terms under Reagan and Bush in the 1980s, the number of people with multiple jobs increased as did the number of mothers who entered the labour market. In fact, *"the only reason that family income was maintained is the massive increase in labour force participation of married women ... Put simply, jobs paying family wages have been disappearing, and sustaining a family now requires that both adults work ... The result has been a squeeze on the amount of time that people have for themselves ... there is a loss of life quality associated with the decline in time for family ... they have also been forced to work longer ... Americans are working longer just to maintain their current position, and the quality of family life is likely declining. A time squeeze has therefore accompanied the wage squeeze."* [Palley, **Op. Cit.**, pp. 63–4] That is, the supply of labour **increased** as its price fell (Reagan's turn to military Keynesianism and incomplete nature of the "reforms" ensured that a deep spiral was avoided).

To understand why this is the case, it is necessary to think about how the impact of eliminating the minimum wage and trade unions would actually have. First, of course, there would be a drop in the wages of the poorest workers as the assertion is that the minimum wage increases unemployment by forcing wages up. The assertion is that the bosses would then employ more workers as a result. However, this assumes that extra workers could easily be added to the existing capital stock which may not be the case. Assuming this is the case (and it **is** a big assumption), what happens to the workers who have had their pay cut? Obviously, they still need to pay their bills which means they either cut back on consumption and/or seek more work (assuming that prices have not fallen, as this would leave the real wage unchanged). If the former happens, then firms may find that they face reduced demand for their products and, consequently, have no need for the extra employees predicted by the theory. If the latter happens, then the ranks of those seeking work will increase as people look for extra jobs or people outside the labour market (like mothers and children) are forced into the job market. As the supply of workers increase, wages **must** drop according to the logic of the "free market" position. This does not mean that a recovery is impossible, just that in the short and medium terms cutting wages will make a recession worse and be unlikely to **reduce** unemployment for some time.

This suggests that a "free market" capitalism, marked by a fully competitive labour market, no welfare programmes nor unemployment benefits, and extensive business power to break unions and strikes would see aggregate demand constantly rise and fall, in line with the business cycle, and unemployment and inequality would follow suit. Moreover, unemployment would be higher over most of the business cycle (and particularly at the bottom of the slump) than under a capitalism with social programmes, militant unions and legal rights to organise because the real wage would not be able to stay at levels that could support aggregate demand nor could the unemployed use their benefits to stimulate the production of consumer goods. This suggests that a fully competitive labour market, as in the 19th century, would increase the instability of the system — an analysis which was confirmed in during the 1980s (*"the relationship between measured inequality and economic stability ... was weak but if anything it suggests that the more egalitarian countries showed a more stable pattern of growth after 1979."* [Dan Corry and Andrew Glyn, *"The Macroeconomics of equality, stability and growth"*, **Paying for Inequality**, Andrew Glyn and David Miliband (eds.) pp. 212–213]).

So, in summary, the available evidence suggests that **high** wages are associated with **low** levels of unemployment. While this should be the expected result from any realistic analysis of the economic power which marks capitalist economies, it does not provide much support for claims that only by cutting real wages can unemployment be reduced. The "free market" capitalist position and one based on reality have radically different conclusions as well as political implications. Ultimately, most laissez-faire economic analysis is unpersuasive both in terms of the facts and their logic. While economics may be marked by axiomatic reasoning which renders everything the markets does as optimal, the problem is precisely that it is pure axiomatic reasoning with little or no regard for the real world. Moreover, by some strange coincidence, they usually involve policy implications which generally make the rich richer by weakening the working class. Unsurprisingly, decades of empirical evidence have not shifted the faith of those who think that the simple axioms of economics take precedence over the real world nor has this faith lost its utility to the economically powerful.

C.9.3 Are "flexible" labour markets the answer to unemployment?

The usual "free market" capitalist (or neo-liberal) argument is that labour markets must become more "flexible" to solve the problem of unemployment. This is done by weakening unions, reducing (or abolishing) the welfare state, and so on. In defence of these policies, their proponents point to the low unemployment rates of the USA and UK and contrast them to the claimed economic woes of Europe (particularly France and Germany). As we will indicate in this section, this stance has more to do a touching faith that deregulating the labour market brings the economy as a whole closer to the ideal of "perfect competition" than a balanced analysis and assessment of the available evidence. Moreover, it is always important to remember, as tenured economists (talking of protective labour market institutions!) seem to forget, that deregulation can and does have high economic (and not to mention individual and social) costs too.

The underlying argument for flexible labour markets is the notion that unemployment is cased by wages being too high and due to market imperfections wages are sticky downwards. While both claims, as we have seen above, are dubious both factually and logically this has not stopped this position becoming the reigning orthodoxy in elite circles. By market imperfections it is meant trade unions, laws which protect labour, unemployment benefit and other forms of social welfare provision (and definitely **not** big business, patent and copyright laws, or any other pro-business state interventions). All these ensure that wages for those employed are inflexible downwards and the living standards of those unemployed are too high to induce them to seek work. This means that orthodox economics is based on (to use John Kenneth Galbraith's justly famous quip) the assumption that the rich do not work because they are paid too little, while the poor do not work because they are paid too much.

We should first point out that attacks on social welfare have a long pedigree and have been conducted with much the same rationale — it made people lazy and gave them flexibility when seeking work. For example, the British **Poor Law Report** of the 1830s *"built its case against relief on the damage done by poor relief to personal morality and labour discipline (much the same thing in the eyes of the commissioners)."* [David McNally, **Against the Market**, p. 101] The report itself stated that *"the greatest evil"* of the system was *"the spirit of laziness and insubordination that it creates."* [quoted by McNally, **Op. Cit.**, p. 101]

While the rhetoric used to justify attacks on welfare has changed somewhat since then, the logic and rationale have not. They have as their root the need to eliminate anything which provided working class people any means for independence from the labour market. It has always aimed to ensure that the fear of the sack remains a powerful tool in the bosses arsenal and to ensure that their authority is not undermined. Ironically, therefore, its underlying aims are to **decrease** the options available to working class people, i.e. to reduce **our** flexibility within the labour market by limiting our options to finding a job fast or face dire poverty (or worse).

Secondly, there is a unspoken paradox to this whole process. If we look at the stated, public, rationale behind "flexibility" we find a strange fact. While the labour market is to be made more "flexible" and in line with ideal of "perfect competition", on the capitalist side no attempt is being made to bring **it** into line with that model. Let us not forget that perfect competition (the theoretical condition in which all resources, including labour, will be efficiently utilised) states that there must be a large number of buyers and sellers. This is the case on the sellers side of the "flexible" labour market, but this is **not** the case on the buyers (where, as indicated in section C.4, oligopoly reigns). Most who favour labour market "flexibility" are also those most against the breaking up of big business and oligopolistic markets or are against attempts to stop mergers between dominant companies in and across markets. Yet the model requires **both** sides to be made up of numerous small firms without market influence or power. So why expect making one side more "flexible" will have a positive effect on the whole?

There is no logical reason for this to be the case and as we noted in section C.1.4, neo-classical economics agrees – in an economy with both unions and big business, removing the former while retaining the latter will **not** bring it closer to the ideal of perfect competition. With the resulting shift in power on the labour market things will get worse as income is distributed from labour to capital. Which is, we must stress, precisely what **has** happened since the 1980s and the much lauded "reforms" of the labour market. It is a bit like expecting peace to occur between two warring factions by disarming one side and arguing that because the number of guns have been halved peacefulness has doubled! Of course, the only "peace" that would result would be the peace of the graveyard or a conquered people — subservience can pass for peace, if you do not look too close. In the end, calls for the "flexibility" of labour indicate the truism that, under capitalism, labour exists to meet the requirements of capital (or living labour exists to meet the needs of dead labour, a truly insane way to organise a society).

Then there is the key question of comparing reality with the rhetoric. As economist Andrew Glyn points out, the neo-liberal orthodoxy on this issue *"has been strenuously promoted despite weak evidence for the magnitude of its benefits and in almost total neglect of its costs."* In fact, *"there is no evidence that the countries which carried out more reforms secured significant falls in unemployment."* This is perhaps unsurprising as *"there is plenty of support for such deregulation from business even without strong evidence that unemployment would be reduced."* As far as welfare goes, the relationship between unemployment and benefits is, if anything, in the 'wrong' direction (higher benefits do along with lower unemployment). Of course there are a host of other influences on unemployment but *"if benefits were very important we might expect **some** degree of correlation in the 'right' (positive) direction ... such a lack of simple relation with unemployment applies to other likely suspects such as employment protection and union membership."* [**Capitalism Unleashed**, p. 48, p. 121, p. 48 and p. 47]

Nor is it mentioned that the history of labour market flexibility is somewhat at odds with the theory. It is useful to remember that American unemployment was far worse than Europe's

during the 1950s, 60s and 70s. In fact, it did not get better than the European average until the second half of the 1980s. [David R. Howell, *"Introduction"*, pp. 3–34, **Fighting Unemployment**, David R. Howell (ed.), pp. 10–11] To summarise:

> *"it appears to be only relatively recently that the maintained greater flexibility of US labour markets has apparently led to a superior performance in terms of lower unemployment, despite the fact this flexibility is no new phenomenon. Comparing, for example, the United States with the United Kingdom, in the 1960s the United States averaged 4.8 per cent, with the United Kingdom at 1.9 per cent; in the 1970s the United States rate rose to 6.1 per cent, with the United Kingdom rising to 4.3 per cent, and it was only in the 1980s that the ranking was reversed with the United States at 7.2 per cent and the United Kingdom at 10 per cent... Notice that this reversal of rankings in the 1980s took place despite all the best efforts of Mrs Thatcher to create labour market flexibility... [I]f labour market flexibility is important in explaining the level of unemployment... why does the level of unemployment remain so persistently high in a country, Britain, where active measures have been taken to create flexibility?"* [Keith Cowling and Roger Sugden, **Beyond Capitalism**, p. 9]

If we look at the fraction of the labour force without a job in America, we find that in 1969 it was 3.4% (7.3% including the underemployed) and **rose** to 6.1% in 1987 (16.8% including the underemployed). Using more recent data, we find that, on average, the unemployment rate was 6.2% in 1990–97 compared to 5.0% in the period 1950–65. In other words, labour market "flexibility" has not reduced unemployment levels, in fact "flexible" labour markets have been associated with higher levels of unemployment. Of course, we are comparing different time periods. A lot changed between the 1960s and the 1990s and so comparing these periods cannot be the whole answer. However, it does seem strange that the period with stronger unions, higher minimum wages and more generous welfare state should be associated with **lower** unemployment than the subsequent "flexible" period. It is possible that the rise in flexibility and the increase in unemployment may be unrelated. If we look at different countries over the same time period we can see if "flexibility" actually reduces unemployment. As one British economist notes, this may not be the case:

> *"Open unemployment is, of course, lower in the US. But once we allow for all forms of non-employment [such as underemployment, jobless workers who are not officially registered as such and so on], there is little difference between Europe and the US: between 1988 and 1994, 11 per cent of men aged 25–55 were not in work in France, compared with 13 per cent in the UK, 14 per cent in the US and 15 per cent in Germany."* [Richard Layard, quoted by John Gray, **False Dawn**, p. 113]

Also when evaluating the unemployment records of a country, other factors than the "official" rate given by the government must taken into account. Firstly, different governments have different definitions of what counts as unemployment. As an example, the USA has a more restrictive definition of who is unemployed than Germany. For example, in 2005 Germany's unemployment rate was officially 11.2%. However, using the US definition it was only around 9% (7% in what was formerly West Germany). The offical figure was higher as it included people, such as those involuntarily working part-time, as being unemployed who are counted as being employed in

the USA. America, in the same year, had an unemployment rate of around 5%. So comparing unadjusted unemployment figures will give a radically different picture of the problem than using standardised ones. Sadly far too often business reporting in newspapers fail to do this.

In addition, all estimates of America's unemployment record must take into account its incarceration rates. The prison population is not counted as part of the labour force and so is excluded when calculating unemployment figures. This is particularly significant as those in prison are disproportionately from demographic groups with very high unemployment rates and so it is likely that a substantial portion of these people would be unemployed if they were not in jail. If America and the UK did not have the huge surge in prison population since the 1980s neoliberal reforms, the unemployment rate in both countries would be significantly higher. In the late 1990s, for example, more than a million extra people would be seeking work if the US penal policies resembled those of any other Western nation. [John Gray, **Op. Cit.**, p. 113] England and Wales, unsurprisingly, tops the prison league table for Western Europe. In 2005, 145 per 100,000 of their population was incarcerated. In comparison, France had a rate of 88 while Germany had one of 97. This would, obviously, reduce the numbers of those seeking work on the labour market and, consequently, reduce the unemployment statistics.

While the UK is praised for its "flexible" labour market in the 2000s, many forget the price which was paid to achieve it and even more fail to realise that the figures hide a somewhat different reality. It is therefore essential to remember Britain's actual economic performance during Thatcher's rule rather than the "economically correct" narrative we have inherited from the media and economic "experts." When Thatcher came to office in 1979 she did so promising to end the mass unemployment experienced under Labour (which had doubled between 1974 and 1979). Unemployment then tripled in her first term, rising to over 3 million in 1982 (for the first time since the 1930s, representing 1 in 8 people). This was due in large part to the application of Monetarist dogma making the recession far worse than it had to be. Unemployment remained at record levels throughout the 1980s, only dropping to below its 1979 level in 1997 when New Labour took office. It gets worse. Faced with unemployment rising to well over 10%, Thatcher's regime did what any respectable government would — it cooked the books. It changed how unemployment was recorded in order to artificially lower the official unemployment records. It also should be stressed that the UK unemployment figures do not take into account the Thatcherite policy of shunting as many people as possible off the unemployment roles and onto sickness and incapacity benefits during the 1980s and 1990s (*"In some countries, like the UK and the Netherlands, many [of the unemployed] found their way onto sickness benefit ... Across the UK, for example, there was a strong positive correlation between numbers on sickness benefits and the local unemployment rate."* [Glyn, **Op. Cit.**, p. 107]). Once these "hidden" people are included the unemployment figures of Britain are similar to those countries, such as France and Germany, who are more honest in recording who is and is not unemployed.

Eighteen years of high unemployment and a massive explosion in those on incapacity benefits is hardly an advert for the benefits of "flexible" labour market. However, a very deep recession, double-figure unemployment for most of the decade, defeats for key strikes and unions plus continued high unemployment for nearly two decades had an impact on the labour movement. It made people willing to put up with anything in order to remain in work. Hence Thatcher's "economic miracle" — the working class finally knew its place in the social hierarchy.

Thus, if a politician is elected who is hailed by the right as a "new Thatcher", i.e., seeking to "reform" the economy (which is "economically correct" speak for using the state to break working

class militancy) then there are some preconditions required before they force their populations down the road to (private) serfdom. They will have to triple unemployment in under three years and have such record levels last over a decade, provoke the deepest recession since the 1930s, oversee the destruction of the manufacturing sector and use the powers of the state to break the mass protests and strikes their policies will provoke. Whether they are successful depends on the willingness of working class people to stand up for their liberties and rights and so impose, from the streets, the changes that really needed — changes that politicians will not, indeed cannot, achieve.

Nor should it be forgotten that here are many European countries with around the same, or lower, official unemployment rates as the UK with much less "flexible" labour markets. Taking the period 1983 to 1995, we find that around 30 per cent of the population of OECD Europe lived in countries with average unemployment rates lower than the USA and around 70 per cent in countries with lower unemployment than Canada (whose wages are only slightly less flexible than the USA). Furthermore, the European countries with the lowest unemployment rates were not noted for their labour market flexibility (Austria 3.7%, Norway 4.1%, Portugal 6.4%, Sweden 3.9% and Switzerland 1.7%). Britain, which probably had the most flexible labour market had an average unemployment rate higher than half of Europe. And the unemployment rate of Germany is heavily influenced by areas which were formally in East Germany. Looking at the former West German regions only, unemployment between 1983 and 1995 was 6.3%, compared to 6.6% in the USA (and 9.8% in the UK). This did not change subsequently. There are many regulated European countries with lower unemployment than the USA (in 2002, 10 of 18 European countries had lower unemployment rates). Thus:

> *"Often overlooked in the 1990s in the rush to embrace market fundamentalism and to applaud the American model was the fact that several European countries with strong welfare states consistently reported unemployment rates well below that of the United States ... At the same time, other European welfare sates, characterised by some of the lowest levels of wage inequality and the highest levels of social protection in the developed world, experienced substantial declines in unemployment over the 1990s, reaching levels that are now below that of the United States."* [David R. Howell, *"Conclusion"*, pp. 310–43, **Op. Cit.**, p. 310]

As such, it is important to remember that *"the empirical basis"* of the neo-liberal OECD-IMF orthodoxy is *"limited."* [Howell, **Op. Cit.**, p. 337] In fact, the whole "Europe is in a state of decline" narrative which is used to justify the imposition of neo-liberal reforms there is better understood as the corporate media's clever ploy to push Europe into the hands of the self-destructing neo-liberalism that is slowly taking its toll on Britain and America rather than a serious analysis of the real situation there.

Take, for example, the issue of high youth unemployment in many European countries which reached international awareness during the French anti-CPE protests in 2006. In fact, the percentage of prime-age workers (25–54) in employment is pretty similar in "regulated" France, Germany and Sweden as in "flexible" America and Britain (it is much higher for women in Sweden). However, there are significant differences in youth employment rates and this suggests where the apparent unemployment problem lies in Europe. This problem is due to the statistical method used to determine the unemployment figures. The standard measure of unemployment

divides the number unemployed by the numbers unemployed plus employed. The flaw in this should be obvious. For example, assume that 90% of French youths are in education and of the remaining 10%, 5% are in work and 5% are unemployed. This last 10% are the "labour force" and so we would get a massive 50% unemployment rate but this is due to the low (5%) employment rate. Looking at the youth population as a whole, only 5% are actually unemployed. [David R. Howell, *"Introduction"*, pp. 3–34, **Op. Cit.**, pp. 13–14] By the standard measure, French males age 15–24 had an unemployment rate of 20.8% in 2007, as compared to 11.8% in America. Yet this difference is mainly because, in France (as in the rest of Europe), there are many more young males not in the labour force (more are in school and fewer work part time while studying). As those who are not in the labour market are not counted in the standard measure, this gives an inflated value for youth unemployment. A far better comparison would be to compare the number of unemployed divided by the population of those in the same age group. This results in the USA having a rate of 8.3% and France 8.6%.

Another source of the "decline" of Europe is usually linked to lower GDP growth over the past few years compared to countries like Britain and the USA. Yet this perspective fails to take into account internal income distribution. Both the USA and UK are marked by large (and increasing) inequality and that GDP growth is just as unequally distributed. In America, for example, most of GDP growth since the 1980s has been captured by the top 5% of the population while median wages have been (at best) flat. Ignoring the enrichment of the elite in the USA and UK would mean that GDP growth would be, at least for the bulk of the population, better in Europe. This means that while Europe may have grown more slowly, it benefits more than just the ruling class. Then there are such factors as poverty and social mobility. Rates of poverty are much worse in the neo-liberal countries, while social mobility has fallen in the US and UK since the 1980s. There are less poor people in Europe and they stay in poverty for shorter periods of time compared to America and Britain.

Moreover, comparing Europe's income or GDP per person to the U.S. fails to take into account the fact that Europeans work far less than Americans or British people. So while France may have lagged America in per capita income in 2007 ($30,693 to $43,144), it cannot be said that working class people are automatically worse off as French workers have a significantly shorter working week and substantially more holidays. Less hours at work and longer holidays may impact negatively on GDP but only an idiot would say that this means the economy is worse, never mind the quality of life. Economists, it should be remembered, cannot say that one person is worse off than another if she has less income due to working fewer hours. So GDP per capita may be higher in the US, but only because American workers work more hours and **not** because they are more productive. Like other Europeans, the French have decided to work less and enjoy it more. So it is important to remember that GDP is not synonymous with well-being and that inequality can produce misleading per capita income comparisons.

A far better indicator of economic welfare is productivity. It is understandable that this is not used as a measure when comparing America to Europe as it is as high, or higher, in France and other Western European countries as it is in the US (and much higher than in the UK where low wages and long hours boost the figure). And it should be remembered that rising productivity in the US has not been reflecting in rising wages since 1980. The gains of productivity, in other words, have been accumulated by the boss class and not by the hard working American people (whose working week has steadily increased during that period). Moreover, France created more private sector jobs (+10% between 1996 and 2002, according to the OECD) than the UK

(+6%) or the US (+5%). Ironically, given the praise it receives for being a neo-liberal model, the UK economy barely created any net employment in the private sector between 2002 and 2007 (unemployment **had** dropped, but that was due to increased state spending which led to a large rise in public sector jobs).

Then there is the fact that some European countries **have** listened to the neo-liberal orthodoxy and reformed their markets but to little success. So it should be noted that *"there has in fact already been a very considerable liberalisation and reform in Europe,"* both in product and labour markets. In fact, during the 1990s Germany and Italy reformed their labour markets *"roughly ten times"* as much as the USA. The *"point is that reforms should have boosted productivity growth in Europe,"* but they did not. If regulation *"was the fundamental problem, some positive impact on labour productivity growth should have come already from the very substantial deregulation already undertaken. Deregulation should have contributed to an acceleration in productivity growth in Europe whereas actually productivity growth declines. It is hard to see how regulation, which was declining, could be the source of Europe's slowdown."* [Glyn, **Op. Cit.**, p. 144]

So, perhaps, "flexibility" is not the solution to unemployment some claim it is (after all, the lack of a welfare state in the 19th century did not stop mass unemployment nor long depressions occurring). Indeed, a strong case can be made (and has been by left-wing economists) that the higher open unemployment in Europe has a lot less to do with "rigid" structures and "pampered" citizens than it does with the fiscal and monetary austerity produced by the excessively tight monetary policies of the European Central Bank plus the requirements of the Maastricht Treaty and the *"Growth and Stability pact"* which aims to reduce demand expansion (i.e. wage rises) under the name of price stability (i.e., the usual mantra of fighting inflation by lowering wage increases). So, *"[i]n the face of tight monetary policy imposed first by the [German] Bundesbank and then by the European Central Bank ... it has been essential to keep wages moderate and budget deficits limited. With domestic demand severely constrained, many European countries experiences particularly poor employment growth in the mid-1990s."* [David R. Howell, *"Conclusion"*, **Op. Cit.**, p. 337] This has been essentially imposed by the EU bureaucrats onto the European population and as these policies, like the EU itself, has the support of most of Europe's ruling class such an explanation is off the political agenda.

So if "flexibility" does not result in lower unemployment, just what is it good for? The net results of American labour market "flexibility" were summarised by head the US Federal Reserve Alan Greenspan in 1997. He was discussing the late 1990s boom (which was, in fact, the product of the dot.com bubble rather than the dawn of a new era so many claimed at the time). He explained why unemployment managed to fall below the standard NAIRU rate without inflation increasing. In his words:

> *"Increases in hourly compensation ... have continued to fall far short of what they would have been had historical relationships between compensation gains and the degree of labour market tightness held ... As I see it, heightened job insecurity explains a significant part of the restraint on compensation and the consequent muted price inflation . .. The continued reluctance of workers to leave their jobs to seek other employment as the labour market has tightened provides further evidence of such concern, as does the tendency toward longer labour union contracts ... The low level of work stoppages of recent years also attests to concern about job security ... The continued decline in the share of the private workforce in labour unions has likely made wages more responsive*

> *to market forces ... Owing in part to the subdued behaviour of wages, profits and rates of return on capital have risen to high levels."* [quoted by Jim Stanford, *"Testing the Flexibility Paradigm: Canadian Labor Market Performance in International Context,"* pp. 119–155, **Fighting Unemployment**, David R. Howell (ed.), pp. 139–40]

Under such circumstances, it is obvious why unemployment could drop and inflation remain steady. Yet there is a massive contradiction in Greenspan's account. As well as showing how keen the Federal Reserve investigates the state of the class struggle, ready to intervene when the workers may be winning, it also suggests that flexibility works just one way:

> *"Some of the features highlighted by Greenspan reflect precisely a **lack** of flexibility in the labour market: a lack of response of compensation to tight labour markets, a reluctance of workers to leave their jobs, and the prevalence of long-term contracts that lock employment arrangements for six or more years at a time. And so Greenspan's portrayal of the unique features of the US model suggests that something more than flexibility is the key ingredient at work — or at least that 'flexibility' is being interpreted once again from an unbalanced and one-sided perspective. It is, rather, a high degree of labour market **discipline** that seems to be the operative force. US workers remain insecure despite a relatively low unemployment rate, and hence compensation gains ... were muted. This implies a consequent redistribution of income from labour to capital ... Greenspan's story is more about **fear** than it is about flexibility — and hence this famous testimony has come to be known as Greenspan's 'fear factor' hypothesis, in which he concisely described the importance of labour market discipline for his conduct of monetary policy."* [Jim Stanford, **Op. Cit.**, p. 140]

So while this attack on the wages, working conditions and social welfare is conducted under the pre-Keynesian notion of wages being *"sticky"* downwards, the underlying desire is to impose a "flexibility" which ensures that wages are *"sticky"* **upwards.** This suggests a certain one-sidedness to the "flexibility" of modern labour markets: employers enjoy the ability to practice flexpoilation but the flexibility of workers to resist is reduced.

Rather than lack of "flexibility," the key factor in explaining high unemployment in Europe is the anti-inflationary policies of its central banks, which pursue high interest rates in order to "control" inflation (i.e. wages). In contrast, America has more flexibility simply due to the state of the working class there. With labour so effectively crushed in America, with so many workers feeling they cannot change things or buying into the individualistic premises of capitalism thanks to constant propaganda by business funded think-tanks, the US central bank can rely on job insecurity and ideology to keep workers in their place in spite of relatively lower official unemployment. Meanwhile, as the rich get richer many working class people spend their time making ends meet and blaming everyone and everything but their ruling class for their situation (*"US families must work even more hours to achieve the standard of living their predecessors achieved 30 years ago."* [David R. Howell, *"Conclusion"*, **Op. Cit.**, p. 338]).

All this is unsurprising for anarchists as we recognise that "flexibility" just means weakening the bargaining power of labour in order to increase the power and profits of the rich (hence the expression ***"flexploitation"***!). Increased "flexibility" has been associated with **higher,** not lower unemployment. This, again, is unsurprising, as a "flexible" labour market basically means

one in which workers are glad to have any job and face increased insecurity at work (actually, ***"insecurity"*** would be a more honest word to use to describe the ideal of a competitive labour market rather than *"flexibility"* but such honesty would let the cat out of the bag). In such an environment, workers' power is reduced meaning that capital gets a larger share of the national income than labour and workers are less inclined to stand up for their rights. This contributes to a fall in aggregate demand, so increasing unemployment. In addition, we should note that "flexibility" may have little effect on unemployment (although not on profits) as a reduction of labour's bargaining power may result in **more** rather than less unemployment. This is because firms can fire "excess" workers at will, increase the hours of those who remain and stagnating or falling wages reduces aggregate demand. Thus the paradox of increased "flexibility" resulting in higher unemployment is only a paradox in the neo-classical framework. From an anarchist perspective, it is just the way the system works as is the paradox of overwork and unemployment occurring at the same time.

So while "free market" economics protrays unions as a form of market failure, an interference with the natural workings of the market system and recommend that the state should eliminate them or ensure that they are basically powerless to act, this simply does not reflect the real world. Any real economy is marked by the economic power of big business (in itself, according to neo-classical economics, a distortion of the market). Unless workers organise then they are in a weak position and will be even more exploited by their economic masters. Left-wing economist Thomas I. Palley presents the correct analysis of working class organisation when he wrote:

> *"The reality is that unions are a correction of market failure, namely the massive imbalance of power that exists between individual workers and corporate capital. The importance of labour market bargaining power for the distribution of income, means that unions are a fundamental prop for widespread prosperity. Weakening unions does not create a 'natural' market: it just creates a market in which business has the power to dominate labour.*
>
> *"The notion of perfect natural markets is built on the assumption that market participants have no power. In reality, the process of labour exchange is characterised not only by the presence of power, but also by gross inequality of power. An individual worker is at a great disadvantage in dealing with large corporations that have access to massive pools of capital and can organise in a fashion that renders every individual dispensible ... Unions help rectify the imbalance of power in labour markets, and they therefore correct market failure rather than causing it."* {**Op. Cit.**, pp. 36–7]

The welfare state also increases the bargaining power of workers against their firms and limits the ability of firms to replace striking workers with scabs. Given this, it is understandable why bosses hate unions and any state aid which undermines their economic power. Thus the *"hallmark"* of the neo-liberal age *"is an economic environment that pits citizen against citizen for the benefit of those who own and manage"* a country. [**Op. Cit**, p. 203]

And we must add that whenever governments have attempted to make the labour market *"fully competitive"* it has either been the product of dictatorship (e.g. Chile under Pinochet) or occurred at the same time as increased centralisation of state power and increased powers for the police and employers (e.g. Britain under Thatcher, Reagan in the USA). This is the agenda which is proscribed for Western Europe. In 2006, when successful street protests stopped a proposed

labour market reform in France (the CPE), one American journalist, Elaine Sciolino, complained that *"the government seems to fear its people; the people seem to fear change."* [**New York Times**, March 17 2006] Such are the contradictions of neo-liberalism. While proclaiming the need to reduce state intervention, it requires increased state power to impose its agenda. It needs to make people fear their government and fear for their jobs. Once that has been achieved, then people who accept "change" (i.e. the decisions of their economic, social and political bosses) without question. That the French people do not want a British or American style labour market, full of low-wage toilers who serve at the boss's pleasure should not come as a surprise. Nor should the notion that elected officials in a supposed democracy are meant to reflect the feelings of the sovereign people be considered as unusual or irrational.

The anti-democratic nature of capitalist "flexiblity" applies across the world. Latin American Presidents trying to introduce neo-liberalism into their countries have had to follow suit and *"ride roughshod over democratic institutions, using the tradition Latin American technique of governing by decree in order to bypass congressional opposition... Civil rights have also taken a battering. In Bolivia, the government attempted to defuse union opposition ... by declaring a state of siege and imprisoning 143 strike leaders... In Colombia, the government used anti-terrorist legislation in 1993 to try 15 trade union leaders opposing the privatisation of the state telecommunications company. In the most extreme example, Peru's Alberto Fujimori dealt with a troublesome Congress by simply dissolving it ... and seizing emergency powers."* [Duncan Green, **The Silent Revolution**, p. 157]

This is unsurprising. People, when left alone, will create communities, organise together to collectively pursue their own happiness, protect their communities and environment. In other words, they will form groups, associations and unions to control and influence the decisions that affect them. In order to create a "fully competitive" labour market, individuals must be atomised and unions, communities and associations weakened, if not destroyed, in order to fully privatise life. State power must be used to disempower the mass of the population, restrict their liberty, control popular organisations and social protest and so ensure that the free market can function without opposition to the human suffering, misery and pain it would cause. People, to use Rousseau's evil term, *"must be forced to be free."* And, unfortunately for neo-liberalism, the countries that tried to reform their labour market still suffered from high unemployment, plus increased social inequality and poverty and where still subject to the booms and slumps of the business cycle.

Of course, bosses and the elite are hardly going to present their desire for higher profits and more power in those terms. Hence the need to appear concerned about the fate of the unemployed. As such, it is significant, of course, that right-wing economists only seem to become concerned over unemployment when trade unions are organising or politicians are thinking of introducing or raising the minimum wage. Then they will talk about how these will raise unemployment and harm workers, particularly those from ethnic minorities. Given that bosses always oppose such policies, we must conclude that they are, in fact, seeking a situation where there is full employment and finding willing workers is hard to do. This seems, to say the least, an unlikely situation. If bosses were convinced that, for example, raising the minimum wage would increase unemployment rather than their wages bill they would be supporting it wholeheartedly as it would allow them to pressurise their workers into labouring longer and harder to remain in employment. Suffice to say, bosses are in no hurry to see their pool of wage slaves drained and so their opposition to trade unions and minimum wages are the product of need for profits rather than some concern for the unemployed.

This applies to family issues as well. In its support for "free markets" you can get a taste of the schizophrenic nature of the conservative right's approach to family values. On the one hand, they complain that families do not spend enough time together as they are under financial pressure and this results both parents going out to work and working longer hours. Families will also suffer because businesses do not have to offer paid maternity leave, paid time off, flexitime, paid holidays, or other things that benefit them. However, the right cannot bring themselves to advocate unions and strike action by workers (or state intervention) to achieve this. Ironically, their support for "free market" capitalism and "individualism" undermines their support for "family values." Ultimately, that is because profits will always come before parents.

All this is unsurprising as, ultimately, the only real solution to unemployment and overwork is to end wage labour and the liberation of humanity from the needs of capital. Anarchists argue that an economy should exist to serve people rather than people existing to serve the economy as under capitalism. This explains why capitalism has always been marked by a focus on "what the economy wants" or "what is best for the economy" as having a capitalist economy always results in profit being placed over people. Thus we have the paradoxical situation, as under neo-liberalism, where an economy is doing well while the bulk of the population are not.

Finally, we must clarify the anarchist position on state welfare (we support working class organisations, although we are critical of unions with bureaucratic and top-down structures). As far as state welfare goes, anarchists do not place it high on the list of things we are struggling against (once the welfare state for the rich has been abolished, then, perhaps, we will reconsider that). As we will discuss in section D.1.5, anarchists are well aware that the current neo-liberal rhetoric of "minimising" the state is self-serving and hides an attack on the living standards of working class people. As such, we do not join in such attacks regardless of how critical we may be of aspects of the welfare state for we seek genuine reform from below by those who use it rather than "reform" from above by politicians and bureaucrats in the interests of state and capital. We also seek to promote alternative social institutions which, unlike the welfare state, are under working class control and so cannot be cut by decree from above. For further discussion, see sections J.5.15 and J.5.16.

C.9.4 Is unemployment voluntary?

Here we point out another aspect of the free market capitalist "blame the workers" argument, of which the diatribes against unions and workers' rights highlighted above is only a part. This is the assumption that unemployment is not involuntary but is freely chosen by workers. As Nicholas Kaldor put it, for "free market" economists involuntary employment *"cannot exist because it is excluded by the assumptions."* [**Further Essays on Applied Economics**, p. x] Many neo-classical economists claim that unemployed workers calculate that their time is better spent searching for more highly paid employment (or living on welfare than working) and so desire to be jobless. That this argument is taken seriously says a lot about the state of modern capitalist economic theory, but as it is popular in many right-wing circles, we should discuss it.

David Schweickart notes, these kinds of arguments ignore *"two well-established facts: First, when unemployment rises, it is layoffs, not [voluntary] quits, that are rising. Second, unemployed workers normally accept their first job offer. Neither of these facts fits well with the hypothesis that most unemployment is a free choice of leisure."* [**Against Capitalism**, p. 108] When a company

fires a number of its workers, it can hardly be said that the sacked workers have calculated that their time is better spent looking for a new job. They have no option. Of course, there are numerous jobs advertised in the media. Does this not prove that capitalism always provides jobs for those who want them? Hardly, as the number of jobs advertised must have some correspondence to the number of unemployed and the required skills and those available. If 100 jobs are advertised in an areas reporting 1,000 unemployed, it can scarcely be claimed that capitalism tends to full employment. This hardly gives much support to the right-wing claim that unemployment is "voluntary" and gives an obvious answer to right-wing economist Robert Lucas's quest *"to explain why people allocate time to ... unemployment, we need to know why they prefer it to all other activities."* [quoted by Schweickart, **Op. Cit.**, p. 108] A puzzle indeed! Perhaps this unworldly perspective explains why there has been no real effort to verify the assertion that unemployment is "voluntary leisure."

Somewhat ironically, given the desire for many on the right to deny the possibility of involuntary unemployment this perspective became increasingly influential at precisely the same time as the various theories of the so-called "natural rate" of unemployment did (see section C.9). Thus, at the same time as unemployment was proclaimed as being a "voluntary" choice economics was also implicitly arguing that this was nonsense, that unemployment **is** an essential disciplinary tool within capitalism to keep workers in their place (sorry, to fight inflation).

In addition, it is worthwhile to note that the right-wing assumption that higher unemployment benefits and a healthy welfare state promote unemployment is not supported by the evidence. As a moderate member of the British Conservative Party notes, the *"OECD studied seventeen industrial countries and found no connect between a country's unemployment rate and the level of its social-security payments."* [**Dancing with Dogma**, p. 118] Moreover, the economists David Blanchflower and Andrew Oswald *"Wage Curve"* for many different countries is approximately the same for each of the fifteen countries they looked at. This also suggests that labour market unemployment is independent of social-security conditions as their "wage curve" can be considered as a measure of wage flexibility. Both of these facts suggest that unemployment is involuntary in nature and cutting social-security will **not** affect unemployment.

Another factor in considering the nature of unemployment is the effect of decades of "reform" of the welfare state conducted in both the USA and UK since 1980. During the 1960s the welfare state was far more generous than it was in the 1990s and unemployment was lower. If unemployment was "voluntary" and due to social-security being high, we would expect a decrease in unemployment as welfare was cut (this was, after all, the rationale for cutting it in the first place). In fact, the reverse occurred, with unemployment rising as the welfare state was cut. Lower social-security payments did not lead to lower unemployment, quite the reverse in fact.

Faced with these facts, some may conclude that as unemployment is independent of social security payments then the welfare state can be cut. However, this is not the case as the size of the welfare state does affect the poverty rates and how long people remain in poverty. In the USA, the poverty rate was 11.7% in 1979 and rose to 13% in 1988, and continued to rise to 15.1% in 1993. The net effect of cutting the welfare state was to help **increase** poverty. Similarly, in the UK during the same period, to quote the ex-Thatcherite John Gray, there *"was the growth of an underclass. The percentage of British (non-pensioner) households that are wholly workless — that is, none of whose members is active in the productive economy — increased from 6.5 per cent in 1975 to 16.4 per cent in 1985 and 19.1 per cent in 1994... Between 1992 and 1997 there was a 15 per cent increase in unemployed lone parents... This dramatic growth of an underclass occurred as a direct*

consequence of neo-liberal welfare reforms, particularly as they affected housing." [**False Dawn**, p. 30] This is the opposite of the predictions of right-wing theories and rhetoric.

As Gray correctly argues, the *"message of the American [and other] New Right has always been that poverty and the under class are products of the disincentive effects of welfare, not the free market."* He goes on to note that it *"has never squared with the experience of the countries of continental Europe where levels of welfare provision are far more comprehensive than those of the United States have long co-existed with the absence of anything resembling an American-style underclass. It does not touch at virtually any point the experience of other Anglo-Saxon countries."* He points to the example of New Zealand where *"the theories of the American New Right achieved a rare and curious feat — self-refutation by their practical application. Contrary to the New Right's claims, the abolition of nearly all universal social services and the stratification of income groups for the purpose of targeting welfare benefits selectively created a neo-liberal poverty trap."* [**Op. Cit.**, p. 42]

So while the level of unemployment benefits and the welfare state may have little impact on the level of unemployment (which is to be expected if the nature of unemployment is essentially involuntary), it **does** have an effect on the nature, length and persistency of poverty. Cutting the welfare state increases poverty and the time spent in poverty (and by cutting redistribution, it also increases inequality).

If we look at the relative size of a nation's social security transfers as a percentage of Gross Domestic Product and its relative poverty rate we find a correlation. Those nations with a high level of spending have lower rates of poverty. In addition, there is a correlation between the spending level and the number of persistent poor. Those nations with high spending levels have more of their citizens escape poverty. For example, Sweden has a single-year poverty rate of 3% and a poverty escape rate of 45% and Germany has figures of 8% and 24% (and a persistent poverty rate of 2%). In contrast, the USA has figures of 20% and 15% (and a persistent poverty rate of 42%).

Given that a strong welfare state acts as a kind of floor under the wage and working conditions of labour, it is easy to see why capitalists and the supporters of "free market" capitalism seek to undermine it. By undermining the welfare state, by making labour "flexible," profits and power can be protected from working people standing up for their rights and interests. Little wonder the claimed benefits of "flexibility" have proved to be so elusive for the vast majority while inequality has exploded. The welfare state, in other words, reduces the attempts of the capitalist system to commodify labour and increases the options available to working class people. While it did not reduce the need to get a job, the welfare state did undermine dependence on any particular employee and so increased workers' independence and power. It is no coincidence that the attacks on unions and the welfare state was and is framed in the rhetoric of protecting the *"right of management to manage"* and of driving people back into wage slavery. In other words, an attempt to increase the commodification of labour by making work so insecure that workers will not stand up for their rights.

Unemployment has tremendous social costs, with the unemployed facing financial insecurity and the possibility of indebtedness and poverty. Many studies have found that unemployment results in family distribution, ill health (both physical and mental), suicide, drug addition, homelessness, malnutrition, racial tensions and a host of other, negative, impacts. Given all this, given the dire impact of joblessness, it strains belief that people would **choose** to put themselves through it. The human costs of unemployment are well documented. There is a stable correlation between rates of unemployment and the rates of mental-hospital admissions. There is a connec-

tion between unemployment and juvenile and young-adult crime. The effects on an individual's self-respect and the wider implications for their community and society are massive. As David Schweickart concludes the *"costs of unemployment, whether measured in terms of the cold cash of lost production and lost taxes or in the hotter units of alienation, violence, and despair, are likely to be large under Laissez Faire."* [**Op. Cit.**, p. 109]

Of course, it could be argued that the unemployed should look for work and leave their families, home towns, and communities in order to find it. However, this argument merely states that people should change their whole lives as required by "market forces" (and the wishes — *"animal spirits,"* to use Keynes' term — of those who own capital). In other words, it just acknowledges that capitalism results in people losing their ability to plan ahead and organise their lives (and that, in addition, it can deprive them of their sense of identity, dignity and self-respect as well), portraying this as somehow a requirement of life (or even, in some cases, noble).

It seems that capitalism is logically committed to viciously contravening the very values upon which it claims it be built, namely the respect for the innate worth and separateness of individuals. This is hardly surprising, as capitalism is based on reducing individuals to the level of another commodity (called "labour"). To requote Karl Polanyi:

> *"In human terms such a postulate [of a labour market] implied for the worker extreme instability of earnings, utter absence of professional standards, abject readiness to be shoved and pushed about indiscriminately, complete dependence on the whims of the market. [Ludwig Von] Mises justly argued that if workers 'did not act as trade unionists, but reduced their demands and changed their locations and occupations according to the labour market, they would eventually find work.' This sums up the position under a system based on the postulate of the commodity character of labour. It is not for the commodity to decide where it should be offered for sale, to what purpose it should be used, at what price it should be allowed to change hands, and in what manner it should be consumed or destroyed."* [**The Great Transformation**, p. 176]

However, people are **not** commodities but living, thinking, feeling individuals. The "labour market" is more a social institution than an economic one and people and work more than mere commodities. If we reject the neo-liberals' assumptions for the nonsense they are, their case fails. Capitalism, ultimately, cannot provide full employment simply because labour is **not** a commodity (and as we discussed in section C.7, this revolt against commodification is a key part of understanding the business cycle and so unemployment).

C.10 Is "free market" capitalism the best way to reduce poverty?

It is far to say that supporters of "free-market" capitalism make the claim that their system not only benefits everyone, but especially working class people (indeed, the very poorest sectors of society). This was the position during the so-called "anti-globalisation" protests at the turn of the 21st century, when the issue of global inequality and poverty was forced to the front of politics (for a time). In response, the likes of the Economist portraying itself and the big businesses seeking lower costs and higher profits as the real champions of the poor (particularly in the third world).

In this perspective growth is the key to reducing (absolute) poverty rather than, say, redistribution, struggle for reforms by means of direct action and popular self-organisation or (heaven forbid!) social revolution. The logic is simple. Economic growth of 1% per year will double an economy in 70 years, while 3% does so in just over 23 years and 5% growth takes a mere 15 years. Thus the standard right-wing argument is that we should promote "free market" capitalism as this is a growth machine par excellence. In fact, any form of redistribution or social struggle is considered counter-productive in this viewpoint as it is harms overall growth by either scaring away capital from a country or blunts the incentives of the elite to strive to "produce" more wealth. Over time, wealth will (to coin a well-worn phrase) "trickle down" from the wealthy to the many.

What to make of this claim? Again, it does contain an element of truth. As capitalism is a "grow or die" economy (see section D.4), obviously the amount of wealth available to society increases for **all** as the economy expands. So the poor will, in general, be better off **absolutely** in any growing economy (at least in economic terms). This was the case under Soviet state capitalism as well: the poorest worker in the 1980s was obviously far better off economically than one in the 1920s. As such, what counts is **relative** differences between classes and periods within a growth economy. Given the thesis that free-market capitalism will benefit the poor **especially,** we have to ask: is this actually true and, of so, can the other classes benefit equally well? This means we need to ask whether the assumption to concentrate on **absolute** poverty or inequality rather that **relative** values makes more sense. Similarly, we need to question the assumption that "free market" capitalism is the growth machine its supporters assert and whether the benefits of the growth it produces does, in fact, "trickle down." Questioning these assumptions is essential.

The key problem with evaluating such claims is, of course, the fact that an economy, like a society, is a very complex system which evolves through time. There are few opportunities for "controlled experiments" with which to test differing analyses and theories. This means that any attempt to analysis these claims must be based on looking at different countries and time periods in order to contrast them. Thus we will look at the same countries at different periods (the more social democratic post-war period to the more neo-liberal post-1980s and more neo-liberal countries with those in which free-market "reforms" have not been pushed as far). As we will

show, the track record of "free(r) market" capitalism has been, at best, distinctly unimpressive and, at worse, significantly poorer.

However, this appeal to reality will not convince many supporters of capitalism. For the true believer in the capitalist market, this kind of evidence does not create doubt in their ideas, only the conviction that the experiments did not go far enough. Thus, for the ideologue, freer market capitalism handily tell us nothing about free market capitalism – unless, of course, they can be portrayed as an "economic miracle" (regardless of the facts). For "advocates of the market," the sanctity of private property and private contracts is held as an inalienable natural right. To refute charges that this Will simply benefit the already wealthy they spend much time arguing that unfettered capitalism is also the only economic system which will produce the greatest benefit for the greatest number. In other words, that absolute capitalist markets and private property rights coincides **exactly** with personal interest. A clearer example of wishful thinking could hardly be asked for. Yet it is not hard to see what function this plays. Few people will be persuaded by their assumptions on property and markets, given the common sense objection that free exchange between the weak and the strong will, obviously, benefit the latter more. Yet more people may be convinced to go along with "free market" proposals by considerations of economic efficiency and the hope that the poor will see their living standards improve over time (particularly if "experts" with economics degrees are involved as people often assume they know what they are talking about).

Now, the empirical track-record of what is called capitalism is decidedly mixed. There are three courses of action open to the market advocate. The first is to embrace the property-rights argument wholeheartedly, and say that we should adopt pure capitalism even if it hurts a large percentage of the population because it is the right thing to do. This would be unconvincing for most people as economic austerity and serf-like working conditions in return for protecting the power and property rights of the few who actually own the wealth would find few (sane or disinterested) supporters. Then it could be argues that the empirical track-record of "actually existing" capitalism should be ignored in favour of economic ideology as reality is simply not pure enough. That, again, would be unconvincing for the obvious reason that we would be being asked to have faith in the validity of economics (as we have noted before, this would not be wise given its surreal assumptions and non-scientific nature). This would have one positive side-effect, as doing this would mean that that "market advocates" would have to stop claiming that all the good things we have are due to something (capitalism) that does not exist. So that option is unlikely to have many supporters or convince many. Finally, it could be argued that contrary to appearances capitalism really **does** benefit everyone. While this option is not compatible with intellectual honesty, it is by the far the most popular within the ranks of "market advocates." This is undoubtedly because the wealth and corporations are always willing to pay well for people happy to defend their power and profits against the reality they produce.

So what of the claim that capitalism is the best way to help them poor, that capitalism will especially benefit working class people? To make sense (i.e. to be more than simply a rhetoric assertion), it must rest on two basic notions. Firstly, that "free market" capitalism will have a higher growth rate than alternative forms of that system (such state capitalism or regulated capitalism). Secondly, that inequality will be less and share of wages in the national income more in "free market" than in other systems (this must be the case, otherwise "free market" reforms do not **especially** help working class people). We will discuss the first claim here, before discussing the track record of neo-liberalism in the next section followed a discussion of the history of

capitalism and free trade in section C.10.2. We then analysis the failings of the equality defence in section C.10.3 before ending with a discussion on the limitations of looking at income and growth in evaluating how capitalism benefits the working class (section C.10.4). As we show, there is substantial evidence to suggest that the standard defences of "free market" capitalism are not up to much. Let us be clear and state there is generally a positive correlation between economic growth and the income of the poor. We are not attacking economic growth as such but rather asking whether neo-liberalism's own defence actually stands up.

Looking at the historical picture, then, yes, capitalism does produce much more economic growth than previous social systems such as slavery and feudalism. However, defending capitalism on the basis that it better than a slave based economy is hardly a strong foundation (particularly when capitalists are happy to locate to dictatorships which have slave-like labour conditions). The more substantive argument is based on the assumption that "free market" capitalism produces faster economic growth than other forms of that system and that growth of the economic pie is more important than how it is distributed. In other words, the same (or even smaller) share of a bigger pie in the future is better than a bigger share of the existing pie. This means we need to look at the economic performance of capitalist economies, comparing the neoliberal ones to regulated social democratic ones. We would expect the former to be performing significantly better than the latter in addition to being more dynamic **after** reforms than before. The reality hardly matches the claims.

The attempt to compare and contrast economies can be found in, say, the works of Milton Friedman to show the superiority of his beloved "free market" capitalism. However, as economist Thomas Balogh notes, to prove that *"socialistic policies"* had crippled Britain's economic growth since 1945 Friedman began *"by misrepresenting the size of the public sector ... he chooses a ratio which, though irrelevant, gives spurious support to his thesis."* Equally, Friedman compares post-war Britain to post-war Japan and West Germany, conveniently failing to note that both hardly had minimal states (for example, West Germany had approximately the same level of state spending as the UK and Japan had the social planning of its Ministry of Industry and Trade). As Balogh notes, the *"consequences of socialism are then illustrated by reference to the weak economic performance of Britain in comparison with Japan and Germany since 1945. This is an odd comparison to choose when judging the impact of 'socialism' on Britain. Surely what we need is to compare the British performance during a period of sustained boom under 'Friedmanism', e.g. in the period 1900–13, with the record under 'socialism,' say 1945–75."* However, to do that would mean noting that the average annual rate of growth per head of GNP between 1900 and 1913 was a mere 0.2%, compared to 2.2% between 1948 and 1975. Even taking other starting dates (such as the slump year 1893) produces a smaller rate of growth that the post-war period. [**The Irrelevance of Conventional Economics**, p. 181]

Nor do things get better when we look at the Friedman influenced Thatcher government which turned the UK into a poster-child for neo-liberalism. Here, yet again, the facts do not really support the claims in favour of "free(r) markets". As Ian Gilmore, a moderate conservative MP at the time, points out *"[d]uring the Thatcher years growth was lower than in any period of similar length since the war."* He notes *"the vast discrepancy between what the Thatcherites claimed for their policies and what actually happened."* Unsurprisingly, there was an *"unparalleled rise in poverty,"* as *"relative poverty grew significantly during the 1980s,"* from a nearly a tenth in 1979 to nearly a fifth in 1987. In 1979, the poorest fifth had just under 10% of post-tax income and the richest fifth had 37%. Ten years later, this had fallen to 7% and risen to 43% (*"The rich got rich, and the poor*

got poorer"). *"Not only did the poor not share in the limited growth that took place between 1979 and 1990, the poor were relatively poorer than they had been on 1979."* [**Dancing with Dogma**, pp. 83–4, p. 87, p. 142, p. 138 and p. 172] we will return to this issue in section C.10.3.

Things did not get any better in the 1990s. Growth in GDP per capita was steadily decreased in the UK, from 2.3% per annum between 1950 and 1970, to 2.1% between 1970 and 1979 and to 1.9% between 1979 and 1997. For the US, a similar process was at work (from 2.0%, to 2.3% to 1.5%). At best, it can be said that the growth rates of Germany and France between 1979 and 1997 were worse (at 1.7% and 1.4%, respectively). However, before 1979 their growth was much higher (at 5.1%/4.5% between 1950 and 1970 and 2.8%/3.3% between 1970 and 1979, respectively). Growth in labour productivity per hour worked is hardly impressive, being 2.3% between 1979 and 1997 compared to 0.8% for the US, 2.4% for France and 2.2% for Germany. This is well below the 1950–1970 figure of 3.0% and only slightly better than 2.1% during the strike bound 1970s. In 1979, the UK was 9th of 15 EU members in OECD measures of prosperity. By 1995, it was 11th before rising back to 10th in 1999. In summary, *"the idea that Britain has a clearly superior economy to the continent is a delusion."* [Adair Turner, **Just Capital: The Liberal Economy**, p. 200, pp. 199–200 and p. 196]

The best that can be said of Thatcherism is that during the 1980s, *"Britain put an end to three decades of relative decline and caught up some lost ground versus continental leaders ... But Britain's absolute productivity and prosperity performance is still below the European average and its pace of catch-up has been slow."* Combine this with longer working hours compared to the rest of Europe, we have a situation in the UK where *"too many companies relying on low wages and a flexible labour market to remain competitive, rather than on investment in capital equipment and technique."* Looking at the historical picture, it should be stressed that the UK has been in decline since the 1880s, when it remained the only developed nation to embrace free trade and that between the 1950s and 1970s, the *"absolute growth rates per capita .. . compared well with the inter-war years and with the period of British leadership in the nineteenth century."* This lack of success for neo-liberal reforms can also be seen in New Zealand. The economic results of its liberalisation project were just as poor. Between 1984–98 per capita income grew only about 5.4%, or 0.4% per annum, well below the EU average and one of the lowest rates of increase among the OECD countries. [Turner, **Op. Cit.**, p. 196, p. 212, p. 199 and p. 240fn] Needless to say, be cause the rich got richer and rebellious workers controlled, both the UK and New Zealand were proclaimed "economic miracles."

This lack of dynamism is not limited just to the UK or New Zealand. As left-wing economist Andrew Glyn notes, the *"fact that there was no general improvement in growth in the 1980s could be explained away by the fact that the ... policies ... were only picking up steam. But the real puzzle is the 15 years since 1990. Why [have these free market policies] ... failed to bring an increase in the growth rate."* In fact, growth per year has steadily fallen since 1973 with 1990–2004 the lowest rate yet for the USA, Europe and Japan. This applies to other economic indicators as well. *"The fact that output per head has been growing more slowly since 1990 than it did in the turbulent period 1973–9, never mind the Golden Age, must be a severe disappointment to those who believed that unleashing the free market would restore rapid growth."* He summarises the evidence by pointing out that *"economic performance overall has been unspectacular."* [**Capitalism Unleashed**, pp. 130–1 and p. 151]

As Chomsky summarises, *"neoliberal-style programs began to take shape in the 1970s"* and since then real wages *"for the majority have largely stagnated or declined ... the relatively weak benefits*

system has declines as well. Incomes are maintained only be extending working hours well beyond those in similar societies, while inequality has soared" (as has personal debt). Moreover, *"this is a vast change from the preceding quarter century, when economic growth was the highest on record for a protracted period and also egalitarian. Social indicators, which closely tracked economic growth until the mid-1970s, then diverged, declining to the level of 1960 by the year 200O."* [**Failed States**, p. 211]

The assumption is that producing free(r) markets and a pure(r) capitalism will result in higher growth and so rising living standards. *"So far,"* note two experts, *"the promises have not been realised. As trade and financial markets have been flung open, incomes have risen not faster, but slower. Equality among nations has not improved, with many of the poorest nations suffering an absolute decline in incomes. Within nations, inequality seems to have worsened ... the trend to towards more inequality."* In the two decades after 1980, *"overall income growth slowed dramatically."* For example, the rich countries saw annual per capita income growth fall from 4.8% (1965–80) to 1.4% (1980–95). Medium countries saw a fall from 3.8% to 3.1% (excluding China, this was 3.2% to 0.6% as China rose from 4.1% to 8.6%). For the poorest nations, there was a rise from 1.4% to 2.0% but this becomes 1.2% to 0.1% when India is excluded (India saw a rise from 1.5% to 3.2%). In fact, income dropped by -0.4% a year between 1980 and 1995 for the least developed countries (it had risen 0.4% a year between 1965 and 1980). *"In more advanced countries ... income growth was lower in the 1990s than in the 1980s. Over the entire post-1980 period, it was substantially below that of the 1960s and 1970s."* In America, for example, annual growth of per capita income has dropped from 2.3% between 1960–79, to 1.5% between 1979 and 1989 and 1.0% between 1989 and 1996 (per capita income growth up to 1998 was 1.4% per year, still less than the 1.6% per cent between 1973 and 1980 and 1980s and about half the growth over the 1960 to 1973 period). Given that income equality improved during the 1960s and 1970s, before worsening after 1980 for most countries, particularly the USA, this means that even these most increases flowed overwhelming to those at the top of the income hierarchy. In America, the working hours for a middle-class family has increased by 10.4% between 1979 and 1997. In other words, working class people are working more for less. In most advanced nations, there has *"not been a sizeable increase in poverty,"* the *"exceptions [being] the USA and the United Kingdom, where poverty grew, respectively, by 2.4 and 5.4 percentage points between 1979 and 1991."* [Jeff Faux and Larry Mishel, *"Inequality and the Global Economy"*, pp. 93–111, Will Hutton and Anthony Giddens (eds.), **On The Edge**, pp. 93–4, p. 96, p. 97, p. 98, p. 101, p. 102 and p. 100]

This lack of rise in growth is a definite feature of neo-liberalism. The promises of the "free market" capitalism have not borne fruit:

> *"Growth did not accelerate. It slowed down. During the 1960s, the average rate of growth of world GDP per capita was 3.5% per annum ... The average rate of growth of world GDP per capital was 2.1% per annum during the 1970s, 1.3% per annum during the 1980s and 1% per annum during the 1990s. This growth was more volatile compared with the past, particularly in the developing world. the growth was also unevenly distributed across countries ...*
>
> *"Economic inequalities have increased in the late twentieth century as the income gap between rich and poor countries, between rich and the poor in the world's population, as also between rich and poor people within countries, has widen. The ratio of GDP per capital in the richest country to GDP per capita in the poorest country of the world rose*

> *from 35:1 in 1950 to 42:1 in 1970 and 62:1 in 1990. The ratio of GDP per capita in the 20 richest countries to GDP per capita in the poorest 20 countries of the world rose from 54:1 during 1960–62 to 121:1 during 2000–20002. The income gap between people has also widened over time. The ratio of the average GNP per capita in the richest quintile of the world's population to the poorest quintile in the world's population rose from 31:1 in 1965 to 60:1 in 1990 and 74:1 in 1997 ... Income distribution within countries also worsened ... Between 1975 and 2000, the share of the richest 1% in gross income rose from 8% to 17% in the US, from 8.8% to 13.3% in Canada and from 6.1% to 13% in the UK."* [Deepak Nayyar, *"Globalisation, history and development: a tale of two centuries,"* pp. 137–159, **Cambridge Journal of Economics**, Vol. 30, No. 1, pp. 153–4 and p. 154]

In fact, between 1950 and 1973 there was a vastly superior economic performance compared to what came before and what came after. If laissez-faire capitalism would benefit "everyone" more than "really existing capitalism," the growth rate would be **higher** during the later period, which more closely approximated laissez faire. It is not. As such, we should always remember that if anything is proclaimed an "economic miracle" it is unlikely to actually be so, at least for the working class. Looking at the American triumphantism of the late 1990s, it was easy to forget that in the 1980s and early 1990s, despair at the US economy was commonplace. Then people looked to Japan, just as they had looked to Europe in the 1960s.

We must also note that there is a standard response by believers on "laissez-faire" capitalism when inconvenient facts are presented to them, namely to stress that we have not reached the market utopia yet and more reforms are required (*"a feature of hard-line free-market analysis [is] that when liberalisation does not work the reason is always timidity and the solution is obvious. Complete the job."* [Glyn, **Op. Cit.**, p. 143]). Another possible defence would be to stress that the results would have been worse if the reforms had not been implemented. These are, of course, possibilities but given the rhetoric used by the defenders of capitalism on the wonders and efficiency of free markets, it seems strange that making them freer would have such negative effects.

Looking at the history of capitalism, it appears that social-democratic capitalism, with strong unions and a welfare state, produces not only more growth but also more equitable growth (as one expert notes, *"[i]f the 'welfare state' were abolished and taxes reduced accordingly, society would become a great deal more unequal."* [John Hills, **Inequality and the State**, p. 195]). Movements to more laissez-faire capitalism has resulted not only in lower growth but also growth which accumulates in fewer hands (which makes sense considering the basic anarchist insight that a free exchange benefits the stronger of the two parties). As such, based on its own criteria (namely economic growth), then neo-liberalism has to be judged a failure. Do not get us wrong. It is possible to still advocate laissez-faire capitalism on ethical grounds (if that is the right word). It is simply doubtful that it will produce the boost in economic growth (or employment) that its advocates suggest. It may do, of course, as "actually existing" capitalism is still far from the pure system of the textbooks but it is significant that movements towards the ideal have produced **less** growth along with greater inequality and relative poverty.

This is **not** to suggest that anarchists support social-democratic capitalism rather than more laissez-faire forms. Far from it — we seek to end all forms of that system. However, it is significant that the more equal forms of capitalism based on strong and militant unions produced better results than "free(r) market" forms. This suggests that the standard right-wing argument that col-

lective organising and fighting to keep an increased share of the wealth we produce harms the overall economy and so harmful in the long run are deeply flawed. Instead, it is the **lack** of any struggle for equality and freedom that is correlated with bad overall economic performance. Of course, such struggles are a pain for the capitalist class. Rather than produce a *"road to serfdom,"* social-democracy created the full employment environment which produced a rebellious population. The move towards "free(r) markets" was a response to this social struggle, an attempt to enserf the population which has proven to be somewhat successful. As such, Kalecki's 1940s prediction we quoted in section B.4.4 has been proven correct: the ruling class would prefer social peace (i.e. obedience) rather than higher growth (particularly if they get to monopolise most of the gains of that lower growth).

Finally, we should note that there is a slight irony to see right-wingers saying that "pure(r)" capitalism would benefit the poor especially. This is because they usually reject the idea that aggregate economic statistics are a meaningful concept or that the government should collate such data (this is a particular feature of the "Austrian" school of economics). As such, it would be near impossible to determine if living standards had improved any faster than under the current system. Given the history of "actually existing" capitalism, it is probably wise that many "market advocates" do so. Moreover, any subjective evaluation, such as asking people, which resulted in a negative response would be dismissed out of hand as "envy." Ironically, for an ideology which says it bases itself on "subjective" evaluations, economists are always ready to ignore any which conflict with their ideas. Needless to say, even if it could be proven beyond doubt that "pure(r)" capitalism did **not** help the poor but rather enriched the wealthy then almost all "free market" capitalists would **not** change their ideas. This is because, for them, the outcomes of the market are hallowed and if they result in increased poverty then so be it. It just shows that the poor are lazy and not worth higher incomes. That they sometimes utilise the rhetoric of social concern simply shows that most people still have concern and solidarity for their fellows, a concern which capitalism has not managed to totally remove (much to the chagrin of the likes of von Hayek — see chapter 11 of Alan Haworth's **Anti-Libertarianism** for a short but relevant discussion of this).

C.10.1 Hasn't neo-liberalism benefited the world's poor?

Until the wave of so-called "anti-globalisation" protests (a more accurate term would be "global justice" protests) erupted in the late 1990s, there was no real need for the neo-liberal agenda to justify its performance. When opposition could not be ignored, then it had to be undermined. This lead to a host of articles and books justifying neo-liberalism in terms of it helping the world's poorest peoples. This has meant denying the reality of 30 years of neo-liberal reforms in favour of concentrating on absolute poverty figures.

This is understandable. As we discuss in the section C.10.4, absolute inequality and poverty is a good means of making discussion of the real issues meaningless. Moreover, as noted above, as capitalism must grow to survive wealth will tend to increase for all members of society over time. The real question is whether "free(r) markets increase or reduce growth rates and how they impact on relative levels of poverty and inequality. Given that the last few decades indicate how free(r) markets result in increased inequality, it is obvious why defenders of capitalism would seek to focus attention on absolute income. While denied by some, inequality has risen under

globalisation. Those who deny it usually do so because the doctrines of the powerful are at stake. Some, in spite of the evidence, are that world-wide economic inequality has fallen thanks to global capitalism.

At the forefront of such claims is **the Economist** magazine, which played its usual role of ideological cheerleader for the ruling class. Discussing *"Global economic inequality"*, the magazine argued that the claim that inequality has risen is false. Ironically, their own article refutes its own conclusions as it presented a graph which showed an upward relationship between economic growth from 1980 to 2000 and original income level for a large group of countries. This means that global economic inequality **has** increased — as they admit, this means *"that the poor are falling behind, and that cross-country inequality is getting worse."* [*"More or less equal?"*, **The Economist**, 11th March, 2004]

However, this conclusion is ideologically incorrect and so something must be done to achieve the correct position in order to defend capitalism against the anti-capitalist bias of reality. They did this by adding another chart which weights each point by population. This showed that two of the largest countries of their group, China and India, grew among the fastest. Using this data they make the claim that inequality has, in fact, fallen under neo-liberalism. Once you look at individuals rather than countries then the claim can be made that world-wide inequality has been falling under "free(r) market" capitalism. While an impressive piece of ideological obfuscation, the argument ignores changes **within** countries. The article states that *"average incomes in India and China are going up extremely rapidly"* but not every person receives the average. The average hides a lot. For example, 9 homeless people have an average income of £0 but add a multi-millionaire and the average income of the ten people is in the millions. On average, at the end of a game of poker everyone has the same amount of money they started with. As such, to ignore the fact that inequality increased dramatically both countries during the 1990s is disgraceful when trying to evaluate whether poverty has actually decreased or not. And it should be obvious that if inequality is increasing **within** a country then it must also be increasing internationally as well.

Significantly, *"where governments adopted the [neo-liberal] Washington Consensus, the poor have benefited less from growth."* [Joseph E. Stiglitz, **Globalization and its Discontents**, p. 79] The mantra that economic growth is so wonderful is hard to justify when the benefits of that growth are being enjoyed by a small proportion of the people and the burdens of growth (such as rising job insecurity, loss of benefits, wage stagnation and decline for the majority of workers, declining public services, loss of local communities and so forth) are being borne by so many. Which does seem to be the case under neo-liberalism (which, undoubtedly, explains why it is portrayed so positively in the business press).

To be fair, the article does note the slow and declining incomes in the past 20 years in sub-Saharan Africa but rest assured, the magazine stresses, this area *"suffers not from globalisation, but from lack of it."* This means that this area can be ignored when evaluating the results of neo-liberalism. Yet this is unconvincing as these nations are hardly isolated from the rest of the world. As they are suffering from debt and western imposed structural adjustment programs it seems illogical to ignore them — unless it is a way to improve neo-liberalism's outcomes by evading its greatest failures.

Then there is the comparison being made. The Economist looks solely at the years 1980–2000 yet surely the right comparison would be between this period and the twenty years before 1980? Once that is done, it becomes clear why the magazine failed to do so for *"economic growth and*

almost all of the other indicators, the last 20 years have shown a very clear decline in progress as compared with the previous two decades." While it is *"commonly believed that the shift towards globalisation has been a success, at least regarding growth,"* in fact *"the progress achieved in the two decades of globalisation has been considerably less than the progress in the period from 1960 to 1980."* For low and middle-income countries, performance is *"much worse ... than the period from 1960 to 1980." "Summing up the evidence on per capita income growth, countries at every level of per capita GDP performed worse on average in the period of globalisation than in the period from 1960 to 1980."* [Mark Weisbrot, Dean Baker, Egor Kraev and Judy Chen, **The Scorecard on Globalization 1980–2000: Twenty Years of Diminished Progress**] In fact:

> *"The poorest group went from a per capita GDP growth rate of 1.9 percent annually in 1960–80, to a decline of 0.5 percent per year (1980–2000). For the middle group (which includes mostly poor countries), there was a sharp decline from an annual per capita growth rate of 3.6 percent to just less than 1 percent. Over a 20-year period, this represents the difference between doubling income per person, versus increasing it by just 21 percent."* [**Op. Cit.**]

Nor should we forget that there is a *"gallery of nations whose economies soured shortly after their leaders were lauded by the global policy elite for pursuing sound economic fundamentals."* [Jeff Faux and Larry Mishel, **Op. Cit.**, p. 94] This process of proclaiming the success of neo-liberalism before it implodes started with the original neo-liberal experiment, namely Pinochet's Chile whose economy imploded just after Milton Friedman proclaimed it an "economic miracle" (see section C.11).

Latin America has suffered the most attention from neo-liberalism and its institutions so it would be useful to look there for evaluating the claims of its supporters (*"the IMF talks with pride about the progress that Latin America made in market reforms"* [Stiglitz, **Op. Cit.**, p. 79]). Rather than success story, there has been *"a long period of economic failure: for the prior 20 years, 1980–1999, the region grew by only 11 percent (in per capita terms) over the whole period. This is the worst 20-year growth performance for more than a century, even including the years of the Great Depression."* By comparison, *"for the two decades from 1960–1979, Latin America experienced per capita GDP growth of 80 percent."* In fact, *"using the 1960–1979 period as a baseline, the quarter century for 1980–2004 is dismal. Annual growth in GDP per capita registers a mere 0.5 percent, as opposed to 3.0 percent over the previous period. Countries that are now considered relatively successful are not doing very well compared to past performance. For example, Mexico registers 0.8 percent annual per capita growth for 1980–2004, as compared with 3.3 percent for 1960–79. For Brazil, which one had one of the fastest growing economies in the world, per capita growth is only 0.8 percent annually for 1980–2004, as compared with 4.9 percent for 1960–79."* For Latin America as a whole, real per-capita growth was 3.0% in the 1960s, 2.9% in the 1970s, -0.3% in the 1980s and 1.4% in the 1990s. This means that for 1980–1999, *"the region's per capita GDP grew at an annual rate of only 0.5 percent, a cumulative total of 11 percent for the two decades."* By comparison, *"from 1960–1979, per capita growth was 3.0 percent, or 80 percent for these two decades."* [Mark Weisbrot and David Rosnick, **Another Lost Decade?: Latin America's Growth Failure Continues into the 21st Century**] Looking at Mexico, for example, since NAFTA per capita GDP growth in Mexico has averaged less than 1.0% annually. This is an extremely poor growth record for a developing country. Successful developing countries, such as South Korea and Taiwan have

managed to sustain per capita GDP growth rates that have averaged more than 4.0% since the sixties. In fact, Mexico managed to sustain a per capita GDP growth rate of more than 4.0% in the period from 1960 to 1980, when it was following a path of import substitution. But, then, neither South Korea nor Taiwan followed the dictates of neo-liberalism.

Over all it is important to stress that neo-liberalism has failed its own test:

> *"Economic growth over the last twenty years, the period during which [neo-liberalism] policies ... have been put into place, has been dramatically reduced ... to assume that the World Bank and the IMF have brought 'growth-enhancing policies' to their client countries goes against the overwhelming weight of the evidence over the last two decades ... In short, there is no region of the world that the Bank or Fund can point to as having succeeded through adopting the policies that they promote — or in many cases, impose — upon borrowing countries."* [Mark Weisbrot, Dean Baker, Robert Naiman, and Gila Neta, **Growth May Be Good for the Poor — But are IMF and World Bank Policies Good for Growth?**]

As Chomsky summarises, the periods of fastest and prolonged growth have not coincide with phases of extensive liberalisation. In fact, neoliberal reforms have *"been accompanied by much slower rates of growth and reduced progress on social indicators ... There are exceptions to the general tendency: high growth rates were recorded among those who ignored the rules (and with tremendous inequality and other severe side effects in China and India)."* Growth rates have, in fact, fell by *"over half"* compared to the preceding period of statist policies (particularly when measured per capita). [**Op. Cit.**, pp. 216–7] For most countries, growth was higher in the 1950s, 1960s and even the 1970s. This suggests that neo-liberalism fails even its own tests as noted by one economist who compared the reality of successful development to the neo-liberal myth:

> *"the poor growth records of developing countries over the last two decades suggest this line of defence [i.e. it brings higher growth] is simply untenable ... The plain fact is that the Neo-Liberal 'policy reforms' have not been able to deliver their central promise — namely, economic growth."* [Ha-Joon Chang, **Kicking Away the Ladder**, p. 128]

Then there is the issue of what the magazine fails to mention. For a start, it excludes the ex-Stalinist regimes in Eastern Europe. This is understandable for obvious reasons. If these nations were included, then their rising inequality and poverty since they became part of the global market would have to be mentioned and this would make its defence of neo-liberalism much harder (as would the fact life expectancies fell to Third World levels). As economist Joseph Stiglitz points out, the neo-liberal reforms brought the ex-Stalinist countries *"unprecedented poverty."* In 1989, only 2% of Russians lived in poverty, by the late 1998 that number had soared to 23.8%, using the $2 a day standard. More than 40% had less that $4 a day. Other post-Stalinist countries *"have seen comparable, if not worse, increases in poverty."* Overall, these reform package has *"entailed one of the largest increases in poverty in history."* [**Globalization and its Discontents**, p. 6, p. 153 and p. 182]

The GDP in the former Stalinist states fell between 20% and 40% in the decade after 1989, an economic contraction which can only be compared to the Great Depression of the 1930s. Of the 19 ex-Stalinist economies, only Poland's GDP exceeded that of 1989, the year transition began.

In only 5 was GDP per capita more than 80% of the 1989 level. [Chang, **Op. Cit.**, p. 129] Only a small minority saw their real wages rise; the vast majority experienced a spectacular fall in living standards. It took the Czech Republic, for example eight years until average real wages reached their 1989 level. Unemployment became widespread. In 2005, Slovakia had 27% of its under-25s are unemployed while in Poland 39% of under-25s were without a job (the highest figure in Europe) and 17% of the population were below the poverty line.

Overall, between 1985 and 2000, growth in GDP per capita was negative in 17 transition countries while the *"incidence of poverty increased in most countries of Latin America, the Caribbean and Sub-Saharan Africa during the 1980s and the 1990s. Much of Eastern Europe and Central Asia experiences a sharp rise in poverty during the 1990s."* East, Southwest and South Asia did experience a steady decline in the incidence of poverty, but *"most of this improvement is accounted for by changes in just two countries, with large populations, China and India."* [Deepak Nayyar, **Op. Cit.**, p. 154, pp. 154–5 and p. 155] Hardly an inspiring result.

And what of the actual economic regimes in China and India? One left-wing economist notes that *"in the early stages of China's high growth period there was an expansion of state employment, including in the dynamic and crucial manufacturing sector ... in its most recent phase, private capital accumulation dominates the growth process in China, although the state still strongly influences the pattern of investment through its control of the credit system and its policy of creating 'national champions' in sectors such as cars and steel."* Not to mention, of course, its role in the labour market. There is no freedom to organise — the country is, in effect, one big workplace and the state bosses do not tolerate freedom of association, assembly and speech any more than any other company. Unsurprisingly, labour discipline *"is very harsh"* and workers may find it difficult to change jobs and migrate to urban areas. [Andrew Glyn, **Op. Cit.**, p. 87 and p. 94]

As one expert notes, in the case of both India and China *"the main trade reforms took place **after** the onset of high growth. Moreover, these countries' trade restrictions remain among the highest in the world."* In India, its *"trend growth rate increased substantially in the early 1980s"* while *"serious trade reform did not start until 1991–93 ... tariffs were actually higher in the rising growth period of the 1980s than in the low-growth 1970s."* Thus claims of *"the beneficial effects of trade liberalisation on poverty have to be seen as statements based on faith rather than evidence."* [Dani Rodrik, **Comments on 'Trade, Growth, and Poverty by D. Dollar and A. Kraay**] As Chomsky notes, there is a deliberate policy which *"muddles export orientation with neo-liberalism, so that if a billion Chinese experience high growth under export-orientated policies that radically violate neo-liberal principles, the increase in average global growth rates can be hailed as a triumph of the principles that are violated."* [**Op. Cit.**, p. 217] It should also be mentioned that both these states avoided the 1980s debt crisis by avoiding Western banks in the 1970s. They also maintain capital controls, so that hot money cannot flow freely in and out, and have large state sectors.

At least the **Economist** itself notes that *"[n]either country is an exemplar of free market capitalism — far from it."* That says it all about the defenders of free market capitalism; they defend their ideas by pointing to countries which do not apply them!

It should be stressed that this praise for the "free market" using regimes which hardly meet the criteria has a long history. This has included both Japan and the East Asian Tigers in the 1970s and 1980s as *"the spectacular growth of these countries ... is fundamentally due to activist industrial, trade and technology policies (ITT) by the state."* [Chang, **Op. Cit.**, p. 49] As an expert on these economies notes, *"the legend is not fully consistent with the way the governments have in practice behaved,"* namely adopting *"over a long period of time a much more aggressive, dirigistic set of in-*

dustrial policies than free-trading principles would justify." In fact, their *"governments were deeply committed to increasing and sustaining high levels of investment and to steering its composition."* He bemoans the *"assumption that only those features of economic policy consistent with neoclassical principles could have contributed to good economic performance"* and so explanations for such *"accordingly ignore non-neoclassical features."* [Robert Wade, *"What can Economics Learn from East Asian Success?"*, pp. 68–79, **Annals of the American Academy of Political and Social Science**, vol. 505, pp. 70–1, p. 72 and p. 68]

This analysis was proved right when, ironically, the praise turned to attack when the 1997 crisis erupted and all the features previously ignored or denied where brought onto the central stage to explain the slump (*"When their bubbles imploded, the same countries were denounced by the policy elites for something called 'crony capitalism' — a year earlier, the term had been 'business-friendly environment.'"* [Jeff Faux and Larry Mishel, **Op. Cit.**, p. 94]). As Robert Wade noted, *"the perception shifted from 'miracle Asia' to 'Asian crony state capitalism' almost over night,"* a term used *"to convey a told-you-so moral about the dangers of government intervention."* [*"From 'miracle' to 'cronyism': explaining the Great Asian Slump"*, pp. 673–706, **Cambridge Journal of Economics**, Vol. 22, No. 6, p. 699 and p. 700] Ironically, Japan's 1990s woes and the 1997 crisis both occurred **after** those states liberalised their economies (as recommended by, of course, economists and the IMF). Unsurprisingly, we discover Milton Friedman pointing (in 2002!) to the *"dramatic success of the market-orientated policies of the East Asian tigers"* as if they gave support to his ideological position of laissez-faire capitalism. [**Op. Cit.**, p. ix]

Then there is the issue of "economic liberty" as such. Milton Friedman stated in 2002 that the *"limited increase in economic freedom has changed the face of China, strikingly confirming our faith in the power of free markets."* [**Op. Cit.**, pp. viii-ix] Faith is the right word, as only the faithful could fair to note that there is no free market in China as it does not have basic freedoms for labour. How much "economic freedom" is there for workers under a brutal dictatorship? How can it be claimed, with a straight face, that there is an *"increase in economic freedom"* in such regimes? It seems, therefore, that for right-wing economists that their *"faith"* in "free markets" is *"confirmed"* by an authoritarian system that obviously and constantly violates the freedom of labour. But then again, workers have never been considered highly by the profession. What has always counted is the freedom of the boss and, consequently, a regime that secures that is always praised (and we discuss in section C.11, Friedman has a track record in this).

The selectively of the supporters of "free market" capitalists is truly staggering. Take, as an example, globalisation and anti-globalisation protests. Supports of the trade deals accused critics as being against "free trade" and, by implication, against freedom. Yet the deals they supported were based on accepting the current labour standards across the world. This means accepting the labour conditions of states, usually dictatorships, which habitually deny a free market (even a capitalist one) to its workers — all in the name of the free market! Which makes the "free market" supporters of neo-liberalism utter hypocrites. They are happy to accept a "free market" in which the denial of freedom of workers to form unions is an intrinsic part. It also suggests that the much attacked critics of "trade" deals who demand that basic standards of freedom for workers be incorporated into them are those who truly support "free trade" and the "free market." Those who advocate unrestricted trade with dictatorial regimes (where workers are thrown in prison, at best, or assassinated, at worse, if they organise or talk about unions and protests) are engaging in the worse form of doublethink when they appropriate the term "freedom" for their position.

It is easy to understand why supporters of capitalism do so. In such regimes, capital is free and the many abuses of freedom are directed towards the working class. These suppress wages and the resulting competition can be used to undermine workers wages, conditions and freedoms back home. This is why neo-liberals and such like agree to a range of global policies that give substantial freedoms to capitalists to operate unhindered around the world while, at the same time, fiercely resistant to any demands that the freedom of workers be given equal concern (this why Chomsky talks about the *"international global justice movement, ludicrously called 'anti-globalisation' because they favour globalisation that privileges the interests of people, not investors and financial institutions."* [**Op. Cit.**, p. 259]). In other words, free markets are fine for capitalists, but not for workers. And if anyone disagrees, they turn round and accuse their critics of being opposed to "freedom"! As such, anti-globalisation protesters are right. People in such regimes are not free and it is meaningless to talk of the benefits of "free markets" when a free market in labour does not exist. It does, of course, show how genuine the defenders of capitalism are about freedom.

So has global poverty fallen since the rise of neo-liberalism in 1970s? Perhaps it has, but only if you apply the World Bank measure (i.e. a living standard of less than a dollar a day). If that is done then the number of individuals in dire poverty is (probably) falling (although Joseph Stiglitz states that *"the actual number of people living in poverty ... actually increased by almost 100 million"* in the 1990s and he argues that globalisation as practised *"has not succeeded in reducing poverty."* [**Op. Cit.**, p. 5 and p. 6]). However, the vast bulk of those who have risen out of dire poverty are in China and India, that is in the two countries which do not follow the neo-liberal dogma. In those that did follow the recommendations of neo-liberalism, in Africa, Latin America and Eastern Europe, poverty and growth rates are much worse. Chang states the obvious:

> *"So we have an apparent 'paradox' here — at least if you are a Neo-Liberal economist. All countries, but especially developing countries, grew much faster when they used 'bad' policies during the 1960–1980 period than when they used 'good' ones during the following two decades ... Now, the interesting thing is that these 'bad; policies are basically those that the NDCs [Now Developed Countries] had pursued when they were developing countries themselves. Given this, we can only conclude that, in recommending the allegedly 'good' policies, the NDCs are in effect 'kicking away the ladder' by which they have climbed to the top."* [**Op. Cit.**, p. 129]

Hardly a glowing recommendation for the prescriptions favoured by the Economist and other supporters of free market capitalism. Nor very convincing support for solving the problems of neo-liberalism with yet more globalisation (of the same, neo-liberal, kind). One thing is true, though. The accepted wisdom of the age if that the road to prosperity and international acceptance is "economic liberalisation" or some of euphemism for opening economies to foreign investment. What this really means is that authoritarian regimes that allow their subjects to be exploited by international capital rather than state bureaucracies will find apologists among those who profit from such transactions or get paid by them. That this involves violation of the freedom of working class people and the labour "market" does not seem to bother them for, they stress, in long term material benefits this will create outweigh such restrictions on the eternal and sacred laws of economics. That "freedom" is used to justify this just shows how debased that concept has become under capitalism and within capitalist ideology.

C.10.2 Does "free trade" benefit everyone?

As we discussed in the last section, the post-1980 era of neo-liberal globalisation and "free(r) markets" has not been as beneficial to the developing world as the defenders of neo-liberalism suggest. In fact, these economies have done worse under neo-liberalism than they did under state-aided forms of development between 1950 and 1980. The only exceptions post-1980 have been those states which have rejected the dogmas of neo-liberalism and used the state to foster economic development rather than rely on "free trade."

It would, of course, be churlish to note that this is a common feature of capitalist development. Industrialisation has always been associated with violations of the sacred laws of economics and freedom for workers. In fact, the central conceit of neo-liberalism is that it ignores the evidence of history but this is unsurprising (as noted in section C.1.2, economics has a distinct bias against empirical evidence). This applies to the notion of free trade as well as industrialisation, both of which show the economists lack of concern with reality.

Most economists are firm supporters of free trade, arguing that it benefits all countries who apply it. The reason why was first explained by David Ricardo, one of the founding fathers of the discipline. Using the example of England and Portugal and wine and cloth, he argued that international trade would benefit both countries even if one country (Portugal) produced both goods more cheaply than the other because it was relative costs which counted. This theory, called comparative advantage, meant that it would be mutually beneficial for both countries to specialise in the goods they had a relative advantage in and trade. So while it is cheaper to produce cloth in Portugal than England, it is cheaper still for Portugal to produce excess wine, and trade that for English cloth. Conversely, England benefits from this trade because its cost for producing cloth has not changed but it can now get wine at closer to the cost of cloth. By each country specialising in producing one good, the sum total of goods internationally increases and, consequently, everyone is better off when these goods are traded. [**The Principles of Political Economy and Taxation**, pp. 81–3]

This argument is still considered as the bed-rock of the economics of international trade and is used to refute arguments in favour of policies like protectionism. Strangely, though, economists have rarely compared the outcome of these policies. Perhaps because as Chomsky notes, *"if you want to know how well those theorems actually work, just compare Portugal and England after a hundred years of development."* [**Understanding Power**, p. 254] One economist who did was the German Friedrich List who, in 1837, urged people *"to turn his attention to Portugal and to England and to compare the economies of these two countries. I am sure that he can have no doubts as to which country is prosperous and which has lost its economic independence, is dead from an intellectual, commercial and industrial point of view, and is decadent, poverty stricken and weak."* [**The Natural System of Political Economy**, pp. 169–70] Unsurprisingly, List used this example to bolster his case for protectionism. Little has changed. Allan Engler notes that *"[a]fter nearly 200 years, comparative advantage had given Portugal no noticeable advantage."* While the UK became the leading industrial power, Portugal remained a poor agricultural economy: *"Britain's manufacturing industries were the most efficient in the world, Portugal had little choice but to be an exporter of agricultural products and raw materials."* In 1988, Portugal's per capita GDP was less than one third that of the UK. When "Purchasing power parity" is factored in, Portugal's per capita GDP was barely more than half of the UK. [**Apostles of Greed**, p. 132]

Nor should we forget that free trade takes the economic agent as the country. Unlike an individual, a nation is divided by classes and marked by inequalities of wealth, power and influence. Thus while free trade may increase the sum-total of wealth in a specific country, it does not guarantee that its benefits or losses will be distributed equally between social classes, never mind individuals. Thus capitalists may favour free trade at specific times because it weakens the bargaining power of labour, so allowing them to reap more income at the workers' expense (as producers and consumers). Taking the example of the so-called "free trade" agreements of the 1990s, there was no reason to believe that benefits of such trade may accrue to all within a given state nor that the costs will be afflicted on all classes. Subsequent developments confirmed such a perspective, with the working class suffering the costs of corporate-led "globalisation" while the ruling class gained the benefits. Not that such developments bothered most economists too much, of course. Equally, while the total amount of goods may be increased by countries pursuing their comparative advantage it does not automatically follow that trade between them will distribute the benefits equally either between the countries or within them. As with exchange between classes, trade between countries is subject to economic power and so free trade can easily lead to the enrichment of one at the expense of the other. This means that the economically powerful will tend to support free trade as they will reap more from it.

Therefore the argument for free trade cannot be abstracted from its impact or the interests it serves, as Joan Robinson pointed out:

> *"When Ricardo set out the case against protection he was supporting British economic interests. Free trade ruined Portuguese industry. Free trade for* ***others*** *is in the interests of the strongest competitor in world markets, and a sufficiently strong competitor has no need for protection at home. Free trade doctrine, in practice, is a more subtle form of Mercantilism. When Britain was the workshop of the world, universal free trade suited her interests. When (with the aid of protection) rival industries developed in Germany and the United States, she was still able to preserve free trade for her own exports in the Empire."* [**Collected Economic Papers**, vol. 5, p. 28]

This echoes the analysis of List who that the British advocacy of free trade was primarily political in nature and not to mention hypocritical. Its political aim was to destroy potential competitors by flooding their markets with goods, so ruining their industrial base and making them exporters of raw materials for British industry rather than producers of finished goods. He argued that a *"study of the true consequences"* of free trade *"provide the key to England's commercial policy from that day to this. The English have always been cosmopolitans and philanthropists in theory but always monopolists in practice."* [**Op. Cit.**, p. 167] Moreover, such a position was hypocritical because Britain industrialised by means of state intervention and now sought to deny that option to other nations.

List advocated that the state should protect infant industries until such time as they could survive international competition. Once industrialised, the state could then withdraw. He did not deny that free trade may benefit agricultural exporters, but only at the expense of industrial development and spill-over benefits it generates for the economy as a whole. In other words, free trade harmed the less-developed nation in terms of its economic prosperity and independence in the long run. Protectionism allowed the development of local industrial capitalism while free trade bolstered the fortunes of foreign capitalist nations (a Hobson's choice, really, from an anarchist perspective). This was the situation with British capitalism, as *"Britain had very high tariffs*

on manufacturing products as late as the 1820s, some two generations after the start of its Industrial Revolution … Measures other than tariff protection were also deployed" (such as banning imports from competitors). [Chang, **Op. Cit.**, p. 22] Needless to say, trade unions were illegal during this period of industrialisation and troops were regularly deployed to crush strikes, riots and rebellions. Economist Thomas Balogh confirms this analysis:

> *"The fact is that Britain's economic growth forged ahead of its European competitors while it was exploiting an effective monopoly of the steam engine, from 1780 to 1840. Through most of that period the nation had a high and complicated tariff …, massive public investment and spending … and an extensive public welfare system with wage supplements and welfare allowances indexed to basic costs of living …*
>
> *"There followed a long period, from about 1840 to 1931, when Britain did indeed have the freest trade and relatively speaking the cheapest government and (until 1914) the smallest public sector among the industrially developing nations, Yet, for competitiveness, that century saw the relative decline of the country. Numerous competing countries, led by the US and Germany, emerged and overtook and passed Britain in output and income per head. Every one of them had protective tariffs, and a bigger (relative) public sector than the British."* [**Op. Cit.**, p. 180]

Significantly, and highly embarrassingly for neo-classical economists, the one nation which embraced free trade ideology most, namely the UK in the latter half of the 19th century, suffered economic decline in comparison to its competitors who embraced protectionist and other statist economic policies. It would be churlish to note that this is the exact opposite of what the theory predicts.

In historical terms, List has been proven correct numerous times. If the arguments for free trade were correct, then the United States and Germany (plus Japan, South Korea, etc., more recently), would be economic backwaters while Portugal would have flourished. The opposite happened. By the 1900s, Britain was overtaken economically by America and Germany, both of whom industrialised by means of protectionism and other forms of state intervention. As such, we should not forget that Adam Smith confidently predicted that protectionism in America would *"would retard instead of accelerating the further increase in the value of their annual progress, and would obstruct instead of promoting the progress of their country towards real wealth and greatness."* He considered it best that capital be *"employed in agriculture"* rather than manufacturing. [**The Wealth of Nations**, p. 328 and p. 327]). The historical record hardly supports Smith's predictions as *"throughout the nineteenth century and up to the 1920s, the USA was the fastest growing economy in the world, despite being the most protectionist during almost all of this period … Most interestingly, the two best 20-year GDP per capita growth performances during the 1830–1910 period were 1870–1890 (2.1 per cent) and 1890–1910 (two per cent) — both period of particularly high protectionism. It is hard to believe that this association between the degree of protectionism and overall growth is purely coincidental."* [**Op. Cit.**, p. 30]

As with the UK, America *"remained the most ardent practitioner of infant industry protection until the First World War, and even until the Second."* Like UK, the state played its role in repressing labour, for while unions were usually not technically illegal, they were subject to anti-trust laws (at state and then federal level) as well as force during strikes from troops and private police forces. It was *"only after the Second World War that the USA — with its industrial supremacy*

unchallenged — finally liberalised it trade and started championing the cause of free trade." [Chang, **Op. Cit.**, p. 28 and p. 29] Unsurprisingly, faced with growing international competition it practised protectionism and state aid while keeping the rhetoric of free trade to ensure that any potential competitor has its industries ruined by being forced to follow policies the US never applied in the same situation. Chomsky summarises:

> *"So take a look at one of the things you don't say if you're an economist within one of the ideological institutions, although surely every economist has to know it. Take the fact that there is not a single case on record in history of any country that has developed successfully through adherence to 'free market' principles: none."* [**Op. Cit.**, p. 255]

Not that this has disabused most economists from repeating Ricardo's theory as if it told the full story of international trade or has been empirically verified. As Chang puts it, his approach of studying the actual history of specific countries and generalising conclusions *"is concrete and inductive"* and *"contrasts strongly with the currently dominant Neoclassical approach based on abstract and deductive methods."* This has meant that *"contemporary discussion on economic development policy-making has been peculiarly ahistoric."* [**Op. Cit.**, p. 6] This is unsurprising, as there is a distinct tendency within mainstream economics not to check to see if whether the theory conforms to reality. It is as if we **know** that capitalist economics is true, so why bother to consider the evidence. So no matter how implausible a given theory is, capitalist economics simply asks us to take them on trust. Perhaps this is because they are nothing more than logical deductions from various assumptions and comparing them to reality would expose not only the bankruptcy of the theory but also the bogus claims that economics relates to reality or is a science?

That these theories survive at all is due to their utility to vested interests and, of course, their slightly complicated logical beauty. It should be noted, in passing, that the free trade argument is based on **reducing** international competition. It recommends that different countries specialise in different industries. That this would make sense for, say, a country with industry (marked by increasing returns to scale and significant spill-over effects into other areas of the economy) rather than one based on agriculture (marked by decreasing returns to scale) goes without saying. That the policy would turn the world into a provider of raw materials and markets rather than a source of competitors for the most advanced nation is just one of these co-incidences capitalist economics suffers from.

As such, it is not a coincidence that both the classic "free trade" and current neo-liberal position does allow a nation to secure its dominance in the market by forcing the ruling elites in **other** nations to subscribe to rules which hinder their freedom to develop in their own way. As we discuss in section D.5, the rise of neo-liberalism can be viewed as the latest in a long series of imperialist agendas designed to secure benefits of trade to the West as well as reducing the number of rivals on the international market. As Chang notes, Britain's move to free trade after 1846 *"was based on its then unchallenged economic superiority and was intricately linked with its imperial policy."* The stated aim was to halt the move to industrialisation in Europe by promoting agricultural markets. Outside of the West, *"most of the rest of the world was forced to practice free trade through colonialism and ... unequal treaties."* These days, this policy is implemented via international organisations which impose Western-dominated rules. As Chang notes, the *"developed countries did not get where they are now through policies and the institutions that they recommend to developing countries today. Most of them actively used 'bad' trade and industrial*

policies ... practices that these days are frowned upon, if not actively banned, by the WTO." [**Op. Cit.**, p. 16, p. 23, p. 16 and p. 2]

In other words, the developed countries are making it difficult for the developing countries to use policies and institutions which they themselves so successfully used previously. This, as with the "free trade" arguments of the 19th century, is simply a means of controlling economic development in other countries to reduce the number of potential competitors and to secure markets in other countries. In addition, we must also stress that the threat of capital flight within western countries also raises competitive pressures for labour and so has the added benefit of helping tame rebellious workers in the imperialist nations themselves. These factors help explain the continued support for free trade theory in economic circles in spite of the lack of empirical evidence in its favour. But then again, given that most economists cannot understand how one class exploits another by means of exchange within a national market due to its economic power, it would be surprising if they could see it within international markets.

To generalise, it appears that under capitalism there are two main options for a country. Either it submits itself to the dictates of global finance, embracing neo-liberal reforms and seeing its growth fall and inequality rise or (like every other successful industrialiser) it violates the eternal laws of economics by using the state to protect and govern its home market and see growth rise along with inequality. As Chang notes, looking at the historical record a *"consistent pattern emerges, in which all the catching-up economies use activist industrial, trade and technology (ITT) policies ... to promote economic development."* He stresses *"it was the UK and the USA, the supposed homes of free trade policy, which used tariff protection most aggressively."* The former *"implemented the kinds of ITT policies that became famous for their use in ... Japan, Korea and Taiwan."* [**Op. Cit.**, pp. 125–6, p. 59 and pp. 60–1] In addition, another aspect of this process involves repressing the working class so that **we** pay the costs for industrialising. Unions were illegal when Britain used its ITT policies while the *"labour market in Taiwan and Korea, for example, has been about as close to a free market as it is possible to get, due in part to government repression of unions."* [*"What can Economics Learn from East Asian Success?"*, **Op. Cit.**, p. 70] Given that unions are anathema to neo-classical and Austrian economics, it is understandable why their repression should be considered relatively unproblematic (in fact, according to economic ideology repressing unions can be considered to be in the interests of the working class as, it is claimed, unions harm non-unionised workers — who knew that bosses and their states were such philanthropists?).

Neither option has much to recommend it from an anarchist perspective. As such, our stating of facts associated with the history of "actually existing" capitalism should not be construed to imply that anarchists support state-run development. Far from it. We are simply noting that the conclusion of history seems to be that countries industrialise and grow faster when the state governs the market in significant ways while, at the same time, repressing the labour movement. This is unsurprising, for as we discuss in section D.1, this process of state intervention is part and parcel of capitalism and, as noted in section F.8, has always been a feature of its rise in the first place (to use Marx's expression, a process of *"primitive accumulation"* has always been required to create capitalism). This does not mean, just to state the obvious, that anarchists support protectionism against "free trade." In a class system, the former will tend to benefit local capitalists while the latter will benefit foreign ones. Then there is the social context. In a predominantly rural economy, protectionism is a key way to create capitalism. For example, this was the case in 19th century America and it should be noted that the Southern slave states were opposed to protectionism, as where the individualist anarchists. In other words, protectionism was

a capitalist measure which pre-capitalists and anti-capitalists opposed as against their interests. Conversely, in a developed capitalist economy "free trade" (usually very selectively applied) can be a useful way to undermine workers wages and working conditions as well as foreign capitalist competitors (it may also change agriculture itself in developing countries, displacing small peasant farmers from the land and promoting capitalist agriculture, i.e. one based on large estates and wage labour).

For the anarchist, while it is true that in the long run option two does raise the standard of living faster than option one, it should always be remembered that we are talking about a **class** system and so the costs and benefits will be determined by those in power, not the general population. Moreover, it cannot be assumed that people in developing countries actually want a Western lifestyle (although the elites who run those countries certainly do, as can be seen from the policies they are imposing). As Bookchin once noted, *"[a]s Westerners, 'we' tend to assume out of hand that 'they' want or need the same kind of technologies and commodities that capitalism produced in America and Europe ... With the removal of imperialism's mailed fist, a new perspective could open for the Third World."* [**Post-Scarcity Anarchism**, pp. 156–7]

Suffice to say, there are other means to achieve development (assuming that is desired) based on working class control of industry. Given this, the only genuine solution for developing countries would be to get rid of their class systems and create a society where working people take control of their own fates, i.e. anarchism. Hence we find Proudhon, for example, stating he *"oppose[d] the free traders because they favour interest, while they demand the abolition of tariffs."* He advocated the opposite, supporting free trade *"as a consequence of the abolition of interest"* (i.e. capitalism). Thus the issue of free trade cannot be separated from the kind of society practising it nor from the creation of a free society. Abolishing capitalism in one country, he argued, would lead to other nations reforming themselves, which would *"emancipate their lower classes; in a word, to bring about revolution. Free trade would then become equal exchange."* [**The General Idea of the Revolution**, pp. 235–8] Unless that happens, then no matter whether protectionism or free trade is applied, working class people will suffer its costs and will have to fight for any benefits it may bring.

C.10.3 Does "free market" capitalism benefit everyone, *especially* working class people?

One defence of capitalism is that, appearances and popular opinion to the contrary, it is benefits working class people **more** than the ruling class.

This argument can be found in right-liberal economist Milton Friedman's defence of capitalism in which he addresses the claim that *"the extension and development of capitalism has meant increased inequality."* Not so, he states. *"Among the Western countries alone,"* he argues, *"inequality appears to be less, in any meaningful sense, the more highly capitalist the country is ... With respect to changes over time, the economic progress achieved in the capitalist countries has been accompanied by a drastic diminution in inequality."* In fact, *"a free society [i.e. capitalism] in fact tends towards greater material equality than any other yet tried."* Thus, according to Friedman, a *"striking fact, contrary to popular conception, is that capitalism leads to less inequality than alternative systems of organisation and that the development of capitalism has greatly lessened the extent*

of inequality. Comparisons over space and time alike confirm this." [**Capitalism and Freedom**, p. 168, pp. 169–70, p. 195 and p. 169]

Friedman makes other claims to the superiority of capitalism. Thus he states that not only do non-capitalist societies *"tend to have wider inequality than capitalist, even as measured by annual income"* in such systems inequality *"tends to be permanent, whereas capitalism undermines status and introduces social mobility."* Like most right-wingers, he stresses the importance of social mobility and argues that a society with little change in position *"would be the more unequal society."* Finally, he states that *"[o]ne of the most striking facts which run counter to people's expectations has to do with the source of income. The more capitalistic a country is, the smaller the fraction of income for the use of what is generally regarded as capital, and the larger the fraction paid for human services."* [**Op. Cit.**, pp. 171–2, p. 171 and pp. 168–9]

Friedman, as he regularly did, failed to present any evidence to support his claims or any of his *"striking fact[s]"* so it is hard to evaluate the truthfulness of any of this specific assertions. One possible way of doing so would be to consider the actual performance of specific countries before and after 1980. That year is significant as this marked the assumption of office of Thatcher in the UK and Reagan in the US, both of whom were heavily influenced by Friedman and other supporters of "free market" capitalism. If his claims were true, then we would expect **decreases** in equality, social mobility and the share of *"human services"* before 1980 (the period of social Keynesian policies) and **increases** in all three after. Sadly for Friedman (and us!), the facts are counter to his assertions — equality, mobility and share of income for *"human services"* all decreased post-1980.

As we showed in section B.7, inequality rose **and** social mobility fell since 1980 in the USA and the UK (social democratic nations have a better record on both). As far as the share of income goes, that too has failed to support his assertions. Even in 1962, the facts did not support his assertion as regards the USA. According to figures from the U.S. Department of Commerce the share of labour in 1929 was 58.2% and this rose to 69.5% by 1959. Even looking at just private employees, this was a rise from 52.5% to 58% (income for government employees, including the military went from 5.7% to 12.2%). In addition, "proprietor's income" (which represents income to the owner of a business which combines work effort and ownership, for example a farmer or some other self-employed worker) fell, with farm income going from 6.8% to 3.0%, while other such income dropped from 10.1% to 8.7%. [Walter S. Measday, *"Labor's Share in the National Income,"* **The Quarterly Review of Economics & Business**, Vol. 2, No. 3, August 1962] Unless Friedman would argue that 1929 America was more statist than 1959, it seems that his assertion was false even when it was first made. How did his comment fare after he made it? Looking at the period after 1959 there was continuing increase in labour share in the national income, peaking in the 1970s before steadily dropping over the following decades (it dropped to below 1948 levels in 1983 and stayed there). [Alan B. Krueger, *"Measuring Labor's Share"*, **The American Economic Review**, vol. 89, No.2, May 1999] Since then the downward trend has continued.

It would be churlish to note that the 1970s saw the rise of influence of Friedman's ideas in both countries and that they were applied in the early 1980s.

There are problems with using labour share. For example it moves with the business cycle (rising in recessions and falling in booms). In addition, there can be other forms of labour compensation as well as wages. Looking at total compensation to labour, this amounts to around 70% of total US income between 1950 and 2000 (although this, too, peaked in the 1970s before falling [Krueger, **Op. Cit.**]). However, this "labour" income can be problematic. For example,

employer provided health care is considered as non-wage compensation so it is possible for rising health care costs to be reflected in rising labour compensation yet this hardly amounts to a rising labour share as the net gain would be zero. Then there is the question of government employees and welfare benefits which, of course, are considered labour income. Unfortunately, Friedman provides no clue as to which statistics he is referring to, so we do not know whether to include total compensation or not in evaluating his claims.

One group of economists have taken the issue of government transfers into account. Since 1979, there has been an *"increased share of capital income (such as rent, dividends, interest payments, and capital gains) and a corresponding smaller share earned as wages and salaries."* Most families receive little or no capital income, but it is *"a very important source of income to the top 1% and especially the top 0.1% (who receive more than a third of all capital income)."* In 1959, total labour income was 73.5% while capital income was 13.3% of market-based income (personal income less government transfers). By 1979, these were 75.8% and 15.1%, respectively. The increases for both are due to a fall in "proprietor's income" from 13.3% to 9.1%. By 2000, capital income had risen to 19.1% while labour's share had fallen to 71.8% (proprietor's income remained the same). This *"shift away from labour income and toward capital income is unique in the post-war period and is partly responsible for the ongoing growth of inequality since 1979."* [Lawrence Mishel, Jered Bernstein, and Sylvia Allegretto, **The State of Working America 2006/7**, p. 76 and p. 79]

It should be noted that Friedman repeated the standard economist (and right-wing) argument that a better way to increase wages than unions or struggle is to make workers more productive. That lifts everyone's standard of living. At least it used to. Between 1945 and 1980, worker wages did, indeed, track productivity increases. This was also the high period of union density in America. After 1980, that link was broken. By a strange co-incidence, this was the Friedman-inspired Reagan effectively legalised and encouraged union busting. Since then, productivity increases are going almost entirely to the top tenth of the population, while median incomes have stagnated. Without unions and robust worker bargaining power, productivity increases have not been doing much for workers. Not that people like Friedman actually mentioned that rather significant fact.

Then there is the issue of *"human services"* itself. This is **not** the same as labour income at all as it includes, for example, management pay. As we indicated in section C.3, this "labour" income is better thought of as **capital** income as that specific labour is rooted in the control of capital. That this is the case can be seen by the numerous defences of exploding CEO pay by right-wing think tanks, journals and economists as well as the lack of concern about the inflationary nature of such massive "pay" rises (particularly when contrasted to the response over very slight increases in workers' pay). This means that "labour" income could remain constant while CEO salaries explode and worker wages stagnant or even fall, as is the case in both the US (and UK) since 1980. In such circumstances, looking at "human services" becomes misleading as returns to capital are listed as "labour" simply because they are in the form of bosses pay. Equally, CEO perks and bonuses would be included as "labour" non-wage compensation.

To see what this means we must use an example. Take a country with 100 people with a combined income of £10,000. The average income would be £100 each. Taking a labour/capital split of 70/30, we get an income of labour of £7000 and an income to capital of £3000. Assuming that 5% of the population own the capital stock, that is an average income of £600 each while labour gets an average of £73.68. However, 10% of the population are managers and assuming another 70/30 split between management and worker income this means that management gets

£2100 in total (an average of £210) while workers get £4900 (an average of £57.65). This means that the owners of capital get 6 times the national average income, managers just over twice that amount and workers just over half the average. In other words, a national statistic of 70% labour income hides the reality that workers, who make up 85% of the population, actually get less than half the income (49%). Capital income, although less, is distributed to fewer people and so causes massive inequality (15% of the population get an average income of £340, nearly 6 times more than the average for the remaining 85% while the upper 5% get over 10 times). If the share of management in labour income rises to 35%, then workers wages fall and inequality rises while labour income remains constant at 70% (management's average income rises to £363.33 while workers' falls to £53.53). It should be stressed this example **underestimates** inequality in capitalist economies, particularly ones which had the misfortunate to apply Friedman's ideas.

Looking further a field, this pattern has been repeated everywhere "free(r) market" capitalism has been imposed. In Chile equality and labour's share increased during the 1960s and early 1970s, only for both to plummet under Pinochet's Friedman-inspired neo-liberal regime (see section C.11 for the grim details of *"economic liberty"* there). In Thatcher's Britain, inequality rose while labour share and social mobility fell. Between 1978 and 1990, the share of wages and salaries in household income in the UK fell from 65.8% to 57.4%. The share for capital income (rent, interest and dividends) more than doubled (from 4.9% to 10.0%).Unsurprisingly, this rise *"directly contributed to the increase in overall inequality"* (48% of all investment income went to the richest tenth of households). [John Hill, **Inequality and the State**, p. 88]

Looking at how increases in income and wealth were distributed, we find that gains since 1979 went predominantly to the rich. Before that, the income of all sections of society grew at roughly the same level between 1961 and 1979. Most of the increase was near the mean, the one exception was the lowest tenth whose incomes rose significantly higher than the rest). This meant that *"over the 1960s and 1970s as a whole all income groups benefited from rising incomes, the lowest rising fastest."* After 1978 *"the pattern broke down"* and incomes for the highest tenth rose by 60–68 percent while at the medium it grew by about 30% between 1979 and 1994/5. The lower down the income distribution, the lower the growth (in fact, after housing costs the income of bottom 10% was 8% lower in 1994/5 than in 1979). As in America during the same period a fence turned into stairs as the nearer to the bottom the slower income grew, the nearer the top the faster income grew (i.e. roughly equal growth turned into growth which increased as income increased — see section B.7.1). Between 1979 and 1990/91, the bottom 70% saw their income share fall. During the Major years, from 1992 to 1997, inequality stopped growing simply because hardly anyone's income grew. Over all, between 1979 and 2002/3, the share of all incomes received by the bottom half fell from 22% to 37%. This is more than the whole of the bottom half combined. The bottom 10% saw their share of income fall from 4.3% to 3% (after housing costs, this was 4.0% to 2.0%). Only the top tenth saw their income increase (from 20.6% to 28%). About 40% of the total increase in real net incomes went to the top tenth between 1979 and 2002–3. 17% of the increase in after-tax incomes went to the top 1%, about 13% went to the top 0.5% (*"Wealth is much more unequally distributed than incomes."*). [John Hills, **Op. Cit.**, p. 20, p. 21, p. 23 and p. 37]

Unsurprisingly, income inequality widened considerably (which more than reversed all the moves towards equality of income that had taken place since 1945) and Britain went from being one of the more equal countries in the industrialised countries to being one of the most unequal. The numbers below half the median income rose. In the 1960s, this was roughly 10%, before falling to 6% in 1977. It then *"the rose sharply"* and peaked at 21% in 1991/92 before stabilising

at 18–19%. After housing costs, this meant a rise from 7% to 25% below half the average income, falling to 23%. It should be noted that the pre-Thatcher period gives *"the lie to the notion that 'relative' poverty can never be reduced."* In summary, by the early 1990s *"relative poverty was twice the level it had been in the 1960s, and three times what it had been in the late 1970s."* It seems needless to add that social mobility fell. [John Hills, **Op. Cit.**, p. 48, p. 263 and pp. 120–1]

The same can be said of Eastern Europe. This is particularly significant, for if Friedman's assertions were right then we would expect that the end of Stalinism in Eastern Europe would have seen a decrease in inequality. As in Chile, Britain, New Zealand and America, the opposite occurred — inequality exploded. By the start of the 21st century Eastern Europe was challenging neo-liberal Britain at the top of the European income inequality tables.

The historical record does not give much support to claims that free(r) market capitalism is best for working class people. Real wage growth rose to around 5% per year in the early 1970s, before falling substantially to under 2% from the 1980s onwards for 13 OECD countries. In fact, *"real wage have growth very slowly in OECD countries since 1979, an extraordinary turn-round from the 3–5% growth rates of the 1960s."* In the US, the median wage was actually less in 2003 than in 1979. Average wages actually declined until 1995, then they increased somewhat so that the average growth rate for the 1990s was less than 0.5% a year. Europe and Japan have done only a little better, with growth of around 1% per year. This is unsurprising, given the rise in returns to capital after 1979 for *"real wages do not automatically grow as fast as labour productivity. The general increase in the share of profits .. pulls real wage growth behind productivity growth."* Within the labour force, inequality has risen. Wage differentials *"are considerably higher in the UK/US group than in Europe"* and have grown faster. Real wages for the top 10% grew by 27.2% between 1979 and 2003, compared to 10.2% in the middle (real wages for the bottom 10% did not grow). In Europe, *"real wages grew at the bottom at a similar rate to the average."* The top 1% of wage-earners in the USA doubled their total wage share between 1979 and 1998 from 6.2% to 10.9%, whilst the top 0.1% nearly tripled their share to 4.1%. Almost all of the increase in the top 10% went to the top 5%, and about two-thirds to the top 1%. In France, the share of the top 1% remained the same. Overall, *"labour's position tended to be more eroded in the more free market economies like the USA and UK than in European economies where social protection [including trade unionism] was already stronger."* [Andrew Glyn, **Op. Cit.**, p. 6 p. 116, p. 117, p. 118 and p. 127]

Looking at inequality and poverty, the conclusion is that liberalisation of markets *"tend to bring greater inequality."* In fact, the rise in the UK was strongest in the 1980s, the Thatcher period while New Zealand *"saw as big an increase in inequality as the UK."* The USA *"maintained its position as the most unequal country with inequality increasing in both decades."* In summary, *"the increase in inequality has been noticeably greater in the inegalitarian liberal economies than in Northern Europe."* Moreover, *"liberal countries have larger proportions of their populations in poverty"* than European ones. Unsurprisingly, New Zealand and the UK (both poster-childs for neo-liberalism) *"had the biggest increases in numbers in poverty between the mid-1980s and 2000."* In the mid-1990s, 20–25% of workers in the UK, Canada and USA were earning less than 65% of median earnings, compared to 5–8% in Scandinavia and Belgium. This rise income inequality *"tend to reproduce themselves through the generations."* There *"is far **less** social mobility in the USA"* than in Scandinavia, Germany and Canada and there has been a *"severe decline in social mobility"* in the UK after the Friedman-inspired Thatcherism of the 1980s and 1990s. Unsurprisingly, there has been *"a rise in the importance of property incomes."*, with the ratio of property income to labour income rising from 15% in the USA in 1979 to 18% in 2002. In France it went from 7% to

12% and is around 8% in Norway and Finland. [**Op. Cit.**, p. 167, p. 168, p. 169, p. 171, p. 169, p. 173, p. 174 and p. 170]

Needless to say, given the lack of evidence presented when Friedman first published his book in 1962, the 40th anniversary edition was equally fact free. Given that 40 years is more than enough time to evaluate his claims particularly given that approximately half-way through this period, Friedman's ideas became increasingly influential and applied, in varying degrees in many countries (particularly in the UK under Thatcher and the US under Reagan). Friedman does not mention the developments in equality, mobility or labour share in 2002, simply making the general statement that he was *"enormously gratified by how well the book has withstood time."* Except, of course, where reality utterly contradicted it! This applies not only to his claims on equality, income shares and poverty, but also the fundamental basis of his Monetarist dogma, namely the aim to control the *"behaviour of the stock of money"* by means of *"a legislated rule instructing the monetary authority to achieve a specified rates of growth in the stock of money."* [**Op. Cit.**, p. ix and p. 54] As we indicated in section C.8, the devastating results of applying this centre-piece of his ideology means that it hardly *"withstood time"* by any stretch of the imagination! In other words, we have a case of self-refutation that has few equals.

To conclude, as defences of capitalism based on equality are unlikely to survive contact with reality, the notion that this system is really the best friend of the working person and the poor needs to be defended by other means. This is where the growth argument we debunked in the last two sections comes in. Neither has much basis in reality.

Of course, the usual excuse should be noted. It could be argued that the reason for this lack of correlation of reality with ideology is that capitalism is not "pure" enough. That, of course, is a valid argument (as Friedman notes, Thatcher and Reagan *"were able to curb leviathan, through not to cut it down."* [**Op. Cit.**, p. vii]). State intervention has hardly disappeared since 1980 but given the lush praise given to the "magic" of the market you would expect **some** improvement. When Friedman died in 2006, the praise from the right-wing and business press was extensive, listing him as one of the most, if not **the** most, influential economist of the late 20th century. It seems strange, then, to suggest that the market is now **less** free than at the height of the post-war Keynesian period. To do so would suggest that Reagan, Thatcher and Pinochet had little or no impact on the economy (or that they made it worse in terms of state intervention). In other words, that Friedman was, in fact, the **least** influential economist of the late 20th century (as opposed to one of the worse, if we compare his assertions to reality before and after the policies they inspired were implemented). However, he helped make the rich richer, so the actual impact of what he actually suggested for the bulk of the population can be cheerfully ignored.

C.10.4 Does growth automatically mean people are better off?

In the above sections we have discussed the effects of neo-liberal reforms purely in terms of economic statistics such as growth rates and so on. This means we have critiqued capitalism in its own terms, in terms of its supporters own arguments in its favour. As shown, in terms of equality, social mobility and growth the rise of "free(r) market" capitalism has not been all its supporters have asserted. Rather than produce more equality, less poverty and increased growth, the opposite has occurred. Where some progress on these areas have occurred, such as in Asia, the countries have **not** embraced the neo-liberal model.

However, there is a deeper critique to be made of the notion that capitalism benefits everyone, especially the poor. This relates to the **quality** of life, rather than the quantity of money available. This is an extremely important aspect to the question of whether "free market" capitalism will result in everyone being "better off." The typical capitalist tendency is to consider quantitative values as being the most important consideration. Hence the concern over economic growth, profit levels, and so on, which dominate discussions on modern life. However, as E.P. Thompson makes clear, this ignores important aspects of human life:

> *"simple points must be made. It is quite possible for statistical averages and human experiences to run in opposite directions. A per capita increase in quantitative factors may take place at the same time as a great qualitative disturbance in people's way of life, traditional relationships, and sanctions. People may consume more goods and become less happy or less free at the same time ... [For example] real wages [may have] advanced ... but at the cost of longer hours and greater intensity of labour ... In statistical terms, this reveals an upward curve. To the families concerned it might feel like immiseration.*
>
> *"Thus it is perfectly possible ... [to have an] improvement in average material standards ... [at the same time as] intensified exploitation, greater insecurity, and increasing human misery ... most people [can be] 'better off' than their forerunners had been fifty years before, but they had suffered and continued to suffer this ... improvement as a catastrophic experience."* [**The Making of the English Working Class**, p. 231]

Thompson was specifically referring to the experience of the British industrial revolution on the working class but his analysis is of general note (its relevance goes far beyond evaluating past or current industrialisation processes). This means that concentrating on, say, absolute poverty or income growth (as defenders of neo-liberalism do) means to ignore the quality of life which this increased income is associated with. For example, a peasant farmer who has to leave his farm for employment in a factory may consider having bosses dictating his every move, an increased working day and intensity of work more significant than, say, a net increase in his income. That this farmer may have been driven off his farm as a result of neo-liberal or other "reforms" is another factor which has to be taken into account. If, to suggest another possibility, Health and Safety regulations reduce work speeds, then national output will be reduced just as unions will stop firms making their workers labour more intensely for longer. However, increased output at the expense of those who do the work is not unproblematic (i.e. real wages may increase but at the cost of longer hours, less safety and greater intensity of labour). Another obvious example would be the family where the husband gets "downsized" from a good manufacturing job. He may get a lower paying service industry job, which forces his wife (and perhaps children) to get a job in order to make ends meet. Family income may increase slightly as a result, but at a heavy cost to the family and their way of life. Therefore the standard of living in the abstract may have increased, but, for the people in question, they would feel that it had deteriorated considerably. As such, economic growth need not imply rising standards of living in terms if the **quality** of life decreases as incomes rise.

This is, in part, because if the economy worked as neoclassical theory demanded, then people would go to work not knowing how much they would be paid, how long they would be employed for or, indeed, whether they had a job at all when they got there. If they rented their home, they would not even know whether they had a home to come back to. This is because every

price would have to be subject to constant change in order to adjust to equilibrium. Insecurity, in other words, is at the heart of the economy and this is hardly productive of community or "family" values (and other expressions used in the rhetoric of the right while they promote an economic system which, in practice, undermines them in the name of profit). In other words, while a society may become materially better off over time, it becomes worse off in terms of **real** wealth, that is those things which make life worth living. Thus capitalism has a corrosive effect on human relationships, the pleasure of productive activity (work), genuine freedom for the many, how we treat each other and so on. The corrosive effects of economics are not limited simply to the workplace but seep into all other aspects of your life.

Even assuming that free market capitalism could generate high growth rates (and that assumption is not borne out in the real world), this is not the end of the matter. How the growth is distributed is also important. The benefits of growth may accumulate to the few rather than the many. Per capita and average increases may hide a less pleasant reality for those at the bottom of the social hierarchy. An obvious example would be a society in which there is massive inequality, where a few are extremely rich and the vast majority are struggling to make ends meet. Such a society could have decent growth rates and per capita and average income may grow. However, if such growth is concentrated at the top, in the hands of the already wealthy, the reality is that economic growth does not benefit the many as the statistics suggest. As such, it is important to stress that average growth may not result in a bettering for all sections of a society. In fact, *"there are plenty of instances in which the poor, and the majority of the population. have been left behind in the era of globalisation — even where per capita income has grown."* This is not limited to just developing countries. Two episodes like this occurred in the United States, with data showing that *"the per capita income of the poor falling from 1979–84, and 1989–94, while per capita income rose."* Overall, the US has seen its median wage and real wages for the bottom 20th of its populations fall between 1973 and 1997 while *"per capita income in the US has risen by 70 percent. For the median wage and bottom-quintile wage to actually **fall** during this same period is an economic change of momentous proportions, from the point of view of the majority of Americans."* [Mark Weisbrot, Dean Baker, Robert Naiman, and Gila Neta, **Growth May Be Good for the Poor – But are IMF and World Bank Policies Good for Growth?**] This is a classic example of society with substantial inequality seeing the benefits of growth accrue to the already rich. To state the obvious, **how** the benefits of growth are distributed cannot be ignored.

In addition, consumerism may not lead to the happiness or the "better society" which many economists imply to be its results. If consumerism is an attempt to fill an empty life, it is clearly doomed to failure. If capitalism results in an alienated, isolated existence, consuming more will hardly change that. The problem lies within the individual and the society within which they live. Hence, quantitative increases in goods and services may not lead to anyone "benefiting" in any meaningful way. Similarly, there is the issue of the quality of the production and consumption produced by economic growth. Values like GDP do not tell us much in terms of what was produced and its social and environmental impact. Thus high growth rates could be achieved by the state expanding its armed forces and weaponry (i.e. throwing money to arms corporations) while letting society go to rot (as under Reagan). Then there is awkward fact that negative social developments, such as pollution and rising crime, can contribute to a rising value for GDP). This happens because the costs of cleaning up, say, an oil spill involves market transactions and so gets added to the GDP for an economy.

As such, the notion of growth **as such** is good should be rejected in favour of a critical approach to the issue which asks growth for what and for whom. As Chomsky puts it, *"[m]any indigenous people apparently do not see any reason why their lives, societies, and cultures should be disrupted or destroyed so that New Yorkers can sit in SUVs in traffic gridlock."* [**Failed States**, p. 259] Under capitalism, much "productivity" is accounted for by economic activity that is best described as wasteful: military spending; expanding police and prison bureaucracies; the spiralling cost of (privatised) healthcare; suburban sprawl; the fast-food industry and its inevitable ill effects on health; cleaning up pollution; specifying and defending intellectual and other property rights; treating the illnesses caused by over-work, insecurity and stress; and so on. As Alexander Berkman once noted, capitalism spawns many forms of "work" and "productive" activity which only make sense within that system and could *"be automatically done away with"* in a sane society. [**What is Anarchism?**, pp. 223–5] Equally, "productivity" and living standards can stand at odds with each other. For example, if a country has a lower working week and take longer holidays, these would clearly depress GDP. This is the case with America and France, with approximately equal productivity the later spends less time in work and more time off. Yet it takes a capitalist ideologue to say that such a country is worse off as a nation for all that time people spend enjoying themselves.

These issues are important to remember when listening to "free market" gurus discussing economic growth from their "gated communities," insulated from the surrounding deterioration of society and nature caused by the workings of capitalism. In other words, quality is often more important than quantity. This leads to the important idea that some (even many) of the requirements for a truly human life cannot be found on any market, no matter how "free" it may be. Equally, a "free" market can lead to unfree people as they driven to submit themselves to the authority of bosses do to economic pressures and the threat of unemployment.

So it can be said that laissez-faire capitalism will benefit all, **especially** the poor, only in the sense that all can potentially benefit as an economy increases in size. Of course, the mantra that economic growth is so wonderful is hard to justify when the benefits of that growth are being enjoyed by a small proportion of the people and the burdens of growth (such as rising job insecurity, loss of benefits, wage stagnation and decline for the majority of workers, declining public services, loss of local communities and so forth) are being borne by so many (as is the case with the more to freer markets from the 1980s). If we look at actually existing capitalism, we can start to draw some conclusions about whether a pure laissez-faire capitalism will actually benefit working people. The United States has a small public sector by international standards and in many ways it is the closest large industrial nation to the unknown ideal of pure capitalism. It is also interesting to note that it is also number one, or close to it, in the following areas [Richard Du Boff, **Accumulation and Power**, pp. 183–4]:

> lowest level of job security for workers, with greatest chance of being dismissed without notice or reason.
> greatest chance for a worker to become unemployed without adequate unemploy-

ment and medical insurance.
less leisure time for workers, such as holiday time.
one of the most lopsided income distribution profiles.
lowest ratio of female to male earnings, in 1987 64% of the male wage.
highest incidence of poverty in the industrial world.
among the worse rankings of all advanced industrial nations for pollutant emissions into the air.
highest murder rates.
worse ranking for life expectancy and infant morality.

It seems strange that the more laissez-faire system has the worse job security, least leisure time, highest poverty and inequality if laissez-faire will **especially** benefit the poor or working people. In fact, we find the more free market the regime, the worse it is for the workers. Americans have longer hours and shorter holidays than Western Europeans and more people live in poverty. 22% of American children grow up in poverty, which means that it ranks 22nd out of the 23 industrialised nations, ahead of only Mexico and behind all 15 of the pre-2004 EU countries.

According to a 2007 United Nation report, the worse places to be a child are in neo-liberal societies such as the UK and USA (the UK was bottom, at number 21 one below the US). The UNICEF report dealt with the condition of children in advanced capitalist countries and found that both the UK and US are way down the list on education, health, poverty, and well-being. While UNICEF preferred to state that this is because of a "dog eat dog society", it is hardly a coincidence that these two societies have most embraced the principles of neo-liberalism and have repeatedly attacked the labour movement, civil society in general as well as the welfare state in the interests of capital. In contrast, the social democratic northern European countries which have best results. One could also point out, for example, that Europeans enjoy more leisure time, better health, less poverty, less inequality and thus more economic security, greater intergenerational economic mobility, better access to high-quality social services like health care and education, and manage to do it all in a far more environmentally sustainable way (Europe generates about half the CO2 emissions for the same level of GDP) compared to the US or the UK.

A definite case of what is good for the economy (profits) is bad for people. To state the obvious, an economy and the people in that economy are not identical. The former can be doing well, but not the latter — particularly if inequality is skewing distribution of any rising incomes. So while the economy may be doing well, its (median) participant (and below) may see very little of it.

Of course, defenders of laissez-faire capitalism will point out that the United States, like the UK and any other real country, is far from being laissez-faire. This is true, yet it seems strange that the further an economy moves from that "ideal" the better conditions get for those who, it is claimed, will especially benefit from it. As such, non-believers in pure capitalism have cause for dissent although for the typical "market advocate" such comparisons tell us littler — unless they happen to bolster their case then "actually existing" capitalism can be used as an example.

Ultimately, the real issue is to do with quality of life and relative changes. Yet the argument that capitalism helps the poorest most via high economic growth is rooted in comparing "free market" capitalism with historical example, i.e. in the notion of **absolute** inequality rather than **relative** inequality and poverty. Thus poverty (economic, cultural and social) in, say, America

can be dismissed simply on the grounds that poor people in 2005 have more and better goods than those in 1905. The logic of an absolute position (as intended, undoubtedly) is such as to make even discussing poverty and inequality pointless as it is easy to say that there are **no** poor people in the West as no one lives in a cave. But, then again, using absolute values it is easy to prove that there were no poor people in Medieval Europe, either, as they did not live in caves and, compared to hunter gatherers or the slaves of antiquity, they had much better living standards. As such, any regime would be praiseworthy, by the absolute standard as even slavery would have absolutely better living standards than, say, the earliest humans.

In this respect, the words of Adam Smith are as relevant as ever. In **The Wealth of Nations** Smith states the following:

> *"By necessaries I understand not only the commodities which are indispensably necessary for the support of life, but whatever the custom of the country renders it indecent for creditable people, even of the lowest order, to be without. A linen shirt, for example, is, strictly speaking, not a necessary of life. The Greeks and Romans lived, I suppose, very comfortably though they had no linen. But in the present times, through the greater part of Europe, a creditable day-labourer would be ashamed to appear in public without a linen shirt, the want of which would be supposed to denote that disgraceful degree of poverty which, it is presumed, nobody can well fall into without extreme bad conduct ... Under necessaries, therefore, I comprehend not only those things which nature, but those things which the established rules of decency have rendered necessary to the lowest rank of people."* (Book Five, Chapter II, Article IV)

As usual, Adam Smith is right while his erstwhile ideological followers are wrong. They may object, noting that strictly speaking Smith was talking of *"necessaries"* rather than poverty. However, his concept of necessaries implies a definition of poverty and this is obviously based not on some unchanging biological concept of subsistence but on whatever *"the custom of the country"* or *"the established rules of decency"* consider necessary Marx made the same point his later works, when he distanced himself from his earlier notion that capitalism resulted in **absolute** impoverishment. As he put it in volume 1 of **Capital**, *"the number and extent of [the worker's] so-called necessary requirements, as also the manner and extent they are satisfied, are themselves products of history, and depend therefore to a great extent on the level of civilisation attained by a country ... In contrast, therefore, with the case of other commodities, the determination of the value of labour-power contains a historical and moral element."* [p. 275]

It is ironic that those today who most aggressively identify themselves as disciples of Smith are also the people who are most opposed to definitions of poverty that are consistent with this definition of "necessaries" (this is unsurprising, as those who invoke his name most usually do so in pursuit of ideas alien to his work). This is done for the usual self-interested motives. For example, Thatcher's government originally had little problem with the concept of relative poverty and *"[o]nly when its policies had led to a conspicuous growth of relative poverty was the idea denounced, and the decision taken by the government ... that absolute poverty (undefined and unqualified) was the only reality."* [Ian Gilmore, **Op. Cit.**, p. 136] Smith's perspective, significantly, is that followed by most poverty researchers, who use a relative measure in evaluating poverty rates. The reason is unsurprising as poor is relative to the living standards and customs of a time and place. Some sceptic might regurgitate the unoriginal response that the poor in the West are rich compared to people in developing countries, but they do not live in those countries. True, living

standards have improved considerably over time but comparing the poor of today with those of centuries past is also meaningless. The poor today are poor relative to what it takes to live and develop their individual potentials in their own societies, not in (for example) 18th century Scotland or half-way across the globe (even Milton Friedman had to grudging admit that *"poverty is in part a relative matter."* [**Op. Cit.**, p. 191]). Considering the harmful effects of relative inequality we indicated in section B.1, this position is perfectly justified.

The notion of absolute poverty being the key dates back to at least Locke who argued in his **Second Treatise** on government that in America *"a King of a large and fruitful Territory there feeds, lodges, and is clad worse than a day Labourer in England."* (section 41) Ignoring the dubious anthropological assertions, his claim was made as part of a general defence of enclosing common land and turning independent workers into dependent wage slaves. The key to his argument is that the accumulation of property and land beyond that useable by an individual along with the elimination of customary rights for poor individuals was justified because owners of the enclosed land would hire workers and increase the overall wealth available. This meant that the dispossessed workers (and particularly their descendants) would be better off materially (see C.B MacPherson's **The Political Theory of Possessive Individualism: From Hobbes to Locke** for an excellent discussion of this). The links with the current debate on globalisation are clear, with so-called "market advocates" and "individualists" providing extensive apologetics for capital moving to authoritarian regimes which systematically violate individual rights and the principles of the "free" market precisely in terms of the increased material wealth this (eventually) produces. But then it is easy for bosses, tenured professors and well paid think-tank experts to pontificate that such sacrifices (for others, of course) are worth it in the long run.

This apparently strange transformation of "individualists" into "collectivists" (justifying the violation of individual rights in terms of the greater good) has a long precedent. Indeed, it can only be considered strange if you are ignorant of the nature and history of capitalism as well as the contortions its defenders have inflicted on themselves (and by yet another of these strange coincidences that so regularly afflicts capitalism and its supporters, the individuals whose liberty and rights are considered expendable are always members of the working class). So the notion of absolute poverty has always been associated with defending inequalities of wealth and power as well as providing justification in terms of long term benefit for the violation of the "freedom" and "individual rights" they claim to defend. Significantly, the contemporary representatives of the landlords who imposed enclosures framed their arguments precisely in terms of restricting the independence (i.e. freedom) of the working population. As Marxist David McNally summarises after providing extensive quotes, it was *"precisely these elements of material and spiritual independence that many of the most outspoken advocates of enclosure sought to destroy."* They *"were remarkably forthright in this respect. Common rights and access to common lands, they argued, allowed a degree of social and economic independence, and thereby produced a lazy, dissolute mass of rural poor ... Denying such people common lands and common rights would force them to conform to the harsh discipline imposed by the market in labour."* [**Against the Market**, p. 19] This would only be considered paradoxical if you equate freedom with capitalism.

The underlying assumption under all this is that liberty (at least for working class people) is less important than material wealth, a vision rightly attacked when Stalinism seemed to be out-performing the West in terms of growth before the 1970s. Yet the question, surely, is would individuals freely agree to be subjected to the dictates of a boss for 10–12 hours a day if other alternatives had not closed off by state intervention? As we discuss in section F.8, the answer

has always been no. This is the case today. For example, Naomi Klein interviews one boss of a third-world sweatshop who explained that *"for the lowly province worker, working inside an enclosed factory is better than being outside."* One of his workers rebutted this, stating *"Our rights are being trampled"* and the he said that *"because he has not experienced working in a factory and the conditions inside."* Another noted that *"of course he would say that we prefer this work — it is beneficial to him, but not to us."* Another states the obvious: *"But we are landless, so we have no choice but to work in the economic zone even though it is very hard and the situation is unfair."* [quoted by Klein, **No Logo**, p. 220 and p. 221] It should noted that the boss has, of course, the backing of a great many economists (including many moderately left-wing ones) who argue that sweatshops are better than no jobs and that these countries cannot afford basic workers' rights (as these are class societies, it means that their ruling class cannot afford to give their workers the beneficial aspects of a free market, namely the right to organise and associate freely). It is amazing how quickly an economist or right-liberal will proclaim that a society cannot expect the luxury of a free market, at least for the working class, and how these "individualists" will proclaim that the little people must suffer in order for the greater good to be achieved.

As for the regimes within these factories, Klein notes that they are extremely authoritarian. The largest free-trade zone in the Philippines is *"a miniature military state inside a democracy"* and the *"management is military-style, the supervisors often abusive."* As would be expected, *"no questioning of authority is expected or permitted"* and in some *"strikes are officially illegal"* (rather than unofficially banned). [**Op. Cit.**, p. 204, p. 205 and p. 214] As with the original industrial revolution, capitalism takes advantages of other forms of social hierarchy in developing countries. As Stephen A. Marglin noted, the women and children, *"who by all accounts constituted the overwhelming majority of factory workers in the early days, were there not because they choose to be but because their husbands and fathers told them to be. The application of revealed preference to their presence in the factory requires a rather elastic view of the concept of individual choice."* [*"What do Bosses do?"*, pp. 60–112, **The Review of Radical Political Economics**, vol. 6, No. 2, p. 98] In other words, while the workers **may** be better off in terms of wages they are not better off in terms of liberty, equality and dignity. Luckily there are economists around to explain, on their behalf, that these workers cannot afford such luxuries.

Looking beyond the empirical investigation, we should point out the slave mentality behind these arguments. After all, what does this argument actually imply? Simply that economic growth is the only way for working people to get ahead. If working people put up with exploitative working environments, in the long run capitalists will invest some of their profits and so increase the economic cake for all. So, like religion, "free market" economics argue that we must sacrifice in the short term so that (perhaps) in the future our living standards will increase (*"you'll get pie in the sky when you die"* as Joe Hill said about religion). Moreover, any attempt to change the "laws of the market" (i.e. the decisions of the rich) by collective action will only harm the working class. If the defenders of capitalism were genuinely interested in individual freedom they would be urging the oppressed masses to revolt rather than defending the investing of capital in oppressive regimes in terms of the freedom they are so willing to sacrifice when it comes to workers. But, of course, these defenders of "freedom" will be the first to point out that such revolts make for a bad investment climate — capital will be frightened away to countries with a more "realistic" and "flexible" workforce (usually made so by state repression).

In other words, capitalist economics praises servitude over independence, kow-towing over defiance and altruism over egoism. The "rational" person of neo-classical economics does not

confront authority, rather he accommodates himself to it. For, in the long run, such self-negation will pay off with a bigger cake with (it is claimed) correspondingly bigger crumbs "trickling" downwards. In other words, in the short-term, the gains may flow to the elite but in the future we will all gain as some of it will trickle (back) down to the working people who created them in the first place. But, unfortunately, in the real world uncertainty is the rule and the future is unknown. The history of capitalism shows that economic growth is quite compatible with stagnating wages, increasing poverty and insecurity for workers and their families, rising inequality and wealth accumulating in fewer and fewer hands (the example of the USA and Chile from the 1970s to 1990s and Chile spring to mind). And, of course, even **if** workers kow-tow to bosses, the bosses may just move production elsewhere anyway (as tens of thousands of "down-sized" workers across the West can testify). For more details of this process in the USA see Edward S. Herman's article *"Immiserating Growth: The First World"* in Z Magazine, July 1994.

For anarchists it seems strange to wait for a bigger cake when we can have the whole bakery. If control of investment was in the hands of those it directly effects (working people) then it could be directed into socially and ecologically constructive projects rather than being used as a tool in the class war and to make the rich richer. The arguments against "rocking the boat" are self-serving (it is obviously in the interests the rich and powerful to defend a given income and property distribution) and, ultimately, self-defeating for those working people who accept them. In the end, even the most self-negating working class will suffer from the negative effects of treating society as a resource for the economy, the higher mobility of capital that accompanies growth and effects of periodic economic and long term ecological crisis. When it boils down to it, we all have two options — you can do what is right or you can do what you are told. "Free market" capitalist economics opts for the latter.

C.11 Doesn't neo-liberalism in Chile prove that the free market benefits everyone?

Chile is considered by some to be one of the economic success stories of the modern world. It can be considered as the first laboratory for neo-liberal economic dogma, first under Pinochet's dictatorship and later when his regime had been replaced by a more democratic one. It can be considered as the template for the economic vision later applied by Reagan and Thatcher in the West. What happened in Chile was repeated (to some degree) wherever neo-liberal policies were implemented. As such, it makes a good case study to evaluate the benefits of free(r) market capitalism and the claims of capitalist economics.

For the right, Chile was pointed to as a casebook in sound economics and is held up as an example of the benefits of capitalism. Milton Friedman, for example, stated in 1982 that Military Junta *"has supported a fully free-market economy as a matter of principle. Chile is an economic miracle."* [quoted by Elton Rayack, **Not so Free to Choose**, p. 37] Then US President George Bush praised the Chilean economic record in December 1990 when he visited that country, stating Chile deserved its *"reputation as an economic model"* for others to follow.

However, the reality of the situation is radically different. As Chilean expert Peter Winn argues, *"[w]e question whether Chile's neoliberal boom ... should be regarded as a miracle. When confronted by such a claim, scholars and students should always ask: a miracle for **whom** – and at what cost?"* [*"Introduction"*, Peter Winn (ed.), **Victims of the Chilean Miracle**, p. 12] As we will prove, Chile's "economic miracle" is **very** class dependent. For its working class, the neo-liberal reforms of the Pinochet regime have resulted in a worsening of their lives; if you are a capitalist then it has been a miracle. That the likes of Friedman claim the experiment as a "miracle" shows where their sympathies lie — and how firm a grasp they have of reality.

The reason why the Chilean people become the first test case for neo-liberalism is significant. They did not have a choice. General Pinochet was the figure-head of a military coup in 1973 against the democratically elected left-wing government led by President Allende. This coup was the culmination of years of US interference by the US in Chilean politics and was desired by the US **before** Allende took office in November 1970 (*"It is the firm and continuing policy that Allende be overthrown by a coup,"* as one CIA memo put it in October of that year [quoted by Gregory Palast, *"A Marxist threat to cola sales? Pepsi demands a US coup. Goodbye Allende. Hello Pinochet"*, **The Observer**, 8/11/1998]). Then American president Richard Nixon imposed an embargo on Chile and began a covert plan to overturn the Allende government. In the words of the US ambassador to Chile, the Americas *"will do all in our power to condemn Chileans to utmost poverty."* [quoted by Noam Chomsky, **Deterring Democracy**, p. 395]

According to notes taken by CIA director Richard Helms at a 1970 meeting in the Oval Office, his orders were to *"make the economy scream."* This was called Project FUBELT and its aims were clear: *"The Director [of the CIA] told the group that President Nixon had decided that an Allende regime in Chile was not acceptable to the United States. The President asked the Agency to*

prevent Allende from coming to power or to unseat him." [*"Genesis of Project FUBELT"* document dated September 16, 1970] Not all aid was cut. During 1972 and 1973 the US increased aid to the military and increased training Chilean military personnel in the United States and Panama. In other words, the coup was helped by US state and various US corporations both directly and indirectly, by undermining the Chilean economy.

Thousands of people were murdered by the forces of "law and order" and Pinochet's forces *"are conservatively estimated to have killed over 11,000 people in his first year in power."* [P. Gunson, A. Thompson, G. Chamberlain, **The Dictionary of Contemporary Politics of South America**, p. 228] Military units embarked on an operation called the Caravan of Death to hunt down those they considered subversives (i.e. anyone suspected or accused of holding left-wing views or sympathies). Torture and rape were used extensively and when people did not just disappear, their mutilated bodies were jumped in plain view as a warning to others. While the Chilean government's official truth and reconciliation committee places the number of disappeared at roughly 3,000, church and human rights groups estimate the number is far higher, at over 10,000. Hundreds of thousands fled into exile. Thus ended Allende's "democratic road to Socialism." The terror did not end after the coup and dictatorship's record on human rights was rightly denounced as barbaric.

Friedman, of course, stressed his *"disagreement with the authoritarian political system of Chile."* [quoted by Rayack, **Op. Cit.**, p. 61] For the time being we will ignore the obvious contradiction in this "economic miracle", i.e. why it almost always takes authoritarian/fascistic states to introduce "economic liberty." Rather we will take the right at its word and concentrate on the economic facts of the free-market capitalism imposed on the Chilean people. They claim it was a free market and given that, for example, Friedman was leading ideologue for capitalism we can assume that the regime approximated the workings of such a system. We will discuss the illogical nature and utter hypocrisy of the right's position in section D.11, where we also discuss the limited nature of the democratic regime which replaced Pinochet and the real relationship between economic and political liberty.

Faced with an economic crisis, in 1975 Pinochet turned to the ideas of Milton Friedman and a group of Chilean economics who had been taught by him at the University in Chicago. A short meeting between Friedman and Pinochet convinced the dictator to hand economic policy making to Friedman's acolytes (who became known as "the Chicago Boys" for obvious reasons). These were free-market economists, working on a belief in the efficiency and fairness of the free market and who desired to put the laws of supply and demand back to work. They set out to reduce the role of the state in terms of regulation and social welfare as these, they argued, had restricted Chile's growth by reducing competition, lowering growth, artificially increasing wages, and leading to inflation. The ultimate goal, Pinochet once said, was to make Chile *"not a nation of proletarians, but a nation of entrepreneurs."* [quoted by Thomas E. Skidmore and Peter H. Smith, **Modern Latin America**, p. 137]

The role of the Chicago Boys cannot be understated. They had a close relationship with the military from 1972, and according to one expert had a key role in the coup:

> *"In August of 1972 a group of ten economists under the leadership of de Castro began to work on the formulation of an economic programme that would replace [Allende's one]... In fact, the existence of the plan was essential to any attempt on the part of the armed forces to overthrow Allende as the Chilean armed forces did not have any*

economic plan of their own." [Silvia Borzutzky, *"The Chicago Boys, social security and welfare in Chile"*, **The Radical Right and the Welfare State**, Howard Glennerster and James Midgley (eds.), p. 88]

This plan also had the backing of certain business interests. Unsurprisingly, immediately after the coup, many of its authors entered key Economic Ministries as advisers. [Rayack, **Op. Cit.**, p. 52] It is also interesting to note that *"[a]ccording to the report of the United States Senate on covert actions in Chile, the activities of these economists were financed by the Central Intelligence Agency (CIA)."* [Borzutzky, **Op. Cit.**, p. 89] Obviously some forms of state intervention were more acceptable than others.

April 1975 saw the Chicago Boys assume *"what was in effect dictatorial control over economic policy ... The monetarists were now in a commanding position to put in place Friedman's recommendations, and they didn't hesitate."* The actual results of the free market policies introduced by the dictatorship were far less than the "miracle" claimed by Friedman and a host of other right-wingers. The initial effects of introducing free market policies was a shock-induced depression which resulted in GDP dropping by 12.9% year "shock treatment" was imposed saw the GDP fall by 12.9% (Latin America saw a 3.8% rise), real wages fell to 64.9% of their 1970 level and unemployment rising to 20 percent. Even Pinochet *"had to concede that the social cost of the shock treatment was greater than he expected."* [Rayack, **Op. Cit.**, p. 56, p. 41 and p. 57] For Friedman, his *"only concern"* with the plan was *"whether it would be pushed long enough and hard enough."* [quoted by Joseph Collins and John Lear, **Chile's Free-Market Miracle: A Second Look**, p. 29] Unsurprisingly, the *"rigorous imposition of the neoliberal economic model after 1975 soon threatened [workers] job security too"* and they *"bore the brunt"* of the changes in terms of *"lost jobs and raised work norms."* [Winn, *"No Miracle for Us,"* Peter Winn (ed.), **Op. Cit.**, p. 131]

After the depression of 1975, the economic started to grow again. This is the source of claim of an "economic miracle." Friedman, for example, used 1976 as his base-line, so excluding the depression year of 1975 which his recommended shock treatment deepened. This is dishonest as it fails to take into account not only the impact of neo-liberal policies but also that a deep recession often produces a vigorous upsurge:

> *"By taking 1975, a recession year in which the Chilean economy declined by 13 percent, as the starting point of their analysis, the Chicago Boys obscured the fact that their 'boom' was more a recovery from the deep recession than a new economic expansion. From 1974 to 1981, the Chilean economy grew at a modest 1.4 percent a year on average. Even at the height of the 'boom' in 1980, effective unemployment was so high — 17 percent — that 5 percent of the workforce were in government make-work programs, a confession of failure for neoliberals who believe in the market as self-correcting and who abhor government welfare programs. Nor did the Chicago Boys call attention to the extreme concentration of capital, precipitous fall in real wages and negative redistribution of income that their policies promoted, or their disincentives to productive investment."* [Peter Winn, *"The Pinochet Era"*, **Op. Cit.**, pp. 28–9]

Between 1975 and 1982, the regime implemented numerous economic reforms based on the suggestions of the Chicago Boys and their intellectual gurus Friedman and von Hayek. They privatised numerous state owned industries and resources and, as would be expected, the pri-

vatisations were carried out in such a way as to profit the wealthy. *"The denationalisation process,"* notes Rayack, *"was carried out under conditions that were extremely advantageous for the new owners ... the enterprises were sold at sharply undervalues prices."* Only large conglomerates could afford them, so capital became even more concentrated. [**Op. Cit.**, p. 67] When it privatised its interests in the forestry processing plants in the country the government followed the privatisation of other areas of the economy and they *"were sold at a discount, according to one estimate, at least 20 per cent below their value."* Thus *"the privatisations were bargain sell-offs of public assets,"* which amounted to a *"subsidy from the national treasury to the buyers of 27 to 69 percent"* and so *"[c]ontrol of the common wealth of the entire nation passed to a handful of national and foreign interests that captured most of the subsidy implicit in the rock bottom prices."* [Joseph Collins and John Lear, **Chile's Free-Market Miracle: A Second Look**, p. 206, p. 54 and p. 59]

By 1978, the Chicago Boys *"were pressing for new laws that would bring labour relations in line with the neoliberal economic model in which the market, not the state, would regulate factors of production."* [Winn, *"The Pinochet Era"*, Winn (ed.), **Op. Cit.**, p. 31] According to Pinochet's Minister of Labour (1978–81), the Labour relations had been *"modernised"* and that *"politicised"* labour leaders and their *"privileged fiefdoms"* had been eliminated, with workers no longer having *"monopolies"* on job positions. Rather than government intervention, negotiation between capital and labour was now left to *"individual responsibility and the discipline of the market."* The stated aim was to *"introduce democracy into the world of Chilean unions and resolve problems that for decades had been obstacles for the progress of workers."* [quoted by Joseph Collins and John Lear, *"Working in Chile's Free Market"*, pp. 10–29, **Latin American Perspectives**, vol. 22, No. 1, pp. 10–11 and p. 16] The hypocrisy of a technocratic bureaucrat appointed by a military dictatorship talking about introducing democracy into unions is obvious. The price of labour, it was claimed, now found its correct level as set by the "free" market.

All of which explains Friedman's 1991 comment that the *"real miracle of Chile"* was that Pinochet *"support[ed] a free market regime designed by principled believers in a free market."* [**Economic Freedom, Human Freedom, Political Freedom**] As to be expected with Friedman, the actual experience of implementing his dogmas refuted both them and his assertions on capitalism. Moreover, working class paid the price.

The advent of the "free market" led to reduced barriers to imports *"on the ground the quotas and tariffs protected inefficient industries and kept prices artificially high. The result was that many local firms lost out to multinational corporations. The Chilean business community, which strongly supported the coup in 1973, was badly affected."* [Skidmore and Smith, **Op. Cit.**, p. 138] The decline of domestic industry cost thousands of better-paying jobs. Looking at the textile sector, firms survived because of *"lowered labour costs and increased productivity."* The sector has *"low real wages, which dramatically altered"* its international competitiveness. In other words, the Chilean textile industry *"had restructured itself on the back of its workers."* [Peter Winn, *"No Miracle for Us"*, Winn (ed.), **Op. Cit.**, p. 130] The mines were *"enormously profitable after 1973 because of increased labour discipline, the reduction in costs due to the contraction of real wages, and an increase in production based on expansion programs initiated during the late 1960s."* [Thomas Miller Klubock, *"Class, Community, and Neoliberalism in Chile"*, **Op. Cit.**, p. 241] This was the **real** basis of the 1976 to 1981 "economic miracle" Friedman praised in 1982.

As with most neo-liberal experiments, the post-1975 "miracle" was built on sand. It was *"a speculative bubble that was hailed as an 'economic miracle' until it burst in the 1981–82 bank crash that brought the deregulated Chilean economy down in its wake."* It was *"largely short-term specula-*

tive capital ... producing a bubble in stock market and real estate values" and *"by 1982 the economy was in shambles and Chile in the throes of its worse economic crisis since the depression of the 1930s. A year later, massive social protests defied Pinochet's security forces."* [Winn, **Op. Cit.**, p. 38] Thus *"the bottom fell out of the economy"* and Chile's GDP fell 14% in one year. In the textile industry alone, an estimated 35 to 45% of companies failed. [Collins and Lear, **Op. Cit.**, p. 15]

So after 7 years of free(r) market capitalism, Chile faced yet another economic crisis which, in terms of unemployment and falling GDP was even greater than that experienced during the terrible shock treatment of 1975. Real wages dropped sharply, falling in 1983 to 14% below what they had been in 1970. Bankruptcies skyrocketed, as did foreign debt and unemployment. [Rayack, **Op. Cit.**, p. 69] Chile's GNP *"fell by more than 15 percent, while its real disposable GNP declined by 19 percent. The industrial sector contracted by more than 21 percent and construction by more than 23 percent. Bankruptcies tripled ... It was a crisis comparable to the Great Depression of the 1930s, which affected Chile more severely than any other country in the world."* The same can be said of this crisis, for while GNP in Chile feel 14% during 1982–3, the rest of Latin America experienced 3.5% drop as whole. [Winn, **Op. Cit.**, p. 41 and p. 66] By 1983, the Chilean economy was devastated and it was only by the end of 1986 that Gross Domestic Product per capita (barely) equalled that of 1970. Unemployment (including those on government make-work programmes) had risen to a third of the labour force by mid-1983. By 1986, per capita consumption was actually 11% lower than the 1970 level. [Skidmore and Smith, **Op. Cit.**, p. 138]

Faced with this massive economic collapse (a collapse that somehow slipped Friedman's mind when he was evaluating the Chilean experiment in 1991), the regime organised a massive bailout. The "Chicago Boys" resisted this measure, arguing with dogmatic arrogance that there was no need for government intervention or policy changes because they believed in the self-correcting mechanisms of the market would resolve any economic problem. However, they were applying a simplistic textbook version of the economy to a complex reality which was spectacularly different from their assumptions. When that reality refused to respond in the way predicted by their ideological musing, the state stepped in simply because the situation had become so critical it could not avoid it.

The regime did do some things to help the unemployed, with 14% of the labour force enrolled in two government make-work programs that paid less than the minimum wage by October 1983. However, aid for the capitalist class was far more substantial. The IMF offered loans to Chile to help it out of mess its economic policies had helped create, but under strict conditions (such as making the Chilean public responsible for paying the billions in foreign loans contracted by **private** banks and firms). The total bailout cost 3% of Chile's GNP for three years, a cost which was passed on to the population (this *"socialisation of private debts were both striking and unequal"*). This follows the usual pattern of "free market" capitalism — market discipline for the working class, state aid for the elite. During the "miracle," the economic gains had been privatised; during the crash the burden for repayment was socialised. In fact, the regime's intervention into the economy was so extensive that, *"[w]ith understandable irony, critics lampooned the 'Chicago road to socialism.'"* [Winn, **Op. Cit.**, p. 66 and p. 40]

Significantly, of the 19 banks that the government had privatised, all but five failed. These along with the other bankrupt firms fell back into government hands, a fact the regime sought to downplay by failing to classify them as public companies. Once the debts had been *"assumed by the public,"* their *"assets were sold to private interests."* Significantly, the *"one bank that had not been privatised and the other publicly owned companies survived the crisis in relatively good shape"*

and almost all of them were *"turning a profit, generating for the government in profits and taxes 25 percent of its total revenues ... Thus the public companies that had escaped the Chicago Boy's privatisations ... enabled a financially strapped government to resuscitate the failed private banks and companies."* [Collins and Lear, **Chile's Free-Market Miracle: A Second Look**, pp. 51–2]

Needless to say, the recovery (like the illusionary boom) was paid for by the working class. The 1982 crash meant that *"something had to give, and the Chicago Boys decided that it would be wages. Wages, they explained, should be allowed to find their natural level."* An 1982 decree *"transferred much of the burden of recovery and profitability to workers and became central to Chile's economic recovery throughout the rest of the decade."* [Collins and Lear, **Op. Cit.**, p. 20 and p. 19] For the miners, between late 1973 and May 1983, real average wages dropped by 32.6% and workers' benefits were reduced (for example, the free medical attention and health care that had been won in the 1920s were dropped). [Thomas Miller Klubock, *"Class, Community, and Neoliberalism in Chile,"* Winn (ed.), **Op. Cit.**, p. 217] As Peter Winn summarises:

> *"Chile's workers, who had paid the social costs of the illusory neoliberal 'miracle,' now paid as well the highest price for the errors of their nation's military rulers and Chicago Boy technocrats and the imprudence of their country's capitalists. Plant closing and layoffs drove the effective unemployment rate above 30 percent, while real wages for those lucky enough to retain their jobs fell by nearly 11 percent in 1979–82 and by some 20 percent during the 1980s. In addition, inflation jumped to over 20 percent in both 1982 and 1983, and the budget surplus gave way to a deficit equal to 3 percent of the GNP by 1983. By then, Chile's foreign debt was 13 percent higher than its GNP ... Chile's economy contracted 400 percent more in 1982–83 than the rest of Latin America."* [*"The Pinochet Era"*, Winn (ed.), **Op. Cit.**, pp. 41–2]

Unsurprisingly, for the capitalist class things were somewhat different. Private banks *"were bailed out by the government, which spent $6 billion in subsidies during 1983–85 (equal to 30 percent of the GNP!) but were made subject to strict government regulation designed to assure their solvency. Controls were also placed on flows of foreign capital."* [Winn, **Op. Cit.**, p. 42] The government also raised tariffs from 10% to between 20 and 35% and the peso was drastically devalued. [Collins and Lear, **Op. Cit.**, p. 15] Pinochet's state took a more active role in promoting economic activity. For example, it developed new export industries which *"benefited from a series of subsidies, privatisations, and deregulations that allowed for unrestricted exploitation of natural resources of limited renewability. Equally important were low wages, great flexibility of employers vis-à-vis workers, and high levels of unemployment."* [Collins and Lear, **Op. Cit.**, p. 20] The forestry sector was marked by government hand-outs to the already rich. Joseph Collins and John Lear argue that the neoliberals' *"stated goals were to curtail sharply the direct role of government in forestry and to let market mechanisms determine the prices and direct the use of resources. Yet government intervention and subsidies were in fact central to reorienting the benefits of forestry production away from the rural population towards a handful of national and foreign companies."* [**Op. Cit.**, p. 205]

By 1986, the economy had stabilised and the crisis was over. However, the recovery was paid for by the working class as *"wages stayed low"* even as the economy began to recover. Low wages were key to the celebrated 'miracle' recovery. From 1984 to 1989 the gross national product grew an average of 6 percent annually. By 1987 Chile had recovered the production levels of 1981, and by 1989 production levels exceeded 1981 levels by 10 percent. The average wage, by contrast, was

5 percent lower at the end of the decade than it had been in 1981 — almost 10 percent lower than the average 1970 wage. The drop in the minimum wage *"was even more drastic."* Public unrest during the economic crisis made it politically difficult to eliminate, so it *"was allowed to erode steadily in the face of inflation. By 1988, it was 40 percent lower in real terms than it had been in 1981 ... In that year 32 percent of the workers in Santiago earned the minimum wage or less."* Thus, *"recovery and expansion after 1985 depended on two ingredients that are unsustainable over the long term and in a democratic society,"* namely *"an intensified exploitation of the labour force"* and *"the unregulated exploitation of nonrenewable natural resources such as native forests and fishing areas, which amounted to a one-time subsidy to domestic conglomerates and multinationals."* [Collins and Lear, **Op. Cit.**, **Op. Cit.**, p. 83, p. 84 and p. 35]

In summary, *"the experiment has been an economic disaster."* [Rayack, **Op. Cit.**, p. 72]

C.11.1 Who benefited from Chile's "economic miracle"?

Given that Chile was hardly an "economic miracle," the question arises why it was termed so by people like Friedman. To answer that question, we need to ask who actually benefited from the neo-liberalism Pinochet imposed. To do this we need to recognise that capitalism is a class system and these classes have different interests. We would expect any policies which benefit the ruling elite to be classed as an "economic miracle" regardless of how adversely they affect the general population (and vice versa). In the case of Chile, this is precisely what happened.

Rather than benefit everyone, neo-liberalism harmed the majority. Overall, by far the hardest group hit was the working class, particularly the urban working class. By 1976, the third year of Junta rule, real wages had fallen to 35% below their 1970 level. It was only by 1981 that they has risen to 97.3% of the 1970 level, only to fall again to 86.7% by 1983. Unemployment, excluding those on state make-work programmes, was 14.8% in 1976, falling to 11.8% by 1980 (this is still double the average 1960s level) only to rise to 20.3% by 1982. [Rayack, **Op. Cit.**, p. 65] Between 1980 and 1988, the real value of wages grew only 1.2 percent while the real value of the minimum wage declined by 28.5 percent. During this period, urban unemployment averaged 15.3 percent per year. [Silvia Borzutzky, **Op. Cit.**, p. 96] Even by 1989 the unemployment rate was still at 10% (the rate in 1970 was 5.7%) and the real wage was still 8% lower than in 1970. Between 1975 and 1989, unemployment averaged 16.7%. In other words, after nearly 15 years of free market capitalism, real wages had still not exceeded their 1970 levels and unemployment was still higher. As would be expected in such circumstances the share of wages in national income fell from 42.7% in 1970 to 33.9% in 1993. Given that high unemployment is often attributed by the right to strong unions and other labour market "imperfections," these figures are doubly significant as the Chilean regime, as noted above, reformed the labour market to improve its "competitiveness."

After 1982, *"stagnant wages and the unequal distribution of income severely curtailed buying power for most Chileans, who would not recover 1970 consumption levels until 1989."* [Collins and Lear, **Op. Cit.**, p. 25] By 1988, *"the average real wage had returned to 1980 levels, but it was still well below 1970 levels. Moreover, in 1986, some 37 percent of the labour force worked in the informal sector, where wages were lower and benefits often nonexistent. Many worked for minimum wage which in 1988 provided only half of what an average family required to live decently — and a fifth of the workers didn't even earn that. A survey . .. concluded that nearly half of Chileans lived in poverty."* [Winn, *"The Pinochet Era"*, **Op. Cit.**, p. 48] This was far more in absolute and relative

terms than at any time in the in the preceding three decades. [Collins and Lear, *"Working in Chile's Free Market"*, **Op. Cit.**, p. 26]

Per capita consumption fell by 23% from 1972–87. The proportion of the population below the poverty line (the minimum income required for basic food and housing) increased from 20% to 44.4% between 1970 and 1987. Per capita health care spending was more than halved from 1973 to 1985, setting off explosive growth in poverty-related diseases such as typhoid, diabetes and viral hepatitis. On the other hand, while consumption for the poorest 20% of the population of Santiago dropped by 30%, it rose by 15% for the richest 20%. [Noam Chomsky, **Year 501**, pp. 190–191] The percentage of Chileans without adequate housing increased from 27 to 40 percent between 1972 and 1988, despite the claims of the government that it would solve homelessness via market friendly policies.

So after two decades of neoliberalism, the Chilean worker can look forward to *"a job that offers little stability and low wages, usually a temporary one or one in the informal economy ... Much of the growth in jobs after the 1982–1983 crash came in economic sectors characterised by seasonal employment ... [and are] notorious for their low pay, long hours, and high turnover."* In 1989, over 30% of jobs were in the formal sector in the Santiago metropolitan area with incomes less than half the average of those in the formal sector. For those with jobs, *"the work pace intensified and the work day lengthened ... Many Chileans worked far longer than the legal maximum work week of 48 hours without being paid for the extra hours. Even free-market celebrants ... admit that extra unpaid hours remain a serious problem"* in 1989. In fact, it is *"commonly assumed that employees work overtime without pay or else"* and, unsurprisingly, the *"pattern resembles the European production systems of the mid-19th century."* [Collins and Lear, **Op. Cit.**, p. 22 pp. 22–3, p. 23, p. 24 and p. 25] Unsurprisingly, as in neo-liberal America, wages have become divorced from productivity growth. Even in the 1990s, *"there is evidence that productivity growth outpaced real wage growth by as much as a ratio 3:1 in 1993 and 5:1 in 1997."* [Volker Frank, *"Politics without Policy"*, **Op. Cit.**, p. 73]

Similar comments are possible in regards to the privatised pension system, regarded by many right-wingers as a success and a model for other countries. However, on closer inspection this system shows its weaknesses — indeed, it can be argued that the system is only a success for those companies making extensive profits from it (administration costs of the Chilean system are almost 30% of revenues, compared to 1% for the U.S. Social Security system [Doug Henwood, **Wall Street**, p. 305]). For working people, it is a disaster. According to SAFP, the government agency which regulates the system, 96% of the known workforce were enrolled in February 1995, but 43.4% of these were not adding to their funds. Perhaps as many as 60% do not contribute regularly (given the nature of the labour market, this is unsurprising). Unfortunately, regular contributions are required to receive full benefits. Critics argue that only 20% of contributors will actually receive good pensions.

Workers need to find money for health care as their *"remuneration has been reduced to the wage, ending most benefits that workers had gained over the years [before the coup]. Moreover, the privatisation of such social services as health care and retirement security ... [has meant] the costs were now taken entirely from employee earnings."* Unsurprisingly, *"[l]onger work days and a stepped-up pace of work increased the likelihood of accidents and illness. From 1982 to 1985 the number of reported workplace accident almost doubled. Public health experts estimate, however, that over three-quarters of workplace accidents went unreported, in part because over half of the workforce is without any kind of accident insurance."* [Collins and Lear, **Op. Cit.**, p. 20 and p. 25]

It is interesting to note that when this programme was introduced, the armed forces and police were allowed to keep their own generous public plans. If the plans **were** are as good as their supporters claim, you would think that those introducing them would have joined them. Obviously what was good enough for the masses were not suitable for the rulers and the holders of the guns they depended upon. Given the subsequent fate of that scheme, it is understandable that the ruling elite and its minions did not want middle-men to make money off their savings and did not trust their pensions to the fluctuations of the stock market. Their subjects, however, were less lucky. All in all, Chile's privatised social security system *"transferred worker savings in the form of social security contributions from the public to the private sector, making them available to the country's economic groups for investment. Given the oligopic concentration of wealth and corporate control under Pinochet, this meant handing the forced savings of workers over to Chile's most powerful capitalists."* That is, *"to shore up capital markets through its transfer of worker savings to Chile's business elites."* [Winn, *"The Pinochet Era"*, **Op. Cit.**, p. 64 and p. 31]

The same applies to the health system, with the armed forces and national police and their dependants having their own public health care system. This means that they avoid the privatised health system which the wealthy use and the run-down public system which the majority have access to. The market ensures that for most people, *"the actual determining factor is not 'choice,' but one's ability to pay."* By 1990, only 15% of Chileans were in the private system (of these, nearly 75% are form the top 30% of the population by income). This means that there are three medical systems in Chile. The well-funded public one for armed forces and police, a good to excellent private system for the elite few and a *"grossly under-funded, rundown, over-burdened"* one *"for some 70% of Chileans."* Most *"pay more and receive less."* [Collins and Lear, **Op. Cit.**, p. 99 and p. 246]

The impact on individuals extended beyond purely financial considerations, with the Chilean labour force *"once accustomed to secure, unionised jobs [before Pinochet] ... [being turned] into a nation of anxious individualists ... [with] over half of all visits to Chile's public health system involv[ing] psychological ailments, mainly depression. 'The repression isn't physical any more, it's economic — feeding your family, educating your child,' says Maria Pena, who works in a fishmeal factory in Concepcion. 'I feel real anxiety about the future', she adds, 'They can chuck us out at any time. You can't think five years ahead. If you've got money you can get an education and health care; money is everything here now.'"* Little wonder, then, that *"adjustment has created an atomised society, where increased stress and individualism have damaged its traditionally strong and caring community life... suicides have increased threefold between 1970 and 1991 and the number of alcoholics has quadrupled in the last 30 years ... [and] family breakdowns are increasing, while opinion polls show the current crime wave to be the most widely condemned aspect of life in the new Chile. 'Relationships are changing,' says Betty Bizamar, a 26-year-old trade union leader. 'People use each other, spend less time with their family. All they talk about is money, things. True friendship is difficult now.'"* [Duncan Green, **Op. Cit.**, p. 96 and p. 166]

The experiment with free market capitalism also had serious impacts for Chile's environment. The capital city of Santiago became one of the most polluted cities in the world due the free reign of market forces. With no environmental regulation there is general environmental ruin and water supplies have severe pollution problems. [Noam Chomsky, **Year 501**, p. 190] With the bulk of the country's experts being based on the extraction and low processing of natural resources, eco-systems and the environment have been plundered in the name of profit and property. The

depletion of natural resources, particularly in forestry and fishing, is accelerating due to the self-interested behaviour of a few large firms looking for short term profit.

So, in summary, Chile's workers *"were central target's of [Pinochet's] political repression and suffered greatly from his state terror. They also paid a disproportionate share of the costs of his regime's regressive social policies. Workers and their organisations were also the primary targets of Pinochet's labour laws and among the biggest losers from his policies of privatisation and deindustrialisation."* [Winn, *"Introduction"*, **Op. Cit.**, p. 10]

Given that the majority of Chile's people where harmed by the economic policies of the regime, how can it be termed a "miracle"? The answer can be found in another consequence of Pinochet's neo-classical monetarist policies, namely *"a contraction of demand, since workers and their families could afford to purchase fewer goods. The reduction in the market further threatened the business community, which started producing more goods for export and less for local consumption. This posed yet another obstacle to economic growth and led to increased concentration of income and wealth in the hands of a small elite."* [Skidmore and Smith, **Op. Cit.**, p. 138]

It is the increased wealth of the elite that we see the true "miracle" of Chile. When the leader of the Christian Democratic Party returned from exile in 1989 he said that economic growth that benefited the top 10% of the population had been achieved (Pinochet's official institutions agreed). [Noam Chomsky, **Deterring Democracy**, p. 231] This is more than confirmed by other sources. According to one expert in the Latin American neo-liberal revolutions, the elite *"had become massively wealthy under Pinochet."* [Duncan Green, **The Silent Revolution**, p. 216] In 1980, the richest 10% of the population took 36.5% of the national income. By 1989, this had risen to 46.8%. By contrast, the bottom 50% of income earners saw their share fall from 20.4% to 16.8% over the same period. Household consumption followed the same pattern. In 1970, the top 20% of households had 44.5% of consumption. This rose to 51% in 1980 and to 54.6% in 1989. Between 1970 and 1989, the share going to the other 80% fell. The poorest 20% of households saw their share fall from 7.6% in 1970 to 4.4% in 1989. The next 20% saw their share fall from 11.8% to 8.2%, and middle 20% share fell from 15.6% to 12.7%. The next 20% saw their share of consumption fall from 20.5% to 20.1%. In other words, *"at least 60 percent of the population was relatively, if not absolutely, worse off."* [James Petras and Fernando Ignacio Leiva, **Democracy and Poverty in Chile**, p. 39 and p. 34]

In summary, *"the distribution of income in Chile in 1988, after a decade of free-market policies, was markedly regressive. Between 1978 and 1988 the richest 10 percent of Chileans increased their share of national income from 37 to 47 percent, while the next 30 percent saw their share shrink from 23 to 18%. The income share of the poorest fifth of the population dropped from 5 to 4 percent."* [Collins and Lear, **Op. Cit.**, p. 26] In the last years of Pinochet's dictatorship, the richest 10% of the rural population saw their income rise by 90% between 1987 and 1990. The share of the poorest 25% fell from 11% to 7%. The legacy of Pinochet's social inequality could still be found in 1993, with a two-tier health care system within which infant mortality is 7 per 1000 births for the richest fifth of the population and 40 per 1000 for the poorest fifth. [Duncan Green, **Op. Cit.**, p. 108 and p. 101] Between 1970 and 1989, labour's share of the national income fell from 52.3% to 30.7% (it was 62.8% in 1972). Real wages in 1987 were still 81.2% of their 1980–1 level. [Petras and Leiva, **Op. Cit.**, p. 34, p. 25 and p. 170]

Thus Chile has been a "miracle" for the capitalist class, with its successes being *"enjoyed primarily (and in many areas, exclusively) by the economic and political elites. In any society shot through with enormous inequalities in wealth and income, the market ... works to concentrate wealth and*

income." There has been *"a clear trend toward more concentrated control over economic resources ... Economic concentration is now greater than at any other time in Chile's history"* with multinational corporations reaping *"rich rewards from Chile's free-market policies"* (*"not surprisingly, they enthusiastically applaud the model and push to implant it everywhere"*). Ultimately, it is *"unconscionable to consider any economic and social project successful when the percentage of those impoverished ... more than doubled."* [Collins and Lear, **Chile's Free-Market Miracle: A Second Look**, p. 252 and p. 253]

Thus the wealth created by the Chilean economy in during the Pinochet years did **not** "trickle down" to the working class (as claimed would happen by "free market" capitalist dogma) but instead accumulated in the hands of the rich. As in the UK and the USA, with the application of "trickle down economics" there was a vast skewing of income distribution in favour of the already-rich. That is, there has been a 'trickle-up' (or rather, a **flood** upwards). Which is hardly surprising, as exchanges between the strong and weak will favour the former (which is why anarchists support working class organisation and collective action to make us stronger than the capitalists and why Pinochet repressed them).

Overall, *"in 1972, Chile was the second most equal country in Latin America; by 2002 it was the second most **un**equal country in the region."* [Winn, *"The Pinochet Era"*, **Op. Cit.**, p. 56] Significantly, this refutes Friedman's 1962 assertion that *"capitalism leads to less inequality ... inequality appears to be less ... the more highly capitalist the country is."* [**Capitalism and Freedom**, p. 169] As with other countries which applied Friedman's ideas (such as the UK and US), inequality soared in Chile. Ironically, in this as in so many cases, implementing his ideas refuted his own assertions.

There are two conclusions which can be drawn. Firstly, that Chile is now **less** capitalist after applying Friedman's dogmas. Secondly, that Friedman did not know what he was talking about. The second option Seems the most likely, although for some defenders of the faith Chile's neoliberal experiment may not have been "pure" enough. However, this kind of assertion will only convince the true believer.

C.11.2 What about Chile's economic growth and low inflation?

Given the actual results of the experiment, there are only two areas left to claim an "economic miracle." These are combating inflation and increasing economic growth. Neither can be said to be "miraculous."

As far as inflation goes, the Pinochet regime **did** reduce it, eventually. At the time of the time of the CIA-backed coup it was around 500% (given that the US undermined the Chilean economy — *"make the economy scream"*, Richard Helms, the director of the CIA — high inflation would be expected). By 1982 it was 10% and between 1983 to 1987, it fluctuated between 20 and 31%. It took eight years for the Chicago Boys to control inflation and, significantly, this involved *"the failure of several stabilisation programmes at an elevated social cost ... In other words, the stabilisation programs they prescribed not only were not miraculous — they were not successful."* [Winn, *"The Pinochet Era"*, **Op. Cit.**, p. 63] In reality, inflation was not controlled by means of Friedman's Monetarism but rather by state repression as left-wing Keynesian Nicholas Kaldor points out:

> *"The rate of growth of the money supply was reduced from 570 per cent in 1973 ... to 130 per cent in 1977. But this did not succeed in moderating the growth of the money*

> *GNP or of the rise in prices, because – lo and behold! — no sooner did they succeed in moderating the growth of the money supply down, than the velocity of circulation shot up, and inflation was greater with a lower rate of growth of the money supply . .. they have managed to bring down the rate of growth of prices ... And how? By the method well tried by Fascist dictatorships. It is a kind of incomes policy. It is a prohibition of wage increases with concentration camps for those who disobey and, of course, the prohibition of trade union activity and so on. And so it was not monetarism that brought the Chilean inflation down ... [It was based on] methods which by-passed the price mechanism."* [**The Economic Consequences of Mrs Thatcher**, p. 45]

Inflation was controlled by means of state repression and high unemployment, a combination of the incomes policy of Hitler and Mussolini and Karl Marx (i.e., Friedman's "natural rate of unemployment" we debunked in section C.9). In other words, Monetarism and "free market" capitalism did not reduce inflation (as was the case with Thatcher and Reagan was well).

Which leaves growth, the only line of defence possible for the claim of a Chilean "Miracle." As we discussed in section C.10, the right argue that relative shares of wealth are not important, it is the absolute level which counts. While the share of the economic pie may have dropped for most Chileans, the right argue that the high economic growth of the economy meant that they were receiving a smaller share of a bigger pie. We will ignore the well documented facts that the **level** of inequality, rather than absolute levels of standards of living, has most effect on the health of a population and that ill-health is inversely correlated with income (i.e. the poor have worse health that the rich). We will also ignore other issues related to the distribution of wealth, and so power, in a society (such as the free market re-enforcing and increasing inequalities via "free exchange" between strong and weak parties, as the terms of any exchange will be skewed in favour of the stronger party, an analysis which the Chilean experience provides extensive evidence for with its "competitive" and "flexible" labour market). In other words, growth without equality can have damaging effects which are not, and cannot be, indicated in growth figures.

So we will consider the claim that the Pinochet regime's record on growth makes it a "miracle" (as nothing else could). However, when we look at the regime's growth record we find that it is hardly a "miracle" at all — the celebrated economic growth of the 1980s must be viewed in the light of the two catastrophic recessions which Chile suffered in 1975 and 1982. As Edward Herman points out, this growth was *"regularly exaggerated by measurements from inappropriate bases (like the 1982 trough)."* [**The Economics of the Rich**]

This point is essential to understand the actual nature of Chile's "miracle" growth. For example, supporters of the "miracle" pointed to the period 1978 to 1981 (when the economy grew at 6.6 percent a year) or the post 1982–84 recession up-swing. However, this is a case of "lies, damn lies, and statistics" as it does not take into account the catching up an economy goes through as it leaves a recession. During a recovery, laid-off workers go back to work and the economy experiences an increase in growth due to this. This means that the deeper the recession, the higher the subsequent growth in the up-turn. So to see if Chile's economic growth was a miracle and worth the decrease in income for the many, we need to look at whole business cycle, rather than for the upturn. If we do this we find that Chile had the second worse rate of growth in Latin America between 1975 and 1980. The average growth in GDP was 1.5% per year between 1974 and 1982, which was lower than the average Latin American growth rate of 4.3% and lower than the 4.5% of Chile in the 1960's. [Rayack, **Op. Cit.**, p. 64]

This meant that, in per capita terms, Chile's GDP only increased by 1.5% per year between 1974–80. This was considerably less than the 2.3% achieved in the 1960's. The average growth in GDP was 1.5% per year between 1974 and 1982, which was lower than the average Latin American growth rate of 4.3% and lower than the 4.5% of Chile in the 1960s. Between 1970 and 1980, per capita GDP grew by only 8%, while for Latin America as a whole, it increased by 40%. Between the years 1980 and 1982 during which all of Latin America was adversely affected by depression conditions, per capita GDP fell by 12.9 percent, compared to a fall of 4.3 percent for Latin America as a whole. [Rayack, **Op. Cit.**, p. 57 and p. 64]

Thus, between 1970 and 1989, Chile's GDP *"grew at a slow pace (relative to the 1960s and to other Latin American countries over the same period) with an average rate of 1.8–2.0 per cent. On a per capita basis ... GDP [grew] at a rate (0.1–0.2 per cent) well below the Latin American average ... [B]y 1989 the GDP was still 6.1 per cent below the 1981 level, not having recovered the level reached in 1970. For the entire period of military rule (1974–1989) only five Latin American countries had a worse record. Some miracle!"* [Petras and Leiva, **Op. Cit.**, p. 32]

Thus the growth "miracles" refer to recoveries from depression-like collapses, collapses that can be attributed in large part to the free-market policies imposed on Chile! Overall, the growth "miracle" under Pinochet turns out to be non-existent. The full time frame illustrates Chile's lack of significant economic and social process between 1975 and 1989. Indeed, the economy was characterised by instability rather than real growth. The high levels of growth during the boom periods (pointed to by the right as evidence of the "miracle") barely made up for the losses during the bust periods.

All in all, the experience of Chile under Pinochet and its "economic miracle" indicates that the costs involved in creating a free market capitalist regime are heavy, at least for the majority. Rather than being transitional, these problems have proven to be structural and enduring in nature, as the social, environmental, economic and political costs become embedded into society. The murky side of the Chilean "miracle" is simply not reflected in the impressive macroeconomic indictors used to market "free market" capitalism, indicators themselves subject to manipulation as we have seen.

C.11.3 Did neo-liberal Chile confirm capitalist economics?

No. Despite claims by the likes of Friedman, Chile's neo-liberal experiment was no "economic miracle" and, in fact, refuted many of the key dogmas of capitalist economics. We can show this by comparing the actual performance of "economic liberty" with Friedman's predictions about it.

The first thing to note is that neo-liberal Chile hardly supports the claim that the free market is stable. In fact, it was marked by deep recessions followed by periods of high growth as the economic recovered. This resulted in overall (at best) mediocre growth rates (see last section).

Then there is the fact that the Chilean experiment refutes key neo-classical dogmas about the labour market. In **Capitalist and Freedom**, Friedman was at pains to attack trade unions and the idea that they defended the worker from coercion by the boss. Nonsense, he asserted, the *"employee is protected from coercion by the employer because of other employers for whom he can work."* [pp. 14–5] Thus collective action in the form of, say, unions is both unnecessary and, in fact, harmful. The ability of workers to change jobs is sufficient and the desire of capitalist

economists is always to make the real labour market become more like the ideal market of perfect competition – lots of atomised individuals who are price takers, not price setters. While big business gets ignored, unions are demonised.

The problem is that such "perfect" labour markets are hard to create outside of dictatorships. Pinochet's reign of terror created such a market. Faced with the possibility of death and torture if they stood up for their rights, the only **real** alternative most workers had was that of finding a new job. So while the labour market was far from being an expression of "economic liberty," Chile's dictatorship **did** produce a labour market which almost perfectly reflected the neo-classical (and Austrian) ideal. Workers become atomised individuals as state terror forced them to eschew acting as trade unionists and seeking collective solutions to their (individual and collective) problems. Workers had no choice **but** to seek a new employer if they felt they were being mistreated or under-valued. Terror created the preconditions for the workings of an ideal capitalist labour market. Friedman's talk of "economic liberty" in Chile suggests that Friedman thought that a "free market" in labour would work "as if" it were subject to death squads. In other words, that capitalism needs an atomised workforce which is too scared to stand up for themselves. Undoubtedly, he would prefer such fear to be imposed by purely "economic" means (unemployment playing its usual role) but as his work on the "natural rate of unemployment" suggests, he is not above appealing to the state to maintain it.

Unfortunately for capitalist ideology, Chile refuted that notion, with its workers subject to the autocratic power of the boss and having to give concession after concession simply to remain in work. Thus the *"total overhaul of the labour law system [which] took place between 1979 and 1981 ... aimed at creating a perfect labour market, eliminating collective bargaining, allowing massive dismissal of workers, increasing the daily working hours up to twelve hours and eliminating the labour courts."* [Silvia Borzutzky, **Op. Cit.**, p. 91] In reality, the Labour code simply reflected the power property owners have over their wage slaves and *"was solidly probusiness. It was intended to maximise the flexibility of management's use of labour and to keep any eventual elected government from intervening on behalf of labour in negotiations between employers and workers."* This was hidden, of course, by *"populist rhetoric."* [Collins and Lear, **Op. Cit.**, p. 16] In fact, the Plan Laboral *"was intended to definitely shift the balance of power in labour relations in favour of business and to weaken the workers and unions that formed the central political base of the Left."* [Winn, *"The Pinochet Era"*, **Op. Cit.**, p. 31]

Unsurprisingly, *"workers ... have not received a fair share of the benefits from the economic growth and productivity increases that their labour has produced and that they have had to bear a disproportionate share of the costs of this restructuring in their wages, working conditions, job quality, and labour relations."* [Winn, *"Introduction"*, **Op. Cit.**, p. 10]

Chile, yet again, refuted another of Friedman's assertions about capitalism. In 1975, he wrongly predicted that the unemployed caused by the Monetarist recession would quickly find work, telling a Santiago audience that they would *"be surprised how fast people would be absorbed by a growing private-sector economy."* [quoted by Rayack, **Op. Cit.**, p. 57] Unemployment reached record levels for decades, as the free market regime *"has been slow to create jobs. During the 1960s unemployment hovered around 6 percent; by contrast, the unemployment level for the years 1974 to 1987 averaged 20 percent of the workforce. Even in the best years of the boom (1980–1981) it stayed as high as 18 percent. In the years immediately following the 1982 crash, unemployment – including government emergency work programs — peaked at 35 percent of the workforce."* Unsurprisingly, the *"most important rationalisation"* made by Chilean industry *"was*

the lowering of labour costs. This was accomplished through massive layoffs, intensifying the work of remaining workers, and pushing wage levels well below historic levels." This was aided by unemployment levels which *"officially averaged 20 percent from 1974 to 1987. Chronic high levels of unemployment afforded employers considerable leverage in setting working conditions and wage levels ... Not surprisingly, workers who managed to hold onto their jobs were willing to make repeated concessions to employers, and in order to get jobs employees often submitted to onerous terms."* Between 1979 and 1982, more than a fifth of manufacturing companies failed and employment in the sector fell by over a quarter. In the decade before 1981, out of every 26 workers, 13 became unemployed, 5 joined the urban informal sector and 8 were on a government emergency employment program. It should be stressed that official statistics *"underestimate the real level of unemployment"* as they exclude people who worked just one day in the previous week. A respected church-sponsored institute on employment found that in 1988, unemployment in Santiago was as high as 21%. [Lear and Collins, **Op. Cit.**, p. 22, p. 15, p. 16, p. 15 and p. 22]

The standard free-market argument is that unemployment is solved by subjecting the wage level to the rigours of the market. While wages will be lower, more people will be employed. As we discussed in section C.9, the logic and evidence for such claims is spurious. Needless to say, Friedman never revised his claims in the light of the empirical evidence produced by the application of his ideas.

Given the fact that "labour" (i.e., an individual) is not produced for the market in the first place, you can expect it to react differently from other "commodities." For example, a cut in its price will generally increase supply, not decrease it, simply because people have to eat, pay the rent and so forth. Cutting wages will see partners and children sent to work, plus the acceptance of longer hours by those who remain in work. As such, the idea that unemployment is caused by wages being too high has always been a specious and self-serving argument, one refuted not only by logic but that bane of economics, empirical evidence. This was the case with Chile's "economic miracle," where declining wages forced families to seek multiple incomes in order to survive: *"The single salary that could support a family was beyond the reach of most workers; the norm, in fact, was for spouses and children to take on temporary and informal jobs ... Even with multiple incomes, many families were hard-pressed to survive."* [Lear and Collins, **Op. Cit.**, p. 23] Which, of course, refutes "free market" capitalist claim that the labour market is like any other market. In reality, it is not and so it is hardly surprising that a drop in the price of labour **increased** supply nor that the demand for labour did not increase to in response to the drop in its real wage.

Lastly, there is the notion that collective action in the market by the state or trade unions harms the general population, particularly the poor. For neo-classical and Austrian economists, labour is the source of all of capitalism's problems (and any government silly enough to pander to the economically illiterate masses). Pinochet's regime allowed them to prove this was the case. Again Chile refuted them.

The "Chicago Boys" had no illusions that fascism was required to create free market capitalism. According to Sergio de Castro, the architect of the economic programme Pinochet imposed, fascism was required to introduce "economic liberty" because *"it provided a lasting regime; it gave the authorities a degree of efficiency that it was not possible to obtain in a democratic regime; and it made possible the application of a model developed by experts and that did not depend upon the social reactions produced by its implementation."* [quoted by Silvia Borzutzky, *"The Chicago Boys, social security and welfare in Chile"*, **The Radical Right and the Welfare State**, Howard Glen-

nerster and James Midgley (eds.), p. 90] They affirmed that *"in a democracy we could not have done one-fifth of what we did."* [quoted by Winn, *"The Pinochet Era"*, Winn (ed.), **Op. Cit.**, p. 28]

Given the individualistic assumptions of neo-classical and Austrian economics, it is not hard to conclude that creating a police state in order to control industrial disputes, social protest, unions, political associations, and so on, is what is required to introduce the ground rules the capitalist market requires for its operation. As socialist Brian Barry argues in relation to the Thatcher regime in Britain which was also heavily influenced by the ideas of "free market" capitalists like Milton Friedman and Frederick von Hayek:

> *"Some observers claim to have found something paradoxical in the fact that the Thatcher regime combines liberal individualist rhetoric with authoritarian action. But there is no paradox at all. Even under the most repressive conditions ... people seek to act collectively in order to improve things for themselves, and it requires an enormous exercise of brutal power to fragment these efforts at organisation and to force people to pursue their interests individually... left to themselves, people will inevitably tend to pursue their interests through collective action — in trade unions, tenants' associations, community organisations and local government. Only the pretty ruthless exercise of central power can defeat these tendencies: hence the common association between individualism and authoritarianism, well exemplified in the fact that the countries held up as models by the free-marketers are, without exception, authoritarian regimes."* [*"The Continuing Relevance of Socialism"*, Robert Skidelsky (ed.), **Thatcherism**, p. 146]

Little wonder, then, that Pinochet's regime was marked by authoritarianism, terror and rule by savants. Indeed, *"[t]he Chicago-trained economists emphasised the scientific nature of their programme and the need to replace politics by economics and the politicians by economists. Thus, the decisions made were not the result of the will of the authority, but they were determined by their scientific knowledge. The use of the scientific knowledge, in turn, would reduce the power of government since decisions will be made by technocrats and by the individuals in the private sector."* [Silvia Borzutzky, **Op. Cit.**, p. 90] However, as Winn points out:

> *"Although the Chicago Boys justified their policies with a discourse of liberty, they were not troubled by the contradiction of basing the economic freedom they promoted on the most dictatorial regime in Chilean history — or in denying workers the freedom to strike or bargain collectively. At bottom, the only freedom that they cared about was the economic liberty of those Chileans and foreigners with capital to invest and consume, and that 'freedom,' de Castro believed, was best assured by an authoritarian government and a passive labour force. In short, their notions of freedom were both selective and self-serving."* [**Op. Cit.**, p. 28]

Of course, turning authority over to technocrats and private power does not change its nature — only who has it. Pinochet's regime saw a marked shift of governmental power away from protection of individual rights to a protection of capital and property rather than an abolition of that power altogether. As would be expected, only the wealthy benefited. The working class were subjected to attempts to create a "perfect labour market" — and only terror can turn people into the atomised commodities such a market requires. Perhaps when looking over the nightmare of

Pinochet's regime we should ponder these words of Bakunin in which he indicates the negative effects of running society by means of science books and "experts":

> *"human science is always and necessarily imperfect... were we to force the practical life of men — collective as well as individual — into rigorous and exclusive conformity with the latest data of science, we would thus condemn society as well as individuals to suffer martyrdom on a Procrustean bed, which would soon dislocate and stifle them, since life is always an infinitely greater thing than science."* [**The Political Philosophy of Bakunin**, p. 79]

The Chilean experience of rule by free market ideologues prove Bakunin's points beyond doubt. Chilean society was forced onto the Procrustean bed by the use of terror and life was forced to conform to the assumptions found in economics textbooks. And as we proved above, only those with power or wealth did well out of the experiment. From an anarchist perspective, the results were all too sadly predictable. The only surprising thing is that the right point to the experiment as a success story.

Since Chile has become (mostly) a democracy (with the armed forces still holding considerable influence) the post-Pinochet governments have made minor reforms. For example, *"tax increases targeted for social spending for the poor"* allowed them to *"halve the 1988 45 percent poverty rate bequeathed by Pinochet."* In fact, the *"bulk of this spending"* was aimed at *"the poorest of the poor, the 25 percent of the population classified as destitute in 1988."* [Winn, *"The Pinochet Era,"* **Op. Cit.**, p. 50, p. 52 and p. 55]

However, while this *"curtailed absolute poverty, they did not reduce inequality ... From 1990 to 1996 the share of the national income of the poorest 20 percent of the population stagnated beneath 4 percent, while that of the richest 20 percent inched up from 56 percent to 57 percent ... the distribution of income was one of the most unequal in the world. In Latin America, only Brazil was worse."* [Paul W Drake, *"Foreword"*, Winn (ed.), **Op. Cit.**, p. xi] The new government raised the minimum wage in 1990 by 17% in real terms, with another rise of approximately 15% two years later. This had a significant on income as *"a substantial number of the Chilean labour force receives wages and salaries that are only slightly above the minimum wage."* [Volker Frank, *"Politics without Policy"*, Winn (ed.), **Op. Cit.**, p. 73 and p. 76] In stark contrast to the claims of neo-classical economics, the rise in the minimum wage did not increase unemployment. In fact, it **dropped** to 4.4%, in 1992, the lowest since the early 1970s.

Overall, increased social spending on health, education and poverty relief has occurred since the end of the dictatorship and has lifted over a million Chileans out of poverty between 1987 and 1992 (the poverty rate has dropped from 44.6% in 1987 to 23.2% in 1996, although this is still higher than in 1970). However, inequality is still a major problem as are other legacies from the Pinochet era, such as the nature of the labour market, income insecurity, family separations, alcoholism, and so on. Yet while *"both unemployment and poverty decreased, in part because of programs targeted at the poorest sectors of the population by centre-left governments with greater social concern than the Pinochet dictatorship,"* many problems remain such as *"a work week that was among the longest in the world."* [Winn, *"Introduction"*, **Op. Cit.**, p. 4]

Chile has moved away from Pinochet's "free-market" model in other ways to. In 1991, Chile introduced a range of controls over capital, including a provision for 30% of all non-equity capital entering Chile to be deposited without interest at the central bank for one year. This reserve

requirement — known locally as the encaje — amounts to a tax on capital flows that is higher the shorter the term of the loan. As William Greider points out, Chile *"has managed in the last decade to achieve rapid economic growth by abandoning the pure free-market theory taught by American economists and emulating major elements of the Asian strategy, including forced savings and the purposeful control of capital. The Chilean government tells foreign investors where they may invest, keeps them out of certain financial assets and prohibits them from withdrawing their capital rapidly."* [**One World, Ready or Not**, p. 280]

Needless to say, while state aid to the working class has increased somewhat, state welfare for business is still the norm. After the 1982 crash, the Chilean Economic Development Agency (CORFO) reverted to its old role in developing Chilean industry (after the coup, it did little more than just selling off state property at discount prices to the wealthy). In other words, the post-recession "miracle" of the 1980s was due, in part, to a state organisation whose remit was promoting economic development, supporting business with new technology as well as technical and financial assistance. It, in effect, promoted joint public-private sectors initiatives. One key example was its role in funding and development of new resource-sector firms, such as the forestry sector ad the fishing industry. While free-marketeers have portrayed the boom natural-resource extraction as the result of the "free market," in reality private capital lacked the initiative and foresight to develop these industries and CORFO provided aid as well as credits and subsidies to encourage it. [James M. Cypher, *"Is Chile a Neoliberal Success?"*, **Dollars & Sense**, September/October 2004] Then there is the role of Fundación Chile, a public-private agency designed to develop firms in new areas where private capital will not invest. This pays for research and development before selling its stake to the private sector once a project becomes commercially viable. [Jon Jeter, *"A Smoother Road To Free Markets,"* **Washington Post**, 21/01/2004] In other words, a similar system of state intervention promoted by the East-Asian Tigers (and in a similar fashion, ignored by the ideologues of "free market" capitalism — but, then, state action for capitalists never seems to count as interfering in the market).

Thus the Chilean state has violated its "free market" credentials, in many ways, very successfully too. While it started in the 1980s, post-Pinochet has extended this to include aid to the working class. Thus the claims of free-market advocates that Chile's rapid growth in the 1990s is evidence for their model are false (just as their claims concerning South-East Asia also proved false, claims conveniently forgotten when those economies went into crisis). Needless to say, Chile is under pressure to change its ways and conform to the dictates of global finance. In 1998, Chile eased its controls, following heavy speculative pressure on its currency, the peso. That year economic growth halved and contracted 1.1% in 1999.

So even the neo-liberal jaguar has had to move away from a purely free market approach on social issues and the Chilean government has had to intervene into the economy in order to start putting back together the society ripped apart by market forces and authoritarian government. However, fear of the military has ensured that reforms have been minor and, consequently, Chile cannot be considered a genuine democracy. In other words, "economic liberty" has not produced genuine "political liberty" as Friedman (and others) claim (see section D.11). Ultimately, for all but the tiny elite at the top, the Pinochet regime of "economic liberty" was a nightmare. Economic "liberty" only seemed to benefit one group in society, an obvious "miracle." For the vast majority, the "miracle" of economic "liberty" resulted, as it usually does, in increased inequality, exploitation, poverty, pollution, crime and social alienation. The irony is that many right-wing free-marketers point to it as a model of the benefits of capitalism.

C.12 Doesn't Hong Kong show the potentials of "free market" capitalism?

Given the general lack of laissez-faire capitalism in the world, examples to show its benefits are few and far between. Rather than admit that the ideal is simply impossible, conservative and right-"libertarian" ideologues scour the world and history for examples. Rarely do they let facts get in the way of their searching — until the example expresses some negative features such as economic crisis (repression of working class people or rising inequality and poverty are of little consequence). Once that happens, then all the statist features of those economies previously ignored or downplayed will be stressed in order to protect the ideal from reality.

One such example is Hong Kong, which is often pointed to by right-wingers as an example of the power of capitalism and how a "pure" capitalism will benefit all. It has regularly been ranked as first in the *"Index of Economic Freedom"* produced by the Heritage Foundation, a US-based conservative think tank ("economic freedom" reflecting what you expect a right-winger would consider important). Milton Friedman played a leading role in this idealisation of the former UK colony. In his words:

> *"Take the fifty-year experiment in economic policy provided by Hong Kong between the end of World War II and ... when Hong Kong reverted to China.*
>
> *"In this experiment, Hong Kong represents the experimental treatment . .. I take Britain as one control because Britain, a benevolent dictator, imposed different policies on Hong Kong from the ones it pursued at home ...*
>
> *"Nonetheless, there are some statistics, and in 1960, the earliest date for which I have been able to get them, the average per capita income in Hong Kong was 28 percent of that in Great Britain; by 1996, it had risen to 137 percent of that in Britain. In short, from 1960 to 1996, Hong Kong's per capita income rose from about one-quarter of Britain's to more than a third larger than Britain's ... I believe that the only plausible explanation for the different rates of growth is socialism in Britain, free enterprise and free markets in Hong Kong. Has anybody got a better explanation? I'd be grateful for any suggestions."* [**The Hong Kong Experiment**]

It should be stressed that by "socialism" Friedman meant state spending, particularly that associated with welfare (*"Direct government spending is less than 15 percent of national income in Hong Kong, more than 40 percent in the United States."* [**Op. Cit.**]). What to make of his claims?

It is undeniable that the figures for Hong Kong's economy are impressive. Per-capita GDP by end 1996 should reach US$ 25,300, one of the highest in Asia and higher than many western nations. Enviable tax rates — 16.5% corporate profits tax, 15% salaries tax. In the first 5 years of the 1990's Hong Kong's economy grew at a tremendous rate — nominal per capita income and GDP levels (where inflation is not factored in) almost doubled. Even accounting for inflation,

growth was brisk. The average annual growth rate in real terms of total GDP in the 10 years to 1995 was six per cent, growing by 4.6 per cent in 1995. However, looking more closely, we find a somewhat different picture than that painted by those claim Hong Kong as an example of the wonders of free market capitalism. Once these basic (and well known) facts are known, it is hard to take Friedman's claims seriously. Of course, there are aspects of laissez-faire to the system (it does not subsidise sunset industries, for example) however, there is much more to Hong Kong that these features. Ultimately, laissez-faire capitalism is more than just low taxes.

The most obvious starting place is the fact that the government owns all the land. To state the obvious, land nationalisation is hardly capitalistic. It is one of the reasons why its direct taxation levels are so low. As one resident points out:

> *"The main explanation for low tax rates ... is not low social spending. One important factor is that Hong Kong does not have to support a defence industry ... The most crucial explanation ... lies in the fact that less than half of the government's revenues comes from direct taxation.*
>
> *"The Hong Kong government actually derives much of its revenue from land transactions. The territory's land is technically owned by the government, and the government fills its coffers by selling fifty-year leases to developers (the fact that there are no absolute private property rights to land will come as another surprise t boosters of 'Hong Kong-style' libertarianism) ... The government has an interest in maintaining high property values ... if it is to maintain its policy of low taxation. It does this by carefully controlling the amount of land that is released for sale ... It is, of course, those buying new homes and renting from the private sector who pay the price for this policy. Many Hong Kongers live in third world conditions, and the need to pay astronomical residential property prices is widely viewed as an indirect form of taxation."* [Daniel A. Bell, *"Hong Kong's Transition to Capitalism"*, pp. 15–23, **Dissent**, Winter 1998, pp. 15–6]

The ownership of land and the state's role as landlord partly explains the low apparent ratio of state spending to GDP. If the cost of the subsidised housing land were accounted for at market prices in the government budget, the ratio would be significantly higher. As noted, Hong Kong had no need to pay for defence as this cost was borne by the UK taxpayer. Include these government-provided services at their market prices and the famously low share of government spending in GDP climbs sharply.

Luckily for many inhabitants of Hong Kong, the state provides a range of social welfare services in housing, education, health care and social security. The government has a very basic, but comprehensive social welfare system. This started in the 1950s, when the government launched one of the largest public housing schemes in history to house the influx of about 2 million people fleeing Communist China. Hong Kong's social welfare system really started in 1973, when the newly appointed governor *"announced that public housing, education, medical, and social welfare services would be treated as the four pillars of a fair and caring society."* He launched a public housing program and by 1998, 52 percent of the population *"live in subsidised housing, most of whom rent flats from the Housing Authority with rents set at one-fifth the market level (the rest have bought subsidised flats under various home-ownership schemes, with prices discounted 50 percent from those in the private sector)."* Beyond public housing, Hong Kong *"also has most of the standard features of welfare states in Western Europe. There is an excellent public health care system:*

private hospitals are actually going out of business because clean and efficient public hospitals are well subsidised (the government pays 97 percent of the costs)." Fortunately for the state, the territory initially had a relatively youthful population compared with western countries which meant it had less need for spending on pensions and help for the aged (this advantage is declining as the population ages). In addition, the *"large majority of primary schools and secondary schools are either free of heavily subsidised, and the territory's tertiary institutions all receive most of their funds from the public coffers."* [Bell, **Op. Cit.**, pp. 16–7 and p. 17] We can be sure that when conservatives and right-"libertarians" use Hong Kong as a model, they are **not** referring to these aspects of the regime.

Given this, Hong Kong has *"deviated from the myth of a laissez-faire economy with the government limiting itself to the role of the 'night watchman'"* as it *"is a welfare state."* In 1995–6, it spent 47 percent of its public expenditure on social services (*"only slightly less than the United Kingdom"*). Between 1992 and 1998, welfare spending increased at a real rate of at least 10 percent annually. [Bell, **Op. Cit.**, p. 16] *"Without doubt,"* two experts note, *"the development of public housing in Hong Kong has contributed greatly to the social well-being of the Territory."* Overall, social welfare *"is the third largest [state] expenditure ... after education and health."* [Simon X. B. Zhao and l. Zhand, *"Economic Growth and Income Inequality in Hong Kong: Trends and Explanations,"* pp. 74–103, **China: An International Journal**, Vol. 3, No. 1, p. 95 and p. 97] Hong Kong spent 11.6% of its GDP on welfare spending in 2004, for example.

Moreover, this state intervention is not limited to just social welfare provision. Hong Kong has an affordable public transport system in which the government has substantial equity in most transport systems and grants franchises and monopolised routes. So as well as being the monopoly owner of land and the largest landlord, the state imposes rent controls, operates three railways and regulates transport services and public utilities as monopoly franchises. It subsidises education, health care, welfare and charity. It has also took over the ownership and management of several banks in the 1980s to prevent a general bank run. Overall, since the 1960s *"the Hong Kong government's involvement in everyday life has increases steadily and now reaches into many vital areas of socio-economic development."* [Ming K Chan, *"The Legacy of the British Administration of Hong Kong: A View from Hong Kong,"* pp. 567–582, **The China Quarterly**, no. 151, p. 575 and p. 574] It also intervened massively in the stock market during the 1997 Asian crisis. Strangely, Friedman failed to note any of these developments nor point to the lack of competition in many areas of the domestic economy and the high returns given to competition-free utility companies.

The state did not agree to these welfare measures by choice, as they were originally forced upon it by fears of social unrest, first by waves of migrants fleeing from China and then by the need to portray itself as something more than an uncaring colonial regime. However, the other form of intervention it pursued **was** by choice, namely the collusion between the state and business elites. As one expert notes, the *"executive-led 'administrative non-party' state was heavily influenced by the business community"* with *"the composition of various government advisory boards, committees and the three councils"* reflecting this as *"business interests had an overwhelming voice in the consultation machinery (about 70% of the total membership)."* This is accurately described as a *"bureaucratic-cum-corporatist state"* with *"the interests of government and the private sector dominating those of the community."* Overall, *"the government and private sector share common interests and have close links."* [Mae Kam Ng, *"Political Economy and Urban Planning,"* **Progress in Planning**, P. Diamond and B. H. Massan (eds.), vol. 51, Part 1, p. 11 and p. 84] Sizeable

fortunes will be made when there are interlocking arrangements between the local oligarchies and the state.

Another commentator notes that the myth of Hong Kong's laissez-faire regime *"has been disproved in academic debates more than a decade ago"* and points to *"the hypocrisy of laissez-faire colonialism"* which is marked by *"a government which is actively involved, fully engaged and often interventionist, whether by design or necessity."* He notes that *"the most damaging legacy [of colonial rule] was the blatantly pro-business bias in the government's decision-making."* There has been *"collusion between the colonial officialdom and the British economic elites."* Indeed, *"the colonial regime has been at fault for its subservience to business interests as manifested in its unwillingness until very recently, not because of laissez-faire but from its pro-business bias, to legislate against cartels and monopolies and to regulate economic activities in the interests of labour, consumers and the environment ... In other words, free trade and free enterprise with an open market ... did not always mean fair trade and equal opportunity: the regime intervened to favour British and big business interests at the expense of both fair play and of a level playing field for all economic players regardless of class or race."* [Ming K Chan, *"The Legacy of the British Administration of Hong Kong: A View from Hong Kong,"* pp. 567–582, **The China Quarterly**, no. 151, p. 577, p. 576, p. 575 and pp. 575–6] Bell notes that a British corporation *"held the local telephone monopoly until 1995"* while another *"holds all the landing rights at Hong Kong airport."* [**Op. Cit.**, p. 21]

Unsurprisingly, as it owns all the land, the government has *"a strong position in commanding resources to direct spatial development in the territory."* There is a *"three-tiered system of land-use plans."* The top-level, for example, *"maps out the overall land development strategy to meet the long-term socio-economic needs of Hong Kong"* and it is *"prepared and reviewed by the administration and there is no public input to it."* This planning system is, as noted, heavily influenced by the business sector and its *"committees operate largely behind closed doors and policy formulation could be likened to a black-box operation."* *"Traditionally,"* Ng notes, *"the closed door and Hong Kong centred urban planning system had served to maintain economic dynamism in the colony. With democratisation introduced in the 1980s, the planning system is forced to be more open and to serve not just economic interests."* [Mae Kam Ng, **Op. Cit.**, p. 11, p. 39, p. 37 and p. 13] As Chan stresses, *"the colonial government has continuously played a direct and crucial role as a very significant economic participant. Besides its control of valuable resources, the regime's command of the relevant legal, political and social institutions and processes also indirectly shapes economic behaviour and societal development."* [**Op. Cit.**, p. 574]

Overall, as Bell notes, *"one cannot help but notice the large gap between this reality and the myth of an open and competitive market where only talent and luck determine the economic winners."* [**Op. Cit.**, p. 16] As an expert in the Asian Tiger economies summarises:

> *"to conclude ... that Hong Kong is close to a free market economy is misleading ... Not only is the economy managed from outside the formal institutions of government by the informal coalition of peak private economic organisations, but government itself also has available some unusual instruments for influencing industrial activity. It owns all the land... It controls rents in part of the public housing market and supplies subsidised public housing to roughly half the population, thereby helping to keep down the cost of labour. And its ability to increase or decrease the flow of immigrants from China also gives it a way of affecting labour costs."* [Robert Wade, **Governing the Market**, p. 332]

This means that the Hong Kong system of "laissez-faire" is marked by the state having close ties with the major banks and trading companies, which, in turn, are closely linked to the life-time expatriates who largely run the government. This provides a *"point of concentration"* to conduct negotiations in line with an implicit development strategy. Therefore it is pretty clear that Hong Kong does not really show the benefits of "free market" capitalism. Wade indicates that we can consider Hong Kong as a *"special case or as a less successful variant of the authoritarian-capitalist state."* [**Op. Cit.**, p. 333]

There are other explanations for Hong Kong's high growth rates than simply "capitalism." Firstly, Hong Kong is a city state and cities have a higher economic growth rate than regions (which are held back by large rural areas). This is because the agricultural sector rarely achieves high economic growth rates and so in its absence a high growth rate is easier to achieve. Secondly, there is Hong Kong's location and its corresponding role as an entrepôt economy. Wade notes that *"its economic growth is a function of its service role in a wider regional economy, as entrepôt trader, regional headquarters for multinational companies, and refuge for nervous money."* [**Op. Cit.**, p. 331] Being between China and the rest of the world means its traders could act as a middleman, earning income from the mark-up they could impose on good going through the territory. This is why Hong Kong is often referred to as an entrepôt economy, a place that imports, stores, and re-exports goods. In other words, Hong Kong made a lot of its money because many Chinese exports and imports went through it and its traders marked-up the prices. It should be obvious if most of Western Europe's goods went through, say, Liverpool, that city would have a very good economic performance regardless of other factors. This option is hardly available to most cities, never mind countries.

Then there is the issue of state ownership of land. As Mae Kam Ng reports, monopoly ownership of all land by the state sets the context for super-profits by government and finance capital generally. [**Op. Cit.**, p. 13] Unsurprisingly, most government land *"is sold to just three real-estate developers"* who *"sit on huge tracts of land, drop-feeding apartments onto the market so as to maintain high property prices."* Between 1992 and 1996, for example, prices increased fourfold and profits doubled. The heads of two of the property firms were on the list of the world's ten richest men in 1998. *"Meanwhile, potential new entrants to the market are restricted by the huge cost of paying land-conversion premiums that are the bedrock of government revenues."* This is a *"cosy arrangement between the government and major developers."* [Daniel A. Bell, **Op. Cit.**, p. 16]

The role as headquarters for companies and as a financial centre also plays a part. It means an essential part of its success is that it gets surplus value produced elsewhere in the world. Handling other people's money is a sure-fire way of getting rich and this will have a nice impact on per-capita income figures (as will selling goods produced in sweat-shops in dictatorships like China). There has been a gradual shift in economic direction to a more service-oriented economy which has stamped Hong Kong as one of the world's foremost financial centres. This highly developed sector is served by some 565 banks and deposit-taking companies from over 40 countries, including 85 of the world's top 100 in terms of assets. In addition, it is the 8th largest stock market in the world (in terms of capitalisation) and the 2nd largest in Asia. By 1995, Hong Kong was the world's 10th largest exporter of services with the industry embracing everything from accounting and legal services, insurance and maritime to telecommunications and media. The contribution of the services sectors as a whole to GDP increased from 60 per cent in 1970 to 83 per cent in 1994.

Meanwhile, manufacturing industry has moved to low wage countries such as southern China (by the end of the 1970's, Hong Kong's manufacturing base was less competitive, facing increasing costs in land and labour — in other words, workers were starting to benefit from economic growth and so capital moved elsewhere). The economic reforms introduced by Deng Xiaoping in southern China in 1978 where important, as this allowed capital access to labour living under a dictatorship (just as American capitalists invested heavily in Nazi Germany — labour rights were null, profits were high). It is estimated about 42,000 enterprises in the province have Hong Kong participation and 4,000,000 workers (nine times larger than the territory's own manufacturing workforce) are now directly or indirectly employed by Hong Kong companies. In the late 1980's Hong Kong trading and manufacturing companies began to expand further a field than just southern China. By the mid 1990's they were operating across Asia, in Eastern Europe and Central America. This shift, incidentally, has resulted in deindustrialisation and a *"decrease in real income among manual workers"* as they moved to the lower end service sector. [Simon X. B. Zhao and l. Zhand, **Op. Cit.**, p. 88]

Then there is the criteria Friedman uses, namely per-capita GDP. As we have repeated stressed, averages hide a lot of important and relevant information when evaluating a society. So it must be stressed that Friedman's criteria of per capita income is an average and, as such, hides the effect of inequality. This means that a society with huge numbers of poor people and a handful of ultra-rich individuals may have a higher average income than a more equal society. This is the case of, say, America compared to Sweden. Unsurprisingly, Hong Kong is a very unequal society and this inequality is growing (so his claim that Hong Kong is capitalist refutes his 1962 assertion that the more capitalist economies are more equal). *"Behind the impressive GDP figures,"* indicates Chan, *"is a widening income gap between the super-rich and the grassroots, with 650,000 people reportedly living below the poverty line."* [**Op. Cit.**, p. 576] As Bell points out, 13% lived below the poverty line in 1999, compared to 8% in 1971. This is partly explained by *"the rising proportion of elderly people and single-parent families."* However, economic integration with China has played a role as Hong Kong's manufacturing sector *"has been almost entirely transferred to the southern province of Guangdong (where labour is cheaper and workers' rights are practically non-existent), with the consequence that Hong Kong's industrial workers now find it much harder to find decent jobs in Hong Kong. Most end up working in low-paying service jobs without much hope of upward mobility."* [**Op. Cit.**, pp. 21–2]

As other experts note, while Hong Kong may have a GDP-per-capita of a developed nation, its distribution of household income was similar to that of Guatemala. Looking at the 1960s onwards, income distribution only improved between 1966 and 1971, after this period the share of the bottom 30% of the population went down continuously while the top 20% saw an increase in their share of total income. In fact, from the 1980s, *"the top 20% of households managed to account for over 50 per cent of the total income."* In fact, the bottom 60% of the population saw a decline in their share of income between 1971 and 1996. Overall, *"high-income households increased their wealth progressively faster than low-income households."* This polarisation, they argue, will continue as the economy de-industrialises: *"in the absence of proper social policies, it will generate a small, extremely wealthy class of the 'new rich' and simultaneously a large population of the 'working poor.'"* [Simon X. B. Zhao and L. Zhand, **Op. Cit.**, p. 85, p. 80, p. 82, p. 84 and p. 102]

Given that everywhere cannot be such a service provider, it does not provide much of an indication of how "free market" capitalism would work in, say, the United States. And as there

is in fact extensive (if informal) economic management and that the state owns all the land and subsidies rent and health care, how can it be even considered an example of "free market" capitalism in action? Unless, of course, you consider that "economic freedom" best flourishes under a dictatorship which owns all the land, which has close links to business interests, provides a comprehensive, if basic, welfare state and is dependent on another country to provide its defence needs and the head of its executive. While most American's would be envious of Hong Kong's welfare state, it is doubtful that many would consider its other features as desirable. How many would be happy with being under a *"benevolent dictator"* (perhaps being turned into a colony of Britain again?) whose appointed government works closely with the local business elite? Having a political regime in which the wealthy can influence the government without the need for elections may be considered too a high price to pay just to get subsidised housing, health care and education. Given a choice between freedom and a high rate of growth, how many would pick the latter over the former?

It is no coincidence that like most examples of the wonders of the free market, Hong Kong was not a democracy. It was a relatively liberal colonial dictatorship run. But political liberty does not rate highly with many supporters of laissez-faire capitalism (such as right-"libertarians", for example). However, the two are linked. Which explains why we have spent so much time debunking the "free market" capitalism claims over Hong Kong. It is more than simply a concern over basic facts and correcting inaccurate assertions. Rather it is a concern over the meaning of freedom and the dubious assumption that freedom can be compartmentalised. While Hong Kong may be a more appealing example that Pinochet's Chile, it still rests on the assumption that the masses should be excluded from having a say over their communities (in their own interests, of course, and **never,** of course, in the interests of those who do the excluding) and that freedom is simply the ability to change bosses (or become one yourself). Ultimately, there is a big difference between "free" and "business-friendly." Hong Kong is the latter simply because it is not the former. Its success is testament that dictatorships can be more reliable defenders of class privilege than democracies.

This can be seen from the attitude of Hong Kong's business elite to the democratic reforms introduced in the 1990s and integration with China. Significantly, *"the nominally socialist Chinese government consistently opposed the introduction of further social welfare programs in Hong Kong."* This is because *"it has chosen to enter into a strategic alliance with Hong Kong's business class"* (*"To earn support of corporate bosses, the Chinese government organised timely interventions on behalf of Hong Kong companies"*). Unsurprisingly, the first Beijing-appointed executive was made up of successful business men and one of its first acts was to suspend pro-labour laws passed by the outgoing legislature. [Bell, **Op. Cit.**, p. 17, p. 18 and pp. 19–20] The Chinese government opposed attempts to extend democracy, imposing a complex electoral system which, in the words of the **Asian Wall Street Journal**, was a *"means of reducing public participation in the political process while stacking the next legislature with people who depend on favours from the regime in Hong Kong or Beijing and answer to narrow special interests, particularly the business elite."* [quoted by Bell, **Op. Cit.**, pp. 18–9]

This reflects the fact that business tycoons are worried that democracy would led to increased welfare spending with one, for example, predicting that the *"under-educated, and those who did not pay tax would elect candidates who stood for more social spending, which would turn Hong Kong into a 'welfare state' ... If we had a 100-per-cent directly elected LegCo, only social welfare-oriented candidates will be elected. Hong Kong is a business city and we [sic!] do not want to end*

up being a social welfare state." [*"Tycoon warns on protests,"* **The Standard**, 29 April 2004] Such a government can ignore public opinion and the electorate more than in an independent democracy and, of course, can be more influenced by business (as the history of Hong Kong testifies).

Overall, it is fair to say that Friedman only saw what he wanted to see and contrasted his idealised vision with Britain and explained the divergent economic performances of both countries to a conflict between "socialism" and "capitalism." How he failed to notice that the reality of Hong Kong was one marked by collusion between big business and the state and that in key areas the regime was much more "socialist" than its British counterpart is difficult to understand given his willingness to use it as an example. It seems intellectually dishonest to fail to mention that the state owned all the land and was the biggest landlord with at least 50% of the population living in subsidised housing. Then there are the facts of almost free medical treatment at government clinics and hospitals and an education system almost entirely funded by the government. These are all massive interventions in the marketplace, interventions Friedman spent many decades fighting in the USA. He did, however, contribute to the myth that the British were benign imperialists and the "free market" they introduced into Hong Kong was in the interests of all rather than for those who exercised the dictatorship.

Section D — How do statism and capitalism affect society?

This section of the FAQ indicates how both statism and capitalism affect the society they exist in. It is a continuation of sections B (Why do anarchists oppose the current system?) and C (What are the myths of capitalist economics?) and it discusses the impact of the underlying social and power relationships within the current system on society.

This section is important because the institutions and social relationships capitalism and statism spawn do not exist in a social vacuum, they have deep impacts on our everyday lives. These effects go beyond us as individuals (for example, the negative effects of hierarchy on our individuality) and have an effect on how the political institutions in our society work, how technology develops, how the media operates and so on. As such, it is worthwhile to point out how (and why) statism and capitalism affect society as a whole outwith the narrow bounds of politics and economics.

So here we sketch some of the impact concentrations of political and economic power have upon society. While many people attack the *results* of these processes (like specific forms of state intervention, ecological destruction, imperialism, etc.) they usually ignore their *causes.* This means that the struggle against social evils will be never-ending, like a doctor fighting the symptoms of a disease without treating the disease itself or the conditions which create it in the first place. We have indicated the roots of the problems we face in earlier sections; now we discuss how these impact on other aspects of our society. This section of the FAQ explores the interactions of the causes and results and draws out how the authoritarian and exploitative nature of capitalism and the state affects the world we live in.

It is important to remember that most supporters of capitalism refuse to do this. Yes, some of them point out **some** flaws and problems within society but they never relate them to the system as such. As Noam Chomsky points out, they *"ignor[e] the catastrophes of capitalism or, on the rare occasions when some problem is noticed, attribut[e] them to any cause **other** than the system that consistently brings them about."* [**Deterring Democracy**, p. 232] Thus we have people, say, attacking imperialist adventures while, at the same time, supporting the capitalist system which drives it. Or opposing state intervention in the name of "freedom" while supporting an economic system which by its working forces the state to intervene simply to keep it going and society together. The contradictions multiple, simply because the symptoms are addressed, never the roots of the problems.

That the system and its effects are interwoven can best be seen from the fact that while right-wing parties have been elected to office promising to reduce the role of the state in society, the actual size and activity of the state has not been reduced, indeed it has usually increased in scope (both in size and in terms of power and centralisation). This is unsurprising, as "free market" implies strong (and centralised) state — the "freedom" of management to manage means that the freedom of workers to resist authoritarian management structures must be weakened by state action. Thus, ironically, state intervention within society will continue to be needed in order to ensure that society survives the rigours of market forces and that elite power and privilege are protected from the masses.

The thing to remember is that the political and economic spheres are not independent. They interact in many ways, with economic forces prompting political reactions and changes, and vice versa. Overall, as Kropotkin stressed, there are *"intimate links ... between the political regime and the economic regime."* [**Words of a Rebel**, p. 118] These means that it is impossible to talk of, say, capitalism as if it could exist without shaping and being shaped by the state and society. Equally, to think that the state could intervene as it pleased in the economy fails to take into account

the influence economic institutions and forces have on it. This has always been the case, as the state *"is a hybridisation of political and social institutions, of coercive with distributive functions, of highly punitive with regulatory procedures, and finally of class with administrative needs — this melding process has produced very real ideological and practical paradoxes that persist as major issues today."* [Bookchin, **The Ecology of Freedom**, p. 196] These paradoxes can only be solved, anarchists argue, by abolishing the state and the social hierarchies it either creates (the state bureaucracy) or defends (the economically dominant class). Until then, reforms of the system will be incomplete, be subject to reversals and have unintended consequences.

These links and interaction between statism and capitalism are to be expected due to their similar nature. As anarchists have long argued, at root they are based on the same hierarchical principle. Proudhon, for example, regarded *"the capitalist principle"* and *"the governmental principle"* as *"one and the same principle ... abolition of the exploitation of man by man and the abolition of the government of man by man, are one and the same formula."* [quoted by Wayne Thorpe, **"The Workers Themselves"**, p. 279] This means that anarchists reject the notion that political reforms are enough in themselves and instead stress that they must be linked to (or, at least, take into account) economic change. This means, for example, while we oppose specific imperialist wars and occupation, we recognise that they will reoccur until such time as the economic forces which generate them are abolished. Similarly, we do not automatically think all attempts to reduce state intervention should be supported simply because they appear to reduce the state. Instead, we consider who is introducing the reforms, why they are doing so and what the results will be. If the "reforms" are simply a case of politicians redirecting state intervention away from the welfare state to bolster capitalist power and profits, we would not support the change. Anarchist opposition to neo-liberalism flows from our awareness of the existence of economic and social power and inequality and its impact on society and the political structure.

In some ways, this section discusses class struggle **from above**, i.e. the attacks on the working class conducted by the ruling class by means of its state. While it appears that every generation has someone insisting that the "class war" is dead and/or obsolete (Tony Blair did just that in the late 1990s), what they mean is that class struggle **from below** is dead (or, at least, they wish it so). What is ignored is that the class struggle from above continues even if class struggle from the below appears to have disappeared (until it reappears in yet another form). This should be unsurprising as any ruling class will be seeking to extend its profits, powers and privileges, a task aided immensely by the reduced pressure from below associated with periods of apparent social calm (Blair's activities in office being a striking confirmation of this). Ultimately, while you may seek to ignore capitalism and the state, neither will ignore you. That this produces resistance should be obvious, as is the fact that demise of struggle from below have always been proven wrong.

By necessity, this section will not (indeed, cannot) cover all aspects of how statism and capitalism interact to shape both the society we live in and ourselves as individuals. We will simply sketch the forces at work in certain important aspects of the current system and how anarchists view them. Thus our discussion of imperialism, for example, will not get into the details of specific wars and interventions but rather give a broad picture of why they happen and why they have changed over the years. However, we hope to present enough detail for further investigation as well as an understanding of how anarchists analyse the current system based on our anti-authoritarian principles and how the political and economic aspects of capitalism interact.

D.1 Why does state intervention occur?

The most obvious interaction between statism and capitalism is when the state intervenes in the economy. Indeed, the full range of capitalist politics is expressed in how much someone thinks this should happen. At one extreme, there are the right-wing liberals (sometimes mistakenly called "libertarians") who seek to reduce the state to a defender of private property rights. At the other, there are those who seek the state to assume full ownership and control of the economy (i.e. state capitalists who are usually mistakenly called "socialists"). In practice, the level of state intervention lies between these two extremes, moving back and forth along the spectrum as necessity requires.

For anarchists, capitalism as an economy requires state intervention. There is, and cannot be, a capitalist economy which does not exhibit some form of state action within it. The state is forced to intervene in society for three reasons:

From our discussion of the state and its role in section B.2, the first two reasons are unexpected and straight forward. The state is an instrument of class rule and, as such, acts to favour the continuation of the system as a whole. The state, therefore, has always intervened in the capitalist economy, usually to distort the market in favour of the capitalist class within its borders as against the working class and foreign competitors. This is done by means of taxes, tariffs, subsidies and so forth.

State intervention has been a feature of capitalism from the start. As Kropotkin argued, *"nowhere has the system of 'non-intervention of the State' ever existed. Everywhere the State has been, and still is, the main pillar and the creator, direct and indirect, of Capitalism and its powers over the masses. Nowhere, since States have grown up, have the masses had the freedom of resisting the oppression by capitalists... The state has* ***always*** *interfered in the economic life in favour of the capitalist exploiter. It has always granted him protection in robbery, given aid and support for further enrichment.* ***And it could not be otherwise.*** *To do so was one of the functions — the chief mission — of the State."* [**Evolution and Environment**, pp. 97–8]

In addition to this role, the state has also regulated certain industries and, at times, directly involved itself in employing wage labour to product goods and services. The classic example of the latter is the construction and maintenance of a transport network in order to facilitate the physical circulation of goods. As Colin Ward noted, transport *"is an activity heavily regulated by government. This regulation was introduced, not in the interests of the commercial transport operators, but in the face of their intense opposition, as well as that of the ideologists of 'free' enterprise."* He gives the example of the railways, which were *"built at a time when it was believed that market forces would reward the good and useful and eliminate the bad or socially useless."* However, *"it was found necessary as early as 1840 for the government's Board of Trade to regulate and supervise them, simply for the protection of the public."* [**Freedom to Go**, p. 7 and pp. 7–8]

This sort of intervention was to ensure that no one capitalist or group of capitalists had a virtual monopoly over the others which would allow them to charge excessive prices. Thus the need to bolster capital as a whole may involve regulating or expropriating certain capitalists and sections

of that class. Also, state ownership was and is a key means of rationalising production methods, either directly by state ownership or indirectly by paying for Research and Development. That certain sections of the ruling class may seek advantages over others by control of the state is, likewise, a truism.

All in all, the idea that capitalism is a system without state intervention is a myth. The rich use the state to bolster their wealth and power, as would be expected. Yet even if such a thing as a truly "laissez-faire" capitalist state were possible, it would still be protecting capitalist property rights and the hierarchical social relations these produce against those subject to them. This means, as Kropotkin stressed, it *"has never practised"* the idea of laissez faire. In fact, *"while all Governments have given the capitalists and monopolists full liberty to enrich themselves with the underpaid labour of working men [and women] ... they have **never**, **nowhere** given the working [people] the liberty of opposing that exploitation. Never has any Government applied the 'leave things alone' principle to the exploited masses. It reserved it for the exploiters only."* [**Op. Cit.**, p. 96] As such, under pure "free market" capitalism state intervention would still exist but it would be limited to repressing the working class (see section D.1.4 for more discussion).

Then there is the last reason, namely counteracting the destructive effects of capitalism itself. As Chomsky puts it, *"in a predatory capitalist economy, state intervention would be an absolute necessity to preserve human existence and to prevent the destruction of the physical environment — I speak optimistically ... social protection ... [is] therefore a minimal necessity to constrain the irrational and destructive workings of the classical free market."* [**Chomsky on Anarchism**, p. 111] This kind of intervention is required simply because *"government cannot want society to break up, for it would mean that it and the dominant class would be deprived of sources of exploitation; nor can it leave society to maintain itself without official intervention, for then people would soon realise that government serves only to defend property owners ... and they would hasten to rid themselves of both."* [Malatesta, **Anarchy**, p. 25]

So while many ideologues of capitalism thunder against state intervention (for the benefit of the masses), the fact is that capitalism itself produces the need for such intervention. The abstractly individualistic theory on which capitalism is based ("everyone for themselves") results in a high degree of statism since the economic system itself contains no means to combat its own socially destructive workings. The state must also intervene in the economy, not only to protect the interests of the ruling class but also to protect society from the atomising and destructive impact of capitalism. Moreover, capitalism has an inherent tendency toward periodic recessions or depressions, and the attempt to prevent them has become part of the state's function. However, since preventing them is impossible (they are built into the system — see section C.7), in practice the state can only try to postpone them and ameliorate their severity. Let's begin with the need for social intervention.

Capitalism is based on turning both labour and land into commodities. As socialist Karl Polanyi points out, however, *"labour and land are no other than the human beings themselves of which every society consists and the natural surroundings in which it exists; to include labour and land in the market mechanism means to subordinate the substance of society itself to the laws of the market."* And this means that *"human society has become an accessory to the economic system,"* with humanity placing itself fully in the hands of supply and demand. But such a situation *"could not exist for any length of time without annihilating the human and natural substance of society; it would have physically destroyed man and transformed his surroundings into a wilderness."* This, inevitably, provokes a reaction in order to defend the basis of society and the environment that

capitalism needs, but ruthlessly exploits. As Polanyi summarises, *"the countermove against economic liberalism and laissez-faire possessed all the unmistakable characteristics of a spontaneous reaction ... [A] closely similar change from laissez-faire to 'collectivism' took place in various countries at a definite stage of their industrial development, pointing to the depth and independence of the underlying causes of the process."* [**The Great Transformation**, p. 71, pp. 41–42 and pp. 149–150]

To expect that a community would remain indifferent to the scourge of unemployment, dangerous working conditions, 16-hour working days, the shifting of industries and occupations, and the moral and psychological disruption accompanying them — merely because economic effects, in the long run, might be better — is an absurdity. Similarly, for workers to remain indifferent to, for example, poor working conditions, peacefully waiting for a new boss to offer them better conditions, or for citizens to wait passively for capitalists to start voluntarily acting responsibly toward the environment, is to assume a servile and apathetic role for humanity. Luckily, labour refuses to be a commodity and citizens refuse to stand idly by while the planet's ecosystems are destroyed.

In other words, the state and many of its various policies are not imposed from outside of the capitalist system. It is not some alien body but rather has evolved in response to clear failings within capitalism itself (either from the perspective of the ruling elite or from the general population). It contrast, as the likes of von Hayek did, to the "spontaneous" order of the market versus a "designed" order associated with state fails to understand that the latter can come about in response to the former. In other words, as Polanyi noted, state intervention can be a *"spontaneous reaction"* and so be a product of social evolution itself. While the notion of a spontaneous order may be useful to attack undesired forms of state intervention (usually social welfare, in the case of von Hayek), it fails to note this process at work nor the fact that the state itself played a key role in the creation of capitalism in the first place as well as specifying the rules for the operation and so evolution of the market itself.

Therefore state intervention occurs as a form of protection against the workings of the market. As capitalism is based on atomising society in the name of "freedom" on the competitive market, it is hardly surprising that defence against the anti-social workings of the market should take statist forms — there being few other structures capable of providing such defence (as such social institutions have been undermined, if not crushed, by the rise of capitalism in the first place). Thus, ironically, "individualism" produces a "collectivist" tendency within society as capitalism destroys communal forms of social organisation in favour of ones based on abstract individualism, authority, and hierarchy – all qualities embodied in the state, the sole remaining agent of collective action in the capitalist worldview. Strangely, conservatives and other right-wingers fail to see this, instead spouting on about "traditional values" while, at the same time, glorifying the "free market." This is one of the (many) ironic aspects of free market dogma, namely that it is often supported by people who are at the forefront of attacking the **effects** of it. Thus we see conservatives bemoaning the breakdown of traditional values while, at the same time, advocating the economic system whose operation weakens family life, breaks up communities, undermines social bonds and places individual gain above all else, particularly "traditional values" and "community." They seem blissfully unaware that capitalism destroys the traditions they claim to support and recognises only monetary values.

In addition to social protection, state intervention is required to protect a country's economy (and so the economic interests of the ruling class). As Noam Chomsky points out, even the

USA, home of "free enterprise," was marked by *"large-scale intervention in the economy after independence, and conquest of resources and markets... [while] a centralised developmental state [was constructed] committed to [the] creation and entrenchment of domestic manufacture and commerce, subsidising local production and barring cheaper British imports, constructing a legal basis for private corporate power, and in numerous other ways providing an escape from the stranglehold of comparative advantage."* [**World Orders, Old and New**, p. 114] State intervention is as natural to capitalism as wage labour.

In the case of Britain and a host of other countries (and more recently in the cases of Japan and the Newly Industrialising Countries of the Far East, like Korea) state intervention was the key to development and success in the "free market." (see, for example, Robert Wade's **Governing the Market**). In other "developing" countries which have had the misfortune to be subjected to "free-market reforms" (e.g. neo-liberal Structural Adjustment Programs) rather than following the interventionist Japanese and Korean models, the results have been devastating for the vast majority, with drastic increases in poverty, homelessness, malnutrition, etc. (for the elite, the results are somewhat different of course). In the nineteenth century, states only turned to laissez-faire once they could benefit from it and had a strong enough economy to survive it: *"Only in the mid-nineteenth century, when it had become powerful enough to overcome any competition, did England [sic!] embrace free trade."* [Chomsky, **Op. Cit.**, p. 115] Before this, protectionism and other methods were used to nurture economic development. And once laissez-faire started to undermine a country's economy, it was quickly revoked. For example, protectionism is often used to protect a fragile economy and militarism has always been a favourite way for the ruling elite to help the economy, as is still the case, for example, in the "Pentagon System" in the USA (see section D.8).

Therefore, contrary to conventional wisdom, state intervention will always be associated with capitalism due to: (1) its authoritarian nature; (2) its inability to prevent the anti-social results of the competitive market; (3) its fallacious assumption that society should be *"an accessory to the economic system"*; (4) the class interests of the ruling elite; and (5) the need to impose its authoritarian social relationships upon an unwilling population in the first place. Thus the contradictions of capitalism necessitate government intervention. The more the economy grows, the greater become the contradictions and the greater the contradictions, the greater the need for state intervention. The development of capitalism as a system provides amble empirical support for this theoretical assessment.

Part of the problem is that the assumption that "pure" capitalism does not need the state is shared by both Marxists and supporters of capitalism. *"So long as capital is still weak,"* Marx wrote, "it supports itself by leaning on the crutches of past, or disappearing, modes of production. As soon as it begins to feel itself strong, it throws away these crutches and moves about in accordance with its own laws of motion. But as soon as it begins to feel itself as a hindrance to further development and is recognised as such, it adapts forms of behaviour through the harnessing of competition which seemingly indicate its absolute rule but actually point to its decay and dissolution." [quoted by Paul Mattick, **Marx and Keynes**, p. 96] Council Communist Paul Mattick comments that a *"healthy"* capitalism *"is a strictly competitive capitalism, and the imperfections of competition in the early and late stages of its development must be regarded as the ailments of an infantile and of a senile capitalism. For a capitalism which restricts competition cannot find its indirect 'regulation' in the price and market movements which derive from the value relations in the production process."* [**Op. Cit.**, p. 97]

However, this gives capitalism far too much credit — as well as ignoring how far the reality of that system is from the theory. State intervention has always been a constant aspect of economic life under capitalism. Its limited attempts at laissez-faire have always been failures, resulting in a return to its statist roots. The process of selective laissez-faire and collectivism has been as much a feature of capitalism in the past as it is now. Indeed, as Noam Chomsky argues, *"[w]hat is called 'capitalism' is basically a system of corporate mercantilism, with huge and largely unaccountable private tyrannies exercising vast control over the economy, political systems, and social and cultural life, operating in close co-operation with powerful states that intervene massively in the domestic economy and international society. That is dramatically true of the United States, contrary to much illusion. The rich and privileged are no more willing to face market discipline than they have been in the past, though they consider it just fine for the general population."* [**Marxism, Anarchism, and Alternative Futures**, p. 784] As Kropotkin put it:

> *"What, then is the use of taking, with Marx, about the 'primitive accumulation' — as if this 'push' given to capitalists were a thing of the past? ... In short, nowhere has the system of 'non-intervention of the State' ever existed ... Nowhere, since States have grown up, have the masses had the freedom of resisting the oppression by capitalists. The few rights they have now they have gained only by determination and endless sacrifice.*
>
> *"To speak therefore of 'non-intervention of the State' may be all right for middle-class economists, who try to persuade the workers that their misery is 'a law of Nature.' But — how can Socialists use such language?"* [**Op. Cit.**, pp. 97–8]

In other words, while Marx was right to note that the *"silent compulsion of economic relations sets the seal on the domination of the capitalist over the worker"* he was wrong to state that *"[d]irect extra-economic force is still of course used, but only in exceptional cases."* The ruling class rarely lives up to its own rhetoric and while *"rely[ing] on his [the workers'] dependence on capital"* it always supplements that with state intervention. As such, Marx was wrong to state it was *"otherwise during the historical genesis of capitalist production."* It is not only the *"rising bourgeoisie"* which *"needs the power of the state"* nor is it just *"an essential aspect of so-called primitive accumulation."* [**Capital**, vol. 1, pp. 899–900]

The enthusiasm for the "free market" since the 1970s is in fact the product of the extended boom, which in turn was a product of a state co-ordinated war economy and highly interventionist Keynesian economics (a boom that the apologists of capitalism use, ironically, as "evidence" that "capitalism" works) plus an unhealthy dose of nostalgia for a past that never existed. It's strange how a system that has never existed has produced so much! When the Keynesian system went into crisis, the ideologues of "free market" capitalism seized their chance and found many in the ruling class willing to utilise their rhetoric to reduce or end those aspects of state intervention which benefited the many or inconvenienced themselves. However, state intervention, while reduced, did not end. It simply became more focused in the interests of the elite (i.e. the natural order). As Chomsky stresses, the "minimal state" rhetoric of the capitalists is a lie, for they will *"never get rid of the state because they need it for their own purposes, but they love to use this as an ideological weapon against everyone else."* They are *"not going to survive without a massive state subsidy, so they want a powerful state."* [**Chomsky on Anarchism**, p. 215]

And neither should it be forgotten that state intervention was required to create the "free" market in the first place. To quote Polanyi again, *"[f]or as long as [the market] system is not*

established, economic liberals must and will unhesitatingly call for the intervention of the state in order to establish it, and once established, in order to maintain it." [**Op. Cit.**, p. 149] Protectionism and subsidy (mercantilism) — along with the liberal use of state violence against the working class — was required to create and protect capitalism and industry in the first place (see section F.8 for details).

In short, although laissez-faire may be the ideological basis of capitalism — the religion that justifies the system — it has rarely if ever been actually practised. So, while the ideologues are praising "free enterprise" as the fountainhead of modern prosperity, the corporations and companies are gorging at the table of the State. As such, it would be wrong to suggest that anarchists are somehow "in favour" of state intervention. This is not true. We are "in favour" of reality, not ideology. The reality of capitalism is that it needs state intervention to be created and needs state intervention to continue (both to secure the exploitation of labour and to protect society from the effects of the market system). That we have no truck with the myths of "free market" economics does not mean we "support" state intervention beyond recognising it as a fact of a system we want to end and that some forms of state intervention are better than others.

D.1.1 Does state intervention cause the problems to begin with?

It depends. In the case of state intervention on behalf of the ruling class, the answer is always yes! However, in terms of social intervention the answer is usually no.

However, for classical liberals (or, as we would call them today, neo-liberals, right-wing "libertarians" or "conservatives"), state intervention is the root of all evil. It is difficult for anarchists to take such argument that seriously. Firstly, it is easily concluded from their arguments that they are only opposed to state intervention on behalf of the working class (i.e. the welfare state or legal support for trade unionism). They either ignore or downplay state intervention on behalf of the ruling class (a few **do** consistently oppose all state intervention beyond that required to defend private property, but these unsurprisingly have little influence beyond appropriation of some rhetoric and arguments by those seeking to bolster the ruling elite). So most of the right attack the social or regulatory activities of the government, but fail to attack those bureaucratic activities (like defence, protection of property) which they agree with. As such, their arguments are so selective as to be little more than self-serving special pleading. Secondly, it does appear that their concern for social problems is limited simply to their utility for attacking those aspects of state intervention which claim to help those most harmed by the current system. They usually show greater compassion for the welfare of the elite and industry than for the working class. For former, they are in favour of state aid, for the latter the benefits of economic growth is all that counts.

So what to make of claims that it is precisely the state's interference with the market which causes the problems that society blames on the market? For anarchists, such a position is illogical, for *"whoever says regulation says limitation: now, how conceive of limiting privilege before it existed?"* It *"would be an effect without a cause"* and so *"regulation was a corrective to privilege"* and not vice versa. *"In logic as well as in history, everything is appropriated and monopolised when laws and regulations arrive."* [Proudhon, **System of Economic Contradictions**, p. 371] As economist Edward Herman notes:

> *"The growth of government has closely followed perceived failings of the private market system, especially in terms of market instability, income insecurity, and the proliferation of negative externalities. Some of these deficiencies of the market can be attributed to its very success, which have generated more threatening externalities and created demands for things the market is not well suited to provide. It may also be true that the growth of the government further weakens the market. This does not alter the fact that powerful underlying forces — not power hungry bureaucrats or frustrated intellectuals — are determining the main drift."* [Edward Herman, **Corporate Control, Corporate Power**, pp. 300–1]

In other words, state intervention is the result of the problems caused by capitalism rather than their cause. To say otherwise is like arguing that murder is the result of passing laws against it.

As Polanyi explains, the neo-liberal premise is false, because state intervention always *"dealt with some problem arising out of modern industrial conditions or, at any rate, in the market method of dealing with them."* In fact, most of these "collectivist" measures were carried out by *"convinced supporters of laissez-faire ... [and who] were as a rule uncompromising opponents of [state] socialism or any other form of collectivism."* [**Op. Cit.**, p. 146] Sometimes such measures were introduced to undermine support for socialist ideas caused by the excesses of "free market" capitalism but usually there were introduced due to a pressing social need or problem which capitalism created but could not meet or solve. This means that key to understanding state intervention, therefore, is to recognise that politics is a **not** matter of free will on behalf of politicians or the electorate. Rather they are the outcome of the development of capitalism itself and result from social, economic or environmental pressures which the state has to acknowledge and act upon as they were harming the viability of the system as a whole.

Thus state intervention did not spring out of thin air, but occurred in response to pressing social and economic needs. This can be observed in the mid 19th century, which saw the closest approximation to laissez-faire in the history of capitalism. As Takis Fotopoulos argues, *"the attempt to establish pure economic liberalism, in the sense of free trade, a competitive labour market and the Gold Standard, did not last more than 40 years, and by the 1870s and 1880s, protectionist legislation was back ... It was also significant... [that all major capitalist powers] passed through a period of free trade and laissez-faire, followed by a period of anti-liberal legislation."* [*"The Nation-state and the Market"*, pp. 37–80, **Society and Nature**, Vol. 2, No. 2, p. 48]

For example, the reason for the return of protectionist legislation was the Depression of 1873–86, which marked the end of the first experiment with pure economic liberalism. Paradoxically, then, the attempt to liberalise the markets led to more regulation. In light of our previous analysis, this is not surprising. Neither the owners of the country nor the politicians desired to see society destroyed, the result to which unhindered laissez-faire leads. Apologists of capitalism overlook the fact that *"[a]t the beginning of the Depression, Europe had been in the heyday of free trade."* [Polanyi, **Op. Cit.**, p. 216] State intervention came about in response to the social disruptions resulting from laissez-faire. It did not cause them.

Similarly, it is a fallacy to state, as Ludwig von Mises did, that *"as long as unemployment benefit is paid, unemployment must exist."* [quoted by Polanyi, **Op. Cit.**, p. 283] This statement is not only ahistoric but ignores the existence of the **involuntary** unemployment (the purer capitalism of the nineteenth century regularly experienced periods of economic crisis and mass unem-

ployment). Even such a die-hard exponent of the minimal state as Milton Friedman recognised involuntary unemployment existed:

> *"The growth of government transfer payments in the form of unemployment insurance, food stamps, welfare, social security, and so on, has reduced drastically the suffering associated with involuntary unemployment... most laid-off workers ... may enjoy nearly as high an income when unemployed as when employed ... At the very least, he need not be so desperate to find another job as his counterpart in the 1930's. He can afford to be choosy and to wait until he is either recalled or a more attractive job turns up."* [quoted by Elton Rayack, **Not so Free to Choose**, p. 130]

Which, ironically, contradicts Friedman's own claims as regards the welfare state. In an attempt to show that being unemployed is not as bad as people believe Friedman *"glaringly contradicts two of his main theses, (1) that the worker is free to choose and (2) that no government social programs have achieved the results promised by its proponents."* As Rayack notes, by *"admitting the existence of involuntary unemployment, Friedman is, in essence, denying that ... the market protects the worker's freedom to choose... In addition, since those social programs have made it possible for the worker to be 'choosy; in seeking employment, to that extent the welfare state has increased his freedom."* [**Op. Cit.**, p. 130] But, of course, the likes of von Mises will dismiss Friedman as a "socialist" and no further thought is required.

That governments started to pay out unemployment benefit is not surprising, given that mass unemployment can produce mass discontent. This caused the state to start paying out a dole in order eliminate the possibility of crime as well as working class self-help, which could conceivably have undermined the status quo. The elite was well aware of the danger in workers organising for their own benefit and tried to counter-act it. What the likes of von Mises forget is that the state has to consider the long term viability of the system rather than the ideologically correct position produced by logically deducting abstract principles.

Sadly, in pursuing of ideologically correct answers, capitalist apologists often ignore common sense. If one believes people exist for the economy and not the economy for people, one becomes willing to sacrifice people and their society today for the supposed economic benefit of future generations (in reality, current profits). If one accepts the ethics of mathematics, a future increase in the size of the economy is more important than current social disruption. Thus Polanyi again: *"a social calamity is primarily a cultural not an economic phenomenon that can be measured by income figures."* [**Op. Cit.**, p. 157] And it is the nature of capitalism to ignore or despise what cannot be measured.

This does not mean that state intervention cannot have bad effects on the economy or society. Given the state's centralised, bureaucratic nature, it would be impossible for it **not** to have some bad effects. State intervention can and does make bad situations worse in some cases. It also has a tendency for self-perpetuation. As Elisee Reclus put it:

> *"As soon as an institution is established, even if it should be only to combat flagrant abuses, it creates them anew through its very existence. It has to adapt to its bad environment, and in order to function, it must do so in a pathological way. Whereas the creators of the institution follow only noble ideals, the employees that they appoint must consider above all their remuneration and the continuation of their employment."*

[*"The Modern State"*, pp. 201–15, John P Clark and Camille Martin (eds.), **Anarchy, Geography, Modernity**, p. 207]

As such, welfare within a bureaucratic system will have problems but getting rid of it will hardly **reduce** inequality (as proven by the onslaught on it by Thatcher and Reagan). This is unsurprising, for while the state bureaucracy can never eliminate poverty, it can and does reduce it — if only to keep the bureaucrats secure in employment by showing some results.

Moreover, as Malatesta notes, *"the practical evidence [is] that whatever governments do is always motivated by the desire to dominate, and is always geared to defending, extending and perpetuating its privileges and those of the class of which it is both the representative and defender."* [**Anarchy**, p. 24] In such circumstances, it would be amazing that state intervention did not have negative effects. However, to criticise those negative effects while ignoring or downplaying the far worse social problems which produced the intervention in the first place is both staggeringly illogical and deeply hypocritical. As we discuss later, in section D.1.5, the anarchist approach to reforms and state intervention is based on this awareness.

D.1.2 Is state intervention the result of democracy?

No. Social and economic intervention by the modern state began long before universal suffrage became widespread. While this intervention was usually in the interests of the capitalist class, it was sometimes done explicitly in the name of the general welfare and the public interest. Needless to say, while the former usually goes unmentioned by defenders of capitalism, the latter is denounced and attacked as violations of the natural order (often in terms of the sinister sounding "collectivist" measures).

That democracy is not the root cause for the state's interference in the market is easily seen from the fact that non-democratic capitalist states presided over by defenders of "free market" capitalism have done so. For example, in Britain, acts of state intervention were introduced when property and sexual restrictions on voting rights still existed. More recently, taking Pinochet's neo-liberal dictatorship in Chile, we find that the state, as would be expected, *"often intervened on behalf of private and foreign business interests."* Given the history of capitalism, this is to be expected. However, the state also practised social intervention at times, partly to diffuse popular disaffection with the economic realities the system generated (disaffection that state oppression could not control) and partly to counter-act the negative effects of its own dogmas. As such, *"[f]ree-market ideologues are reluctant to acknowledge that even the Pinochet government intervened in many cases in the market-place in last-minute attempts to offset the havoc wrecked by its free-market policies (low-income housing, air quality, public health, etc.)"* [Joseph Collins and John Lear, **Chile's Free-Market Miracle: A Second Look**, p. 254]

The notion that it is "democracy" which causes politicians to promise the electorate state action in return for office is based on a naive viewpoint of representative democracy. The centralist and hierarchical nature of "representative" democracy means that the population at large has little real control over politicians, who are far more influenced by big business, business lobby groups, and the state bureaucracy. This means that truly popular and democratic pressures are limited within the capitalist state and the interests of elites are far more decisive in explaining state actions.

Obviously anarchists are well aware that the state does say it intervenes to protect the interests of the general public, not the elite. While much of this is often rhetoric to hide policies which (in reality) benefit corporate interests far more than the general public, it cannot be denied that such intervention does exist, to some degree. However, even here the evidence supports the anarchist claim that the state is an instrument of class rule, not a representative of the general interest. This is because such reforms have, in general, been few and far between compared to those laws which benefit the few.

Moreover, historically when politicians have made legal changes favouring the general public rather than the elite they have done so only after intense social pressure from below. For examples, the state only passed pro-union laws only when the alternative was disruptive industrial conflict. In the US, the federal government, at best, ignored or, at worse, actively suppressed labour unions during the 19th century. It was only when mineworkers were able to shut down the anthracite coal fields for months in 1902, threatening disruption of heating supplies around the country, that Teddy Roosevelt supported union demands for binding arbitration to raise wages. He was the first President in American history to intervene in a strike in a positive manner on behalf of workers.

This can be seen from the "New Deal" and related measures of limited state intervention to stimulate economic recovery during the Great Depression. These were motivated by more material reasons than democracy. Thus Takis Fotopoulos argues that *"[t]he fact ...that 'business confidence' was at its lowest could go a long way in explaining the much more tolerant attitude of those controlling production towards measures encroaching on their economic power and profits. In fact, it was only when — and as long as — state interventionism had the approval of those actually controlling production that it was successful."* [*"The Nation-state and the Market"*, **Op. Cit.**, p. 55] As anarchist Sam Dolgoff notes, the New Deal in America (and similar policies elsewhere) was introduced, in part, because the *"whole system of human exploitation was threatened. The political state saved itself, and all that was essential to capitalism, doing what 'private enterprise' could not do. Concessions were made to the workers, the farmers, the middle-class, while the private capitalists were deprived of some of their power."* [**The American Labor Movement**, pp. 25–6] Much the same can be said of the post-war Keynesianism consensus, which combined state aid to the capitalist class with social reforms. These reforms were rarely the result of generous politicians but rather the product of social pressures from below and the needs of the system as a whole. For example, the extensive reforms made by the 1945 Labour Government in the UK was the direct result of ruling class fear, not socialism. As Quentin Hogg, a Conservative M.P., put it in the House of Parliament in 1943: *"If you do not give the people social reforms, they are going to give you revolution."* Memories of the near revolutions across Europe after the First World War were obviously in many minds, on both sides.

Needless to say, when the ruling class considered a specific reform to be against its interests, it will be abolished or restricted. An example of this can be seen in the 1934 Wagner Act in the USA, which gave US labour its first and last political victory. The Act was passed due to the upsurge in wildcat strikes, factory occupations and successful union organising drives which were spreading throughout the country. Its purpose was specifically to calm this struggle in order to preserve "labour peace." The act made it legal for unions to organise, but this placed labour struggles within the boundaries of legal procedures and so meant that they could be more easily controlled. In addition, this concession was a form of appeasement whose effect was to make those involved in union actions less likely to start questioning the fundamental bases of

the capitalist system. Once the fear of a militant labour movement had passed, the Wagner Act was undermined and made powerless by new laws, laws which made illegal the tactics which forced the politicians to pass the law in the first place and increased the powers of bosses over workers. The same can be said of other countries.

The pattern is clear. It is always the case that things need to change on the ground first and then the law acknowledges the changes. Any state intervention on behalf of the general public or workers have all followed people and workers organising and fighting for their rights. If labour or social "peace" exists because of too little organising and protesting or because of lack of strength in the workplace by unions, politicians will feel no real pressure to change the law and, consequently, refuse to. As Malatesta put it, the *"only limit to the oppression of government is that power with which the people show themselves capable of opposing it ... When the people meekly submit to the law, or their protests are feeble and confined to words, the government studies its own interests and ignores the needs of the people; when the protests are lively, insistent, threatening, the government ... gives way or resorts to repression."* [**Errico Malatesta: His Life and Ideas**, p. 196]

Needless to say, the implication of classical liberal ideology that popular democracy is a threat to capitalism is the root of the fallacy that democracy leads to state intervention. The notion that by limiting the franchise the rich will make laws which benefit all says more about the classical liberals' touching faith in the altruism of the rich than it does about their understanding of human nature, the realities of both state and capitalism and their grasp of history. The fact that they can join with John Locke and claim with a straight face that all must abide by the rules that only the elite make says a lot about their concept of "freedom."

Some of the more modern classical liberals (for example, many right-wing "libertarians") advocate a "democratic" state which cannot intervene in economic matters. This is no solution, however, as it only gets rid of the statist response to real and pressing social problems caused by capitalism without supplying anything better in its place. This is a form of paternalism, as the elite determines what is, and is not, intervention and what the masses should, and should not, be able to do (in their interests, of course). Then there is the obvious conclusion that any such regime would have to exclude change. After all, if people can change the regime they are under they may change it in ways that the right does not support. The provision for ending economic and other reforms would effectively ban most opposition parties as, by definition, they could do nothing once in power. How this differs from a dictatorship would be hard to say — after all, most dictatorships have parliamentary bodies which have no power but which can talk a lot.

Needless to say, the right often justify this position by appealing to the likes of Adam Smith but this, needless to say, fails to appreciate the changing political and economic situation since those days. As market socialist Allan Engler argues:

> *"In Smith's day government was openly and unashamedly an instrument of wealth owners. Less than 10 per cent of British men — and no women at all — had the right to vote. When Smith opposed government interference in the economy, he was opposing the imposition of wealth owners' interests on everybody else. Today, when neoconservatives oppose state interference, their aim to the opposite: to stop the representatives of the people from interfering with the interests of wealth owners."* [**Apostles of Greed**, p. 104]

As well as the changing political situation, Smith's society was without the concentrations of economic power that marks capitalism as a developed system. Whether Smith would have

been happy to see his name appropriated to defend corporate power is, obviously, a moot point. However, he had no illusions that the state of his time interfered to bolster the elite, not the many (for example: *"Whenever the law has attempted to regulate the wages of workmen, it has always been rather to lower them than to raise them."* [**The Wealth of Nations**, p. 119]). As such, it is doubtful he would have agreed with those who involve his name to defend corporate power and trusts while advocating the restriction of trade unions as is the case with modern day neo-liberalism:

> *"Whenever the legislature attempts to regulate the differences between masters and their workmen, its counsellors are always masters. When the regulation, therefore, is in favour of the workmen, it is always just and equitable ... When masters combine together in order to reduce the wages of their workmen, they commonly enter into a private bond or agreement ... Were the workmen to enter into a contrary combination of the same kind. not to accept of a certain wage under a certain penalty, the law would punish them very severely; and if dealt impartially, it would treat the masters in the same way."* [**Op. Cit.**, p. 129]

The interest of merchants and master manufacturers, Smith stressed, *"is always in some respects different from, and even opposite to, that of the public ... The proposal of any new law or regulation of commerce which comes from this order ought always to be listened to with great precaution, and ought never to be adopted till after having been long and carefully examined, not only with the most scrupulous, but with the most suspicious attention. It comes from an order of men whose interest is never exactly the same with that of the public, who have generally an interest to deceive and even to oppress the public, and who accordingly have, upon many occasions, both deceived and oppressed it."* [**Op. Cit.**, pp. 231–2] These days Smith would have likely argued that this position applies equally to attempts by big business to **revoke** laws and regulations!

To view the state intervention as simply implementing the wishes of the majority is to assume that classes and other social hierarchies do not exist, that one class does not oppress and exploit another and that they share common interests. It means ignoring the realities of the current political system as well as economic, for political parties will need to seek funds to campaign and that means private cash. Unsurprisingly, they will do what their backers demands and this dependence the wealthy changes the laws all obey. This means that any government will tend to favour business and the wealthy as the parties are funded by them and so they get some say over what is done. Only those parties which internalise the values and interests of their donors will prosper and so the wealthy acquire an unspoken veto power over government policy. In other words, parties need to beg the rich for election funds. Some parties do, of course, have trade union funding, but this is easily counteracted by pressure from big business (i.e., that useful euphemism, *"the markets"*) and the state bureaucracy. This explains why the unions in, say, Britain spend a large part of their time under Labour governments trying to influence it by means of strikes and lobbying.

The defenders of "free market" capitalism appear oblivious as to the reasons **why** the state has approved regulations and nationalisations as well as **why** trade unions, (libertarian and statist) socialist and populist movements came about in the first place. Writing all these off as the products of ideology and/or economic ignorance is far too facile an explanation, as is the idea of power hungry bureaucrats seeking to extend their reach. The truth is much more simple and lies at the

heart of the current system. The reasons why various "anti-capitalist" social movements and state interventions arise with such regular periodicity is because of the effects of an economic system which is inherently unstable and exploitative. For example, social movements arose in the 19th century because workers, artisans and farmers were suffering the effects of a state busy creating the necessary conditions for capitalism. They were losing their independence and had become, or were being turned, into wage slaves and, naturally, hated it. They saw the negative effects of capitalism on their lives and communities and tried to stop it.

In terms of social regulation, the fact is that they were often the result of pressing needs. Epidemics, for example, do not respect property rights and the periodic deep recessions that marked 19th century capitalism made the desire to avoid them an understandable one on the part of the ruling elite. Unlike their ideological followers in the latter part of the century and onwards, the political economists of the first half of the nineteenth century were too intelligent and too well informed to advocate out-and-out laissez-faire. They grasped the realities of the economic system in which they worked and thought and, as a result, were aware of clash between the logic of pure abstract theory and the demands of social life and morality. While they stressed the pure theory, the usually did so in order to justify the need for state intervention in some particular aspect of social or economic life. John Stuart Mill's famous chapter on *"the grounds and limits of the laissez-faire and non-interference principle"* in his **Principles of Political Economy** is, perhaps, the most obvious example of this dichotomy (unsurprisingly, von Mises dismissed Mill as a "socialist" — recognising the problems which capitalism itself generates will make you ideologically suspect to the true believer).

To abolish these reforms without first abolishing capitalism is to return to the social conditions which produced the social movements in the first place. In other words, to return to the horrors of the 19th century. We can see this in the USA today, where this process of turning back the clock is most advanced: mass criminality, lower life expectancy, gated communities, increased work hours, and a fortune spent on security. However, this should not blind us to the limitations of these movements and reforms which, while coming about as a means to overcome the negative effects of corporate capitalism upon the population, **preserved** that system. In terms of successful popular reform movements, the policies they lead to were (usually) the minimum standard agreed upon by the capitalists themselves to offset social unrest.

Unsurprisingly, most opponents of state intervention are equally opposed to popular movements and the pressures they subject the state to. However trying to weaken (or even get rid of) the social movements which have helped reform capitalism ironically helps bolster the power and centralisation of the state. This is because to get rid of working class organisations means eliminating a key counter-balance to the might of the state. Atomised individuals not only cannot fight capitalist exploitation and oppression, they also cannot fight and restrict the might of the state nor attempt to influence it even a fraction of what the wealthy elite can via the stock market and management investment decisions. As such, von Hayek's assertion that *"it is inexcusable to pretend that ... the pressure which can be brought by the large firms or corporation is comparable to that of the organisation of labour"* is right, but in the exact opposite way he intended. [**Law, Legislation and Liberty**, vol. III, p. 89] Outside the imagination of conservatives and right-wing liberals, big business has much greater influence than trade unions on government policy (see section D.2 for some details). While trade union and other forms of popular action are more visible than elite pressures, it does not mean that the form does not exist or less influential. Quite

the reverse. The latter may be more noticeable, true, but is only because it has to be in order to be effective and because the former is so prevalent.

The reality of the situation can be seen from looking at the US, a political system where union influence is minimal while business influence and lobbying is large scale (and has been since the 1980s). A poll of popular attitudes about the 2005 US budget *"revealed that popular attitudes are virtually the inverse of policy."* In general, there is a *"dramatic divide between public opinion and public policy,"* but public opinion has little impact on state officials. Unsurprisingly, the general population *"do not feel that the government is responsive to the public will."* The key to evaluating whether a state is a functioning democracy is dependent on *"what public opinion is on major issues"* and *"how it relates to public policy."* In the case of the US, business interests are supreme and, as such, *"[n]ot only does the US government stand apart from the rest of the world on many crucial issues, but even from its own population."* The state *"pursues the strategic and economic interests of dominant sectors of the domestic population,"* unless forced otherwise by the people (for *"rights are not likely to be granted by benevolent authorities"* but rather by *"education and organising"*). In summary, governments implement policies which benefit *"the short-term interests of narrow sectors of power and wealth ... It takes wilful blindness not to see how these commitments guide ... policy."* [Chomsky, **Failed States**, p. 234, p. 235, p. 228, p. 229, p. 262, p. 263 and p. 211] A clearer example of how capitalist "democracy" works can hardly be found.

Von Hayek showed his grasp of reality by stating that the real problem is *"not the selfish action of individual firms but the selfishness of organised groups"* and so *"the real exploiters in our present society are not egotistic capitalists ... but organisations which derive their power from the moral support of collective action and the feeling of group loyalty."* [**Op. Cit.**, p. 96] So (autocratic) firms and (state privileged) corporations are part of the natural order, but (self-organised and, at worse, relatively democratic) unions are not. Ignoring the factual issues of the power and influence of wealth and business, the logical problem with this opinion is clear. Companies are, of course, *"organised groups"* and based around *"collective action"*. The difference is that the actions and groups are dictated by the few individuals at the top. As would be expected, the application of his ideas by the Thatcher government not only bolstered capitalist power and resulted in increased inequality and exploitation (see section J.4.2) but also a strengthening and centralisation of state power. One aspect of this the introduction of government regulation of unions as well as new legislation which increase police powers to restrict the right to strike and protest (both of which were, in part, due opposition to free market policies by the population).

Anarchists may agree that the state, due to its centralisation and bureaucracy, crushes the spontaneous nature of society and is a handicap to social progress and evolution. However, leaving the market alone to work its course fallaciously assumes that people will happily sit back and let market forces rip apart their communities and environment. Getting rid of state intervention without getting rid of capitalism and creating a free society would mean that the need for social self-protection would still exist but that there would be even less means of achieving it than now. The results of such a policy, as history shows, would be a catastrophe for the working class (and the environment, we must add) and beneficial only for the elite (as intended, of course).

Ultimately, the implication of the false premise that democracy leads to state intervention is that the state exists for the benefit of the majority, which uses the state to exploit the elite! Amazingly, many capitalist apologists accept this as a valid inference from their premise, even though it's obviously a **reductio ad absurdum** of that premise as well as going against the facts of history. That the ruling elite is sometimes forced to accept state intervention outside its

preferred area of aid for itself simply means that, firstly, capitalism is an unstable system which undermines its own social and ecological basis and, secondly, that they recognise that reform is preferable to revolution (unlike their cheerleaders).

D.1.3 Is state intervention socialistic?

No. Libertarian socialism is about self-liberation and self-management of one's activities. Getting the state to act for us is the opposite of these ideals. In addition, the question implies that socialism is connected with its nemesis, statism, and that socialism means even more bureaucratic control and centralisation (*"socialism is the contrary of governmentalism."* [Proudhon, **No Gods, No Masters**, vol. 1, p. 63]). As Kropotkin stressed: *"State bureaucracy and centralisation are as irreconcilable with socialism as was autocracy with capitalist rule."* [**Evolution and Environment**, p. 185] The history of both social democracy and state socialism proved this, with the former merely reforming some aspects of capitalism while keeping the system intact while the latter created an even worse form of class system.

The identification of socialism with the state is something that social democrats, Stalinists and capitalist apologists **all** agree upon. However, as we'll see in section H.3.13, "state socialism" is in reality just state capitalism — the turning of the world into "one office and one factory" (to use Lenin's expression). Little wonder that most sane people join with anarchists in rejecting it. Who wants to work under a system in which, if one does not like the boss (i.e. the state), one cannot even quit?

The theory that state intervention is "creeping socialism" takes the laissez-faire ideology of capitalism at its face value, not realising that it is ideology rather than reality. Capitalism is a dynamic system and evolves over time, but this does not mean that by moving away from its theoretical starting point it is negating its essential nature and becoming socialistic. Capitalism was born from state intervention, and except for a very short period of laissez-faire which ended in depression has always depended on state intervention for its existence. As such, while there *"may be a residual sense to the notion that the state serves as an equaliser, in that without its intervention the destructive powers of capitalism would demolish social existence and the physical environment, a fact that has been well understood by the masters of the private economy who have regularly called upon the state to restrain and organise these forces. But the common idea that the government acts as a social equaliser can hardly be put forth as a general principle."* [Noam Chomsky, **The Chomsky Reader**, p. 185]

The list of state aid to business is lengthy and can hardly be considered as socialistic or egalitarian is aim (regardless of its supporters saying it is about creating "jobs" rather than securing profits, the reality of the situation). Government subsidies to arms companies and agribusiness, its subsidy of research and development work undertaken by government-supported universities, its spending to ensure a favourable international climate for business operations, its defence of intellectual property rights, its tort reform (i.e. the business agenda of limiting citizen power to sue corporations), its manipulation of unemployment rates, and so forth, are all examples of state intervention which can, by no stretch of the imagination be considered as "socialistic." As left-liberal economist Dean Baker notes:

> *"The key flaw in the stance that most progressives have taken on economic issues is that they have accepted a framing whereby conservatives are assumed to support market*

> *outcomes, while progressives want to rely on the government ... The reality is that conservatives have been quite actively using the power of the government to shape market outcomes in ways that redistribute income upward. However, conservatives have been clever enough to not own up to their role in this process, pretending all along that everything is just the natural working of the market. And, progressives have been foolish enough to go along with this view."* [**The Conservative Nanny State: How the Wealthy Use the Government to Stay Rich and Get Richer**, p. v]

He stresses, that *"both conservatives and liberals want government intervention. The difference between them is the goal of government intervention, and the fact that conservatives are smart enough to conceal their dependence on the government."* They *"want to use the government to distribute income upward to higher paid workers, business owners, and investors. They support the establishment of rules and structures that have this effect."* Dean discusses numerous examples of right-wing forms of state action, and notes that *"[i]n these areas of public policy ... conservatives are enthusiastic promoters of big government. They are happy to have the government intervene into the inner workings of the economy to make sure that money flows in the direction they like — upward. It is accurate to say that conservatives don't like big government social programs, but not because they don't like big government. The problem with big government social programs is that they tend to distribute money downward, or provide benefits to large numbers of people."* It seems redundant to note that *"conservatives don't own up to the fact that the policies they favour are forms of government intervention. Conservatives do their best to portray the forms of government intervention that they favour, for example, patent and copyright protection, as simply part of the natural order of things."* [**Op. Cit.**, p. 1 and p. 2]

This, it should be stressed, is unexpected. As we explained in section B.2, the state is an instrument of minority rule. As such, it strains belief that state intervention would be socialist in nature. After all, if the state is an agent of a self-interesting ruling class, then its laws are inevitably biased in its favour. The ultimate purpose of the state and its laws are the protection of private property and so the form of law is a class weapon while its content is the protection of class interests. They are inseparable.

So the state and its institutions can *"challenge the use of authority by other institutions, such as cruel parents, greedy landlords, brutal bosses, violent criminals"* as well as *"promot[ing] desirable social activities, such as public works, disaster relief, communications and transport systems, poor relief, education and broadcasting."* Anarchists argue, though, the state remains *"primarily ... oppressive"* and its *"main function is in fact to hold down the people, to limit freedom"* and that *"all the benevolent functions of the state can be exercised and often have been exercised by voluntary associations."* Moreover, *"the essential function of the state is to maintain the existing inequality"* and so *"cannot redistribute wealth fairly because it is the main agency of the unfair distribution."* This is because it is *"the political expression of the economic structure, that it is the representative of the people who own or control the wealth of the community and the oppressor of the people who do the work which creates wealth."* [Walters, **About Anarchism**, p. 36 and p. 37]

The claim that state intervention is "socialist" also ignores the realities of power concentration under capitalism. Real socialism equalises power by redistributing it to the people, but, as Noam Chomsky points out, *"[i]n a highly inegalitarian society, it is most unlikely that government programs will be equalisers. Rather, it is to be expected that they will be designed and manipulated by private power for their own benefits; and to a significant degree the expectation is fulfilled. It is not*

very likely that matters could be otherwise in the absence of mass popular organisations that are prepared to struggle for their rights and interests." [**Op. Cit.**, p. 184] The notion that "welfare equals socialism" is nonsense, although it can reduce poverty and economic inequality somewhat. As Colin Ward notes, *"when socialists have achieved power"* they have produced nothing more than *"[m]onopoly capitalism with a veneer of social welfare as a substitute for social justice."* [**Anarchy in Action**, p. 18]

This analysis applies to state ownership and control of industry. Britain, for example, saw the nationalisation of roughly 20% of the economy by the 1945 Labour Government. These were the most unprofitable sections of the economy but, at the time, essential for the economy as a whole. By taking it into state ownership, these sections could be rationalised and developed at public expense. Rather than nationalisation being feared as "socialism," the capitalist class had no real issue with it. As anarchists at the time noted, *"the real opinions of capitalists can be seen from Stock Exchange conditions and statements of industrialists [rather] than the Tory Front bench ... [and from these we] see that the owning class is not at all displeased with the record and tendency of the Labour Party."* [Vernon Richards (ed.), **Neither Nationalisation nor Privatisation — Selections from Freedom 1945–1950**, p. 9]

Moreover, the example of nationalised industries is a good indicator of the non-socialist nature of state intervention. Nationalisation meant replacing the capitalist bureaucrat with a state one, with little real improvement for those subjected to the "new" regime. At the height of the British Labour Party's post-war nationalisations, anarchists were pointing out its anti-socialist nature. Nationalisation was *"really consolidating the old individual capitalist class into a new and efficient class of managers to run ... state capitalism"* by *"installing the really creative industrialists in dictatorial managerial positions."* [Vernon Richards (ed.), **Op. Cit.**, p. 10] Thus, in practice, the real examples of nationalisation confirmed Kropotkin's prediction that it would be *"an exchange of present capitalism for state-capitalism"* and simply be *"nothing but a new, perhaps improved, but still undesirable form of the wage system."* [**Evolution and Environment**, p. 193 and p. 171] The nationalised industries were expected, of course, to make a profit, partly for *"repaying the generous compensation plus interest to the former owners of the mainly bankrupt industries that the Labour government had taken over."* [Richards, **Op. Cit.**, p. 7]

Ultimately, state ownership at local or national level is hardly socialistic in principle or in practice. As Kropotkin stressed, *"no reasonable man [or woman] will expect that Municipal Socialism, any more than Co-operation, could solve to any extent the Social problem."* This was because it was *"self-evident that [the capitalists] will not let themselves be expropriated without opposing resistance. They may favour municipal [or state] enterprise for a time; but the moment they see that it really begins to reduce the number of paupers ... or gives them regular employment, and consequently threatens to reduce the profits of the exploiters, they will soon put an end to it."* [**Act for Yourselves**, p. 94 and p. 95] The rise of Monetarism in the 1970s and the subsequent enthronement of the "Natural Rate" of unemployment thesis proves this argument.

While state intervention is hardly socialistic, what can be said is that *"the positive feature of welfare legislation is that, contrary to the capitalist ethic, it is a testament to human solidarity. The negative feature is precisely that it is an arm of the state."* [Colin Ward, **Talking Anarchy**, p. 79] For anarchists, while *"we are certainly in full sympathy with all that is being done to widen the attributes of city life and to introduce communistic conceptions into it. But it is only through a Social Revolution, made by the workers themselves, that the present exploitation of Labour by*

Capital can be altered." [Kropotkin, **Op. Cit.**, pp. 95–6] As British anarchists stressed during the first post-war Labour Government:

> *"The fact that the alternative, under capitalism, is destitution and the sharper anomalies of poverty, does not make the Liberal-Socialistic alternative a sound proposition."*
>
> *"The only rational insurance against the evils of poverty and industrialism and old age under the wages system is the abolition of poverty and the wages system, and the transformation of industrialism to serve human ends instead of grinding up human beings."* [Vernon Richards (ed.), **World War — Cold War**, p. 347]

In reality, rather than genuine socialism we had reformists *"operating capitalism while trying to give it a socialist gloss."* [**Op. Cit.**, p. 353] The fact is that the ruling class oppose those forms of state intervention which aim, at least in rhetoric, to help working class people. This does not make such reforms socialistic. The much more substantial state intervention for the elite and business are simply part of the natural order and go unmentioned. That this amounts to a welfare state for the wealthy or socialism for the rich is, of course, one of the great unspeakable truths of capitalism.

D.1.4 Is laissez-faire capitalism actually without state intervention?

The underlying assumption in the neo-liberal and conservative attacks against state intervention is the assumption that their minimal state is without it. The reality of the situation is, of course, different. Even the minimal state of the ideologues dreams intervenes on behalf of the ruling class in order to defend capitalist power and the property and property rights this flows from.

This means that the laissez-faire position is a form of state intervention as well. State "neutrality" considered as simply enforcing property rights (the "minimal state") instantly raises the question of **whose** conception of property rights, popular ones or capitalist ones? Unsurprisingly, the capitalist state enforces capitalist notions of property. In other words, it sanctions and supports economic inequality and the privileges and power of those who own property and, of course, the social relationships such a system generates. Yet by defending capitalist property, the state can hardly remain "neutral" with regards to ownership and the power it generates. In other words, the "neutral" state **has** to intervene to defend the authority of the boss or landlord over the workers they exploit and oppress. It is not a "public body" defending some mythical "public interest" but rather a defender of class society and the socio-economic relationships such a system creates. Political power, therefore, reflects and defends economic and social power.

As Kropotkin argued, the *"major portion"* of laws have *"but one object – to protect private property, i.e. wealth acquired by the exploitation of man by man. Their aim is to open to capital fresh fields for exploitation, and to sanction the new forms which that exploitation continually assumes, as capital swallows up another branch of human activity ... They exist to keep up the machinery of government which serves to secure to capital the exploitation and monopoly of wealth produced."* This means that all modern states *"all serve one God — capital; all have but one object — to facilitate the exploitation of the worker by the capitalist."* [**Anarchism**, p. 210]

Given that the capitalist market is marked by inequalities of power, any legal framework will defend that power. The state simply allows the interaction between parties to determine the

norms of conduct in any contract. This ensures that the more powerful party to impose its desires on the weaker one as the market, by definition, does not and cannot have any protections against the imposition of private power. The state (or legal code) by enforcing the norms agreed to by the exchange is just as much a form of state intervention as more obvious forms of state action. In other words, the state's monopoly of power and coercion is used to enforce the contracts reached between the powerful and powerless. As such contracts will hardly be neutral, the state cannot be a neutral arbiter when presiding over capitalism. The net result is simply that the state allows the more powerful party to an exchange to have authority over the weaker party — all under the fiction of equality and freedom. And, as Malatesta stressed, state power and centralisation will have to increase:

> *"liberalism, is in theory a kind of anarchy without socialism, and therefore is simply a lie, for freedom is not possible without equality, and real anarchy cannot exist without solidarity, without socialism. The criticism liberals direct at government consists of wanting to deprive it of some of its functions and to call upon the capitalists to fight it out among themselves, but it cannot attack the repressive functions which are of its essence: for with the* ***gendarme*** *the property owner could not exist, indeed the government's powers of repression must perforce increase as free competition results in more discord and inequality."* [**Anarchy**, p. 46]

His comments were more than confirmed by the rise of neo-liberalism nearly a century later which combined the "free(r) market" with a strong state marked by more extensive centralisation and police powers.

This is unsurprising, as laissez-faire capitalism being *"unable to solve its celebrated problem of the harmony of interests, [is forced] to impose laws, if only provisional ones, and abdicates in its turn before this new authority that is incompatible with the practice of liberty."* [Proudhon, quoted by Alan Ritter, **The Political Thought of Pierre-Joseph Proudhon**, p. 122] Thus capitalism always has to rely on the state, on political coercion, if only the minimal state, to assure its survival. The capitalist market has to, in other words, resort to the coercion it claims to avoid once people start to question its shortcomings. Of course, this coercion need not be monopolised in the form of state police and armed forces. It has been enforced successfully by private police forces and security guards, but it does not change the fact that force is required to maintain capitalist property, power and property rights.

In summary, **all** forms of capitalism rest on the superior force of economic elites who have the backing of the state to defend the sources of that power as well as any contracts it has agreed to. In other words, "laissez-faire" capitalism does not end state intervention, it simply creates a situation where the state leaves the market process to the domination of those who occupy superior market positions. As Kropotkin put it, capitalism *"is called the freedom of transactions but it is more truly called the freedom of exploitation."* [**Words of a Rebel**, p. 119]

Given this, it may be objected that in this case there is no reason for the ruling class to interfere with the economy. If economic coercion is sufficient, then the elite has no need to turn to the state for aid. This objection, however, fails to appreciate that the state **has** to interfere to counteract the negative impacts of capitalism. Moreover, as we discussed in section C.7, economic coercion becomes less pressing during periods of low unemployment and these tend to provoke a slump. It is in the interests of the ruling elite to use state action to reduce the power of the working

classes in society. Thus we find the Federal Reserve in the USA studying economic statistics to see if workers are increasing their bargaining power on the labour market (i.e. are in a position to demand more wages or better conditions). If so, then interest rates are increased and the resulting unemployment and job insecurity make workers more likely to put up with low pay and do what their bosses demand. As Doug Henwood notes, *"policy makers are exceedingly obsessed with wage increases and the state of labour militancy. They're not only concerned with the state of the macroeconomy, conventionally defined, they're also concerned with the state of the class struggle, to use the old-fashioned language."* [**Wall Street**, p. 219] Little wonder the ruling class and its high priests within the "science" of economics have embraced the concept of a "natural rate" of unemployment (see section C.9 on this and as we indicated in section C.6, this has been **very** enriching for the ruling class since 1980).

Ultimately, the business class wants the state to intervene in the economy beyond the minimum desired by a few ideologues of capitalism simply to ensure it gets even more wealth and power — and to ensure that the system does not implode. Ironically, to get capitalism to work as some of its defenders want it to would require a revolution in itself – against the capitalists! Yet if we go to the trouble of fighting public tyranny (the state), why should we stop there? Why should private tyranny (capitalism, its autocratic structures and hierarchical social relationships) remain untouched? Particularly, as Chomsky notes, under capitalism *"minimising the state means strengthening the private sectors. It narrows the domain within which public influence can be expressed. That's not an anarchist goal ... It's minimising the state and increasing an even worse power,"* namely capitalist firms and corporations which are *"private totalitarian organisations."* [**Chomsky on Anarchism**, p. 214 and p. 213] In other words, if a government "privatises" some government function, it is not substituting a market for a bureaucracy. It is substituting a private bureaucracy for a public one, usually at rock-bottom prices, so that some more capitalists can make a profit. All the economic mumbo-jumbo is just a smokescreen for this fact.

D.1.5 Do anarchists support state intervention?

So where do anarchists stand on state intervention? This question does not present a short answer simply because it is a complex issue. On the one hand, as Proudhon stressed, the state exists to *"maintain **order** in society, by consecrating and sanctifying obedience of the citizens to the State, subordination of the poor to the rich, of the common people to the upper class, of the worker to the idler."* [**The General Idea of the Revolution**, p. 243] In such circumstances, appealing to the state makes little sense. On the other hand, the modern state does do some good things (to varying degrees). As a result of past popular struggles, there is a basic welfare system in some countries which does help the poorest sections of society. That aspect of state intervention is what is under attack by the right under the slogan of "minimising the state."

In the long term, of course, the real solution is to abolish capitalism *"and both citizens and communities will have no need of the intervention of the State."* [Proudhon, **Op. Cit.**, p. 268] In a free society, social self-defence would not be statist but would be similar in nature to trade unionism, co-operatives and pressure groups — individuals working together in voluntary associations to ensure a free and just society — within the context of an egalitarian, decentralised and participatory system which eliminates or reduces the problems in the first place (see section I).

However, that does not answer the question of what we do in the here and now when faced with demands that the welfare state (for the working class, **not** corporate welfare) and other reforms be rolled back. This attack has been on going since the 1970s, accelerating since 1980. We should be clear that claims to be minimising the state should be taken with a massive pitch of salt as the likes of Reagan were *"elected to office promising to downsize government and to 'get the government off the people's back,' even though what he meant was to deregulate big business, and make them free to exploit the workers and make larger profits."* [Lorenzo Kom'boa Ervin, **Anarchism and the Black Revolution**, p. 100] As such, it would be a big mistake to confuse anarchist hostility to the state with the rhetoric of right-wing politicians seeking to reduce social spending (Brian Oliver Sheppard discusses this issue well in his article *"Anarchism vs. Right-Wing 'Anti-Statism'"* [**Anarcho-Syndicalist Review**, no. 31, Spring 2001]). Chomsky puts it well:

> *"State authority is now under severe attack in the more democratic societies, but not because it conflicts with the libertarian vision. Rather the opposite: because it offers (weak) protection to some aspects of that vision. Governments have a fatal flaw: unlike the private tyrannies, the institutions of state power and authority offer to the despised public an opportunity to play some role, however limited, in managing their own affairs. That defect is intolerable to the masters . .. the goals of a committed anarchist should be to defend some state institutions from the attack against them, while trying at the same time to pry them open to more meaningful public participation — and, ultimately, to dismantle them in a much more free society, of the appropriate circumstances can be achieved."* [**Chomsky on Anarchism**, p. 193 and p. 194]

There is, of course, a tension in this position. The state may be influenced by popular struggle but it remains an instrument of **capitalist** rule. It may intervene in society as a result of people power and by the necessity to keep the system as a whole going, but it is bureaucratic and influenced by the wealthy and big business. Indeed, the onslaught on the welfare state by both Thatcher and Reagan was conducted under a "democratic" mandate although, in fact, these governments took advantage of the lack of real accountability between elections. They took advantage of an aspect of the state which anarchists had been warning of for decades, being *"well aware that [the politician] can now commit crimes with immunity, [and so] the elected official finds himself immediately exposed to all sorts of seductions on behalf of the ruling classes"* and so implemented policies *"solicited by big industry, high officials, and above all, by international finance."* [Elisee Reclus, **The Modern State**, p. 208 and pp. 208–9]

As such, while anarchists are against the state, our position on state intervention depends on the specific issue at hand. Most of us think state health care services and unemployment benefits (for example) are more socially useful than arms production, and in lieu of more anarchistic solutions, better than the alternative of "free market" capitalism. This does not mean we are happy with state intervention, which in practice undermines working class self-help, mutual aid and autonomy. Also, state intervention of the "social" nature is often paternalistic, run by and for the "middle classes" (i.e. professional/managerial types and other self-proclaimed "experts"). However, until such time as a viable anarchist counterculture is created, we have little option but to "support" the lesser evil (and make no mistake, it **is** an evil).

Taking the issue of privatisation of state owned and run industry, the anarchist position is opposition to both. As we noted in section D.1.3, the anarchist prediction that if you substitute

government ownership for private ownership, *"nothing is changed but the stockholders and the management; beyond that, there is not the least difference in the position of the workers."* [Proudhon, quoted by Ritter, **Op. Cit.**, pp. 167–8] However, privatisation is a rip-off of the general public for the benefit of the wealthy:

> *"Privatisation of public services — whether it is through the direct sale of utilities or through indirect methods such as PFI and PPP — involves a massive transfer of wealth from taxpayers to the pockets of private business interests. It negates the concept of there being such a thing as 'public service' and subjects everything to the bottom line of profit. In other words it seeks to maximise the profits of a few at the expense of wages and social obligations. Furthermore, privatisation inevitably leads to an attack on wages and working conditions — conditions which have been fought for through years of trade union agitation are done away with at the scratch of a pen."* [Gregor Kerr, *"Privatisation: the rip-off of public resources"*, pp. 14–18, **Black and Red Revolution**, no. 11, p. 16]

In response to such "reforms", anarchists propose an alternatives to both options. Anarchists aim not at state ownership but to *"transfer all that is needed for production ... from the hands of the individual capitalists into those of the communities of producers and consumers."* [Kropotkin, **Environment and Evolution**, pp. 169–70] In other words, while *"[i]n today's world 'public sector' has come to mean 'government.' It is only if 'public sector' can be made to mean 'people's ownership' in a real sense that the call for public ownership can be a truly radical one."* [Kerr, **Op. Cit.**, p. 18] This is based on a common-sense conclusion from the analysis of the state as an instrument of the ruling class:

> *"While anarchists oppose the privatisation of state assets and services for the reasons discussed above, we do not call — as some on the left do — for the 'nationalisation' of services as a solution to problems . .. We'd be expecting the same politicians who are busily implementing the neo-liberal agenda to now take on the role of workers' protectors . .. it is important to point out that the 'nationalise it' or 'take it into public ownership' slogan is far too often spun out by people on the left without their taking into account that there is a massive difference between state control/ownership and workers' control/ownership ... we all know that even if the revenues ... were still in state ownership, spending it on housing the homeless or reducing hospital waiting lists would not top the agenda of the government.*
>
> *"Put simply, state ownership does not equal workers' ownership ... we are sold the lie that the resource ... is 'public property.' The reality however is that far from being in the ownership of 'the public,' ordinary people have no direct say in the allocation of these resources. Just as working class people are consistently alienated from the product of their labour, this selling of the idea of 'public ownership' over which the public have no real say leads to an increase in apathy and a sense of helplessness among ordinary people. It is much more likely that the political establishment who control the purse strings supposedly 'in the public interest' will actually spend revenues generated from these 'public assets' on measures that will have the long-term effect of re-enforcing rather than alleviating social division. Public policy consistently results in an increase in the gap between the well-off and the poor."* [Kerr, Opt. Cit., pp. 16–7 and p. 17]

Thus an anarchist approach to this issue would be to reject both privatisation **and** nationalisation in favour of socialisation, i.e. placing nationalised firms under workers' self-management. In the terms of public utilities, such as water and power suppliers, they could be self-managed by their workers in association with municipal co-operatives — based on one member, one vote — which would be a much better alternative than privatising what is obviously a natural monopoly (which, as experience shows, simply facilitates the fleecing of the public for massive private profit). Christie and Meltzer state the obvious:

> *"It is true that government takes over the control of certain necessary social functions. It does not follow that **only** the state could assume such control. The postmen are 'civil servants' only because the State makes them such. The railways were not always run by the state, They belonged to the capitalists [and do once more, at least in the UK], and could as easily have been run by the railway workers.*
>
> *"The opponents of anarchism assure us that if we put government under a ban, there would be no education, for the state controls the schools. There would be no hospitals — where would the money come from? Nobody would work — who would pay their wages? ... But in reality, not ... the state, but the people provide what the people have. If the people do not provide for themselves, the state cannot help them. It only appears to do so because it is in control. Those who have power may apportion work or regulate the standard of living, but this is part of the attack upon the people, not something undertaken on their behalf."* [**The Floodgates of Anarchy**, p. 148–149]

Much the same can be said of other aspects of state intervention. For example, if we look at state education or welfare an anarchist solution could be to press for *"workers' control by all the people involved"* in an institution, in other words *"the extension of the principle of freedom from the economic to the political side of the health [and education] system[s]."* [Nicholas Walters, **About Anarchism**, p. 76] The aim is to create *"new forms of organisation for the social functions that the state fulfils through the bureaucracy."* [Colin Ward, **Anarchy in Action**, p. 19] This means that anarchists, as part of the wider socialist, labour and social movements seek *"to counterbalance as much as we [can] the centralistic, bureaucratic ambitions of Social Democracy."* [Kropotkin, **Act for Yourselves**, p. 120] This applies both to the organisation and tactics of popular movements as well as the proposed reforms and how they are implemented.

In terms of social reforms, anarchists stress that it cannot be left in the hands of politicians (i.e. the agents of the ruling class). It should be obvious that if you let the ruling class decide (on the basis of their own needs and priorities) which reforms to introduce you can guess which ones will be implemented. If the state establishes what is and is not a "reform", then it will implement those which it favours in a manner which benefits itself and the capitalist class. Such top-down "liberalisation" will only increase the power and freedom of the capitalist class and make capitalist and statist exploitation more efficient. It will not undermine the restrictions on liberty for the many which ensure the profits, property and power of the few in the first place. That is, there will be minor changes around the edges of the state system in order to give more "freedom" to landlords and employers to lord it over their tenants and workers. This can be seen from the experience of neo-liberalism across the world.

This means that the decision of what aspects of statism to dismantle first should **never** be handed over to politicians and bureaucrats who are inevitably agents of the capitalist class. It

should be decided from below and guided by an overall strategy of dismantling capitalism **as a system.** That means that any reforms should be aimed at those forms of state intervention which bolster the profits and power of the ruling class and long before addressing those laws which are aimed at making exploitation and oppression tolerable for the working class. If this is not done, then any "reforms" will be directed by the representatives of the business class and, consequently, aim to cut social programmes people actually need while leaving welfare for the rich in place. As such, anarchists argue that pressure from below is required to prioritise reforms based on genuine need rather than the interests of capital. For example, in the UK this would involve, say, urging the privatisation of the Royal Family before even thinking about "reforming" the National Health Service or fighting for the state to "get off the backs" of the unions trying to deregulate business. The key is that people reject a *"naive appeal to the legislators and high officials, waiting for salvation through their deliberations and decrees."* In reality *"freedom does not come begging, but rather must be conquered."* [Reclus, **Op. Cit.**, p. 210] This is not done, then the results will simply confirm Voltairine de Cleyre's insight:

> *"Nearly all laws which were originally framed with the intention of benefiting workers, have either turned into weapons in their enemies' hands, or become dead letters unless the workers through their organisations have directly enforced their observance. So that in the end, it is direct action that has to be relied on anyway."* [**The Voltairine de Cleyre Reader**, p. 59]

A classic example of the former are the anti-trust laws in America, originally aimed at breaking the power of capitalist monopoly but were soon turned against labour unions and strikers. De Cleyre's second point is a truism and, obviously, means that anarchists aim to strengthen popular organisations and create mass movements which use direct action to defend their rights. Just because there are laws protecting workers, for example, there is no guarantee that they will be enforced — unless workers themselves are strong enough to make sure the bosses comply with the law.

Anarchists are in favour of self-directed activity and direct action to get improvements and defend reforms in the here and now. By organising strikes and protests ourselves, we can improve our lives. This does not mean that using direct action to get favourable laws passed or less-favourable ones revoked is a waste of time. Far from it. However, unless ordinary people use their own strength and grassroots organisations to enforce the law, the state and employers will honour any disliked law purely in the breach. By trusting the state, social self-protection against the market and power concentrations becomes hollow. In the end, what the state gives (or, more correctly, is pressurised into giving), it can take away but what we create and run ourselves is always responsive to **our** desires and interests. We have seen how vulnerable state welfare is to pressures from the capitalist class to see that this is a truism.

This is not to deny that in many ways such state "support" can be used as a means of regaining some of the power and labour stolen from us by capitalists in the first place. State intervention **can** give working people more options than they otherwise would have. If state action could not be used in this way, it is doubtful that capitalists and their hired "experts" would spend so much time trying to undermine and limit it. As the capitalist class happily uses the state to enforce its power and property rights, working people making whatever use they can of it is to be expected. Be that as it may, this does not blind anarchists to the negative aspects of the welfare state and

other forms of state intervention (see section J.5.15 for anarchist perspectives on the welfare state).

One problem with state intervention, as Kropotkin saw, is that the state's absorption of social functions *"necessarily favoured the development of an unbridled, narrow-minded individualism. In proportion as the obligations towards the State grew in numbers, the citizens were evidently relieved from their obligations towards each other."* [**Mutual Aid**, p. 183] In the case of state "social functions," such as the British National Health Service, although they were created as a **result** of the social atomisation caused by capitalism, they have tended to **reinforce** the individualism and lack of personal and social responsibility that produced the need for such action in the first place. The pressing need, therefore, is for working class people need *"independent control ... of their own welfare programs. Mutual aid and welfare arrangements are necessary."* [Sam Dolgoff, **The American Labour Movement**, p. 26] Specific forms of community and social self-help and their historical precedents are discussed in section J.5.16.

This means that the anarchist task is building popular resistance to the state and capitalism and that may, at time, involves resisting attempts to impose "reforms" which harm the working class and enrich and empower the ruling class. As such, few anarchists subscribe to the notion that we should support capitalism inspired "minimising" of the state in the believe that this will increase poverty and inequality and so speed up the arrival of a social revolution. However, such a position fails to appreciate that social change is only possible when the hope for a better future has not been completely destroyed:

> *"Like many others I have believed in my youth that as social conditions became worse, those who suffered so much would come to realise the deeper causes of their poverty and suffering. I have since been convinced that such a belief is a dangerous illusion ... There is a pitch of material and spiritual degradation from which a man can no longer rise. Those who have been born into misery and never knew a better state are rarely able to resist and revolt ... Certainly the old slogan, 'The worse the better', was based on an erroneous assumption. Like that other slogan, 'All or nothing', which made many radical oppose any improvement in the lot of the workers, even when the workers demanded it, on the ground that it would distract the mind of the proletariat, and turn it away from the road which leads to social emancipation. It is contrary to all the experience of history and of psychology; people who are not prepared to fight for the betterment of their living conditions are not likely to fight for social emancipation. Slogans of this kind are like a cancer in the revolutionary movement."* [Rudolf Rocker, **London Years**, pp. 25–6]

The anarchist position is, therefore, a practical one based on the specific situation rather than a simplistic application of what is ideologically correct. Rolling back the state in the abstract is not without problems in a class and hierarchy ridden system where opportunities in life are immensely unequal. As such, any *"effort to develop and implement government programs that really were equalisers would lead to a form of class war, and in the present state of popular organisations and distribution of effective power, there can hardly be much doubt as to who would win."* [Chomsky, **The Chomsky Reader**, p. 184] Anarchists seek to build the grassroots resistance for politicians like Reagan, Bush Snr and Jnr, Thatcher and so on do not get elected without some serious institutional forces at work. It would be insane to think that once a particularly right-wing politician leaves office those forces will go away or stop trying to influence the political decision making process.

The task of anarchists therefore is not to abstractly oppose state intervention but rather contribute to popular self-organisation and struggle, creating pressures from the streets and workplaces that governments cannot ignore or defy. This means supporting direct action rather than electioneering (see section J.2) for the *"make-up of the government, the names, persons and political tendencies which rubbed shoulders in it, were incapable of effecting the slightest amendment to the enduring quintessence of the state organism . .. And the price of entering the of strengthening the state is always unfailingly paid in the currency of a weakening of the forces offering it their assistance. For every reinforcement of state power there is always ... a corresponding debilitation of grassroots elements. Men may come and go, but the state remains."* [Jose Peirats, **The CNT in the Spanish Revolution**, vol. 2, p. 150]

D.2 What influence does wealth have over politics?

The short answer is: a great deal of influence, directly and indirectly. We have already touched on this in section B.2.3. Here we will expand on those remarks.

State policy in a capitalist democracy is usually well-insulated from popular influence but very open to elite influence and money interests. Let's consider the possibility of direct influence first. It's obvious that elections cost money and that only the rich and corporations can realistically afford to take part in a major way. Even union donations to political parties cannot effectively compete with those from the business classes. For example, in the 1972 US presidential elections, of the $500 million spent, only about $13 million came from trade unions. The vast majority of the rest undoubtedly came from Big Business and wealthy individuals. For the 1956 elections, the last year for which direct union-business comparisons are possible, the contributions of 742 businessmen matched those of unions representing 17 million workers. This, it should be stressed was at a time when unions had large memberships and before the decline of organised labour in America. Thus the evidence shows that it is *"irrefutable"* that *"businessmen contribute vastly greater sums of money to political campaigns than do other groups [in society]. Moreover, they have special ease of access to government officials, and they are disproportionately represented at all upper levels of government."* [David Schweickart, **Against Capitalism**, pp. 210–1]

Therefore, logically, politics will be dominated by the rich and powerful — in fact if not in theory — since, in general, only the rich can afford to run and only parties supported by the wealthy will gain enough funds and favourable press coverage to have a chance (see section D.3 for the wealthy's control of the mass media). Of course, there are many countries which do have labour-based parties, often allied with union movements, as is the case in Western Europe, for example. Yet even here, the funds available for labour parties are always less than those of capitalist supported parties, meaning that the ability of the former to compete in "fair" elections is hindered. In addition, the political agenda is dominated by the media and as the media are owned by and dependent upon advertising from business, it is hardly surprising that independent labour-based political agendas are difficult to follow or be taken seriously. Unsurprisingly, many of these so-called labour or social-democratic parties have moved to the right (particularly since the 1980s). In Britain, for example, the New Labour government which was elected in 1997 simply, in the main, followed the policies of the previous Conservative Governments and saw its main funding switch from unions to wealthy business men (sometimes in the form of "loans" which could be hidden from the accounts). Significantly, New Labour's success was in part dependent on support from the right-wing media empire of Rupert Murdoch (Blair even consulted with him on policy, indicating his hold over the government).

Then there are the barriers involved once a party has gained office. Just because a party has become the government, it does not mean that they can simply implement their election promises. There are also significant pressures on politicians from the state bureaucracy itself. The state

structure is designed to ensure that real power lies not in the hands of elected representatives but rather in the hands of officials, of the state bureaucracy which ensures that any pro-labour political agenda will be watered down and made harmless to the interests of the ruling class. We discuss this in section J.2.2 and will not do so here.

To this it must be added that wealth has a massive **indirect** influence over politics (and so over society and the law). We have noted above that wealth controls the media and its content. However, beyond this there is what can be called "Investor Confidence," which is another important source of influence. This is *"the key to capitalist stability,"* notes market socialist David Schweickart. *"If a government initiates policies that capitalists perceive to be opposed to their interests, they may, with neither organisation nor even spitefulness, become reluctant to invest [or actually dis-invest] in the offending country (or region or community), not if 'the climate for business is bad.' The outcome of such isolated acts is an economic downturn, and hence political instability. So a government ... has no real choice but to regard the interests of business as privileged. In a very real sense, what is good for business really is good for the country. If business suffers, so will everyone else."* [**Op. Cit.**, pp. 214–5]

Hence Chomsky's comment that when *"popular reform candidates ... get elected ... you get [a] capital strike — investment capital flows out of the country, there's a lowering of investment, and the economy grinds to a halt ... The reason is quite simple. In our society, real power does not happen to lie in the political system, it lies in the private economy; that's were the decisions are made about what's produced, how much is produced, what's consumed, where investment takes place, who has jobs, who controls the resources, and so on and so forth. And as long as that remains the case, changes inside the political system can make* ***some*** *difference — I don't want to say it's zero — but the differences are going to be very slight."* This means that government policy is forced to make *"the rich folk happy"* otherwise *"everything's going to grind to a halt."* [**Understanding Power**, pp. 62–3] As we discuss in the next section, this is precisely what **has** happened.

David Noble provides a good summary of the effects of such indirect pressures when he writes firms *"have the ability to transfer production from one country to another, to close a plant in one and reopen it elsewhere, to direct and redirect investment wherever the 'climate' is most favourable [to business]... . [I]t has enabled the corporation to play one workforce off against another in the pursuit of the cheapest and most compliant labour (which gives the misleading appearance of greater efficiency)... [I]t has compelled regions and nations to compete with one another to try and attract investment by offering tax incentives, labour discipline, relaxed environmental and other regulations and publicly subsidised infrastructure... Thus has emerged the great paradox of our age, according to which those nations that prosper most (attract corporate investment) by most readily lowering their standard of living (wages, benefits, quality of life, political freedom). The net result of this system of extortion is a universal lowering of conditions and expectations in the name of competitiveness and prosperity."* [**Progress Without People**, pp. 91–92]

And, we must note, even when a country **does** lower its standard of living to attract investment or encourage its own business class to invest (as the USA and UK did by means of recession to discipline the workforce by high unemployment) it is no guarantee that capital will stay. US workers have seen their companies' profits rise while their wages have stagnated and (in reward) hundreds of thousands have been "down-sized" or seen their jobs moved to Mexico or South East Asia sweatshops. In the far east, Japanese, Hong Kong, and South Korean workers have also seen their manufacturing jobs move to low wage (and more repressive/authoritarian) countries such as China and Indonesia.

As well as the mobility of capital, there is also the threat posed by public debt. As Doug Henwood notes, *"[p]ublic debt is a powerful way of assuring that the state remains safely in capital's hands. The higher a government's debt, the more it must please its bankers. Should bankers grow displeased, they will refuse to roll over old debts or to extend new financing on any but the most punishing terms (if at all). The explosion of [US] federal debt in the 1980s vastly increased the power of creditors to demand austere fiscal and monetary policies to dampen the US economy as it recovered ... from the 1989–92 slowdown."* [**Wall Street**, pp. 23–24] And, we must note, Wall street made a fortune on the debt, directly and indirectly.

This analysis applies within countries as well. Commenting on Clinton's plans for the devolution of welfare programmes from Federal to State government in America, Noam Chomsky makes the important point that *"under conditions of relative equality, this could be a move towards democracy. Under existing circumstances, devolution is intended as a further blow to the eroding democratic processes. Major corporations, investment firms, and the like, can constrain or directly control the acts of national governments and can set one national workforce against another. But the game is much easier when the only competing player that might remotely be influenced by the 'great beast' is a state government, and even middle-sized enterprise can join in. The shadow cast by business [over society and politics] can thus be darker, and private power can move on to greater victories in the name of freedom."* [Noam Chomsky, *"Rollback III"*, **Z Magazine**, March, 1995]

Economic blackmail is a very useful weapon in deterring freedom. Little wonder Proudhon argued that the *"Revolutionary principle ... is Liberty. In other words, no more government of man by man through the accumulation of capital."* [quoted by Jack Hayward, **After the French Revolution**, p. 177]

D.2.1 Is capital flight really that powerful?

Yes. By capital flight, business can ensure that any government which becomes too independent and starts to consider the interests of those who elected it will be put back into its place. Therefore we cannot expect a different group of politicians to react in different ways to the same institutional influences and interests. It's no coincidence that the Australian Labour Party and the Spanish Socialist Party introduced "Thatcherite" policies at the same time as the "Iron Lady" implemented them in Britain. The New Zealand Labour government is a case in point, where *"within a few months of re-election [in 1984], finance minister Roger Douglas set out a programme of economic 'reforms' that made Thatcher and Reagan look like wimps... .[A]lmost everything was privatised and the consequences explained away in marketspeak. Division of wealth that had been unknown in New Zealand suddenly appeared, along with unemployment, poverty and crime."* [John Pilger, *"Breaking the one party state,"* **New Statesman**, 16/12/94]

An extreme example of capital flight being used to "discipline" a naughty administration can be seen from Labour governments in Britain during the 1960s and 1970s. Harold Wilson, the Labour Prime Minister between 1964 and 1970, recorded the pressures his government was under from "the markets":

> *"We were soon to learn that decisions on pensions and taxation were no longer to be regarded, as in the past, as decisions for parliament alone. The combination of tax increases with increased social security benefits provoked the first of a series of attacks on*

> *sterling, by speculators and others, which beset almost every section of the government for the next five years."* [**The Labour Government 1964–1970**, p. 31]

He also had to *"listen night after night to demands that there should be cuts in government expenditure, and particularly in those parts of government expenditure which related to social services. It was not long before we were being asked, almost at pistol-point to cut back on expenditure"* by the Governor of the Bank of England, the stock exchange's major mouthpiece. [**Op. Cit.**, p. 34] One attempt to pressurise Wilson resulted in him later reflecting:

> *"Not for the first time, I said that we had now reached the situation where a newly elected government with a mandate from the people was being told, not so much by the Governor of the Bank of England but by international speculators, that the policies on which we had fought the election could not be implemented; that the government was to be forced into the adoption of Tory policies to which it was fundamentally opposed. The Governor confirmed that that was, in fact, the case."* [**Op. Cit.**, p. 37]

Only the bluff of threatening to call another general election allowed Wilson to win that particular battle but his government was constrained. It implemented only some of the reforms it had won the election on while implementing many more policies which reflected the wishes of the capitalist class (for example, attempts to shackle the rank and file of the unions).

A similar process was at work against the 1974 to 1979 Labour government. In January, 1974, the FT Index for the London Stock Exchange stood at 500 points. In February, the Miner's went on strike, forcing Heath (the Tory Prime Minister) to hold (and lose) a general election. The new Labour government (which included some left-wingers in its cabinet) talked about nationalising the banks and much heavy industry. In August, 1974, Tony Benn announced plans to nationalise the ship building industry. By December, the FT index had fallen to 150 points. [John Casey, *"The Seventies"*, **The Heavy Stuff**, no. 3, p. 21] By 1976 the Treasury was *"spending $100 million a day buying back its own money on the markets to support the pound."* [**The Times**, 10/6/76]

The Times [27/5/76] noted that *"the further decline in the value of the pound has occurred despite the high level of interest rates.... [D]ealers said that selling pressure against the pound was not heavy or persistent, but there was an almost total lack of interest amongst buyers. The drop in the pound is extremely surprising in view of the unanimous opinion of bankers, politicians and officials that the currency is undervalued."* While there was much talk of private armies and military intervention, this was not needed. As anarchist John Casey argues, the ruling class *"chose to play the economic card ... They decided to subdue the rogue Labour administration by pulling the financial plugs out of the economy ... This resulted in the stock market and the pound plummeting ... This was a much neater solution than bullets and forced the Wilson government to clean up the mess by screwing the working class with public spending cuts and a freeze on wage claims ... The whole process of economic sabotage was neatly engineering through third parties like dealers in the currency markets."* [**Op. Cit.**, p. 23]

The Labour government, faced with the power of international capital, ended up having to receive a temporary "bailing out" by the IMF, which imposed a package of cuts and controls, to which Labour's response was, in effect, *"We'll do anything you say,"* as one economist described it. The social costs of these policies were disastrous, with unemployment rising to the then unheard-of-height of one million. And let's not forget that they *"cut expenditure by twice the amount the*

IMF were promised" in an attempt to appear business-friendly. [Peter Donaldson, **A Question of Economics**, p. 89] By capital flight, a slightly radical Labour government was brought to heel.

Capital will not invest in a country that does not meet its approval. In 1977, the Bank of England failed to get the Labour government to abolish its exchange controls. Between 1979 and 1982 the Tories abolished them and ended restrictions on lending for banks and building societies:

> *"The result of the abolition of exchange controls was visible almost immediately: capital hitherto invested in the U.K. began going abroad. In the* ***Guardian*** *of 21 September, 1981, Victor Keegan noted that 'Figures published last week by the Bank of England show that pension funds are now investing 25% of their money abroad (compared with almost nothing a few years ago) and there has been no investment at all (net) by unit trusts in the UK since exchange controls were abolished.'"* [Robin Ramsay, *"Mrs Thatcher, North Sea and the Hegemony of the City"*, pp. 2–9, **Lobster**, no. 27, p. 3]

This contributed to the general mismanagement of the economy by Thatcher's Monetarist government. While Milton Friedman had predicted *"only a modest reduction in output and employment will be a side effect of reducing inflation to single figures by 1982,"* the actual results of applying his ideas were drastically different. [quoted by Michael Stewart, **Keynes and After**, p. 179] Britain experienced its deepest recession since the 1930s, with unemployment nearly tripling between 1979 and 1985 (officially, from around 5% to 13% but the real figure was even higher as the government changed the method of measuring it to reduce the figures!). Total output fell by 2.5% in 1980 and another 1.5% in 1981. By 1984 manufacturing investment was still 30% lower in 1979. [Steward, **Op. Cit.**, p. 180] Poverty and inequality soared as unemployment and state repression broke the back of the labour movement and working class resistance.

Eventually, capital returned to the UK as Thatcher's government had subdued a militant working class, shackled the trade unions by law and made the welfare state difficult to live on. It reversed many of the partial gains from previous struggles and ended a situation where people had enough dignity not to accept any job offered or put up with an employer's authoritarian practices. These factors created "inflexibility" in the labour market, so that the working class had to be taught a lesson in "good" economics (in part, ironically, by mismanaging the economy by applying neoclassical dogmas in their Monetarist form!).

Needless to say, the situation in the 21st century has become worse. There has been a *"huge rise in international borrowing ... in international capital markets since the liberalisation moves of the 1970s, and [a] significant increase in foreign penetration of national central government bond markets."* This means that it is *"obvious that no central government today may follow economic policies that are disapproved of by the capital markets, which have the power to create an intolerable economic pressure on the respective country's borrowing ability, currency value and investment flows."* [Takis Fotopoulos, **Toward an Inclusive Democracy**, p. 42] We discuss globalisation in more detail in section D.5.

Unsurprisingly, when left-wing governments have been elected into office after the 1980s, they have spent a lot of time during the election showing how moderate they are to the capitalist class ("the markets"). This moderation continued once in office and any reforms implemented have been of a minor nature and placed within a general neo-liberal context. This was the fate of the British Labour government of Tony Blair, while in Brazil the government of Lula (a former lathe

operator, labour union leader and Brazil's first working-class president) was termed "Tropical Blairism" by left-wing critics. Rather than use popular mandate to pursue social justice, they have governed for the rich. Given the role of the state and the pressures governments experience from capital, anarchists were not surprised.

Of course, exceptions can occur, with popular governments implementing significant reforms when economic and political circumstances are favourable. However, these generally need popular movements at the same time to be really effective and these, at some stage, come into conflict with the reformist politicians who hold them back. Given the need for such extra-parliamentary movements to ensure reforms anarchists consider their time better spent building these than encouraging illusions about voting for radical politicians to act for us (see section J.2 for details).

D.2.2 How extensive is business propaganda?

Business spends a lot of money to ensure that people accept the status quo. Referring again to the US as an example (where such techniques are common), various means are used to get people to identify "free enterprise" (meaning state-subsidised private power with no infringement of managerial prerogatives) as "the American way." The success of these campaigns is clear, since many American working people (for example) now object to unions ing too much power or irrationally rejecting all radical ideas as "Communism" (i.e. Stalinism) regardless of their content. By the 1990s, it had even made "liberal" (i.e. mildly reformist centre-left policies) into a swear word in some parts of the country.

This is unsurprising and its roots can be found in the success of sort of popular movements business propaganda was created to combat. As Chomsky argues, due to popular struggles, *"the state has limited capacity to coerce"* in the advanced capitalist countries (although it is always there, to be used when required). This meant that *"elite groups — the business world, state managers and so on — recognised early on that they are going to have to develop massive methods of control of attitude and opinion, because you cannot control people by force anymore and therefore you have to modify their consciousness so that they don't perceive that they are living under conditions of alienation, oppression, subordination and so on. In fact, that's what probably a couple trillion dollars are spent on each year in the US, very self-consciously, from the framing of television advertisements for two-year olds to what you are taught in graduate school economics programs. It's designed to create a consciousness of subordination and it's also intended specifically and pretty consciously to suppress normal human emotions."* [**Chomsky on Anarchism**, p. 223]

This process became apparent in the 1960s. In the words of Edward Herman:

> *"The business community of the United States was deeply concerned over the excesses of democracy in the United States in the 1960s, and it has tried hard to rectify this problem by means of investments in both politicians and informing public opinion. The latter effort has included massive institutional advertising and other direct and indirect propaganda campaigns, but it has extended to attempts to influence the content of academic ideas ... [With] a significant portion of academic research coming from foundations based on business fortunes ... [and money] intended to allow people with preferred viewpoints to be aided financially in obtaining academic status and influence and in producing and disseminating books."* [*"The Selling of Market Economics,"* pp.

173–199, **New Ways of Knowing**, Marcus G. Raskin and Herbert J. Bernstein (eds.), p. 182]

Wealth, in other words, is employed to shape the public mind and ensure that challenges to that wealth (and its source) are reduced. These include funding private foundations and institutes ("think-tanks") which can study, promote and protect ways to advance the interests of the few. It can also include the private funding of university chairs as well as the employment of PR companies to attack opponents and sell to the public the benefits not only of specific companies their activities but also the whole socio-economic system. In the words of Australian Social Scientist Alex Carey the *"twentieth century has been characterised by three developments of great political importance: the growth of democracy, the growth of corporate power, and the growth of corporate propaganda as a means of protecting corporate power against democracy."* [quoted by Noam Chomsky, **World Orders, Old and New**, p. 89]

By 1978, American business was spending $1 billion a year on grassroots propaganda. [Chomsky, **Op. Cit.**, p. 93] This is known as *"Astroturf"* by PR insiders, to reflect the appearance of popular support, without the substance, and *"grasstops"* whereby influential citizens are hired to serve as spokespersons for business interests. In 1983, there existed 26 general purpose foundations for this purpose with endowments of $100 million or more, as well as dozens of corporate foundations. One extremely wealth conservative, Richard Mellon Scaife, was giving $10 million a year through four foundations and trusts. [G. William Domhoff, **Who Rules America Now?**, p. 92 and p. 94] These, along with media power, ensure that force — always an inefficient means of control — is replaced by (to use a term associated with Noam Chomsky) the *"manufacture of consent"*: the process whereby the limits of acceptable expression are defined by the wealthy.

Various institutions are used to get Big Business's message across, for example, the Joint Council on Economic Education, ostensibly a charitable organisation, funds economic education for teachers and provides books, pamphlets and films as teaching aids. In 1974, 20,000 teachers participated in its workshops. The aim is to induce teachers to present corporations in an uncritical light to their students. Funding for this propaganda machine comes from the American Bankers Association, AT&T, the Sears Roebuck Foundation and the Ford Foundation. As Domhoff points out, *"[a]lthough it [and other bodies like it] has not been able to bring about active acceptance of all power elite policies and perspectives, on economic or other domestic issues, it has been able to ensure that opposing opinions have remained isolated, suspect and only partially developed."* [**Op. Cit.**, pp. 103–4]

In other words, "unacceptable" ideas are marginalised, the limits of expression defined, and all within a society apparently based on "the free marketplace of ideas."

This process has been going on for some time. For example *"[i]n April 1947, the Advertising Council announced a $100 million campaign to use all media to 'sell' the American economic system — as they conceived it – to the American people; the program was officially described as a 'major project of educating the American people about the economic facts of life.' Corporations 'started extensive programs to indoctrinate employees,' the leading business journal* ***Fortune*** *reported, subjected their captive audiences to 'Courses in Economic Education' and testing them for commitment to the 'free enterprise system — that is, Americanism.' A survey conducted by the American Management Association (AMA) found that many corporate leaders regarded 'propaganda' and 'economic education' as synonymous, holding that 'we want our people to think right'... [and that] 'some employers view... [it] as a sort of 'battle of loyalties' with the unions' — a rather unequal battle, given*

the resources available." These huge PR campaigns *"employed the media, cinema, and other devices to identify 'free enterprise' — meaning state-subsidised private power with no infringement on managerial prerogatives — as 'the American way,' threatened by dangerous subversives."* [Noam Chomsky, **Op. Cit.**, pp. 89–90 and p. 89]

By 1995, $10 billion was considered a *"conservative estimate"* on how much money was spent on public relations. The actual amount is unknown, as PR industry (and their clients, of course) *"carefully conceals most of its activities from public view. This invisibility is part of a deliberate strategy for manipulating public opinion and government policy."* The net effect is that the wealth of *"large corporations, business associations and governments"* is used to *"out-manoeuvre, overpower and outlast true citizen reformers."* In other words: *"Making the World Safe from Democracy."* [John Stauber and Sheldon Rampton, **Toxic Sludge is Good for You!**, p. 13, p. 14 and p. 13] The public relations industry, as Chomsky notes, is a means by which *"the oppressors ... instil their assumptions as the perspective from which you [should] look at the world"* and is *"done extremely consciously."* [**Propaganda and the Public Mind**, p. 166]

The effects of this business propaganda are felt in all other aspects of life, ensuring that while the US business class is extremely class conscious, the rest of the American population considers "class" a swear word! It does have an impact. The rise of, say, "supply-side" economics in the late 1970s can be attributed to the sheer power of its backers rather than its intellectual or scientific merit (which, even in terms of mainstream economics, were slim). Much the same can be said for Monetarism and other discredited free-market dogmas. Hence the usual targets for these campaigns: taxes, regulation of business, welfare (for the poor, not for business), union corruption (when facing organising drives), and so on. All, of course, wrapped up in populist rhetoric which hides the real beneficiaries of the policies (for example, tax cut campaigns which strangely fail to mention that the elite will benefit most, or entirely, from the proposed legislation).

Ironically, the apparent success of this propaganda machine shows the inherent contradiction in the process. Spin and propaganda, while influential, cannot stop people experiencing the grim consequences when the business agenda is applied. While corporate propaganda has shaped the American political scene significantly to the right since the 1970s, it cannot combat the direct experience of stagnating wages, autocratic bosses, environmental degradation, economic insecurity and wealth polarisation indefinitely. The actual objective reality of neo-liberal capitalism will always come into glaring contrast with the propaganda used to justify and extend it. Hence the rising budgets for these activities cannot counteract the rising unease the American people feel about the direction their country is taking. The task of anarchists is to help the struggle, in America and across the globe, by which they can take their country and lives back from the elite.

D.3 How does wealth influence the mass media?

In a word, massively. This, in turn, influences the way people see the world and, as a result, the media is a key means by which the general population come to accept, and support, *"the arrangements of the social, economic, and political order."* The media, in other words *"are vigilant guardians protecting privilege from the threat of public understanding and participation."* This process ensures that state violence is not necessary to maintain the system as *"more subtle means are required: the manufacture of consent, [and] deceiving the masses with 'necessary illusions."* [Noam Chomsky, **Necessary Illusions**, pp. 13–4 and p. 19] The media, in other words, are a key means of ensuring that the dominant ideas within society are those of the dominant class.

Noam Chomsky has helped develop a detailed and sophisticated analyse of how the wealthy and powerful use the media to propagandise in their own interests behind a mask of objective news reporting. Along with Edward Herman, he has developed the ***"Propaganda Model"*** of the media works. Herman and Chomsky expound this analysis in their book **Manufacturing Consent: The Political Economy of the Mass Media**, whose main theses we will summarise in this section (unless otherwise indicated all quotes are from this work). We do not suggest that we can present anything other than a summary here and, as such, we urge readers to consult **Manufacturing Consent** itself for a full description and extensive supporting evidence. We would also recommend Chomsky's **Necessary Illusions** for a further discussion of this model of the media.

Chomsky and Herman's "propaganda model" of the media postulates a set of five *"filters"* that act to screen the news and other material disseminated by the media. These *"filters"* result in a media that reflects elite viewpoints and interests and mobilises *"support for the special interests that dominate the state and private activity."* [**Manufacturing Consent**, p. xi] These *"filters"* are: (1) the size, concentrated ownership, owner wealth, and profit orientation of the dominant mass-media firms; (2) advertising as the primary income source of the mass media; (3) the reliance of the media on information provided by government, business, and "experts" funded and approved by these primary sources and agents of power; (4) *"flak"* (negative responses to a media report) as a means of disciplining the media; and (5) *"anticommunism"* as a national religion and control mechanism. It is these filters which ensure that genuine objectivity is usually lacking in the media (needless to say, some media, such as Fox news and the right-wing newspapers like the UK's Sun, Telegraph and Daily Mail, do not even try to present an objective perspective).

"The raw material of news must pass through successive filters leaving only the cleansed residue fit to print," Chomsky and Herman maintain. The filters *"fix the premises of discourse and interpretation, and the definition of what is newsworthy in the first place, and they explain the basis and operations of what amount to propaganda campaigns."* [p. 2] We will briefly consider the nature of these five filters below before refuting two common objections to the model. As with Chomsky and Herman, examples are mostly from the US media. For more extensive analysis,

we would recommend two organisations which study and critique the performance of the media from a perspective informed by the "propaganda model." These are the American **Fairness & Accuracy In Reporting** (FAIR) and the UK based **MediaLens** (neither, it should be pointed out, are anarchist organisations).

Before discussing the "propaganda model", we will present a few examples by FAIR to show how the media reflects the interests of the ruling class. War usually provides the most obvious evidence for the biases in the media. For example, Steve Rendall and Tara Broughel analysed the US news media during the first stage of the 2003 invasion of Iraq and found that official voices dominated it *"while opponents of the war have been notably underrepresented,"* Nearly two-thirds of all sources were pro-war, rising to 71% of US guests. Anti-war voices were a mere 10% of all sources, but just 6% of non-Iraqi sources and 3% of US sources. *"Thus viewers were more than six times as likely to see a pro-war source as one who was anti-war; with U.S. guests alone, the ratio increases to 25 to 1."* Unsurprisingly, official voices, *"including current and former government employees, whether civilian or military, dominated network newscasts"* (63% of overall sources). Some analysts did criticise certain aspects of the military planning, but such *"the rare criticisms were clearly motivated by a desire to see U.S. military efforts succeed."* While dissent was quite visible in America, *"the networks largely ignored anti-war opinion."* FAIR found that just 3% of US sources represented or expressed opposition to the war in spite of the fact more than one in four Americans opposed it. In summary, *"none of the networks offered anything resembling proportionate coverage of anti-war voices"*. [*"Amplifying Officials, Squelching Dissent"*, **Extra!** May/June 2003]

This perspective is common during war time, with the media's rule of thumb being, essentially, that to support the war is to be objective, while to be anti-war is to carry a bias. The media repeats the sanitised language of the state, relying on official sources to inform the public. Truth-seeking independence was far from the media agenda and so they made it easier for governments to do what they always do, that is lie. Rather than challenge the agenda of the state, the media simply foisted them onto the general population. Genuine criticism only starts to appear when the costs of a conflict become so high that elements of the ruling class start to question tactics and strategy. Until that happens, any criticism is minor (and within a generally pro-war perspective) and the media acts essentially as the fourth branch of the government rather than a Fourth Estate. The Iraq war, it should be noted, was an excellent example of this process at work. Initially, the media simply amplified elite needs, uncritically reporting the Bush Administration's pathetic "evidence" of Iraqi WMD (which quickly became exposed as the nonsense it was). Only when the war became too much of a burden did critical views start being heard and then only in a context of being supportive of the goals of the operation.

This analysis applies as much to domestic issues. For example, Janine Jackson reported how most of the media fell in step with the Bush Administration's attempts in 2006 to trumpet a "booming" U.S. economy in the face of public disbelief. As she notes, there were *"obvious reasons [for] the majority of Americans dissent ... Most American households are not, in fact, seeing their economic fortunes improve. GDP is up, but virtually all the growth has gone into corporate profits and the incomes of the highest economic brackets. Wages and incomes for average workers, adjusted for inflation, are down in recent years; the median income for non-elderly households is down 4.8 percent since 2000 ...The poverty rate is rising, as is the number of people in debt."* Yet *"rather than confront these realities, and explore the implications of the White House's efforts to deny them, most mainstream media instead assisted the Bush team's PR by themselves feigning confusion over*

the gap between the official view and the public mood." They did so by presenting *"the majority of Americans' understanding of their own economic situation .. . as somehow disconnected from reality, ascribed to 'pessimism,' ignorance or irrationality ... But why these ordinary workers, representing the majority of households, should not be considered the arbiters of whether or not 'the economy' is good is never explained."* Barring a few exceptions, the media did not *"reflect the concerns of average salaried workers at least as much as those of the investor class."* Needless to say, which capitalist economists were allowed space to discuss their ideas, progressive economists did not. [*"Good News! The Rich Get Richer: Lack of applause for falling wages is media mystery,"* **Extra!**, March/April 2006] Given the nature and role of the media, this reporting comes as no surprise.

We stress again, before continuing, that this is a **summary** of Herman's and Chomsky's thesis and we cannot hope to present the wealth of evidence and argument available in either **Manufacturing Consent** or **Necessary Illusions**. We recommend either of these books for more information on and evidence to support the "propaganda model" of the media. Unless otherwise indicated, all quotes in this section of the FAQ are from Herman and Chomsky's **Manufacturing Consent**.

D.3.1 How does the structure of the media affect its content?

Even a century ago, the number of media with any substantial outreach was limited by the large size of the necessary investment, and this limitation has become increasingly effective over time. As in any well developed market, this means that there are very effective **natural** barriers to entry into the media industry. Due to this process of concentration, the ownership of the major media has become increasingly concentrated in fewer and fewer hands. As Ben Bagdikian's stresses in his 1987 book **Media Monopoly**, the 29 largest media systems account for over half of the output of all newspapers, and most of the sales and audiences in magazines, broadcasting, books, and movies. The *"top tier"* of these — somewhere between 10 and 24 systems — along with the government and wire services, *"defines the news agenda and supplies much of the national and international news to the lower tiers of the media, and thus for the general public."* [p. 5] Since then, media concentration has increased, both nationally and on a global level. Bagdikian's 2004 book, **The New Media Monopoly**, showed that since 1983 the number of corporations controlling most newspapers, magazines, book publishers, movie studios, and electronic media have shrunk from 50 to five global-dimension firms, operating with many of the characteristics of a cartel — Time-Warner, Disney, News Corporation, Viacom and Germany-based Bertelsmann.

These *"top-tier companies are large, profit-seeking corporations, owned and controlled by very wealthy people ... Many of these companies are fully integrated into the financial market"* which means that *"the pressures of stockholders, directors and bankers to focus on the bottom line are powerful."* [p. 5] These pressures have intensified in recent years as media stocks have become market favourites and as deregulation has increased profitability and so the threat of take-overs. These ensure that these *"control groups obviously have a special take on the status quo by virtue of their wealth and their strategic position in one of the great institutions of society. And they exercise the power of this strategic position, if only by establishing the general aims of the company and choosing its top management."* [p. 8]

The media giants have also diversified into other fields. For example GE, and Westinghouse, both owners of major television networks, are huge, diversified multinational companies heavily

involved in the controversial areas of weapons production and nuclear power. GE and Westinghouse depend on the government to subsidise their nuclear power and military research and development, and to create a favourable climate for their overseas sales and investments. Similar dependence on the government affect other media.

Because they are large corporations with international investment interests, the major media tend to have a right-wing political bias. In addition, members of the business class own most of the mass media, the bulk of which depends for their existence on advertising revenue (which in turn comes from private business). Business also provides a substantial share of "experts" for news programmes and generates massive "flak." Claims that the media are "left-leaning" are sheer disinformation manufactured by the "flak" organisations described below (in section D.3.4). Thus Herman and Chomsky:

> *"the dominant media forms are quite large businesses; they are controlled by very wealthy people or by managers who are subject to sharp constraints by owners and other market-profit-oriented forces; and they are closely interlocked, and have important common interests, with other major corporations, banks, and government. This is the first powerful filter that effects news choices."* [p. 14]

Needless to say, reporters and editors will be selected based upon how well their work reflects the interests and needs of their employers. Thus a radical reporter and a more mainstream one both of the same skills and abilities would have very different careers within the industry. Unless the radical reporter toned down their copy, they are unlikely to see it printed unedited or unchanged. Thus the structure within the media firm will tend to penalise radical viewpoints, encouraging an acceptance of the status quo in order to further a career. This selection process ensures that owners do not need to order editors or reporters what to do — to be successful they will have to internalise the values of their employers.

D.3.2 What is the effect of advertising on the mass media?

The main business of the media is to sell audiences to advertisers. Advertisers thus acquire a kind of de facto licensing authority, since without their support the media would cease to be economically viable. And it is **affluent** audiences that get advertisers interested. As Chomsky and Herman put it, the *"idea that the drive for large audiences makes the mass media 'democratic' thus suffers from the initial weakness that its political analogue is a voting system weighted by income!"* [p.16]

As regards TV, in addition to *"discrimination against unfriendly media institutions, advertisers also choose selectively among programs on the basis of their own principles. With rare exceptions these are culturally and politically conservative. Large corporate advertisers on television will rarely sponsor programs that engage in serious criticisms of corporate activities."* Accordingly, large corporate advertisers almost never sponsor programs that contain serious criticisms of corporate activities, such as negative ecological impacts, the workings of the military-industrial complex, or corporate support of and benefits from Third World dictatorships. This means that TV companies *"learn over time that such programs will not sell and would have to be carried at a financial sacrifice, and that, in addition, they may offend powerful advertisers."* More generally, advertisers

will want *"to avoid programs with serious complexities and disturbing controversies that interfere with the 'buying mood.'"* [p. 17]

Political discrimination is therefore structured into advertising allocations by wealthy companies with an emphasis on people with money to buy. In addition, *"many companies will always refuse to do business with ideological enemies and those whom they perceive as damaging their interests."* Thus overt discrimination adds to the force of the *"voting system weighted by income."* This has had the effect of placing working class and radical papers at a serious disadvantage. Without access to advertising revenue, even the most popular paper will fold or price itself out of the market. Chomsky and Herman cite the British pro-labour and pro-union **Daily Herald** as an example of this process. At its peak, the **Daily Herald** had almost double the readership of **The Times**, the **Financial Times** and **The Guardian** combined, yet even with 8.1% of the national circulation it got 3.5% of net advertising revenue and so could not survive on the "free market." As Herman and Chomsky note, a *"mass movement without any major media support, and subject to a great deal of active press hostility, suffers a serious disability, and struggles against grave odds."* With the folding of the **Daily Herald**, the labour movement lost its voice in the mainstream media. [pp. 17–8 and pp. 15–16]

Thus advertising is an effective filter for news choice (and, indeed, survival in the market).

D.3.3 Why do the media rely on government and business "experts" for information?

As Herman and Chomsky stress, basic economics explains why the mass media *"are drawn into a symbiotic relationship with powerful sources of information"* as well as *"reciprocity of interest."* The media need *"a steady, reliable flow of raw material of news. They have daily news demands and imperative news schedules that they must meet."* They cannot afford to have reporters and cameras at all locations and so economics *"dictates that they concentrate their resources where significant news often occurs."* [p. 18] This means that bottom-line considerations dictate that the media concentrate their resources where news, rumours and leaks are plentiful, and where regular press conferences are held. The White House, Pentagon, and the State Department, in Washington, D.C., are centres of such activity on a national scale, while city hall and police departments are their local equivalents. In addition, trade groups, businesses and corporations also provide regular stories that are deemed as newsworthy and from credible sources.

In other words, government and corporate sources have the great merit of being recognisable and credible by their status and prestige; moreover, they have the most money available to produce a flow of news that the media can use. For example, the Pentagon has a public-information service employing many thousands of people, spending hundreds of millions of dollars every year, and far outspending not only the public-information resources of any dissenting individual or group but the **aggregate** of such groups. Only the corporate sector has the resources to produce public information and propaganda on the scale of the Pentagon and other government bodies. The Chamber of Commerce, a business collective, had a 1983 budget for research, communications, and political activities of $65 million. Besides the US Chamber of Commerce, there are thousands of state and local chambers of commerce and trade associations also engaged in public relations and lobbying activities. As we noted in section D.2, the corporate funding of PR is massive. Thus *"business corporations and trade groups are also regular purveyors of stories deemed*

newsworthy. These bureaucracies turn out a large volume of material that meets the demands of news organisations for reliable, scheduled flows." [p. 19]

To maintain their pre-eminent position as sources, government and business-news agencies expend much effort to make things easy for news organisations. They provide the media organisations with facilities in which to gather, give journalists advance copies of speeches and upcoming reports; schedule press conferences at hours convenient for those needing to meet news deadlines; write press releases in language that can be used with little editing; and carefully organise press conferences and photo-opportunity sessions. This means that, in effect, *"the large bureaucracies of the powerful* ***subsidise*** *the mass media, and gain special access by their contribution to reducing the media's costs of acquiring the raw materials of, and producing, news."* [p. 22]

This economic dependency also allows corporations and the state to influence the media. The most obvious way is by using their *"personal relationships, threats, and rewards to further influence and coerce the media. The media may feel obligated to carry extremely dubious stories and mute criticism in order not to offend sources and disturb a close relationship. It is very difficult to call authorities on whom one depends for daily news liars, even if they tell whoppers."* Critical sources may be avoided not only due to the higher costs in finding them and establishing their credibility, but because the established *"primary sources may be offended and may even threaten the media with using them."* [p. 22] As well as refusing to co-operate on shows or reports which include critics, corporations and governments may threaten the media with loss of access if they ask too many critical questions or delve into inappropriate areas.

In addition, *"more important, powerful sources regularly take advantage of media routines and dependency to 'manage' the media, to manipulate them into following a special agenda and framework ... Part of this management process consists of inundating the media with stories, which serve sometimes to foist a particular line and frame on the media ... and at other times to chase unwanted stories off the front page or out of the media altogether."* [p. 23]

The dominance of official sources would, of course, be weakened by the existence of highly respectable unofficial sources that gave dissident views with great authority. To alleviate this problem, the power elite uses the strategy of *"co-opting the experts"* — that is, putting them on the payroll as consultants, funding their research, and organising think tanks that will hire them directly and help disseminate the messages deemed essential to elite interests. "Experts" on TV panel discussions and news programs are often drawn from such organisations, whose funding comes primarily from the corporate sector and wealthy families — a fact that is, of course, never mentioned on the programs where they appear. This allows business, for example, to sell its interests as objective and academic while, in fact, they provide a thin veneer to mask partisan work which draws the proper conclusions desired by their pay masters.

This process of creating a mass of experts readily available to the media *"has been carried out on a deliberate and a massive scale."* These ensure that *"the corporate viewpoint"* is effectively spread as the experts work is *"funded and their outputs ... disseminated to the media by a sophisticated propaganda effort. The corporate funding and clear ideological purpose in the overall effort had no discernible effect on the credibility of the intellectuals so mobilised; on the contrary, the funding and pushing of their ideas catapulted them into the press."* [p. 23 and p. 24]

D.3.4 How is "flak" used as a means of disciplining the media?

"Flak" is a term used by Herman and Chomsky to refer *"to negative responses to a media statement or program."* Such responses may be expressed as phone calls, letters, telegrams, e-mail messages, petitions, lawsuits, speeches, bills before Congress, or *"other modes of complaint, threat, or punishment."* Flak may be generated centrally, by organisations, or it may come from the independent actions of individuals (sometimes encouraged to act by media hacks such as right-wing talk show hosts or newspapers). *"If flak is produced on a large-scale, or by individuals or groups with substantial resources, it can be both uncomfortable and costly to the media."* [p. 26]

This is for many reasons. Positions need to be defended within and outwith an organisation, sometimes in front of legislatures and (perhaps) in the courts. Advertisers are very concerned to avoid offending constituencies who might produce flak, and their demands for inoffensive programming exerts pressure on the media to avoid certain kinds of facts, positions, or programs that are likely to call forth flak. This can have a strong deterrence factor, with media organisations avoiding certain subjects and sources simply to avoid having to deal with the inevitable flak they will receive from the usual sources. The ability to produce flak *"is related to power,"* as it is expensive to generate on scale which is actually effective. [p. 26] Unsurprisingly, this means that the most effective flak comes from business and government who have the funds to produce it on a large scale.

The government itself is *"a major producer of flak, regularly assailing, threatening, and 'correcting' the media, trying to contain any deviations from the established line in foreign or domestic policy."* However, the right-wing plays a major role in deliberately creating flak. For example, during the 1970s and 1980s, the corporate community sponsored the creation of such institutions as the American Legal Foundation, the Capital Legal Foundation, the Media Institute, the Center for Media and Public Affairs, and Accuracy in Media (AIM), which may be regarded as organisations designed for the specific purpose of producing flak. Freedom House is an older US organisation which had a broader design but whose flak-producing activities became a model for the more recent organisations. The Media Institute, for instance, was set up in 1972 and is funded by wealthy corporate patrons, sponsoring media monitoring projects, conferences, and studies of the media. The main focus of its studies and conferences has been the alleged failure of the media to portray business accurately and to give adequate weight to the business point of view, but it also sponsors works which "expose" alleged left-wing bias in the mass media. [p. 28 and pp. 27–8]

And, it should be noted, while the flak machines *"steadily attack the media, the media treats them well. They receive respectful attention, and their propagandistic role and links to a large corporate program are rarely mentioned or analysed."* [p. 28] Indeed, such attacks *"are often not unwelcome, first because response is simple or superfluous; and second, because debate over this issue helps entrench the belief that the media are ... independent and objective, with high standards of professional integrity and openness to all reasonable views"* which is *"quite acceptable to established power and privilege — even to the media elites themselves, who are not averse to the charge that they may have gone to far in pursuing their cantankerous and obstreperous ways in defiance of orthodoxy and power."* Ultimately, such flak *"can only be understood as a demand that the media should not even reflect the range of debate over tactical questions among the dominant elites, but should serve only those segments that happen to manage the state at a particular moment, and should do so with*

proper enthusiasm and optimism about the causes — noble by definition — in which state power is engaged." [Chomsky, **Necessary Illusions**, p. 13 and p. 11]

D.3.5 Why is "anticommunism" used as control mechanism?

The final filter which Herman and Chomsky discuss is the ideology of anticommunism. "Communism" is of course regarded as the ultimate evil by the corporate rich, since the ideas of collective ownership of productive assets *"threatens the very root of their class position and superior status."* As the concept is *"fuzzy,"* it can be widely applied and *"can be used against anybody advocating policies that threaten property interests."* [p. 29] Hence the attacks on third-world nationalists as "socialists" and the steady expansion of "communism" to apply to any form of socialism, social democracy, reformism, trade unionism or even "liberalism" (i.e. any movement which aims to give workers more bargaining power or allow ordinary citizens more voice in public policy decisions).

Hence the ideology of anticommunism has been very useful, because it can be used to discredit anybody advocating policies regarded as harmful to corporate interests. It also helps to divide the Left and labour movements, justifies support for pro-US fascist regimes abroad as "lesser evils" than communism, and discourages liberals from opposing such regimes for fear of being branded as heretics from the national religion. This process has been aided immensely by the obvious fact that the "communist" regimes (i.e. Stalinist dictatorships) have been so terrible.

Since the collapse of the USSR and related states in 1989, the utility of anticommunism has lost some of its power. Of course, there are still a few official communist enemy states, like North Korea, Cuba, and China, but these are not quite the threat the USSR was. North Korea and Cuba are too impoverished to threaten the world's only super-power (that so many Americans think that Cuba was ever a threat says a lot about the power of propaganda). China is problematic, as Western corporations now have access to, and can exploit, its resources, markets and cheap labour. As such, criticism of China will be mooted, unless it starts to hinder US corporations or become too much of an economic rival.

So we can still expect, to some degree, abuses or human rights violations in these countries are systematically played up by the media while similar abuses in client states are downplayed or ignored. Chomsky and Herman refer to the victims of abuses in enemy states as **worthy victims,** while victims who suffer at the hands of US clients or friends are **unworthy victims.** Stories about worthy victims are often made the subject of sustained propaganda campaigns, to score political points against enemies. For example:

> *"If the government of corporate community and the media feel that a story is useful as well as dramatic, they focus on it intensively and use it to enlighten the public. This was true, for example, of the shooting down by the Soviets of the Korean airliner KAL 007 in early September 1983, which permitted an extended campaign of denigration of an official enemy and greatly advanced Reagan administration arms plans."*
>
> *"In sharp contrast, the shooting down by Israel of a Libyan civilian airliner in February 1973 led to no outcry in the West, no denunciations for 'cold-blooded murder,' and no boycott. This difference in treatment was explained by the* ***New York Times*** *precisely on the grounds of utility: 'No useful purpose is served by an acrimonious debate over*

the assignment of blame for the downing of a Libyan airliner in the Sinai peninsula last week.' There ***was*** *a very 'useful purpose' served by focusing on the Soviet act, and a massive propaganda campaign ensued."* [p. 32]

As noted, since the end of the Cold War, anti-communism has not been used as extensively as it once was to mobilise support for elite crusades. Other enemies have to be found and so the "Drug War" or "anti-terrorism" now often provide the public with "official enemies" to hate and fear. Thus the Drug War was the excuse for the Bush administration's invasion of Panama, and "fighting narco-terrorists" has more recently been the official reason for shipping military hardware and surveillance equipment to Mexico (where it's actually being used against the Zapatista rebels in Chiapas, whose uprising is threatening to destabilise the country and endanger US investments). After 9/11, terrorism became the key means of forcing support for policies. The mantra *"you are either with us or with the terrorists"* was used to bolster support and reduce criticism for both imperial adventures as well as a whole range of regressive domestic policies.

Whether any of these new enemies will prove to be as useful as anticommunism remains to be seen. It is likely, particularly given how "communism" has become so vague as to include liberal and social democratic ideas, that it will remain the bogey man of choice — particularly as many within the population both at home and abroad continue to support left-wing ideas and organisations. Given the track record of neo-liberalism across the globe, being able to tar its opponents as "communists" will remain a useful tool.

D.3.6 Isn't the "propaganda model" a conspiracy theory?

No, far from it. Chomsky and Herman explicitly address this charge in **Manufacturing Consent** and explain why it is a false one:

"Institutional critiques such as we present in this book are commonly dismissed by establishment commentators as 'conspiracy theories,' but this is merely an evasion. We do not use any kind of 'conspiracy' hypothesis to explain mass-media performance. In fact, our treatment is much closer to a 'free market' analysis, with the results largely an outcome of the workings of market forces." [p. xii]

They go on to suggest what some of these "market forces" are. One of the most important is the weeding-out process that determines who gets the journalistic jobs in the major media: *"Most biased choices in the media arise from the preselection of right-thinking people, internalised preconceptions, and the adaptation of personnel to the constraints of ownership, organisation, market, and political power."* This is the key, as the model *"helps us to understand how media personnel adapt, and are adapted, to systemic demands. Given the imperatives of corporate organisation and the workings of the various filters, conformity to the needs and interests of privileged sectors is essential to success."* This means that those who do not display the requisite values and perspectives will be regarded as irresponsible and/or ideological and, consequently, will not succeed (barring a few exceptions). In other words, those who *"adapt, perhaps quite honestly, will then be able to assert, accurately, that they perceive no pressures to conform. The media are indeed free ... for those who have internalised the required values and perspectives."* [p. xii and p. 304]

In other words, important media employees learn to internalise the values of their bosses: *"Censorship is largely self-censorship, by reporters and commentators who adjust to the realities of source and media organisational requirements, and by people at higher levels within media organisations who are chosen to implement, and have usually internalised, the constraints imposed by proprietary and other market and governmental centres of power."* But, it may be asked, isn't it still a conspiracy theory to suggest that media leaders all have similar values? Not at all. Such leaders *"do similar things because they see the world through the same lenses, are subject to similar constraints and incentives, and thus feature stories or maintain silence together in tacit collective action and leader-follower behaviour."* [p. xii]

The fact that media leaders share the same fundamental values does not mean, however, that the media are a solid monolith on all issues. The powerful often disagree on the tactics needed *"to attain generally shared aims, [and this gets] reflected in media debate. But views that challenge fundamental premises or suggest that the observed modes of exercise of state power are based on systemic factors will be excluded from the mass media even when elite controversy over tactics rages fiercely."* [p. xii] This means that viewpoints which question the legitimacy of elite aims or suggest that state power is being exercised in elite interests rather than the "national" interest will be excluded from the mass media. As such, we would expect the media to encourage debate within accepted bounds simply because the ruling class is not monolithic and while they agree on keeping the system going, they disagree on the best way to do so.

Therefore the "propaganda model" has as little in common with a "conspiracy theory" as saying that the management of General Motors acts to maintain and increase its profits. As Chomsky notes, *"[t]o confront power is costly and difficult; high standards of evidence and argument are imposed, and critical analysis is naturally not welcomed by those who are in a position to react vigorously and to determine the array of rewards and punishments. Conformity to a 'patriotic agenda,' in contrast, imposes no such costs."* This means that *"conformity is the easy way, and the path to privilege and prestige ... It is a natural expectation, on uncontroversial assumptions, that the major media and other ideological institutions will generally reflect the perspectives and interests of established power."* [**Necessary Illusions**, pp. 8–9 and p. 10]

D.3.7 Isn't the model contradicted by the media reporting government and business failures?

As noted above, the claim that the media are "adversarial" or (more implausibly) that they have a "left-wing bias" is due to right-wing PR organisations. This means that some "inconvenient facts" are occasionally allowed to pass through the filters in order to give the **appearance** of "objectivity" — precisely so the media can deny charges of engaging in propaganda. As Chomsky and Herman put it: *"the 'naturalness' of these processes, with inconvenient facts allowed sparingly and within the proper framework of assumptions, and fundamental dissent virtually excluded from the mass media (but permitted in a marginalised press), makes for a propaganda system that is far more credible and effective in putting over a patriotic agenda than one with official censorship."* [p. xiv]

To support their case against the "adversarial" nature of the media, Herman and Chomsky look into the claims of such right-wing media PR machines as Freedom House. However, it is soon discovered that *"the very examples offered in praise of the media for their independence, or criticism*

of their excessive zeal, illustrate exactly the opposite." Such flak, while being worthless as serious analysis, does help to reinforce the myth of an "adversarial media" and so is taken seriously by the media. By saying that both right and left attack them, the media presents themselves as neutral, balanced and objective — a position which is valid only if both criticisms are valid and of equal worth. This is not the case, as Herman and Chomsky prove, both in terms of evidence and underlying aims and principles. Ultimately, the attacks by the right on the media are based on the concern *"to protect state authority from an intrusive public"* and so *"condemn the media for lack of sufficient enthusiasm in supporting official crusades."* In other words, that the *"existing level of subordination to state authority is often deemed unsatisfactory."* [p. xiv and p. 301] The right-wing notion that the media are "liberal" or "left-wing" says far more about the authoritarian vision and aims of the right than the reality of the media.

Therefore the "adversarial" nature of the media is a myth, but this is not to imply that the media does not present critical analysis. Herman and Chomsky in fact argue that the *"mass media are not a solid monolith on all issues."* and do not deny that it does present facts (which they do sometimes themselves cite). This *"affords the opportunity for a classic* ***non sequitur****, in which the citations of facts from the mainstream press by a critic of the press is offered as a triumphant 'proof' that the criticism is self-refuting, and that media coverage of disputed issues is indeed adequate."* But, as they argue, *"[t]hat the media provide some facts about an issue ... proves absolutely nothing about the adequacy or accuracy of that coverage. The mass media do, in fact, literally suppress a great deal ... But even more important in this context is the question given to a fact — its placement, tone, and repetitions, the framework within which it is presented, and the related facts that accompany it and give it meaning (or provide understanding) . .. there is no merit to the pretence that because certain facts may be found by a diligent and sceptical researcher, the absence of radical bias and de facto suppression is thereby demonstrated."* [p. xii and pp xiv-xv]

As they stress, the media in a democratic system is different from one in a dictatorship and so they *"do not function in the manner of the propaganda system of a totalitarian state. Rather, they permit — indeed, encourage — spirited debate, criticism, and dissent, as long as these remain faithfully within the system of presuppositions and principles that constitute an elite consensus, a system so powerful as to be internalised largely without awareness."* Within this context, *"facts that tend to undermine the government line, if they are properly understood, can be found."* Indeed, it is *"possible that the volume of inconvenient facts can expand, as it did during the Vietnam War, in response to the growth of a critical constituency (which included elite elements from 1968). Even in this exceptional case, however, it was very rare for news and commentary to find their way into the mass media if they failed to conform to the framework of established dogma (postulating benevolent U.S aims, the United States responding to aggression and terror, etc.)"* While during the war and after, *"apologists for state policy commonly pointed to the inconvenient facts, the periodic 'pessimism' of media pundits, and the debates over tactics as showing that the media were 'adversarial' and even 'lost' the war,"* in fact these *"allegations are ludicrous."* [p. 302 and p. xiv] A similar process, it should be noted, occurred during the invasion and occupation of Iraq.

To summarise, as Chomsky notes *"what is essential is the power to set the agenda."* This means that debate *"cannot be stilled, and indeed, in a properly functioning system of propaganda, it should not be, because it has a system-reinforcing character if constrained within proper bounds. What is essential is to set the bounds firmly. Controversy may rage as long as it adheres to the presuppositions that define the consensus of elites, and it should furthermore be encourages within these bounds, this*

helping to establish these doctrines as the very condition of thinkable thought while reinforcing the belief that freedom reigns." [**Necessary Illusions**, p. 48]

D.4 What is the relationship between capitalism and the ecological crisis?

Environmental damage has reached alarming proportions. Almost daily there are new upwardly revised estimates of the severity of global warming, ozone destruction, topsoil loss, oxygen depletion from the clearing of rain forests, acid rain, toxic wastes and pesticide residues in food and water, the accelerating extinction rate of natural species, etc., etc. Almost all scientists now recognise that global warming may soon become irreversible, with devastating results for humanity. Those few who reject this consensus are usually paid by corporations with a vested interest in denying the reality of what their companies are doing to the planet (such as oil companies). That sections of the ruling class have become aware of the damage inflicted on the planet's eco-systems suggests that we have only a few decades before they irreparably damaged.

Most anarchists see the ecological crisis as rooted in the psychology of domination, which emerged with the rise of hierarchy (including patriarchy, classes, and the first primitive states) during the Late Neolithic. Murray Bookchin, one of the pioneers of eco-anarchism, points out that *"[t]he hierarchies, classes, propertied forms, and statist institutions that emerged with social domination were carried over conceptually into humanity's relationship with nature. Nature too became increasingly regarded as a mere resource, an object, a raw material to be exploited as ruthlessly as slaves on a latifundium."* [**Toward an Ecological Society** p. 41] In his view, without uprooting the psychology of domination, all attempts to stave off ecological catastrophe are likely to be mere palliatives and so doomed to failure.

Bookchin argues that *"the conflict between humanity and nature is an extension of the conflict between human and human. Unless the ecology movement encompasses the problem of domination in all its aspects, it will contribute* ***nothing*** *toward eliminating the root causes of the ecological crisis of our time. If the ecology movement stops at mere reformism in pollution and conservation control — at mere 'environmentalism' — without dealing radically with the need for an expanded concept of revolution, it will merely serve as a safety value for the existing system of natural and human exploitation."* [**Op. Cit.**, p. 43] Since capitalism is the vehicle through which the psychology of domination finds its most ecologically destructive outlet, most eco-anarchists give the highest priority to dismantling it:

> *"Literally, the system in its endless devouring of nature will reduce the entire biosphere to the fragile simplicity of our desert and arctic biomes. We will be reversing the process of organic evolution which has differentiated flora and fauna into increasingly complex forms and relationships, thereby creating a simpler and less stable world of life. The consequences of this appalling regression are predictable enough in the long run — the biosphere will become so fragile that it will eventually collapse from the standpoint human survival needs and remove the organic preconditions for human life. That this will eventuate from a society based on production for the sake of production is ... merely a matter of time, although when it will occur is impossible to predict."* [**Op. Cit.**, p. 68]

This is not to say that ecological destruction did not exist before the rise of capitalism. This is not the case. Social problems, and the environmental destruction they create, *"lie not only in the conflict between wage labour and capital"* they also *"lie in the conflicts between age-groups and sexes within the family, hierarchical modes of instruction in the schools, the bureaucratic usurpation of power within the city, and ethnic divisions within society. Ultimately, they stem from a hierarchical sensibility of command and obedience that begins with the family and merely reaches its most visible social form in the factory, bureaucracy and military. I cannot emphasise too strongly that these problems emerged long before capitalism."* However, capitalism is the dominant economic form today and so the *"modern urban crisis largely reflects the divisions that capitalism has produced between society and nature."* [**Op. Cit.**, p. 29 and p. 28]

Capitalism, unlike previous class and hierarchical systems, has an expansionist nature which makes it incompatible with the planet's ecology. So it is important to stress that capitalism must be **eliminated** because it **cannot** reform itself so as to become "environment friendly," contrary to the claims of so-called "green" capitalists. This is because *"[c]apitalism not only validates pre-capitalist notions of the domination of nature, ... it turns the plunder of nature into society's law of life. To quibble with this kind of system about its values, to try to frighten it with visions about the consequences of growth is to quarrel with its very metabolism. One might more easily persuade a green plant to desist from photosynthesis than to ask the bourgeois economy to desist from capital accumulation."* [**Op. Cit.**, p. 66]

Thus capitalism causes ecological destruction because it is based upon domination (of human over human and so humanity over nature) and continual, endless growth (for without growth, capitalism would die). This can be seen from the fact that industrial production has increased fifty fold between 1950 and the 1990s. Obviously such expansion in a finite environment cannot go on indefinitely without disastrous consequences. Yet it is impossible **in principle** for capitalism to kick its addiction to growth. It is important to understand why.

Capitalism is based on production for profit. In order to stay profitable, a firm needs to make a profit. In other words, money must become more money. This can be done in two ways. Firstly, a firm can produce new goods, either in response to an existing need or (by means of advertising) by creating a new one. Secondly, by producing a new good more cheaply than other firms in the same industry in order to successfully compete. If one firm increases its productivity (as all firms must try to do), it will be able to produce more cheaply, thus undercutting its competition and capturing more market share (until eventually it forces less profitable firms into bankruptcy). Hence, constantly increasing productivity is essential for survival.

There are two ways to increase productivity, either by passing on costs to third parties (externalities) or by investing in new means of production. The former involves, for example, polluting the surrounding environment or increasing the exploitation of workers (e.g. longer hours and/or more intense work for the same amount of pay). The latter involves introducing new technologies that reduce the amount of labour necessary to produce the same product or service. Due to the struggle of workers to prevent increases in the level of their exploitation and by citizens to stop pollution, new technologies are usually the main way that productivity is increased under capitalism (though of course capitalists are always looking for ways to avoid regulations and to increase the exploitation of workers on a given technology by other means as well).

But new technologies are expensive, which means that in order to pay for continuous upgrades, a firm must continually sell **more** of what it produces, and so must keep expanding its capital. To stay in the same place under capitalism is to tempt crisis — thus a firm must always strive for

more profits and thus must always expand and invest. In order to survive, a firm must constantly expand and upgrade its capital and production levels so it can sell enough to **keep** expanding and upgrading its capital — i.e. "grow or die," or *"production for the sake of production"* (to user Marx's term). This means that the accumulation of capital is at the heart of the system and so it is impossible in principle for capitalism to solve the ecological crisis, because "grow or die" is inherent in its nature:

> *"To speak of 'limits to growth' under a capitalistic market economy is as meaningless as to speak of limits of warfare under a warrior society. The moral pieties, that are voiced today by many well-meaning environmentalists, are as naive as the moral pieties of multinationals are manipulative. Capitalism can no more be 'persuaded' to limit growth than a human being can be 'persuaded' to stop breathing. Attempts to 'green' capitalism, to make it 'ecological', are doomed by the very nature of the system as a system of endless growth."* [Bookchin, **Remaking Society**, pp. 93–94]

As long as capitalism exists, it will **necessarily** continue its *"endless devouring of nature,"* until it removes the *"organic preconditions for human life."* For this reason there can be no compromise with capitalism: We must destroy it before it destroys us. And time is running out.

Capitalists, of course, do not accept this conclusion. Many simply ignore the evidence or view the situation through rose-coloured spectacles, maintaining that ecological problems are not as serious as they seem or that science will find a way to solve them before it's too late. Some are aware of the problem, but they fail to understand its roots and, as such, advocate reforms which are based on either regulation or (more usually in these neo-liberal days) on "market" based solutions. In section E we will show why these arguments are unsound and why libertarian socialism is our best hope for preventing ecological catastrophe.

D.5 What causes imperialism?

In a word: power. Imperialism is the process by which one country dominates another directly, by political means, or indirectly, by economic means, in order to steal its wealth (either natural or produced). This, by necessity, means the exploitation of working people in the dominated nation. Moreover, it can also aid the exploitation of working people in the imperialist nation itself. As such, imperialism cannot be considered in isolation from the dominant economic and social system. Fundamentally the cause is the same inequality of power, which is used in the service of exploitation.

While the rhetoric used for imperial adventures may be about self-defence, defending/exporting "democracy" and/or "humanitarian" interests, the reality is much more basic and grim. As Chomsky stresses, *"deeds consistently accord with interests, and conflict with words — discoveries that must not, however, weaken our faith in the sincerity of the declarations of our leaders."* This is unsurprising as states are always *"pursuing the strategic and economic interests of dominant sectors to the accompaniment of rhetorical flourishes about its exceptional dedication to the highest values"* and so *"the evidence for ... the proclaimed messianic missions reduces to routine pronouncements"* (faithfully repeated by the media) while *"counter-evidence is mountainous."* [**Failed States**, p. 171 and pp. 203–4]

We must stress that we are concentrating on the roots of imperialism here. We do not, and cannot, provide a detailed history of the horrors associated with it. For US imperialism, the works of Noam Chomsky are recommended. His books **Turning the Tide** and **The Culture of Terrorism** expose the evils of US intervention in Central America, for example, while **Deterring Democracy**, **Rogue States: The Rule of Force in World Affairs** and **Failed States: The Abuse of Power and the Assault on Democracy** present a wider perspective. **Killing Hope: US Military and CIA Interventions Since World War II** and **Rogue State: A Guide to the World's Only Superpower** by William Blum are also worth reading. For post-1945 British imperialism, Mark Curtis's **Web of Deceit: Britain's Real Role in the World** and **Unpeople: Britain's Secret Human Rights Abuses** are recommended.

As we will discuss in the following sections, imperialism has changed over time, particularly during the last two hundred years (where its forms and methods have evolved with the changing needs of capitalism). But even in the pre-capitalist days of empire building, imperialism was driven by economic forces and needs. In order to make one's state secure, in order to increase the wealth available to the state, its ruling bureaucracy and its associated ruling class, it had to be based on a strong economy and have a sufficient resource base for the state and ruling elite to exploit (both in terms of human and natural resources). By increasing the area controlled by the state, one increased the wealth available.

States by their nature, like capital, are expansionist bodies, with those who run them always wanting to increase the range of their power and influence (this can be seen from the massive number of wars that have occurred in Europe over the last 500 years). This process was began as nation-states were created by Kings declaring lands to be their private property, regardless of the

wishes of those who actually lived there. Moreover, this conflict did not end when monarchies were replaced by more democratic forms of government. As Bakunin argued:

> *"we find wars of extermination, wars among races and nations; wars of conquest, wars to maintain equilibrium, political and religious wars, wars waged in the name of 'great ideas' ... , patriotic wars for greater national unity ... And what do we find beneath all that, beneath all the hypocritical phrases used in order to give these wars the appearance of humanity and right? Always the same economic phenomenon:* ***the tendency on the part of some to live and prosper at the expense of others.*** *All the rest is mere humbug. The ignorant and naive, and the fools are entrapped by it, but the strong men who direct the destinies of the State know only too well that underlying all those wars there is only one motive: pillage, the seizing of someone else's wealth and the enslavement of someone else's labour."* [**The Political Philosophy of Bakunin**, p. 170]

However, while the economic motive for expansion is generally the same, the economic system which a nation is based on has a definite impact on what drives that motive as well as the specific nature of that imperialism. Thus the empire building of ancient Rome or Feudal England has a different economic base (and so driving need) than, say, the imperialism of nineteenth century Germany and Britain or twentieth and twenty-first century United States. Here we will focus mainly on modern capitalist imperialism as it is the most relevant one in the modern world.

Capitalism, by its very nature, is growth-based and so is characterised by the accumulation and concentration of capital. Companies **must** expand in order to survive competition in the marketplace. This, inevitably, sees a rise in international activity and organisation as a result of competition over markets and resources within a given country. By expanding into new markets in new countries, a company can gain an advantage over its competitors as well as overcome limited markets and resources in the home nation. In Bakunin's words:

> *"just as capitalist production and banking speculation, which in the long run swallows up that production, must, under the threat of bankruptcy, ceaselessly expand at the expense of the small financial and productive enterprises which they absorb, must become universal, monopolistic enterprises extending all over the world — so this modern and necessarily military State is driven on by an irrepressible urge to become a universal State... . Hegemony is only a modest manifestation possible under the circumstances, of this unrealisable urge inherent in every State. And the first condition of this hegemony is the relative impotence and subjection of all the neighbouring States."* [**Op. Cit.**, p. 210]

Therefore, economically and politically, the imperialistic activities of **both** capitalist and state-capitalist (i.e. the Soviet Union and other "socialist" nations) comes as no surprise. Capitalism is inevitably imperialistic and so *"[w]ar, capitalism and imperialism form a veritable trinity,"* to quote Dutch pacifist-syndicalist Bart de Ligt [**The Conquest of Violence**, p. 64] The growth of big business is such that it can no longer function purely within the national market and so they have to expand internationally to gain advantage in and survive. This, in turn, requires the home state of the corporations also to have global reach in order to defend them and to promote their interests. Hence the economic basis for modern imperialism, with *"the capitalistic interests*

of the various countries fight[ing] for the foreign markets and compete with each other there" and when they *"get into trouble about concessions and sources of profit,"* they *"call upon their respective governments to defend their interests ... to protect the privileges and dividends of some ... capitalist in a foreign country."* [Alexander Berkman, **What is Anarchism?**, p. 31] Thus a capitalist class needs the power of nation states not only to create internal markets and infrastructure but also to secure and protect international markets and opportunities in a world of rivals and **their** states.

As power depends on profits within capitalism, this means that modern imperialism is caused more by economic factors than purely political considerations (although, obviously, this factor does play a role). Imperialism serves capital by increasing the pool of profits available for the imperialistic country in the world market as well as reducing the number of potential competitors. As Kropotkin stressed, *"capital knows no fatherland; and if high profits can be derived from the work of Indian coolies whose wages are only one-half of those of English workmen [or women], or even less, capital will migrate to India, as it has gone to Russian, although its migration may mean starvation for Lancashire."* [**Fields, Factories and Workshops**, p. 57]

Therefore, capital will travel to where it can maximise its profits — regardless of the human or environmental costs at home or abroad. This is the economic base for modern imperialism, to ensure that any trade conducted benefits the stronger party more than the weaker one. Whether this trade is between nations or between classes is irrelevant, the aim of imperialism is to give business an advantage on the market. By travelling to where labour is cheap and the labour movement weak (usually thanks to dictatorial regimes), environmental laws few or non-existent, and little stands in the way of corporate power, capital can maximise its profits. Moreover, the export of capital allows a reduction in the competitive pressures faced by companies in the home markets (at least for short periods).

This has two effects. Firstly, the industrially developed nation (or, more correctly corporation based in that nation) can exploit less developed nations. In this way, the dominant power can maximise for itself the benefits created by international trade. If, as some claim, trade always benefits each party, then imperialism allows the benefits of international trade to accrue more to one side than the other. Secondly, it gives big business more weapons to use to weaken the position of labour in the imperialist nation. This, again, allows the benefits of trade (this time the trade of workers liberty for wages) to accrue to more to business rather than to labour.

How this is done and in what manner varies and changes, but the aim is always the same — exploitation.

This can be achieved in many ways. For example, allowing the import of cheaper raw materials and goods; the export of goods to markets sheltered from foreign competitors; the export of capital from capital-rich areas to capital-poor areas as the investing of capital in less industrially developed countries allows the capitalists in question to benefit from lower wages; relocating factories to countries with fewer (or no) social and environmental laws, controls or regulations. All these allow profits to be gathered at the expense of the working people of the oppressed nation (the rulers of these nations generally do well out of imperialism, as would be expected). The initial source of exported capital is, of course, the exploitation of labour at home but it is exported to less developed countries where capital is scarcer and the price of land, labour and raw materials cheaper. These factors all contribute to enlarging profit margins:

> *"The relationship of these global corporations with the poorer countries had long been an exploiting one ... Whereas U.S. corporations in Europe between 1950 and 1965 invested*

> *$8.1 billion and made $5.5 billion in profits, in Latin America they invested $3.8 billion and made $11.2 billion in profits, and in Africa they invested $5.2 billion and made $14.3 bullion in profits.*" [Howard Zinn, **A People's History of the United States**, p. 556]

Betsy Hartman, looking at the 1980s, concurs. *"Despite the popular Western image of the Third World as a bottomless begging bowl,"* she observes, *"it today gives more to the industrialised world than it takes. Inflows of official 'aid' and private loans and investments are exceeded by outflows in the form of repatriated profits, interest payments, and private capital sent abroad by Third World Elites."* [quoted by George Bradford, **Woman's Freedom: Key to the Population Question**, p. 77]

In addition, imperialism allows big business to increase its strength with respect to its workforce in the imperialist nation by the threat of switching production to other countries or by using foreign investments to ride out strikes. This is required because, while the "home" working class are still exploited and oppressed, their continual attempts at organising and resisting their exploiters proved more and more successful. As such, *"the opposition of the white working classes to the ... capitalist class continually gain[ed] strength, and the workers ... [won] increased wages, shorter hours, insurances, pensions, etc., the white exploiters found it profitable to obtain their labour from men [,women and children] of so-called inferior race ... Capitalists can therefore make infinitely more out there than at home."* [Bart de Ligt, **Op. Cit.**, p. 49]

As such, imperialism (like capitalism) is not only driven by the need to increase profits (important as this is, of course), it is also driven by the class struggle — the need for capital to escape from the strength of the working class in a particular country. From this perspective, the export of capital can be seen in two ways. Firstly, as a means of disciplining rebellious workers at home by an "investment strike" (capital, in effect, runs away, so causing unemployment which disciplines the rebels). Secondly, as a way to increase the 'reserve army' of the unemployed facing working people in the imperialist nations by creating new competitors for their jobs (i.e. dividing, and so ruling, workers by playing one set of workers against another). Both are related, of course, and both seek to weaken working class power by the fear of unemployment. This process played a key role in the rise of globalisation — see section D.5.3 for details.

Thus imperialism, which is rooted in the search from surplus profits for big business, is also a response to working class power at home. The export of capital is done by emerging and established transnational companies to overcome a militant and class consciousness working class which is often too advanced for heavy exploitation, and finance capital can make easier and bigger profits by investing productive capital elsewhere. It aids the bargaining position of business by pitting the workers in one country against another, so while they are being exploited by the same set of bosses, those bosses can use this fictional "competition" of foreign workers to squeeze concessions from workers at home.

Imperialism has another function, namely to hinder or control the industrialisation of other countries. Such industrialisation will, of course, mean the emergence of new capitalists, who will compete with the existing ones both in the "less developed" countries and in the world market as a whole. Imperialism, therefore, attempts to reduce competition on the world market. As we discuss in the next section, the nineteenth century saw the industrialisation of many European nations as well as America, Japan and Russia by means of state intervention. However, this state-led industrialisation had a drawback, namely that it created more and more competitors on the

world market. Moreover, as Kropotkin noted, they has the advantage that the *"new manufacturers ... begin where"* the old have *"arrived after a century of experiments and groupings"* and so they *"are built according to the newest and best models which have been worked out elsewhere."* [**Op. Cit.**, p. 32 and p. 49] Hence the need to stop new competitors and secure raw materials and markets, which was achieved by colonialism:

> *"Industries of all kinds decentralise and are scattered all over the globe; and everywhere a variety, an integrated variety, of trades grows, instead of specialisation ... each nation becomes in its turn a manufacturing nation ... For each new-comer the first steps only are difficult ... The fact is so well felt, if not understood, that the race for colonies has become the distinctive feature of the last twenty years [Kropotkin is writing in 1912]. Each nation will have her own colonies. But colonies will not help."* [**Op. Cit.**, p. 75]

Imperialism hinders industrialisation in two ways. The first way was direct colonisation, a system which has effectively ended. The second is by indirect means — namely the extraction of profits by international big business. A directly dominated country can be stopped from developing industry and be forced to specialise as a provider of raw materials. This was the aim of "classic" imperialism, with its empires and colonial wars. By means of colonisation, the imperialist powers ensure that the less-developed nation stays that way — so ensuring one less competitor as well as favourable access to raw materials and cheap labour. French anarchist Elisee Reclus rightly called this a process of creating *"colonies of exploitation."* [quoted by John P Clark and Camille Martin (eds.), **Anarchy, Geography, Modernity**, p. 92]

This approach has been superseded by indirect means (see next section). Globalisation can be seen as an intensification of this process. By codifying into international agreements the ability of corporations to sue nation states for violating "free trade," the possibility of new competitor nations developing is weakened. Industrialisation will be dependent on transnational corporations and so development will be hindered and directed to ensure corporate profits and power. Unsurprisingly, those nations which **have** industrialised over the last few decades (such as the East Asian Tiger economies) have done so by using the state to protect industry and control international finance.

The new attack of the capitalist class ("globalisation") is a means of plundering local capitalists and diminish their power and area of control. The steady weakening and ultimate collapse of the Eastern Block (in terms of economic/political performance and ideological appeal) also played a role in this process. The end of the Cold War meant a reduction in the space available for local elites to manoeuvre. Before this local ruling classes could, if they were lucky, use the struggle between US and USSR imperialism to give them a breathing space in which they could exploit to pursue their own agenda (within limits, of course, and with the blessing of the imperialist power in whose orbit they were in). The Eastern Tiger economies were an example of this process at work. The West could use them to provide cheap imports for the home market as well as in the ideological conflict of the Cold War as an example of the benefits of the "free market" (not that they were) and the ruling elites, while maintaining a pro-west and pro-business environment (by force directed against their own populations, of course), could pursue their own economic strategies. With the end of the Cold War, this factor is no longer in play and the newly industrialised nations are now an obvious economic competitor. The local elites are now "encouraged" (by economic blackmail via the World Bank and the IMF) to embrace US economic ideology.

Just as neo-liberalism attacks the welfare state in the Imperialist nations, so it results in a lower tolerance of local capital in "less developed" nations.

However, while imperialism is driven by the needs of capitalism it cannot end the contradictions inherent in that system. As Reclus put it in the late nineteenth century, *"the theatre expands, since it now embraces the whole of the land and seas. But the forces that struggled against one another in each particularly state are precisely those that fight across the earth. In each country, capital seeks to subdue the workers. Similarly, on the level of the broadest world market, capital, which had grown enormously, disregards all the old borders and seeks to put the entire mass of producers to work on behalf of its profits, and to secure all the consumers in the world."* [Reclus, quoted by Clark and Martin (eds.), **Op. Cit.**, p. 97]

This struggle for markets and resources does, by necessity, lead to conflict. This may be the wars of conquest required to initially dominate an economically "backward" nation (such as the US invasion of the Philippines, the conquest of Africa by West European states, and so on) or maintain that dominance once it has been achieved (such as the Vietnam War, the Algerian War, the Gulf War and so on). Or it may be the wars between major imperialist powers once the competition for markets and colonies reaches a point when they cannot be settled peacefully (as in the First and Second World Wars). As Kropotkin argued:

> *"men no longer fight for the pleasure of kings, they fight for the integrity of revenues and for the growing wealth ... [for the] benefit of the barons of high finance and industry ... [P]olitical preponderance ... is quite simply a matter of economic preponderance in international markets. What Germany, France, Russia, England, and Austria are all trying to win ... is not military preponderance: it is economic domination. It is the right to impose their goods and their customs tariffs on their neighbours; the right to exploit industrially backward peoples; the privilege of building railroads ... to appropriate from a neighbour either a port which will activate commerce, or a province where surplus merchandise can be unloaded ... When we fight today, it is to guarantee our great industrialists a profit of 30%, to assure the financial barons their domination at the Bourse [stock-exchange], and to provide the shareholders of mines and railways with their incomes."* [**Words of a Rebel**, pp. 65–6]

In summary, current imperialism is caused by, and always serves, the needs and interests of Capital. If it did not, if imperialism were bad for business, the business class would oppose it. This partly explains why the colonialism of the 19th century is no more (the other reasons being social resistance to foreign domination, which obviously helped to make imperialism bad for business as well, and the need for US imperialism to gain access to these markets after the second world war). There are now more cost-effective means than direct colonialism to ensure that "underdeveloped" countries remain open to exploitation by foreign capital. Once the costs exceeded the benefits, colonialist imperialism changed into the neo-colonialism of multinationals, political influence, and the threat of force. Moreover, we must not forget that any change in imperialism relates to changes in the underlying economic system and so the changing nature of modern imperialism can be roughly linked to developments within the capitalist economy.

Imperialism, then, is basically the ability of countries to globally and locally dictate trade relations and investments with other countries in such a way as to gain an advantage over the other countries. When capital is invested in foreign nations, the surplus value extracted from

the workers in those nations are not re-invested in those nations. Rather a sizeable part of it returns to the base nation of the corporation (in the form of profits for that company). Indeed, that is to be expected as the whole reason for the investment of capital in the first place was to get more out of the country than the corporation put into it. Instead of this surplus value being re-invested into industry in the less-developed nation (as would be the case with home-grown exploiters, who are dependent on local markets and labour) it ends up in the hands of foreign exploiters who take them out of the dominated country. This means that industrial development as less resources to draw on, making the local ruling class dependent on foreign capital and its whims.

This can be done directly (by means of invasion and colonies) or indirectly (by means of economic and political power). Which method is used depends on the specific circumstances facing the countries in question. Moreover, it depends on the balance of class forces within each country as well (for example, a nation with a militant working class would be less likely to pursue a war policy due to the social costs involved). However, the aim of imperialism is always to enrich and empower the capitalist and bureaucratic classes.

D.5.1 How has imperialism changed over time?

The development of Imperialism cannot be isolated from the general dynamics and tendencies of the capitalist economy. Imperialist capitalism, therefore, is not identical to pre-capitalist forms of imperialism, although there can, of course, be similarities. As such, it must be viewed as an advanced stage of capitalism and not as some kind of deviation of it. This kind of imperialism was attained by some nations, mostly Western European, in the late 19th and early 20th-century. Since then it has changed and developed as economic and political developments occurred, but it is based on the same basic principles. As such, it is useful to describe the history of capitalism in order to fully understand the place imperialism holds within it, how it has changed, what functions it provides and, consequently, how it may change in the future.

Imperialism has important economic advantages for those who run the economy. As the needs of the business class change, the forms taken by imperialism also change. We can identify three main phases: classic imperialism (i.e. conquest), indirect (economic) imperialism, and globalisation. We will consider the first two in this section and globalisation in section D.5.3. However, for all the talk of globalisation in recent years, it is important to remember that capitalism has always been an international system, that the changing forms of imperialism reflect this international nature and that the changes within imperialism are in response to developments within capitalism itself.

Capitalism has always been expansive. Under mercantilism, for example, the "free" market was nationalised **within** the nation state while state aid was used to skew international trade on behalf of the home elite and favour the development of capitalist industry. This meant using the centralised state (and its armed might) to break down "internal" barriers and customs which hindered the free flow of goods, capital and, ultimately, labour. We should stress this as the state has always played a key role in the development and protection of capitalism. The use of the state to, firstly, protect infant capitalist manufacturing and, secondly, to create a "free" market (i.e. free from the customs and interference of society) should not be forgotten, particularly as this second ("internal") role is repeated "externally" through imperialism. Needless to say, this

process of "internal" imperialism within the country by the ruling class by means of the state was accompanied by extensive violence against the working class (also see section F.8).

So, state intervention was used to create and ensure capital's dominant position at home by protecting it against foreign competition and the recently dispossessed working class. This transition from feudal to capitalist economy enjoyed the active promotion of the state authorities, whose increasing centralisation ran parallel with the growing strength and size of merchant capital. It also needed a powerful state to protect its international trade, to conquer colonies and to fight for control over the world market. The absolutist state was used to actively implant, help and develop capitalist trade and industry.

The first industrial nation was Britain. After building up its industrial base under mercantilism and crushing its rivals in various wars, it was in an ideal position to dominate the international market. It embraced free trade as its unique place as the only capitalist/industrialised nation in the world market meant that it did not have to worry about competition from other nations. Any free exchange between unequal traders will benefit the stronger party. Thus Britain, could achieve domination in the world market by means of free trade. This meant that goods were exported rather than capital.

Faced with the influx of cheap, mass produced goods, existing industry in Europe and the Americas faced ruin. As economist Nicholas Kaldor notes, *"the arrival of cheap factory-made English goods **did** cause a loss of employment and output of small-scale industry (the artisanate) both in European countries (where it was later offset by large-scale industrialisation brought about by protection) and even more in India and China, where it was no so offset."* [**Further Essays on Applied Economics**, p. 238] The existing industrial base was crushed, industrialisation was aborted and unemployment rose. These countries faced two possibilities: turn themselves into providers of raw materials for Britain or violate the principles of the market and industrialise by protectionism.

In many nations of Western Europe (soon to be followed by the USA and Japan), the decision was simple. Faced with this competition, these countries utilised the means by which Britain had industrialised — state protection. Tariff barriers were raised, state aid was provided and industry revived sufficiently to turn these nations into successful competitors of Britain. This process was termed by Kropotkin as *"the consecutive development of nations"* (although he underestimated the importance of state aid in this process). No nation, he argued, would let itself become specialised as the provider of raw materials or the manufacturer of a few commodities but would diversify into many different lines of production. Obviously no national ruling class would want to see itself be dependent on another and so industrial development was essential (regardless of the wishes of the general population). Thus a nation in such a situation *"tries to emancipate herself from her dependency ... and rapidly begins to manufacture all those goods she used to import."* [**Fields, Factories and Workshops**, p. 49 and p. 32]

Protectionism may have violated the laws of neo-classical economics, but it proved essential for industrialisation. While, as Kropotkin argued, protectionism ensured *"the high profits of those manufacturers who do not improve their factories and chiefly rely upon cheap labour and long hours,"* it also meant that these profits would be used to finance industry and develop an industrial base. [**Op. Cit.**, p. 41] Without this state aid, it is doubtful that these countries would have industrialised (as Kaldor notes, *"all the present 'developed' or 'industrialised' countries established their industries through 'import substitution' by means of protective tariffs and/or differential subsidies."* [**Op. Cit.**, p. 127]).

Within the industrialising country, the usual process of competition driving out competitors continued. More and more markets became dominated by big business (although, as Kropotkin stressed, without totally eliminating smaller workshops within an industry and even creating more around them). Indeed, as Russian anarchist G. P. Maximoff stressed, the *"specific character of Imperialism is ... the concentration and centralisation of capital in syndicates, trusts and cartels, which ... have a decisive voice, not only in the economic and political life of their countries, but also in the life of the nations of the worlds a whole."* [**Program of Anarcho-Syndicalism**, p. 10] The modern multi-national and transnational corporations are the latest expression of this process.

Simply put, the size of big business was such that it had to expand internationally as their original national markets were not sufficient and to gain further advantages over their competitors. Faced with high tariff barriers and rising international competition, industry responded by exporting capital as well as finished goods. This export of capital was an essential way of beating protectionism (and even reap benefits from it) and gain a foothold in foreign markets (*"protective duties have no doubt contributed ... towards attracting German and English manufacturers to Poland and Russia"* [Kropotkin, **Op. Cit.**, p. 41]). In addition, it allowed access to cheap labour and raw materials by placing capital in foreign lands As part of this process colonies were seized to increase the size of "friendly" markets and, of course, allow the easy export of capital into areas with cheap labour and raw materials. The increased concentration of capital this implies was essential to gain an advantage against foreign competitors and dominate the international market as well as the national one.

This form of imperialism, which arose in the late nineteenth century, was based on the creation of larger and larger businesses and the creation of colonies across the globe by the industrialised nations. Direct conquest had the advantage of opening up more of the planet for the capitalist market, thus leading to more trade and exploitation of raw materials and labour. This gave a massive boost to both the state and the industries of the invading country in terms of new profits, so allowing an increase in the number of capitalists and other social parasites that could exist in the developed nation. As Kropotkin noted at the time, *"British, French, Belgian and other capitalists, by means of the ease with which they exploit countries which themselves have no developed industry, today control the labour of hundreds of millions of those people in Eastern Europe, Asia, and Africa. The result is that the number of those people in the leading industrialised countries of Europe who live off the work of others doesn't gradually decrease at all. Far from it."* [*"Anarchism and Syndicalism"*, **Black Flag**, no. 210, p. 26]

As well as gaining access to raw materials, imperialism allows the dominating nation to gain access to markets for its goods. By having an empire, products produced at home can be easily dumped into foreign markets with less developed industry, undercutting locally produced goods and consequently destroying the local economy (and so potential competitors) along with the society and culture based on it. Empire building is a good way of creating privileged markets for one's goods. By eliminating foreign competition, the imperialist nation's capitalists can charge monopoly prices in the dominated country, so ensuring high profit margins for capitalist business. This adds with the problems associated with the over-production of goods:

> *"The workman being unable to purchase with their wages the riches they are producing, industry must search for new markets elsewhere, amidst the middle classes of other nations. It must find markets, in the East, in Africa, anywhere; it must increase, by trade, the number of its serfs in Egypt, in India, on the Congo. But everywhere it finds competi-*

> *tors in other nations which rapidly enter into the same line of industrial development. And wars, continuous wars, must be fought for the supremacy in the world-market — wars for the possession of the East, wars for getting possession of the seas, wars for the right of imposing heavy duties on foreign merchandise."* [Kropotkin, **Anarchism**, pp. 55–6]

This process of expansion into non-capitalist areas also helps Capital to weather both the subjective and objective economic pressures upon it which cause the business cycle (see section C.7 for more details). As wealth looted from less industrially developed countries is exported back to the home country, profit levels can be protected both from working-class demands and from any relative decline in surplus-value production caused by increased capital investment (see section C.2 for more on surplus value). In fact, the working class of the imperialist country could receive improved wages and living conditions as the looted wealth was imported into the country and that meant that the workers could fight for, and win, improvements that otherwise would have provoked intense class conflict. And as the sons and daughters of the poor emigrated to the colonies to make a living for themselves on stolen land, the wealth extracted from those colonies helped to overcome the reduction in the supply of labour at home which would increase its market price. This loot also helps reduce competitive pressures on the nation's economy. Of course, these advantages of conquest cannot totally **stop** the business cycle nor eliminate competition, as the imperialistic nations soon discovered.

Therefore, the "classic" form of imperialism based on direct conquest and the creation of colonies had numerous advantages for the imperialist nations and the big business which their states represented.

These dominated nations were, in the main, pre-capitalist societies. The domination of imperialist powers meant the importation of capitalist social relationships and institutions into them, so provoking extensive cultural and physical resistance to these attempts of foreign capitalists to promote the growth of the free market. However, peasants', artisans' and tribal people's desires to be "left alone" was never respected, and "civilisation" was forced upon them "for their own good." As Kropotkin realised, *"force is necessary to continually bring new 'uncivilised nations' under the same conditions [of wage labour]."* [**Anarchism and Anarchist Communism**, p. 53] Anarchist George Bradford also stresses this, arguing that we *"should remember that, historically, colonialism, bringing with it an emerging capitalist economy and wage system, destroyed the tradition economies in most countries. By substituting cash crops and monoculture for forms of sustainable agriculture, it destroyed the basic land skills of the people whom it reduced to plantation workers."* [**How Deep is Deep Ecology**, p. 40] Indeed, this process was in many ways similar to the development of capitalism in the "developed" nations, with the creation of a class of landless workers who forms the nucleus of the first generation of people given up to the mercy of the manufacturers.

However, this process had objective limitations. Firstly, the expansion of empires had the limitation that there were only so many potential colonies out there. This meant that conflicts over markets and colonies was inevitable (as the states involved knew, and so they embarked on a policy of building larger and larger armed forces). As Kropotkin argued before the First World War, the real cause of war at the time was *"the competition for markets and the right to exploit nations backward in industry."* [quoted by Martin Miller, **Kropotkin**, p. 225] Secondly, the creation of trusts, the export of goods and the import of cheap raw materials cannot stop the

business cycle nor "buy-off" the working class indefinitely (i.e. the excess profits of imperialism will never be enough to grant more and more reforms and improvements to the working class in the industrialised world). Thus the need to overcome economic slumps propelled business to find new ways of dominating the market, up to and including the use of war to grab new markets and destroy rivals. Moreover, war was a good way of side tracking class conflict at home — which, let us not forget, had been reaching increasingly larger, more militant and more radical levels in all the imperialist nations (see John Zerzan's *"Origins and Meaning of WWI"* in his **Elements of Refusal**).

Thus this first phase of imperialism began as the growing capitalist economy started to reach the boundaries of the nationalised market created by the state within its own borders. Imperialism was then used to expand the area that could be colonised by the capital associated with a given nation-state. This stage ended, however, once the dominant powers had carved up the planet into different spheres of influence and there was nowhere left to expand into. In the competition for access to cheap raw materials and foreign markets, nation-states came into conflict with each other. As it was obvious that a conflict was brewing, the major European countries tried to organise a "balance of power." This meant that armies were built and navies created to frighten other countries and so deter war. Unfortunately, these measures were not enough to countermand the economic and power processes at play (*"Armies equipped to the teeth with weapons, with highly developed instruments of murder and backed by military interests, have their own dynamic interests,"* as Goldman put it [**Red Emma Speaks**, p. 353]). War did break out, a war over empires and influence, a war, it was claimed, that would end all wars. As we now know, of course, it did not because it did not fight the root cause of modern wars, capitalism.

After the First World War, the identification of nation-state with national capital became even more obvious, and can be seen in the rise of extensive state intervention to keep capitalism going — for example, the rise of Fascism in Italy and Germany and the efforts of "national" governments in Britain and the USA to "solve" the economic crisis of the Great Depression. However, these attempts to solve the problems of capital did not work. The economic imperatives at work before the first world war had not gone away. Big business still needed markets and raw materials and the statification of industry under fascism only aided to the problems associated with imperialism. Another war was only a matter of time and when it came most anarchists, as they had during the first world war, opposed both sides and called for revolution:

> *"the present struggle is one between rival Imperialisms and for the protection of vested interests. The workers in every country, belonging to the oppressed class, have nothing in common with these interests and the political aspirations of the ruling class. Their immediate struggle is their* ***emancipation. Their*** *front line is the workshop and factory, not the Maginot Line where they will just rot and die, whilst their masters at home pile up their ill-gotten gains."* [*"War Commentary"*, quoted Mark Shipway, **Anti-Parliamentary Communism**, p. 170]

After the Second World War, the European countries yielded to pressure from the USA and national liberation movements and grated many former countries "independence" (often after intense conflict). As Kropotkin predicted, such social movements were to be expected for with the growth of capitalism *"the number of people with an interest in the capitulation of the capitalist state system also increases."* [*"Anarchism and Syndicalism"*, **Op. Cit.**, p. 26] Unfortunately these

"liberation" movements transformed mass struggle from a potential struggle against capitalism into movements aiming for independent capitalist nation states (see section D.7). Not, we must stress, that the USA was being altruistic in its actions, independence for colonies weakened its rivals as well as allowing US capital access to those markets.

This process reflected capital expanding even more **beyond** the nation-state into multinational corporations. The nature of imperialism and imperialistic wars changed accordingly. In addition, the various successful struggles for National Liberation ensured that imperialism had to change itself in face of popular resistance. These two factors ensured that the old form of imperialism was replaced by a new system of "neo-colonialism" in which newly "independent" colonies are forced, via political and economic pressure, to open their borders to foreign capital. If a state takes up a position which the imperial powers consider "bad for business," action will be taken, from sanctions to outright invasion. Keeping the world open and "free" for capitalist exploitation has been America's general policy since 1945. It springs directly from the expansion requirements of private capital and so cannot be fundamentally changed. However, it was also influenced by the shifting needs resulting from the new political and economic order and the rivalries existing between imperialist nations (particularly those of the Cold War). As such, which method of intervention and the shift from direct colonialism to neo-colonialism (and any "anomalies") can be explained by these conflicts.

Within this basic framework of indirect imperialism, many "developing" nations did manage to start the process of industrialising. Partly in response to the Great Depression, some former colonies started to apply the policies used so successfully by imperialist nations like Germany and America in the previous century. They followed a policy of "import substitution" which meant that they tried to manufacture goods like, for instance, cars that they had previously imported. Without suggesting this sort of policy offered a positive alternative (it was, after all, just local capitalism) it did have one big disadvantage for the imperialist powers: it tended to deny them both markets and cheap raw materials (the current turn towards globalisation was used to break these policies). As such, whether a nation pursued such policies was dependent on the costs involved to the imperialist power involved.

So instead of direct rule over less developed nations (which generally proved to be too costly, both economically and politically), indirect forms of domination were now preferred. These are rooted in economic and political pressure rather than the automatic use of violence, although force is always an option and is resorted to if "business interests" are threatened. This is the reality of the expression "the international community" — it is code for imperialist aims for Western governments, particularly the U.S. and its junior partner, the U.K. As discussed in section D.2.1, economic power can be quite effective in pressuring governments to do what the capitalist class desire even in advanced industrial countries. This applies even more so to so-called developing nations.

In addition to the stick of economic and political pressure, the imperialist countries also use the carrot of foreign aid and investment to ensure their aims. This can best be seen when Western governments provide lavish funds to "developing" states, particularly petty right-wing despots, under the pseudonym "foreign aid." Hence the all to common sight of US Presidents supporting authoritarian (indeed, dictatorial) regimes while at the same time mouthing nice platitudes about "liberty" and "progress." The purpose of this foreign aid, noble-sounding rhetoric about freedom and democracy aside, is to ensure that the existing world order remains intact and that US corporations have access to the raw materials and markets they need. Stability has become

the watchword of modern imperialists, who see **any** indigenous popular movements as a threat to the existing world order. The U.S. and other Western powers provide much-needed war material and training for the military of these governments, so that they may continue to keep the business climate friendly to foreign investors (that means tacitly and overtly supporting fascism around the globe).

Foreign aid also channels public funds to home based transnational companies via the ruling classes in Third World countries. It is, in other words, is a process where the poor people of rich countries give their money to the rich people of poor countries to ensure that the investments of the rich people of rich countries is safe from the poor people of poor countries! Needless to say, the owners of the companies providing this "aid" also do very well out of it. This has the advantage of securing markets as other countries are "encouraged" to buy imperialist countries' goods (often in exchange for "aid", typically military "aid") and open their markets to the dominant power's companies and their products.

Thus, the Third World sags beneath the weight of well-funded oppression, while its countries are sucked dry of their native wealth, in the name of "development" and in the spirit of "democracy" and "freedom". The United States leads the West in its global responsibility (another favourite buzzword) to ensure that this peculiar kind of "freedom" remains unchallenged by any indigenous movements. The actual form of the regime supported is irrelevant, although fascist states are often favoured due to their stability (i.e. lack of popular opposition movements). As long as the fascist regimes remain compliant and obedient to the West and capitalism thrives unchallenged then they can commit any crime against their own people while being praised for making progress towards "democracy." However, the moment they step out of line and act in ways which clash with the interests of the imperialist powers then their short-comings will used to justify intervention (the example of Saddam Hussein is the most obvious one to raise here). As for "democracy," this can be tolerated by imperialism as long as its in *"the traditional sense of 'top-down' rule by elites linked to US power, with democratic forms of little substance — unless they are compelled to do so, by their own populations in particular."* This applies *"internally"* as well as abroad, for *"democracy is fine as long as it ... does not risk popular interference with primary interests of power and wealth."* Thus the aim is to ensure *"an obedient client state is firmly in place, the general perferene of conquerors, leaving just military bases for future contingencies."* [**Failed States**, p. 171, p. 204 and p. 148]

In these ways, markets are kept open for corporations based in the advanced nations all without the apparent use of force or the need for colonies. However, this does not mean that war is not an option and, unsurprisingly, the post-1945 period has been marked by imperialist conflict. These include old-fashioned direct war by the imperialist nation (such as the Vietnam and Iraq wars) as well as new-style imperialistic wars by proxy (such as US support for the Contras in Nicaragua or support for military coups against reformist or nationalist governments). As such, if a regime becomes too independent, military force always remains an option. This can be seen from the 1990 Gulf War, when Saddam invaded Kuwait (and all his past crimes, conducted with the support of the West, were dragged from the Memory Hole to justify war).

Least it be considered that we are being excessive in our analysis, let us not forget that the US *"has intervened well over a hundred times in the internal affairs of other nations since 1945. The rhetoric has been that we have done so largely to preserve or restore freedom and democracy, or on behalf of human rights. The reality has been that [they] ... have been consistently designed and implemented to further the interests of US (now largely transnational) corporations, and the elites*

both at home and abroad who profit from their depredations." [Henry Rosemont, Jr., *"U.S. Foreign Policy: the Execution of Human Rights"*, pp. 13–25, **Social Anarchism**, no. 29 p. 13] This has involved the overthrow of democratically elected governments (such as in Iran, 1953; Guatemala, 1954; Chile, 1973) and their replacement by reactionary right-wing dictatorships (usually involving the military). As George Bradford argues, *"[i]n light of [the economic] looting [by corporations under imperialism], it should become clearer ... why nationalist regimes that cease to serve as simple conduits for massive U.S. corporate exploitation come under such powerful attack — Guatemala in 1954, Chile in 1973 ... Nicaragua [in the 1980s] ... [U.S.] State Department philosophy since the 1950s has been to rely on various police states and to hold back 'nationalistic regimes' that might be more responsive to 'increasing popular demand for immediate improvements in the low living standards of the masses,' in order to 'protect our resources' — in their countries!"* [**How Deep is Deep Ecology?**, p. 62]

This is to be expected, as imperialism is the only means of defending the foreign investments of a nation's capitalist class, and by allowing the extraction of profits and the creation of markets, it also safeguards the future of private capital.

This process has not come to an end and imperialism is continuing to evolve based on changing political and economic developments. The most obvious political change is the end of the USSR. During the cold war, the competition between the USA and the USSR had an obvious impact on how imperialism worked. On the one hand, acts of imperial power could be justified in fighting "Communism" (for the USA) or "US imperialism" (for the USSR). On the other, fear of provoking a nuclear war or driving developing nations into the hands of the other side allowed more leeway for developing nations to pursue policies like import substitution. With the end of the cold-war, these options have decreased considerably for developing nations as US imperialism how has, effectively, no constraints beyond international public opinion and pressure from below. As the invasion of Iraq in 2003 shows, this power is still weak but sufficient to limit some of the excesses of imperial power (for example, the US could not carpet bomb Iraq as it had Vietnam).

The most obvious economic change is the increased global nature of capitalism. Capital investments in developing nations have increased steadily over the years, with profits from the exploitation of cheap labour flowing back into the pockets of the corporate elite in the imperialist nation, not to its citizens as a whole (though there are sometimes temporary benefits to other classes, as discussed in section D.5.4). With the increasing globalisation of big business and markets, capitalism (and so imperialism) is on the threshold of a new transformation. Just as direct imperialism transformed into in-direct imperialism, so in-direct imperialism is transforming into a global system of government which aims to codify the domination of corporations over governments. This process is often called "globalisation" and we discuss it in section D.5.3. First, however, we need to discuss non-private capitalist forms of imperialism associated with the Stalinist regimes and we do that in the next section.

D.5.2 Is imperialism just a product of private capitalism?

While we are predominantly interested in **capitalist** imperialism, we cannot avoid discussing the activities of the so-called "socialist" nations (such as the Soviet Union, China, etc.). Given that modern imperialism has an economic base caused in developed capitalism by, in part, the rise of big business organised on a wider and wider scale, we should not be surprised that the state

capitalist ("socialist") nations are/were also imperialistic. As the state-capitalist system expresses the logical end point of capital concentration (the one big firm) the same imperialistic pressures that apply to big business and its state will also apply to the state capitalist nation.

In the words of libertarian socialist Cornelius Castoriadis:

> *"But if imperialist expansion is the necessary expression of an economy in which the process of capital concentration has arrived at the stage of monopoly domination, this is true a fortiori for an economy in which this process of concentration has arrived at its natural limit ... In other words, imperialist expansion is even more necessary for a totally concentrated economy ... That they are realised through different modes (for example, capital exportation play a much more restricted role and acts in a different way than is the case with monopoly domination) is the result of the differences separating bureaucratic capitalism from monopoly capitalism, but at bottom this changes nothing.*
>
> *"We must strongly emphasise that the imperialistic features of capital are not tied to 'private' or 'State' ownership of the means of production ... the same process takes place if, instead of monopolies, there is an exploiting bureaucracy; in other words, this bureaucracy also can **exploit**, but only on the condition that it **dominates.**"* [**Political and Social Writings**, vol. 1, p. 159]

Given this, it comes as no surprise that the state-capitalist countries also participated in imperialist activities, adventures and wars, although on a lesser scale and for slightly different reasons than those associated with private capitalism. However, regardless of the exact cause the USSR *"has always pursued an imperialist foreign policy, that it is the state and not the workers which owns and controls the whole life of the country."* Given this, it is unsurprising that *"world revolution was abandoned in favour of alliances with capitalist countries. Like the bourgeois states the USSR took part in the manoeuvrings to establish a balance of power in Europe."* This has its roots in its internal class structure, as *"it is obvious that a state which pursues an imperialist foreign policy cannot itself by revolutionary"* and this is shown in *"the internal life of the USSR"* where *"the means of wealth production"* are *"owned by the state which represents, as always, a privileged class — the bureaucracy."* [*"USSR – Anarchist Position,"* pp. 21–24, Vernon Richards (ed.), **The Left and World War II**, p. 22 and p. 23]

This process became obvious after the defeat of Nazi Germany and the creation of Stalinist states in Eastern Europe. As anarchists at the time noted, this was *"the consolidation of Russian imperialist power"* and their *"incorporation ... within the structure of the Soviet Union."* As such, *"all these countries behind the Iron Curtain are better regarded as what they really [were] — satellite states of Russia."* [*"Russia's Grip Tightens"*, pp. 283–5, Vernon Richards (ed.), **World War — Cold War**, p. 285 and p. 284] Of course, the creation of these satellite states was based on the inter-imperialist agreements reached at the Yalta conference of February 1945.

As can be seen by Russia's ruthless policy towards her satellite regimes, Soviet imperialism was more inclined to the defence of what she already had and the creation of a buffer zone between herself and the West. This is not to deny that the ruling elite of the Soviet Union did not try to exploit the countries under its influence. For example, in the years after the end of the Second World War, the Eastern Block countries paid the USSR millions of dollars in reparations. As in private capitalism, the *"satellite states were regarded as a source of raw materials and of cheap manufactured goods. Russia secured the satellites exports at below world prices. And it exported to*

them at above world prices." Thus trade *"was based on the old imperialist principle of buying cheap and selling dear — very, very dear!"* [Andy Anderson, **Hungary '56**, pp. 25–6 and p. 25] However, the nature of the imperialist regime was such that it discouraged too much expansionism as *"Russian imperialism [had] to rely on armies of occupation, utterly subservient quisling governments, or a highly organised and loyal political police (or all three). In such circumstances considerable dilution of Russian power occur[red] with each acquisition of territory."* [*"Russian Imperialism"*, pp. 270–1, Vernon Richards (ed.), **Op. Cit.**, p. 270]

Needless to say, the form and content of the state capitalist domination of its satellite countries was dependent on its own economic and political structure and needs, just as traditional capitalist imperialism reflected its needs and structures. While direct exploitation declined over time, the satellite states were still expected to develop their economies in accordance with the needs of the Soviet Bloc as a whole (i.e., in the interests of the Russian elite). This meant the forcing down of living standards to accelerate industrialisation in conformity with the requirements of the Russian ruling class. This was because these regimes served not as outlets for excess Soviet products but rather as a means of *"plugging holes in the Russian economy, which [was] in a chronic state of underproduction in comparison to its needs."* As such, the *"form and content"* of this regimes' *"domination over its satellite countries are determined fundamentally by its own economic structure"* and so it would be *"completely incorrect to consider these relations identical to the relations of classical colonialism."* [Castoriadis, **Op. Cit.**, p. 187] So part of the difference between private and state capitalist was drive by the need to plunder these countries of commodities to make up for shortages caused by central planning (in contrast, capitalist imperialism tended to export goods). As would be expected, within this overall imperialist agenda the local bureaucrats and elites feathered their own nests, as with any form of imperialism.

As well as physical expansionism, the state-capitalist elites also aided "anti-imperialist" movements when it served their interests. The aim of this was to placed such movements and any regimes they created within the Soviet or Chinese sphere of influence. Ironically, this process was aided by imperialist rivalries with US imperialism as American pressure often closed off other options in an attempt to demonise such movements and states as "communist" in order to justify supporting their repression or for intervening itself. This is **not** to suggest that Soviet regime was encouraging "world revolution" by this support. Far from it, given the Stalinist betrayals and attacks on genuine revolutionary movements and struggles (the example of the Spanish Revolution is the obvious one to mention here). Soviet aid was limited to those parties which were willing to subjugate themselves and any popular movements they influenced to the needs of the Russian ruling class. Once the Stalinist parties had replaced the local ruling class, trade relations were formalised between the so-called "socialist" nations for the benefit of both the local and Russian rulers. In a similar way, and for identical needs, the Western Imperialist powers supported murderous local capitalist and feudal elites in their struggle against their own working classes, arguing that it was supporting "freedom" and "democracy" against Soviet aggression.

The turning of Communist Parties into conduits of Soviet elite interests became obvious under Stalin, when the twists and turns of the party line were staggering. However, it actually started under Lenin and Trotsky and *"almost from the beginning"* the Communist International (Comintern) *"served primarily not as an instrument for World Revolution, but as an instrument of Russian Foreign Policy."* This explains *"the most bewildering changes of policy and political somersaults"* it imposed on its member parties. Ultimately, *"the allegedly revolutionary aims of*

the Comintern stood in contrast to the diplomatic relations of the Soviet Union with other countries." [Marie-Louise Berneri, **Neither East Nor West**, p. 64 and p. 63] As early as 1920, the Dutch Council Communist Anton Pannekoek was arguing that the Comintern opposition to anti-parliamentarianism was rooted *"in the needs of the Soviet Republic"* for *"peaceful trade with the rest of the world."* This meant that the Comintern's policies were driven *"by the political needs of Soviet Russia."* [*"Afterword to World Revolution and Communist Tactics,"** D.A. Smart (ed.), **Pannekoek and Gorter's Marxism**, p. 143 and p. 144] This is to be expected, as the regime had always been state capitalist and so the policies of the Comintern were based on the interests of a (state) capitalist regime.

Therefore, imperialism is not limited to states based on private capitalism — the state capitalist regimes have also been guilty of it. This is to be expected, as both are based on minority rule, the exploitation and oppression of labour and the need to expand the resources available to it. This means that anarchists oppose all forms of capitalist imperialism and raise the slogan *"Neither East nor West."* We *"cannot alter our views about Russia [or any other state capitalist regime] simply because, for imperialist reasons, American and British spokesmen now denounce Russia totalitarianism. We know that their indignation is hypocritical and that they may become friendly to Russia again if it suits their interests."* [Marie-Louise Berneri, **Op. Cit.**, p. 187] In the clash of imperialism, anarchists support neither side as both are rooted in the exploitation and oppression of the working class.

Finally, it is worthwhile to refute two common myths about state capitalist imperialism. The first myth is that state-capitalist imperialism results in a non-capitalist regimes and that is why it is so opposed to by Western interests. From this position, held by many Trotskyists, it is argued that we should support such regimes against the West (for example, that socialists should have supported the Russian invasion of Afghanistan). This position is based on a fallacy rooted in the false Trotskyist notion that state ownership of the means of production is inherently socialist.

Just as capitalist domination saw the transformation of the satellite's countries social relations from pre-capitalist forms in favour of capitalist ones, the domination of "socialist" nations meant the elimination of traditional bourgeois social relations in favour of state capitalist ones. As such, the nature and form of imperialism was fundamentally identical and served the interests of the appropriate ruling class in each case. This transformation of one kind of class system into another explains the root of the West's very public attacks on Soviet imperialism. It had nothing to do with the USSR being considered a "workers' state" as Trotsky, for example, argued. *"Expropriation of the capitalist class,"* argued one anarchist in 1940, *"is naturally terrifying"* to the capitalist class *"but that does not prove anything about a workers' state ... In Stalinist Russia expropriation is carried out ... by, and ultimately for the benefit of, the bureaucracy, not by the workers at all. The bourgeoisie are afraid of expropriation, of power passing out of their hands, whoever seizes it from them. They will defend their property against any class or clique. The fact that they are indignant [about Soviet imperialism] proves their fear — it tells us nothing at all about the agents inspiring that fear."* [J.H., *"The Fourth International"*, pp. 37–43, Vernon Richards (ed.), **Op. Cit.**, pp. 41–2] This elimination of tradition forms of class rule and their replacement with new forms is required as these are the only economic forms compatible with the needs of the state capitalist regimes to exploit these countries on a regular basis.

The second myth is the notion that opposition to state-capitalist imperialism by its subject peoples meant support for Western capitalism. In fact, the revolts and revolutions which repeatedly flared up under Stalinism almost always raised genuine socialist demands. For example, the

1956 Hungarian revolution *"was a social revolution in the fullest sense of the term. Its object was a fundamental change in the relations of production, and in the relations between ruler and ruled in factories, pits and on the land."* Given this, unsurprisingly Western political commentary *"was centred upon the nationalistic aspects of the Revolution, no matter how trivial."* This was unsurprising, as the West was *"opposed both to its methods and to its aims ... What capitalist government could genuinely support a people demanding 'workers' management of industry' and already beginning to implement this on an increasing scale?"* The revolution *"showed every sign of making both them and their bureaucratic counterparts in the East redundant."* The revolt itself was rooted *"[n]ew organs of struggle,"* workers' councils *"which embodied, in embryo, the new society they were seeking to achieve."* [Anderson, **Op. Cit.**, p.6, p. 106 and p. 107]

The ending of state capitalism in Eastern Europe in 1989 has ended its imperialist domination of those countries. However, it has simply opened the door for private-capitalist imperialism as the revolts themselves remained fundamentally at the political level. The ruling bureaucracy was faced with both popular pressure from the streets and economic stagnation flowing from its state-run capitalism. Being unable to continue as before and unwilling, for obvious reasons, to encourage economic and political participation, it opted for the top-down transformation of state to private capitalism. Representative democracy was implemented and state assets were privatised into the hands of a new class of capitalists (often made up of the old bureaucrats) rather than the workers themselves. In other words, the post-Stalinist regimes are still class systems and now subject to a different form of imperialism – namely, globalisation.

D.5.3 Does globalisation mean the end of imperialism?

No. While it is true that the size of multinational companies has increased along with the mobility of capital, the need for nation-states to serve corporate interests still exists. With the increased mobility of capital, i.e. its ability to move from one country and invest in another easily, and with the growth in international money markets, we have seen what can be called a "free market" in states developing. Corporations can ensure that governments do as they are told simply by threatening to move elsewhere (which they will do anyway, if it results in more profits).

Therefore, as Howard Zinn stresses, *"it's very important to point out that globalisation is in fact imperialism and that there is a disadvantage to simply using the term 'globalisation' in a way that plays into the thinking of people at the World Bank and journalists .. . who are agog at globalisation. They just can't contain their joy at the spread of American economic and corporate power all over the world. .. it would be very good to puncture that balloon and say 'This is imperialism.'"* [**Bush Drives us into Bakunin's Arms**] Globalisation is, like the forms of imperialism that preceded it, a response to both objective economic forces and the class struggle. Moreover, like the forms that came before, it is rooted in the economic power of corporations based in a few developed nations and political power of the states that are the home base of these corporations. These powers influence international institutions and individual countries to pursue neo-liberal policies, the so-called "Washington Consensus" of free market reforms, associated with globalisation.

Globalisation cannot be understood unless its history is known. The current process of increasing international trade, investment and finance markets started in the late 60s and early 1970s. Increased competition from a re-built Europe and Japan challenged US domination combined with working class struggle across the globe to leave the capitalist world feeling the strain.

Dissatisfaction with factory and office life combined with other social movements (such as the women's movement, anti-racist struggles, anti-war movements and so on) which demanded more than capitalism could provide. The near revolution in France, 1968, is the most famous of these struggles but it occurred all across the globe.

For the ruling class, the squeeze on profits and authority from ever-increasing wage demands, strikes, stoppages, boycotts, squatting, protests and other struggles meant that a solution had to be found and the working class disciplined (and profits regained). One part of the solution was to "run away" and so capital flooded into certain areas of the "developing" world. This increased the trends towards globalisation. Another solution was the embrace of Monetarism and tight money (i.e. credit) policies. It is a moot point whether those who applied Monetarism actually knew it was nonsense and, consequently, sought an economic crisis or whether they were simply incompetent ideologues who knew little about economics and mismanaged the economy by imposing its recommendations, the outcome was the same. It resulted in increases in the interest rate, which helped deepen the recessions of the early 1980s which broke the back of working class resistance in the U.K. and U.S.A. High unemployment helped to discipline a rebellious working class and the new mobility of capital meant a virtual "investment strike" against nations which had a "poor industrial record" (i.e. workers who were not obedient wage slaves). Moreover, as in any economic crisis, the "degree of monopoly" (i.e. the dominance of large firms) in the market increased as weaker firms went under and others merged to survive. This enhancing the tendencies toward concentration and centralisation which always exist in capitalism, so ensuring an extra thrust towards global operations as the size and position of the surviving firms required wider and larger markets to operate in.

Internationally, another crisis played its role in promoting globalisation. This was the Debit Crisis of the late 1970s and early 1980s. Debt plays a central role for the western powers in dictating how their economies should be organised. The debt crisis proved an ideal leverage for the western powers to force "free trade" on the "third world." This occurred when third world countries faced with falling incomes and rising interest rates defaulted on their loans (loans that were mainly given as a bribe to the ruling elites of those countries and used as a means to suppress the working people of those countries — who now, sickenly, are expected to repay them!).

Before this, as noted in section D.5.1, many countries had followed a policy of "import substitution." This tended to create new competitors who could deny transnational corporations both markets and cheap raw materials. With the debt crisis, the imperialist powers could end this policy but instead of military force, the governments of the west sent in the International Monetary Fund (IMF) and World Bank (WB). The loans required by "developing" nations in the face of recession and rising debt repayments meant that they had little choice but to agree to an IMF-designed economic reform programme. If they refused, not only were they denied IMF funds, but also WB loans. Private banks and lending agencies would also pull out, as they lent under the cover of the IMF — the only body with the power to both underpin loans and squeeze repayment from debtors. These policies meant introducing austerity programmes which, in turn, meant cutting public spending, freezing wages, restricting credit, allowing foreign multinational companies to cherry pick assets at bargain prices, and passing laws to liberalise the flow of capital into and out of the country. Not surprisingly, the result was disastrous for the working population, but the debts were repaid and both local and international elites did very well out of it. So while workers in the West suffered repression and hardship, the fate of the working class in the "developing" world was considerably worse.

Leading economist Joseph Stiglitz worked in the World Bank and described some of dire consequences of these policies. He notes how the neo-liberalism the IMF and WB imposed has, *"too often, not been followed by the promised growth, but by increased misery"* and workers *"lost their jobs [being] forced into poverty"* or *"been hit by a heightened sense of insecurity"* if they remained in work. For many *"it seems closer to an unmitigated disaster."* He argues that part of the problem is that the IMF and WB have been taken over by true believers in capitalism and apply market fundamentalism in all cases. Thus, they *"became the new missionary institutions"* of *"free market ideology"* through which *"these ideas were pushed on reluctant poor countries."* Their policies were *"based on an ideology — market fundamentalism — that required little, if any, consideration of a country's particular circumstances and immediate problems. IMF economists could ignore the short-term effects their policies might have on [a] country, content in the belief* ***in the long run*** *the country would be better off"* — a position which many working class people there rejected by rioting and protest. In summary, globalisation *"as it has been practised has not lived up to what its advocates promised it would accomplish ... In some cases it has not even resulted in growth, but when it has, it has not brought benefits to all; the net effect of the policies set by the Washington Consensus had all too often been to benefit the few at the expense of the many, the well-off at the expense of the poor."* [**Globalisation and Its Discontents**, p. 17, p. 20, p. 13, p. 36 and p. 20]

While transnational companies are, perhaps, the most well-known representatives of this process of globalisation, the power and mobility of modern capitalism can be seen from the following figures. From 1986 to 1990, foreign exchange transactions rose from under $300 billion to $700 billion daily and were expected to exceed $1.3 trillion in 1994. The World Bank estimates that the total resources of international financial institutions at about $14 trillion. To put some kind of perspective on these figures, the Balse-based Bank for International Settlement estimated that the aggregate daily turnover in the foreign exchange markets at nearly $900 billion in April 1992, equal to 13 times the Gross Domestic Product of the OECD group of countries on an annualised basis [**Financial Times**, 23/9/93]. In Britain, some $200–300 billion a day flows through London's foreign exchange markets. This is the equivalent of the UK's annual Gross National Product in two or three days. Needless to say, since the early 1990s, these amounts have grown to even higher levels (daily currency transactions have risen from a mere $80 billion in 1980 to $1.26 billion in 1995. In proportion to world trade, this trading in foreign exchange rose from a ration of 10:1 to nearly 70:1 [Mark Weisbrot, **Globalisation for Whom?**]).

Little wonder that a **Financial Times** special supplement on the IMF stated that *"Wise governments realise that the only intelligent response to the challenge of globalisation is to make their economies more acceptable."* [**Op. Cit.**] More acceptable to business, that is, not their populations. As Chomsky put it, *"free capital flow creates what's sometimes called a 'virtual parliament' of global capital, which can exercise veto power over government policies that it considers irrational. That means things like labour rights, or educational programmes, or health, or efforts to stimulate the economy, or, in fact, anything that might help people and not profits (and therefore irrational in the technical sense)."* [**Rogue States**, pp. 212–3]

This means that under globalisation, states will compete with each other to offer the best deals to investors and transnational companies — such as tax breaks, union busting, no pollution controls, and so forth. The effects on the countries' ordinary people will be ignored in the name of future benefits (not so much pie in the sky when you die, more like pie in the future, maybe, if you are nice and do what you are told). For example, such an "acceptable" business climate was created in Britain, where *"market forces have deprived workers of rights in the name of competition."*

[**Scotland on Sunday**, 9/1/95] Unsurprisingly. number of people with less than half the average income rose from 9% of the population in 1979 to 25% in 1993. The share of national wealth held by the poorer half of the population has fallen from one third to one quarter. However, as would be expected, the number of millionaires has increased, as has the welfare state for the rich, with the public's tax money being used to enrich the few via military Keynesianism, privatisation and funding for Research and Development. Like any religion, the free-market ideology is marked by the hypocrisy of those at the top and the sacrifices required from the majority at the bottom.

In addition, the globalisation of capital allows it to play one work force against another. For example, General Motors plans to close two dozen plants in the United States and Canada, but it has become the largest employer in Mexico. Why? Because an *"economic miracle"* has driven wages down. Labour's share of personal income in Mexico has *"declined from 36 percent in the mid-1970's to 23 percent by 1992."* Elsewhere, General Motors opened a $690 million assembly plant in the former East Germany. Why? Because there workers are willing to *"work longer hours than their pampered colleagues in western Germany"* (as the **Financial Times** put it) at 40% of the wage and with few benefits. [Noam Chomsky, **World Orders, Old and New**, p. 160]

This mobility is a useful tool in the class war. There has been *"a significant impact of NAFTA on strikebreaking. About half of union organising efforts are disrupted by employer threats to transfer production abroad, for example ... The threats are not idle. When such organising drives succeed, employers close the plant in whole or in part at triple the pre-NAFTA rate (about 15 percent of the time). Plant-closing threats are almost twice as high in more mobile industries (e.g. manufacturing vs. construction)."* [**Rogue States**, pp. 139–40] This process is hardly unique to America, and takes place all across the world (including in the "developing" world itself). This process has increased the bargaining power of employers and has helped to hold wages down (while productivity has increased). In the US, the share of national income going to corporate profits increased by 3.2 percentage points between 1989 and 1998. This represents a significant redistribution of the economic pie. [Mark Weisbrot, **Op. Cit.**] Hence the need for **international** workers' organisation and solidarity (as anarchists have been arguing since Bakunin [**The Political Philosophy of Bakunin**, pp. 305–8]).

This means that such agreements such as NAFTA and the Multilateral Agreement on Investment (shelved due to popular protest and outrage but definitely not forgotten) considerably weaken the governments of nation-states — but only in one area, the regulation of business. Such agreements restrict the ability of governments to check capital flight, restrict currency trading, eliminate environment and labour protection laws, ease the repatriation of profits and anything else that might impede the flow of profits or reduce business power. Indeed, under NAFTA, corporations can sue governments if they think the government is hindering its freedom on the market. Disagreements are settled by unelected panels outside the control of democratic governments. Such agreements represent an increase in corporate power and ensure that states can only intervene when it suits corporations, not the general public.

The ability of corporations to sue governments was enshrined in chapter 11 of NAFTA. In a small town in the Mexican state of San Luis Potosi, a California firm — Metalclad — a commercial purveyor of hazardous wastes, bought an abandoned dump site nearby. It proposed to expand on the dumpsite and use it to dump toxic waste material. The people in the neighbourhood of the dump site protested. The municipality, using powers delegated to it by the state, rezoned the site and forbid Metalclad to extend its land holdings. Metalclad, under Chapter 11 of NAFTA, then sued the Mexican government for damage to its profit margins and balance sheet as a result of

being treated unequally by the people of San Luis Potosi. A trade panel, convened in Washington, agreed with the company. [Naomi Klein, **Fences and Windows**, pp. 56–59] In Canada, the Ethyl corporation sued when the government banned its gasoline additive as a health hazard. The government settled "out of court" to prevent a public spectacle of a corporation overruling the nation's Parliament.

NAFTA and other Free Trade agreements are designed for corporations and corporate rule. Chapter 11 was not enshrined in the NAFTA in order to make a better world for the people of Canada, any more than for the people of San Luis Potosi but, instead, for the capitalist elite. This is an inherently imperialist situation, which will "justify" further intervention in the "developing" nations by the US and other imperialist nations, either through indirect military aid to client regimes or through outright invasion, depending on the nature of the *"crisis of democracy"* (a term used by the Trilateral Commission to characterise popular uprisings and a politicising of the general public).

However, force is always required to protect private capital. Even a globalised capitalist company still requires a defender. After all, *"[a]t the international level, U.S. corporations need the government to insure that target countries are 'safe for investment' (no movements for freedom and democracy), that loans will be repaid, contracts kept, and international law respected (but only when it is useful to do so)."* [Henry Rosemont, Jr., **Op. Cit.**, p. 18] For the foreseeable future, America seems to be the global rent-a-cop of choice — particularly as many of the largest corporations are based there.

It makes sense for corporations to pick and choose between states for the best protection, blackmailing their citizens to pay for the armed forces via taxes. It is, in other words, similar to the process at work within the US when companies moved to states which promised the most favourable laws. For example, New Jersey repealed its anti-trust law in 1891–2 and amended its corporation law in 1896 to allow companies to be as large as they liked, to operate anywhere and to own other corporations. This drew corporations to it until Delaware offered even more freedoms to corporate power until other states offered similar laws. In other words, competed for revenue by writing laws to sell to corporations and the mobility of corporations meant that they bargained from a superior position. Globalisation is simply this process on a larger scale, as capital will move to countries whose governments supply what it demands (and punish those which do not). Therefore, far from ending imperialism, globalisation will see it continue, but with one major difference: the citizens in the imperialist countries will see even fewer benefits from imperialism than before, while, as ever, still having to carry the costs.

So, in spite of claims that governments are powerless in the face of global capital, we should never forget that state power has increased drastically in one area — in state repression against its own citizens. No matter how mobile capital is, it still needs to take concrete form to generate surplus value. Without wage salves, capital would not survive. As such, it can never permanently escape from its own contradictions — wherever it goes, it has to create workers who have a tendency to disobey and do problematic things like demand higher wages, better working conditions, go on strike and so on (indeed, this fact has seen companies based in "developing" nations move to less "developed" to find more compliant labour).

This, of course, necessitates a strengthening of the state in its role as protector of property and as a defence against any unrest provoked by the inequalities, impoverishment and despair caused by globalisation (and, of course, the hope, solidarity and direct action generated by that unrest within the working class). Hence the rise of the neo-liberal consensus in both Britain and

the USA saw an increase in state centralisation as well as the number of police, police powers and in laws directed against the labour and radical movements.

As such, it would be a mistake (as many in the anti-globalisation movement do) to contrast the market to the state. State and capital are not opposed to each other — in fact, the opposite is the case. The modern state exists to protect capitalist rule, just as every state exists to defend minority rule, and it is essential for nation states to attract and retain capital within their borders to ensure their revenue by having a suitably strong economy to tax. Globalisation is a state-led initiative whose primary aim is to keep the economically dominant happy. The states which are being "undermined" by globalisation are not horrified by this process as certain protestors are, which should give pause for thought. States are complicit in the process of globalisation – unsurprisingly, as they represent the ruling elites who favour and benefit from globalisation. Moreover, with the advent of a "global market" under GATT, corporations still need politicians to act for them in creating a "free" market which best suits their interests. Therefore, by backing powerful states, corporate elites can increase their bargaining powers and help shape the "New World Order" in their own image.

Governments may be, as Malatesta put it, the property owners **gendarme**, but they can be influenced by their subjects, unlike multinationals. NAFTA was designed to reduce this influence even more. Changes in government policy reflect the changing needs of business, modified, of course, by fear of the working population and its strength. Which explains globalisation — the need for capital to strengthen its position vis-à-vis labour by pitting one labour force against — and our next step, namely to strengthen and globalise working class resistance. Only when it is clear that the costs of globalisation — in terms of strikes, protests, boycotts, occupations, economic instability and so on – is higher than potential profits will business turn away from it. Only international working class direct action and solidarity will get results. Until that happens, we will see governments co-operating in the process of globalisation.

So, for better or for worse, globalisation has become the latest buzz word to describe the current stage of capitalism and so we shall use it here. It use does have two positive side effects though. Firstly, it draws attention to the increased size and power of transnational corporations and their impact on global structures of governance **and** the nation state. Secondly, it allows anarchists and other protesters to raise the issue of international solidarity and a globalisation from below which respects diversity and is based on people's needs, not profit.

After all, as Rebecca DeWitt stresses, anarchism and the WTO *"are well suited opponents and anarchism is benefiting from this fight. The WTO is practically the epitome of an authoritarian structure of power to be fought against. People came to Seattle because they knew that it was wrong to let a secret body of officials make policies unaccountable to anyone except themselves. A non-elected body, the WTO is attempting to become more powerful than any national government ... For anarchism, the focus of global capitalism couldn't be more ideal."* [*"An Anarchist Response to Seattle,"* pp. 5–12, **Social Anarchism**, no. 29, p. 6]

To sum up, globalisation will see imperialism change as capitalism itself changes. The need for imperialism remains, as the interests of private capital still need to be defended against the dispossessed. All that changes is that the governments of the imperialistic nations become even more accountable to capital and even less to their populations.

D.5.4 What is the relationship between imperialism and the social classes within capitalism?

The two main classes within capitalist society are, as we indicated in section B.7, the ruling class and the working class. The grey area between these two classes is sometimes called the middle class. As would be expected, different classes have different positions in society and, therefore, different relationships with imperialism. Moreover, we have to also take into account the differences resulting from the relative positions of the nations in question in the world economic and political systems. The ruling class in imperialist nations will not have identical interests as those in the dominated ones, for example. As such, our discussion will have indicate these differences as well.

The relationship between the ruling class and imperialism is quite simple: It is in favour of it when it supports its interests and when the benefits outweigh the costs. Therefore, for imperialist countries, the ruling class will always be in favour of expanding their influence and power as long as it pays. If the costs outweigh the benefits, of course, sections of the ruling class will argue against imperialist adventures and wars (as, for example, elements of the US elite did when it was clear that they would lose both the Vietnam war and, perhaps, the class war at home by continuing it).

There are strong economic forces at work as well. Due to capital's need to grow in order to survive and compete on the market, find new markets and raw materials, it needs to expand (as we discussed in section D.5). Consequently, it needs to conquer foreign markets and gain access to cheap raw materials and labour. As such, a nation with a powerful capitalist economy will need an aggressive and expansionist foreign policy, which it achieves by buying politicians, initiating media propaganda campaigns, funding right-wing think tanks, and so on, as previously described.

Thus the ruling class benefits from, and so usually supports, imperialism — only, we stress, when the costs out-weight the benefits will we see members of the elite oppose it. Which, of course, explains the elites support for what is termed "globalisation." Needless to say, the ruling class has done **very** well over the last few decades. For example, in the US, the gaps between rich and poor **and** between the rich and middle income reaching their widest point on record in 1997 (from the **Congressional Budget Office** study on Historic Effective Tax Rates 1979–1997). The top 1% saw their after-tax incomes rise by $414,200 between 1979–97, the middle fifth by $3,400 and the bottom fifth fell by -$100. The benefits of globalisation are concentrated at the top, as is to be expected (indeed, almost all of the income gains from economic growth between 1989 and 1998 accrued to the top 5% of American families).

Needless to say, the local ruling classes of the dominated nations may not see it that way. While, of course, local ruling classes do extremely well from imperialism, they need not **like** the position of dependence and subordination they are placed in. Moreover, the steady stream of profits leaving the country for foreign corporations cannot be used to enrich local elites even more. Just as the capitalist dislikes the state or a union limiting their power or taxing/reducing their profits, so the dominated nation's ruling class dislikes imperialist domination and will seek to ignore or escape it whenever possible. This is because *"every State, in so far as it wants to live not only on paper and not merely by sufferance of its neighbours, but to enjoy real independence — inevitably must become a conquering State."* [Bakunin, **Op. Cit.**, p. 211] So the local ruling

class, while benefiting from imperialism, may dislike its dependent position and, if it feels strong enough, may contest their position and gain more independence for themselves.

Many of the post-war imperialist conflicts were of this nature, with local elites trying to disentangle themselves from an imperialist power. Similarly, many conflicts (either fought directly by imperialist powers or funded indirectly by them) were the direct result of ensuring that a nation trying to free itself from imperialist domination did not serve as a positive example for other satellite nations. Which means that local ruling classes can come into conflict with imperialist ones. These can express themselves as wars of national liberation, for example, or just as normal conflicts (such as the first Gulf War). As competition is at the heart of capitalism, we should not be surprised that sections of the international ruling class disagree and fight each other.

The relationship between the working class and imperialism is more complex. In traditional imperialism, foreign trade and the export of capital often make it possible to import cheap goods from abroad and increase profits for the capitalist class, and in this sense, workers can gain because they can improve their standard of living without necessarily coming into system threatening conflict with their employers (i.e. struggle can win reforms which otherwise would be strongly resisted by the capitalist class). Thus living standard may be improved by low wage imports while rising profits may mean rising wages for some key workers (CEOs giving themselves higher wages because they control their own pay rises does not, of course, count!). Therefore, in imperialistic nations during economic boom times, one finds a tendency among the working class (particularly the unorganised sector) to support foreign military adventurism and an aggressive foreign policy. This is part of what is often called the "embourgeoisement" of the proletariat, or the co-optation of labour by capitalist ideology and "patriotic" propaganda. Needless to say, those workers made redundant by these cheap imports may not consider this as a benefit and, by increasing the pool of unemployment and the threat of companies outsourcing work and moving plants to other countries, help hold or drive down wages for most of the working population (as has happened in various degrees in Western countries since the 1970s).

However, as soon as international rivalry between imperialist powers becomes too intense, capitalists will attempt to maintain their profit rates by depressing wages and laying people off in their own country. Workers' real wages will also suffer if military spending goes beyond a certain point. Moreover, if militarism leads to actual war, the working class has much more to lose than to gain as they will be fighting it and making the necessary sacrifices on the "home front" in order to win it. In addition, while imperialism can improve living conditions (for a time), it cannot remove the hierarchical nature of capitalism and therefore cannot stop the class struggle, the spirit of revolt and the instinct for freedom. So, while workers in the developed nations may sometimes benefit from imperialism, such periods cannot last long and cannot end the class struggle.

Rudolf Rocker was correct to stress the contradictory (and self-defeating) nature of working class support for imperialism:

> *"No doubt some small comforts may sometimes fall to the share of the workers when the bourgeoisie of their country attain some advantage over that of another country; but this always happens at the cost of their own freedom and the economic oppression of other peoples. The worker .. . participates to some extent in the profits which, without effort on their part, fall into the laps of the bourgeoisie of his country from the unrestrained exploitation of colonial peoples; but sooner or later there comes the time when these*

people too, wake up, and he has to pay all the more dearly for the small advantages he has enjoyed... . Small gains arising from increased opportunity of employment and higher wages may accrue to the workers in a successful state from the carving out of new markets at the cost of others; but at the same time their brothers on the other side of the border have to pay for them by unemployment and the lowering of the standards of labour. The result is an ever widening rift in the international labour movement ... By this rift the liberation of the workers from the yoke of wage-slavery is pushed further and further into the distance. As long as the worker ties up his interests with those of the bourgeoisie of his country instead of with his class, he must logically also take in his stride all the results of that relationship. He must stand ready to fight the wars of the possessing classes for the retention and extension of their markets, and to defend any injustice they may perpetrate on other people ... Only when the workers in every country shall come to understand clearly that their interests are everywhere the same, and out of this understanding learn to act together, will the effective basis be laid for the international liberation of the working class." [**Anarcho-Syndicalism**, p. 71]

Ultimately, any *"collaboration of workers and employers ... can only result in the workers being condemned to ... eat the crumbs that fall from the rich man's table."* [Rocker, **Op. Cit.**, pp. 70–1] This applies to both the imperialist and the satellite state, of course. Moreover, as imperialism needs to have a strong military force available for it and as a consequence it required militarism at home. This has an impact at home in that resources which could be used to improve the quality of life for all are funnelled towards producing weapons (and profits for corporations). Moreover, militarism is directed not only at external enemies, but also against those who threaten elite role at home. We discuss militarism in more detail in section D.8.

However, under globalisation things are somewhat different. With the increase in world trade and the signing of "free trade" agreements like NAFTA, the position of workers in the imperialist nations need not improve. For example, since the 1970s, the wages — adjusted for inflation — of the typical American employee have actually fallen, even as the economy has grown. In other words, the majority of Americans are no longer sharing in the gains from economic growth. This is very different from the previous era, for example 1946–73, when the real wages of the typical worker rose by about 80 percent. Not that this globalisation has aided the working class in the "developing" nations. In Latin America, for example, GDP per capita grew by 75 percent from 1960–1980, whereas between 1981 and 1998 it has only risen 6 percent. [Mark Weisbrot, Dean Baker, Robert Naiman, and Gila Neta, **Growth May Be Good for the Poor– But are IMF and World Bank Policies Good for Growth?**]

As Chomsky noted, *"[t]o the credit of the **Wall Street Journal**, it points out that there's a 'but.' Mexico has 'a stellar reputation,' and it's an economic miracle, but the population is being devastated. There's been a 40 percent drop in purchasing power since 1994. The poverty rate is going up and is in fact rising fast. The economic miracle wiped out, they say, a generation of progress; most Mexicans are poorer than their parents. Other sources reveal that agriculture is being wiped out by US-subsidised agricultural imports, manufacturing wages have declines about 20 percent, general wages even more. In fact, NAFTA is a remarkable success: it's the first trade agreement in history that's succeeded in harming the populations of all three countries involved. That's quite an achievement."* In the U.S., *"the medium income (half above, half below) for families has gotten back now*

to what it was in 1989, which is below what it was in the 1970s." [**Rogue States**, pp. 98–9 and p. 213]

An achievement which was predicted. But, of course, while occasionally admitting that globalisation may harm the wages of workers in developed countries, it is argued that it will benefit those in the "developing" world. It is amazing how open to socialist arguments capitalists and their supporters are, as long as its not their income being redistributed! As can be seen from NAFTA, this did not happen. Faced with cheap imports, agriculture and local industry would be undermined, increasing the number of workers seeking work, so forcing down wages as the bargaining power of labour is decreased. Combine this with governments which act in the interests of capital (as always) and force the poor to accept the costs of economic austerity and back business attempts to break unions and workers resistance then we have a situation where productivity can increase dramatically while wages fall behind (either relatively or absolutely). As has been the case in both the USA and Mexico, for example.

This reversal has had much to do with changes in the global "rules of the game," which have greatly favoured corporations and weakened labour. Unsurprisingly, the North American union movement has opposed NAFTA and other treaties which empower business over labour. Therefore, the position of labour within both imperialist and dominated nations can be harmed under globalisation, so ensuring international solidarity and organisation have a stronger reason to be embraced by both sides. This should not come as a surprise, however, as the process towards globalisation was accelerated by intensive class struggle across the world and was used as a tool against the working class (see last section).

It is difficult to generalise about the effects of imperialism on the "middle class" (i.e. professionals, self-employed, small business people, peasants and so on — **not** middle income groups, who are usually working class). Some groups within this strata stand to gain, others to lose (in particular, peasants who are impoverished by cheap imports of food). This lack of common interests and a common organisational base makes the middle class unstable and susceptible to patriotic sloganeering, vague theories of national or racial superiority, or fascist scapegoating of minorities for society's problems. For this reason, the ruling class finds it relatively easy to recruit large sectors of the middle class to an aggressive and expansionist foreign policy, through media propaganda campaigns. Since many in organised labour tends to perceive imperialism as being against its overall best interests, and thus usually opposes it, the ruling class is able to intensify the hostility of the middle class to the organised working class by portraying the latter as "unpatriotic" and "unwilling to sacrifice" for the "national interest." Sadly, the trade union bureaucracy usually accepts the "patriotic" message, particularly at times of war, and often collaborates with the state to further imperialistic interests. This eventually brings them into conflict with the rank-and-file, whose interests are ignored even more than usual when this occurs.

To summarise, the ruling class is usually pro-imperialism — as long as it is in their interests (i.e. the benefits outweigh the costs). The working class, regardless of any short term benefit its members may gain, end up paying the costs of imperialism by having to fight its wars and pay for the militarism it produces. So, under imperialism, like any form of capitalism, the working class will pay the bill required to maintain it. This means that we have a real interest in ending it — particularly as under globalisation the few benefits that used to accrue to us are much less.

D.6 Are anarchists against Nationalism?

Yes, anarchists are opposed to nationalism in all its forms. British anarchists Stuart Christie and Albert Meltzer simply point out the obvious: *"As a nation implies a state, it is not possible to be a nationalist and an anarchist."* [**The Floodgates of Anarchy**, p. 59fn]

To understand this position, we must first define what anarchists mean by nationalism. For many people, it is just the natural attachment to home, the place one grew up. Nationality, as Bakunin noted, is a *"natural and social fact,"* as *"every people and the smallest folk-unit has its own character, its own specific mode of existence, its own way of speaking, feeling, thinking, and acting; and it is this idiosyncrasy that constitutes the essence of nationality."* [**The Political Philosophy of Bakunin**, p. 325] These feelings, however, obviously do not exist in a social vacuum. They cannot be discussed without also discussing the nature of these groups and what classes and other social hierarchies they contain. Once we do this, the anarchist opposition to nationalism becomes clear.

This means that anarchists distinguish between **nationality** (that is, cultural affinity) and **nationalism** (confined to the state and government itself). This allows us to define what we support and oppose – nationalism, at root, is destructive and reactionary, whereas cultural difference and affinity is a source of community, social diversity and vitality.

Such diversity is to be celebrated and allowed to express it itself on its own terms. Or, as Murray Bookchin puts it, *"[t]hat specific peoples should be free to fully develop their own cultural capacities is not merely a right but a desideratum. The world would be a drab place indeed if a magnificent mosaic of different cultures does not replace the largely decultured and homogenised world created by modern capitalism."* [*"Nationalism and the 'National Question'"*, pp. 8–36. **Society and Nature**, No. 5, pp. 28–29] But, as he also warns, such cultural freedom and variety should **not** be confused with nationalism. The latter is far more (and ethically, a lot less) than simple recognition of cultural uniqueness and love of home. Nationalism is the love of, or the desire to create, a nation-state and for this reason anarchists are opposed to it, in all its forms.

This means that nationalism cannot and must not be confused with nationality. The later is a product of social processes while the former to a product of state action and elite rule. Social evolution cannot be squeezed into the narrow, restricting borders of the nation state without harming the individuals whose lives **make** that social development happen in the first place.

The state, as we have seen, is a centralised body invested with power and a social monopoly of force. As such it pre-empts the autonomy of localities and peoples, and in the name of the "nation" crushes the living, breathing reality of "nations" (i.e. peoples and their cultures) with one law, one culture and one "official" history. Unlike most nationalists, anarchists recognise that almost all "nations" are in fact not homogeneous, and so consider nationality to be far wider in application than just lines on maps, created by conquest. Hence we think that recreating the centralised state in a slightly smaller area, as nationalist movements generally advocate, cannot solve what is called the "national question."

Ultimately, as Rudolf Rocker argued, the *"**nation is not the cause, but the result of the state. It is the state that creates the nation, not the nation the state**."* Every state *"is an artificial mechanism imposed upon [people] from above by some ruler, and it never pursues any other ends but to defend and make secure the interests of privileged minorities within society."* Nationalism *"has never been anything but the political religion of the modern state."* [**Nationalism and Culture**, p. 200 and p. 201] It was created to reinforce the state by providing it with the loyalty of a people of shared linguistic, ethnic, and cultural affinities. And if these shared affinities do not exist, the state will create them by centralising education in its own hands, imposing an "official" language and attempting to crush cultural differences from the peoples within its borders.

This is because it treats groups of people not as unique individuals but rather *"as if they were individuals with definite traits of character and peculiar psychic properties or intellectual qualities"* which *"must irrevocably lead to the most monstrously deceptive conclusions."* [Rocker, **Op. Cit.**, p. 437] This creates the theoretical justification for authoritarianism, as it allows the stamping out of all forms of individuality and local customs and cultures which do not concur with the abstract standard. In addition, nationalism hides class differences within the "nation" by arguing that all people must unite around their supposedly common interests (as members of the same "nation"), when in fact they have nothing in common due to the existence of hierarchies and classes.

Malatesta recognised this when he noted that you cannot talk about states like they were *"homogeneous ethnographic units, each having its proper interests, aspirations, and mission, in opposition to the interests, aspirations, and mission of rival units. This may be true relatively, as long as the oppressed, and chiefly the workers, have no self-consciousness, fail to recognise the injustice of their inferior position, and make themselves the docile tools of the oppressors."* In that case, it is *"the dominating class only that counts"* and this *"owning to its desire to conserve and to enlarge its power ... may excite racial ambitions and hatred, and send its nation, its flock, against 'foreign' countries, with a view to releasing them from their present oppressors, and submitting them to its own political and economical domination."* Thus anarchists have *"always fought against patriotism, which is a survival of the past, and serves well the interests of the oppressors."* [**Errico Malatesta: His Life and Ideas**, p. 244]

Thus nationalism is a key means of obscuring class differences and getting those subject to hierarchies to accept them as "natural." As such, it plays an important role in keeping the current class system going (unsurprisingly, the nation-state and its nationalism arose at the same time as capitalism). As well dividing the working class internationally, it is also used within a nation state to turn working class people born in a specific nation against immigrants. By getting native-born workers to blame newcomers, the capitalist class weakens the resistance to their power as well as turning economic issues into racial/nationalist ones. In practice, however, nationalism is a *"state ideology"* which boils down to saying it is *"'our country' as opposed to **theirs**, meaning **we** were the serfs of the government first."* [Christie and Meltzer, **Op. Cit.**, p. 71] It tries to confuse love of where you grow up or live with *"love of the State"* and so nationalism is *"not the faithful expression"* of this natural feeling but rather *"an expression distorted by means of a false abstraction, always for the benefit of an exploiting minority."* [Bakunin, **Op. Cit.**, p. 324]

Needless to say, the nationalism of the bourgeoisie often comes into direct conflict with the people who make up the nation it claims to love. Bakunin simply stated a truism when he noted that the capitalist class *"would rather submit"* to a *"foreign yoke than renounce its social privileges and accept economic equality."* This does not mean that the *"bourgeoisie is unpatriotic; on the contrary patriotism, in the narrowest sense, is its essential virtue. But the bourgeoisie love their*

country only because, for them, the country, represented by the State, safeguards their economic, political, and social privileges. Any nation withdrawing their protection would be disowned by them, Therefore, for the bourgeoisie, the country ***is*** *the State. Patriots of the State, they become furious enemies of the masses if the people, tried of sacrificing themselves, of being used as a passive footstool by the government, revolt against it. If the bourgeoisie had to choose between the masses who rebel against the State"* and a foreign invader, *"they would surely choose the latter."* [**Bakunin on Anarchism**, pp. 185–6] Given this, Bakunin would have not been surprised by either the rise of Fascism in Italy nor when the Allies in post-fascist Italy *"crush[ed] revolutionary movements"* and gave *"their support to fascists who made good by becoming Allied Quislings."* [Marie-Louise Berneri, **Neither East Nor West**, p. 97]

In addition, nationalism is often used to justify the most horrific crimes, with the Nation effectively replacing God in terms of justifying injustice and oppression and allowing individuals to wash their hands of their own actions. For *"under cover of the nation everything can be hid"* argues Rocker (echoing Bakunin, we must note). *"The national flag covers every injustice, every inhumanity, every lie, every outrage, every crime. The collective responsibility of the nation kills the sense of justice of the individual and brings man to the point where he overlooks injustice done; where, indeed, it may appear to him a meritorious act if committed in the interests of the nation."* [**Op. Cit.**, p. 252] So when discussing nationalism:

> *"we must not forget that we are always dealing with the organised selfishness of privileged minorities which hide behind the skirts of the nation, hide behind the credulity of the masses. We speak of national interests, national capital, national spheres of interest, national honour, and national spirit; but we forget that behind all this there are hidden merely the selfish interests of power-loving politicians and money-loving business men for whom the nation is a convenient cover to hide their personal greed and their schemes for political power from the eyes of the world."* [Rocker, **Op. Cit.**, pp. 252–3]

Hence we see the all too familiar sight of successful "national liberation" movements replacing foreign oppression with a home-based one. Nationalist governments introduce *"the worse features of the very empires from which oppressed peoples have tried to shake loose. Not only do they typically reproduce state machines that are as oppressive as the ones that colonial powers imposed on them, but they reinforce those machines with cultural, religious, ethnic, and xenophobic traits that are often used to foster regional and even domestic hatreds and sub-imperialisms."* [Bookchin, **Op. Cit.**, p. 30] This is unsurprising as nationalism delivers power to local ruling classes as it relies on taking state power. As a result, nationalism can never deliver freedom to the working class (the vast majority of a given "nation") as its function is to build a mass support base for local elites angry with imperialism for blocking their ambitions to rule and exploit "their" nation and fellow country people.

In fact, nationalism is no threat to capitalism or even to imperialism. It replaces imperialist domination with local elite and foreign oppression and exploitation with native versions. That sometimes the local elites, like imperial ones, introduce reforms which benefit the majority does not change the nature of the new regimes although this does potentially bring them into conflict with imperialist powers. As Chomsky notes, for imperialism the *"threat is not nationalism, but independent nationalism, which focuses on the needs of the population, not merely the wealthy sectors and the foreign investors to whom they are linked. Subservient nationalism that does not*

succumb to these heresies is quite welcome" and it is *"quite willing to deal with them if they are willing to sell the country to the foreign master, as Third World elites (including now those in much of Eastern Europe) are often quite willing to do, since they may greatly benefit even as their countries are destroyed."* [*"Nationalism and the New World Order"* pp. 1–7, **Society and Nature**, No. 5, pp. 4–5] However, independent nationalism is like social democracy in imperialist countries in that it may, at best, reduce the evils of the class system and social hierarchies but it never gets rid of them (at worse, it creates new classes and hierarchies clustered around the state bureaucracy).

Anarchists oppose nationalism in all its forms as harmful to the interests of those who make up a given nation and their cultural identities. As Rocker put it, peoples and groups of peoples have *"existed long before the state put in its appearance"* and *"develop without the assistance of the state. They are only hindered in their natural development when some external power interferes by violence with their life and forces it into patterns which it has not known before."* A nation, in contrast, *"encompasses a whole array of different peoples and groups of peoples who have by more or less violent means been pressed together into the frame of a common state."* In other words, the *"nation is, then, unthinkable without the state."* [**Op. Cit.**, p. 201]

Given this, we do support nationality and cultural difference, diversity and self-determination as a natural expression of our love of freedom and support for decentralisation. This should not, however, be confused with supporting nationalism. In addition, it goes without saying that a nationality that take on notions of racial, cultural or ethnic "superiority" or "purity" or believe that cultural differences are somehow rooted in biology get no support from anarchists. Equally unsurprisingly, anarchists have been the most consistent foes of that particularly extreme form of nationalism, fascism (*"a politico-economic state where the ruling class of each country behaves towards its own people as ... it has behaved to the colonial peoples under its heel."* [Bart de Ligt, **The Conquest of Violence**, p. 74]). Moreover, we do not support those aspects of specific cultures which reflect social hierarchies (for example, many traditional cultures have sexist and homophobic tendencies). By supporting nationality, we do not advocate tolerating these. Nor do the negative aspects of specific cultures justify another state imposing its will on it in the name of "civilising" it. As history shows, such "humanitarian" intervention is just a mask for justifying imperialist conquest and exploitation and it rarely works as cultural change has to flow from below, by the actions of the oppressed themselves, in order to be successful.

In opposition to nationalism, Anarchists are *"proud of being internationalists."* We seek *"the end of all oppression and of all exploitation,"* and so aim *"to awaken a consciousness of the antagonism of interests between dominators and dominated, between exploiters and workers, and to develop the class struggle inside each country, and the solidarity among all workers across the frontiers, as against any prejudice and any passion of either race or nationality."* [Malatesta, **Op. Cit.**, p. 244]

We must stress that anarchists, being opposed to all forms of exploitation and oppression, are against a situation of external domination where the one country dominates the people and territory of another country (i.e., imperialism — see section D.5). This flows from our basic principles as *"[t]rue internationalism will never be attained except by the independence of each nationality, little or large, compact or disunited — just as anarchy is in the independence of each individual. If we say no government of man over man, how can [we] permit the government of conquered nationalities by the conquering nationalities?"* [Kropotkin, quoted by Martin A. Miller, **Kropotkin**, p. 231] As we discuss in the next section, while rejecting Nationalism anarchists do not necessarily oppose national liberation struggles against foreign domination.

D.7 Are anarchists opposed to National Liberation struggles?

Obviously, given the anarchist analysis of imperialism discussed in section D.5, anarchists are opposed to imperialism and wars it inevitably causes. Likewise, as noted in the last section, we are against any form of nationalism. Anarchists oppose nationalism just as much as they oppose imperialism — neither offer a way to a free society. While we oppose imperialism and foreign domination and support decentralisation, it does not mean that anarchists blindly support national liberation movements. In this section we explain the anarchist position on such movements.

Anarchists, it should be stressed, are not against globalisation or international links and ties as such. Far from it, we have always been internationalists and are in favour of ***"globalisation from below,"*** one that respects and encourages diversity and difference while sharing the world. However, we have no desire to live in a world turned bland by corporate power and economic imperialism. As such, we are opposed to capitalist trends which commodify culture as it commodifies social relationships. We want to make the world an interesting place to live in and that means opposing both actual (i.e. physical, political and economic) imperialism as well as the cultural and social forms of it.

However, this does not mean that anarchists are indifferent to the national oppression inherent within imperialism. Far from it. Being opposed to all forms of hierarchy, anarchists cannot be in favour of a system in which a country dominates another. The Cuban anarchists spoke for all of us when they stated that they were *"against all forms of imperialism and colonialism; against the economic domination of peoples ... against military pressure to impose upon peoples political and economic system foreign to their national cultures, customs and social systems ... We believe that among the nations of the world, the small are as worthy as the big. Just as we remain enemies of national states because each of them hold its own people in subjection; so also are we opposed to the super-states that utilise their political, economic and military power to impose their rapacious systems of exploitation on weaker countries. As against all forms of imperialism, we declare for revolutionary internationalism; for the creation of great confederations of free peoples for their mutual interests; for solidarity and mutual aid."* [quoted by Sam Dolgoff, **The Cuban Revolution: A Critical Perspective**, p. 138]

It is impossible to be free while dependent on the power of another. If the capital one uses is owned by another country, one is in no position to resist the demands of that country. If you are dependent on foreign corporations and international finance to invest in your nation, then you have to do what they want (and so the ruling class will suppress political and social opposition to please their backers as well as maintain themselves in power). To be self-governing under capitalism, a community or nation must be economically independent. The centralisation of capital implied by imperialism means that power rests in the hands of a few others, not with those directly affected by the decisions made by that power. This power allows them to define

and impose the rules and guidelines of the global market, forcing the many to follow the laws the few make. Thus capitalism soon makes a decentralised economy, and so a free society, impossible. As such, anarchists stress decentralisation of industry and its integration with agriculture (see section I.3.8) within the context of socialisation of property and workers' self-management of production. Only this can ensure that production meets the needs of all rather than the profits of a few.

Moreover, anarchists also recognise that economic imperialism is the parent of cultural and social imperialism. As Takis Fotopoulos argues, *"the marketisation of culture and the recent liberalisation and deregulation of markets have contributed significantly to the present cultural homogenisation, with traditional communities and their cultures disappearing all over the world and people converted to consumers of a mass culture produced in the advanced capitalist countries and particularly the USA."* [**Towards an Inclusive Democracy**, p. 40] Equally, we are aware, to quote Chomsky, that racism *"is inherent in imperial rule"* and that it is *"inherent in the relation of domination"* that imperialism is based on. [**Imperial Ambitions**, p. 48]

It is this context which explains the anarchist position on national liberation struggles. While we are internationalists, we are against all forms of domination and oppression — including national ones. This means that we are not indifferent to national liberation struggles. Quite the opposite. In the words of Bakunin:

> *"Fatherland and nationality are, like individuality, each a natural and social fact, physiological and historical at the same time; neither of them is a principle. Only that can be called a human principle which is universal and common to all men; and nationality separates men ... What is a principle is the respect which everyone should have for natural facts, real or social. Nationality, like individuality, is one of those facts ... To violate it is to commit a crime ... And that is why I feel myself always the patriot of all oppressed fatherlands."* [**The Political Philosophy of Bakunin**, p. 324]

This is because nationality *"is a historic, local fact which, like all real and harmless facts, has the right to claim general acceptance."* This means that *"[e]very people, like every person, is involuntarily that which it is and therefore has a right to be itself. Therein lies the so-called national rights."* Nationality, Bakunin stressed, *"is not a principle; it is a legitimate fact, just as individuality is. Every nationality, great or small, has the incontestable right to be itself, to live according to its own nature. This right is simply the corollary of the general principal of freedom."* [**Op. Cit.** p. 325]

More recently Murray Bookchin has expressed similar sentiments. *"No left libertarian,"* he argued, *"can oppose the **right** of a subjugated people to establish itself as an autonomous entity — be it in a [libertarian] confederation ... or as a nation-state based in hierarchical and class inequities."* Even so, anarchists do not elevate the idea of national liberation *"into a mindless article of faith,"* as much of the Leninist-influenced left has done. We do not call for support for the oppressed nation without first inquiring into *"**what kind of society** a given 'national liberation' movement would likely produce."* To do so, as Bookchin points out, would be to *"support national liberation struggles for instrumental purposes, merely as a means of 'weakening' imperialism,"* which leads to *"a condition of moral bankruptcy"* as socialist ideas become associated with the authoritarian and statist goals of the "anti-imperialist" dictatorships in "liberated" nations. *"But to oppose an oppressor is not equivalent to calling for **support** for everything formerly colonised nation-states do."* [*"Nationalism and the 'National Question'"*, pp. 8–36, **Society and Nature**, No. 5, p. 31, p. 25, p. 29 and p. 31]

This means that anarchists oppose foreign oppression and are usually sympathetic to attempts by those who suffer it to end it. This does not mean that we necessarily support national liberation movements as such (after all, they usually desire to create a new state) but we cannot sit back and watch one nation oppress another and so act to stop that oppression (by, for example, protesting against the oppressing nation and trying to get them to change their policies and withdraw from the oppressed nations affairs). Nor does it mean we are uncritical of specific expressions of nationality and popular cultures. Just as we are against sexist, racist and homophobic individuals and seek to help them change their attitudes, we are also opposed to such traits within peoples and cultures and urge those who are subject to such popular prejudices to change them by their own efforts with the practical and moral solidarity of others (any attempt to use state force to end such discrimination rarely works and is often counter-productive as it entrenches such opinions). Needless to say, justifying foreign intervention or occupation by appeals to end such backward cultural traits is usually hypocritical in the extreme and masks more basic interests. An obvious example is the Christian and Republican right and its use of the position of women in Afghanistan to bolster support for the invasion of 2001 (the sight of the American Taliban discovering the importance of feminism — in other countries, of course — was surreal but not unexpected given the needs of the moment and their basis in *"reasons of state"*).

The reason for this critical attitude to national liberation struggles is that they usually counterpoise the common interests of "the nation" to those of a (foreign) oppressor and assume that **class** and social hierarchies (i.e. internal oppression) are irrelevant. Although nationalist movements often cut across classes, they in practice seek to increase autonomy for certain parts of society (namely the local elites) while ignoring that of other parts (namely the working class who are expected to continue being subject to class and state oppression). For anarchists, a new national state would not bring any fundamental change in the lives of most people, who would still be powerless both economically and socially. Looking around the world at all the many nation-states in existence, we see the same gross disparities in power, influence and wealth restricting self-determination for working-class people, even if they are free "nationally." It seems hypocritical for nationalist leaders to talk of liberating their own nation from imperialism while advocating the creation of a capitalist nation-state, which will be oppressive to its own population (and, perhaps, eventually become imperialistic itself as it develops to a certain point and has to seek foreign outlets for its products and capital). The fate of all former colonies provides ample support for this conclusion.

As Bakunin stressed, nationalists do not understand that *"the spontaneous and free union of the living forces of a nation has nothing in common with their artificial concentration at once mechanistic and forced in the political centralisation of the unitary state; and because [they] confused and identified these two very opposing things [they have] not only been the promoter of the independence of [their] country [they have] become at the same time ... the promoter of its present slavery."* [quoted by Jean Caroline Cahm, *"Bakunin"*, pp. 22–49, Eric Cahm and Vladimir Claude Fisera (eds), **Socialism and Nationalism**, vol. 1, p. 36]

In response to national liberation struggles, anarchists stress the self-liberation of the working class, which can be only achieved by its members' own efforts, creating and using their own organisations. In this process there can be no separation of political, social and economic goals. The struggle against imperialism cannot be separated from the struggle against capitalism. This has been the approach of most, if not all, anarchist movements in the face of foreign domination – the combination of the struggle against foreign domination with the class struggle against

native oppressors. In many different countries (including Bulgaria, Mexico, Cuba and Korea) anarchists have tried, by their *"propaganda, and above all **action**, [to] encourage the masses to turn the struggle for political independence into the struggle for the Social Revolution."* [Sam Dolgoff, **Op. Cit.**, p. 41] In other words, a people will free only *"by the general uprising of the labouring masses."* [Bakunin, quoted by Cahm, **Op. Cit.**, p. 36]

History has shown the validity of this argument, as well as the fears of Mexican anarchist Ricardo Flores Magon that it is *"the duty of all the poor to work and to struggle to break the chains that enslave us. To leave the solution of our problems to the educated and the rich classes is to voluntarily put ourselves in the grasp of their claws."* For *"a simple change of rulers is not a fount of liberty"* and *"any revolutionary program that doesn't contain a clause concerning the taking of the lands [and workplaces] by the people is a program of the ruling classes, who will never struggle against their own interests."* [**Dreams of Freedom**, p. 142 and p. 293] As Kropotkin stressed, the *"failure of all nationalist movements ... lies in this curse ... that the economic question ... remains on the side ... In a word, it seems to me that in each national movement we have a major task: to set forth the question [of nationalism] on an economic basis and carry out agitation against serfdom [and other forms of exploitation] at one with the struggle against [oppression by] foreign nationality."* [quoted by Martin A. Miller, **Kropotkin**, p. 230]

Moreover, we should point out that Anarchists in imperialist countries have also opposed national oppression by both words and deeds. For example, the prominent Japanese Anarchist Kotoku Shusi was framed and executed in 1910 after campaigning against Japanese expansionism. In Italy, the anarchist movement opposed Italian expansionism into Eritrea and Ethiopia in the 1880s and 1890s, and organised a massive anti-war movement against the 1911 invasion of Libya. In 1909, the Spanish Anarchists organised a mass strike against intervention in Morocco. More recently, anarchists in France struggled against two colonial wars (in Indochina and Algeria) in the late 50's and early 60's, anarchists world-wide opposed US aggression in Latin America and Vietnam (without, we must note, supporting the Cuban and Vietnamese Stalinist regimes), opposed the Gulf War (during which most anarchists raised the call of *"No war but the class war"*) as well as opposing Soviet imperialism.

In practice national liberation movements are full of contradictions between the way the rank and file sees progress being made (and their hopes and dreams) and the wishes of their ruling class members/leaders. The leadership will always resolve this conflict in favour of the future ruling class, at best paying lip-service to social issues by always stressing that addressing them must be postponed to **after** the foreign power has left the country. That makes it possible for individual members of these struggles to realise the limited nature of nationalism and break from these politics towards anarchism. At times of major struggle and conflict this contradiction will become very apparent and at this stage it is possible that large numbers may break from nationalism in practice, if not in theory, by pushing the revolt into social struggles and changes. In such circumstances, theory may catch up with practice and nationalist ideology rejected in favour of a wider concept of freedom, particularly **if** an alternative that addresses these concerns exists. Providing that anarchists do not compromise our ideals such movements against foreign domination can be wonderful opportunities to spread our politics, ideals and ideas — and to show up the limitations and dangers of nationalism itself and present a viable alternative.

For anarchists, the key question is whether freedom is for abstract concepts like "the nation" or for the individuals who make up the nationality and give it life. Oppression must be fought on all fronts, within nations and internationally, in order for working-class people to gain the

fruits of freedom. Any national liberation struggle which bases itself on nationalism is doomed to failure as a movement for extending human freedom. Thus anarchists *"refuse to participate in national liberation fronts; they participate in class fronts which may or may not be involved in national liberation struggles. The struggle must spread to establish economic, political and social structures in the liberated territories, based on federalist and libertarian organisations."* [Alfredo M. Bonanno, **Anarchism and the National Liberation Struggle**, p. 12]

The Makhnovist movement in the Ukraine expressed this perspective well when it was fighting for freedom during the Russian Revolution and Civil War. The Ukraine at the time was a very diverse country, with many distinct national and ethnic groups living within it which made this issue particularly complex:

> *"Clearly, each national group has a natural and indisputable entitlement to speak its language, live in accordance with its customs, retain its beliefs and rituals ... in short, to maintain and develop its national culture in every sphere. It is obvious that this clear and specific stance has absolutely nothing to do with narrow nationalism of the 'separatist' variety which pits nation against nation and substitutes an artificial and harmful separation for the struggle to achieve a natural social union of toilers in one shared social communion.*
>
> *"In our view, national aspirations of a natural, wholesome character (language, customs, culture, etc.) can achieve full and fruitful satisfaction only in the union of nationalities rather than in their antagonism ...*
>
> *"The speedy construction of a new life on [libertarian] socialist foundations will ineluctably lead to development of the culture peculiar to each nationality. Whenever we Makhnovist insurgents speak of independence of the Ukraine, we ground it in the social and economic plane of the toilers. We proclaim the right of the Ukrainian people (and every other nation) to self-determination, not in the narrow, nationalist sense ... but in the sense of the toilers' right to self-determination. We declare that the toiling folk of the Ukraine's towns and countryside have shown everyone through their heroic fight that they do not wish any longer to suffer political power and have no use for it, and that they consciously aspire to a libertarian society. We thus declare that all political power ... is to be regarded ... as an enemy and counter-revolutionary. To the very last drop of their blood they will wage a ferocious struggle against it, in defence of their entitlement to self-organisation."* [quoted by Alexandre Skirda, **Nestor Makhno Anarchy's Cossack**, pp. 377–8]

So while anarchists unmask nationalism for what it is, we do not disdain the basic struggle for identity and self-management which nationalism diverts. We encourage direct action and the spirit of revolt against all forms of oppression — social, economic, political, racial, sexual, religious and national. By this method, we aim to turn national liberation struggles into ***human*** liberation struggles. And while fighting against oppression, we struggle for anarchy, a free confederation of communes based on workplace and community assemblies. A confederation which will place the nation-state, all nation-states, into the dust-bin of history where it belongs. This struggle for popular self-determination is, as such, considered to be part of a wider, international movement for *"a social revolution cannot be confined to a single isolated country, it is by its very nature international in scope"* and so popular movements must *"link their aspirations and forces with*

the aspirations and forces of all other countries" and so the *"only way of arriving at emancipation lies in the fraternity of oppressed peoples in an international alliance of all countries."* [Bakunin, quoted by Cahm, **Op. Cit.**, p. 40 and p. 36]

And as far as "national" identity within an anarchist society is concerned, our position is clear and simple. As Bakunin noted with respect to the Polish struggle for national liberation during the last century, anarchists, as *"adversaries of every State, ... reject the rights and frontiers called historic. For us Poland only begins, only truly exists there where the labouring masses are and want to be Polish, it ends where, renouncing all particular links with Poland, the masses wish to establish other national links."* [quoted by Jean Caroline Cahm, **Op. Cit.**, p. 43]

D.8 What causes militarism and what are its effects?

There are three main causes of capitalist militarism.

Firstly, there is the need to contain the domestic enemy — the oppressed and exploited sections of the population. As Emma Goldman argued, the military machine *"is not directed only against the external enemy; it aims much more at the internal enemy. It concerns that element of labour which has learned not to hope for anything from our institutions, that awakened part of the working people which has realised that the war of classes underlies all wars among nations, and that if war is justified at all it is the war against economic dependence and political slavery, the two dominant issues involved in the struggle of the classes."* In other words, the nation *"which is to be protected by a huge military force is not"* that *"of the people, but that of the privileged class; the class which robs and exploits the masses, and controls their lives from the cradle to the grave."* [**Red Emma Speaks**, p. 352 and p. 348]

The second, as noted in the section on imperialism, is that a strong military is necessary in order for a ruling class to pursue an aggressive and expansionist foreign policy in order to defend its interests globally. For most developed capitalist nations, this kind of foreign policy becomes more and more important because of economic forces, i.e. in order to provide outlets for its goods and capital to prevent the system from collapsing by expanding the market continually outward. This outward expansion of, and so competition between, capital needs military force to protect its interests (particularly those invested in other countries) and give it added clout in the economic jungle of the world market. This need has resulted in, for example, *"hundreds of US bases [being] placed all over the world to ensure global domination."* [Chomsky, **Failed States**, p. 11]

The third major reason for militarism is to bolster a state's economy. Capitalist militarism promotes the development of a specially favoured group of companies which includes *"all those engaged in the manufacture and sale of munitions and in military equipment for personal gain and profit."* [Goldman, **Op. Cit.**, p. 354] These armaments companies ("defence" contractors) have a direct interest in the maximum expansion of military production. Since this group is particularly wealthy, it exerts great pressure on government to pursue the type of state intervention and, often, the aggressive foreign policies it wants. As Chomsky noted with respect to the US invasion and occupation of Iraq:

> *"Empires are costly. Running Iraq is not cheap. Somebody's paying. Somebody's paying the corporations that destroyed Iraq and the corporations that are rebuilding it. in both cases, they're getting paid by the U.S. taxpayer. Those are gifts from U.S. taxpayers to U.S. Corporations ... The same tax-payers fund the military-corporate system of weapons manufacturers and technology companies that bombed Iraq ... It's a transfer of wealth from the general population to narrow sectors of the population."* [**Imperial Ambitions**, pp. 56–7]

This "special relationship" between state and Big Business also has the advantage that it allows the ordinary citizen to pay for industrial Research and Development. As Noam Chomsky points out in many of his works, the *"Pentagon System,"* in which the public is forced to subsidise research and development of high tech industry through subsidies to defence contractors, is a covert substitute in the US for the overt industrial planning policies of other "advanced" capitalist nations, like Germany and Japan. Government subsidies provide an important way for companies to fund their research and development at taxpayer expense, which often yields "spin-offs" with great commercial potential as consumer products (e.g. computers). Needless to say, all the profits go to the defence contractors and to the commercial companies who buy licences to patented technologies from them, rather than being shared with the public which funded the R&D that made the profits possible. Thus militarism is a key means of securing technological advances within capitalism.

It is necessary to provide some details to indicate the size and impact of military spending on the US economy:

> *"Since 1945... there have been new industries sparking investment and employment .. In most of them, basic research and technological progress were closely linked to the expanding military sector. The major innovation in the 1950s was electronics ... [which] increased its output 15 percent per year. It was of critical importance in workplace automation, with the federal government providing the bulk of the research and development (R&D) dollars for military-orientated purposes. Infrared instrumentation, pressure and temperature measuring equipment, medical electronics, and thermoelectric energy conversion all benefited from military R&D. By the 1960s indirect and direct military demand accounted for as much as 70 percent of the total output of the electronics industry. Feedbacks also developed between electronics and aircraft, the second growth industry of the 1950s. By 1960 ... [i]ts annual investment outlays were 5.3 times larger than their 1947–49 level, and over 90 percent of its output went to the military. Synthetics (plastics and fibres) was another growth industry owning much of its development to military-related projects. Throughout the 1950s and 1960s, military-related R&D, including space, accounted for 40 to 50 percent of total public and private R&D spending and at least 85% of federal government share."* [Richard B. Du Boff, **Accumulation and Power**, pp. 103–4]

As another economist notes, it is *"important to recognise that the role of the US federal government in industrial development has been substantial even in the post-war period, thanks to the large amount of defence-related procurements and R&D spending, which have had enormous spillover effects. The share of the US federal government in total R&D speanding, which was only 16 per cent in 1930, remained between one-half and two-thirds during the postwar years. Industries such as computers, aerospace and the internet, where the USA still maintains an international edge despite the decline in its overall technological leadership, would not have existed without defence-related R&D funding by the country's federal government."* Moreover, the state also plays a *"crucial role"* in supporting R&D in the pharmaceutical industry. [Ha-Joon Chang, **Kicking Away the Ladder**, p. 31]

Not only this, government spending on road building (initially justified using defence concerns) also gave a massive boost to private capital (and, in the process, totally transformed America into a land fit for car and oil corporations). The cumulative impact of the 1944, 1956 and 1968

Federal Highway Acts *"allowed $70 billion to be spent on the interstates without [the money] passing through the congressional appropriations board."* The 1956 Act *"[i]n effect wrote into law the 1932 National Highway Users Conference strategy of G[eneral] M[otors] chairman Alfred P. Sloan to channel gasoline and other motor vehicle-related excise taxes into highway construction."* GM also bought-up and effectively destroyed public transit companies across America, so reducing competition against private car ownership. The net effect of this state intervention was that by 1963–66 *"one in every six business enterprise was directly dependent on the manufacture, distribution, servicing, and the use of motor vehicles."* The impact of this process is still evident today — both in terms of ecological destruction and in the fact that automobile and oil companies are still dominate the top twenty of the Fortune 500. [**Op. Cit.**, p. 102]

This system, which can be called military Keynesianism, has three advantages over socially-based state intervention. Firstly, unlike social programmes, military intervention does not improve the situation (and thus, hopes) of the majority, who can continue to be marginalised by the system, suffer the discipline of the labour market and feel the threat of unemployment. Secondly, it acts likes welfare for the rich, ensuring that while the many are subject to market forces, the few can escape that fate — while singing the praises of the "free market". And, thirdly, it does not compete with private capital — in fact, it supplements it.

Because of the connection between militarism and imperialism, it was natural after World War II that America should become the world's leading military state at the same time that it was becoming the world's leading economic power, and that strong ties developed between government, business, and the armed forces. American "military capitalism" is described in detail below, but the remarks also apply to a number of other "advanced" capitalist states.

In his farewell address, President Eisenhower warned of the danger posed to individual liberties and democratic processes by the *"military-industrial complex,"* which might, he cautioned, seek to keep the economy in a state of continual war-readiness simply because it is good business. This echoed the warning which had been made earlier by sociologist C. Wright Mills (in **The Power Elite**), who pointed out that since the end of World War II the military had become enlarged and decisive to the shape of the entire American economy, and that US capitalism had in fact become a military capitalism. This situation has not substantially changed since Mills wrote, for it is still the case that all US military officers have grown up in the atmosphere of the post-war military-industrial alliance and have been explicitly educated and trained to carry it on. Moreover, many powerful corporations have a vested interest in maintaining this system and will be funding and lobbying politicians and their parties to ensure its continuance.

That this interrelationship between corporate power and the state expressed by militarism is a key aspect of capitalism can be seen from the way it survived the end of the Cold War, the expressed rationale for this system:

> *"With the Cold war no longer available, it was necessary to reframe pretexts not only for [foreign] intervention but also for militarised state capitalism at home. The Pentagon budget presented to Congress a few months after the fall of the Berlin Wall remained largely unchanged, but was packaged in a new rhetorical framework, presented in the National Security Strategy of March 1990. Once priority was to support advanced industry in traditional ways, in sharp violation of the free market doctrines proclaimed and imposed on others. The National Security Strategy called for strengthening 'the defence industrial base' (essentially, high-tech industry) with incentives 'to invest in*

> *new facilities and equipment as well as in research and development.' As in the past, the costs and risks of the coming phases of the industrial economy were to be socialised, with eventual profits privatised, a form of state socialism for the rich on which much of the advanced US economy relies, particularly since World War II."* [**Failed States**, p. 126]

This means that US defence businesses, which are among the biggest lobbyists, cannot afford to lose this "corporate welfare." Unsurprisingly, they did not. So while many politicians asserted a "peace dividend" was at hand when the Soviet Bloc collapsed, this has not came to pass. Although it is true that some fat was trimmed from the defence budget in the early 1990s, both economic and political pressures have tended to keep the basic military-industrial complex intact, insuring a state of global war-readiness and continuing production of ever more advanced weapons systems into the foreseeable future. Various excuses were used to justify continued militarism, none of them particularly convincing due to the nature of the threat.

The first Gulf War was useful, but the quick defeat of Saddam showed how little a threat he actually was. The Iraq invasion of 2003 proved that his regime, while temporarily helpful to the Pentagon, was not enough of a menace to warrant the robust defence budgets of yore now given that his military machine had been smashed. This did not, of course, stop the Bush Administration spinning the threat and lying to the world about (non-existent) Iraqi "Weapons of Mass Destruction" (this is unsurprising, though, given how the Soviet military machine had also been hyped and its threat exaggerated to justify military spending). Other "threats" to the world's sole super-power such as Cuba, Iran, Libya and North Korea are equally unconvincing to any one with a firm grasp of reality. Luckily for the US state, a new enemy appeared in the shape of Islamic Terrorism.

The terrorist atrocity of 9/11 was quickly used to justify expanding US militarism (and expanding the power of the state and reducing civil liberties). In its wake, various government bureaucracies and corporations could present their wish-lists to the politicians and expect them to be passed without real comment all under the guise of "the war on terror." As this threat is so vague and so widespread, it is ideal to justify continuing militarism as well as imperial adventures across the global (any state can be attacked simply be declaring it is harbouring terrorists). It can also be used to justify attacks on existing enemies, such as Iraq and the other countries in the so-called "axis of evil" and related states. As such, it was not surprising to hear about the possible Iranian nuclear threat and about the dangers of Iranian influence even while the US military was bogged down in the quagmire of Iraq.

While the Bush Administration's doctrine of *"pre-emptive war"* (i.e. aggression) may have, as Chomsky noted, *"broken little new ground"* and have been standard (but unspoken) US policy from its birth, its does show how militarism will be justified for some time to come. [**Op. Cit.**, p. 85] It (and the threat of terrorism which is used to justify it) provides the Pentagon with more arguments for continued high levels of defence spending and military intervention. In a nutshell, then, the trend toward increasing militarism is not likely to be checked as the Pentagon has found a sufficiently dangerous and demonic enemy to justify continued military spending in the style to which it's accustomed.

Thus the demands of US military capitalism still take priority over the needs of the people. For example, Holly Sklar points out that Washington, Detroit, and Philadelphia have higher infant death rates than Jamaica or Costa Rica and that Black America as a whole has a higher infant

mortality rate than Nigeria; yet the US still spends less public funds on education than on the military, and more on military bands than on the National Endowment for the Arts. [*"Brave New World Order,"* Cynthia Peters (ed.), **Collateral Damage**, pp. 3–46] But of course, politicians continue to maintain that education and social services must be cut back even further because there is "no money" to fund them. As Chomsky so rightly says:

> *"It is sometimes argued that concealing development of high-tech industry under the cover of 'defence' has been a valuable contribution to society. Those who do not share that contempt for democracy might ask what decisions the population would have made if they had been informed of the real options and allowed to choose among them. Perhaps they might have preferred more social spending for health, education, decent housing, a sustainable environment for future generations, and support for the United Nations, international law, and diplomacy, as polls regularly show. We can only guess, since fear of democracy barred the option of allowing the public into the political arena, or even informing them about what was being done in their name."* [**Op. Cit.**, p. 127]

Finally, as well as skewing resource allocation and wealth away from the general public, militarism also harms freedom and increases the threat of war. The later is obvious, as militarism cannot help but feed an arms race as countries hurry to increase their military might in response to the developments of others. While this may be good for profits for the few, the general population have to hope that the outcome of such rivalries do not lead to war. As Goldman noted about the First World War, can be, in part, *"traced to the cut-throat competition for military equipment ... Armies equipped to the teeth with weapons, with highly developed instruments of murder backed by their military interests, have their own dynamic functions."* [**Op. Cit.**, p. 353]

As to freedom, as an institution the military is based on the *"unquestioning obedience and loyalty to the government."* (to quote, as Goldman did, one US General). The ideal soldier, as Goldman puts it, is *"a cold-blooded, mechanical, obedient tool of his military superiors"* and this position cannot be harmonised with individual liberty. Indeed, *"[c]an there be anything more destructive of the true genius of liberty than ... the spirit of unquestioning obedience?"* [**Op. Cit.**, pp. 52–4] As militarism becomes bigger, this spirit of obedience widens and becomes more dominant in the community. It comes to the fore during periods of war or in the run up to war, when protest and dissent are equated to treason by those in power and their supporters. The war hysteria and corresponding repression and authoritarianism which repeatedly sweeps so-called "free" nations shows that militarism has a wider impact than just economic development and wasted resources. As Bakunin noted, *"where military force prevails, there freedom has to take its leave — especially the freedom and well-being of the working people."* [**The Political Philosophy of Bakunin**, pp. 221–2]

D.9 Why does political power become concentrated under capitalism?

Under capitalism, political power tends to become concentrated in the executive branch of government, along with a corresponding decline in the effectiveness of parliamentary institutions. As Kropotkin discussed in his account of *"Representative Government,"* parliaments grew out of the struggle of capitalists against the power of centralised monarchies during the early modern period. This meant that the function of parliaments was to check and control the exercise of executive power when it was controlled by another class (namely the aristocracy and landlords). The role of Parliaments flourished and reached the peak of their prestige in the struggle against the monarchy and immediately afterwards.

With the end of absolute monarchy, legislatures become battlegrounds of contending parties, divided by divergent class and group interests. This reduces their capacity for positive action, particularly when struggle outside parliament is pressurising representatives to take some interest in public concerns. The ruling class also needs a strong centralised state that can protect its interests internally and externally and which can ignore both popular demands and the vested interests of specific sections of the dominant economic and social elites in order to pursue policies required to keep the system as a whole going. This means that there will be a tendency for Parliaments to give up its prerogatives, building up a centralised and uncontrolled authority in the form of an empowered executive against which, ironically, it had fought against at its birth.

This process can be seen clearly in the history of the United States. Since World War II, power has become centralised in the hands of the president to such an extent that some scholars now refer to an *"imperial presidency,"* following Arthur Schlesinger's 1973 book of that title. In the UK, Prime Minister Tony Blair has been repeatedly criticised for his *"presidential"* form of government, while Parliament has been repeatedly side-tracked. This builds on tendencies which flow back to, at least, the Thatcher government which started the neo-liberal transformation of the UK with its associated rise in inequality, social polarisation and increases in state centralisation and authority.

Contemporary US presidents' appropriation of congressional authority, especially in matters relating to national security, has paralleled the rise of the United States as the world's strongest and most imperialistic military power. In the increasingly dangerous and interdependent world of the 20th century, the perceived need for a leader who can act quickly and decisively, without possibly disastrous obstruction by Congress, has provided an impetus for ever greater concentration of power in the White House. This concentration has taken place in both foreign and domestic policy, but it has been catalysed above all by a series of foreign policy decisions in which modern US presidents have seized the most vital of all government powers, the power to make war. For example, President Truman decided to commit troops in Korea without prior congressional approval while the Eisenhower Administration established a system of pacts and treaties with nations all over the globe, making it difficult for Congress to limit the President's

deployment of troops according to the requirements of treaty obligations and national security, both of which were left to presidential judgement. The CIA, a secretive agency accountable to Congress only after the fact, was made the primary instrument of US intervention in the internal affairs of other nations for national security reasons. This process of executive control over war reached a peak post-911, with Bush's nonsense of a *"pre-emptive"* war and public acknowledgement of a long standing US policy that the Commander-in-Chief was authorised to take "defensive" war measures without congressional approval or UN authorisation.

And as they have continued to commit troops to war without congressional authorisation or genuine public debate, the President's unilateral policy-making has spilled over into domestic affairs as well. Most obviously, thanks to Bush I and Clinton, important economic treaties (like GATT and NAFTA) can be rammed through Congress as *"fast-track"* legislation, which limits the time allowed for debate and forbids amendments. Thanks to Jimmy Carter, who reformed the Senior Executive Service to give the White House more control over career bureaucrats, and Ronald Reagan, who politicised the upper levels of the executive branch to an unprecedented degree, presidents can now pack government with their spoilsmen and reward partisan bureaucrats (the lack of response by FEMA during the Katrina hurricane is an example of this). Thanks to the first Bush, presidents now have a powerful new technique to enhance presidential prerogatives and erode the intent of Congress even further — namely, signing laws while announcing that they will not obey them. Fifth, thanks also to Bush, yet another new instrument of arbitrary presidential power has been created: the "tsar," a presidential appointee with vague, sweeping charges that overlap with or supersede the powers of department heads. [Michael Lind, *"The Case for Congressional Power: the Out-of-Control Presidency,"* **The New Republic**, Aug. 14, 1995]

Thus we find administrations bypassing or weakening official government agencies or institutions to implement policies that are not officially permitted. In the US, the Reagan Administration's Iran-Contra affair is an example. During that episode the National Security Council, an arm of the executive branch, secretly funded the Contras, a mercenary counter-revolutionary force in Central America, in direct violation of the Boland Amendment which Congress had passed for the specific purpose of prohibiting such funding. Then there is the weakening of government agencies to the point where they can no longer effectively carry out their mandate. Reagan's tenure in the White House again provides a number of examples. The Environmental Protection Agency, for instance, was for all practical purposes neutralised when employees dedicated to genuine environmental protection were removed and replaced with people loyal to corporate polluters. Such detours around the law are deliberate policy tools that allow presidents to exercise much more actual power than they appear to have on paper. Finally, the President's authority to determine foreign and domestic policy through National Security Directives that are kept secret from Congress and the American people. Such NSDs cover a virtually unlimited field of actions, shaping policy that may be radically different from what is stated publicly by the White House and involving such matters as interference with First Amendment rights, initiation of activities that could lead to war, escalation of military conflicts, and even the commitment of billions of dollars in loan guarantees — all without congressional approval or even knowledge.

President Clinton's use of an Executive Order to bail out Mexico from its debt crisis after Congress failed to appropriate the money falls right into the authoritarian tradition of running the country by fiat, a process which accelerated with his successor George Bush (in keeping with the general tendencies of Republican administrations in particular). The second Bush took this disdain for democracy and the law even further. His administration has tried to roll back

numerous basic liberties and rights as well. He has sought to strip people accused of crimes of rights that date as far back as the Magna Carta in Anglo-American jurisprudence: elimination of presumption of innocence, keeping suspects in indefinite imprisonment, ending trial by impartial jury, restricting access to lawyers and knowledge of evidence and charges against the accused. He has regularly stated when signing legislation that he will assert the right to ignore those parts of laws with which he disagrees. His administration has adopted policies which have ignored the Geneva Convention (labelled as *"quaint"*) and publicly tolerated torture of suspects and prisoners of war. That this underlying authoritarianism of politicians is often belied by their words should go without saying (an obvious fact, somehow missed by the mainstream media, which made satire redundant in the case the second Bush).

Not that this centralisation of powers has bothered the representatives whom are being disempowered by it. Quite the reverse. This is unsurprising, for under a leader which *"guarantees 'order' — that is to say internal exploitation and external expansion — than the parliament submits to all his caprices and arms him with ever new powers ... That is understandable: all government has tendency to become personal since that is its origin and its essence ... it will always search for the man on whom it can unload the cares of government and to whom in turn it will submit. As long as we confide to a small group all the economic, political, military, financial and industrial prerogatives with which we arm them today, this small group will necessarily be inclined ... to submit to a single chief."* [Kropotkin, **Op. Cit.**, p. 128] As such, there are institutional forces at work within the government organisational structure which encourage these tendencies and as long as they find favour with business interests they will not be challenged.

This is a key factor, of course. If increased authoritarianism and concentration of decision making were actually harming the interests of the economically dominant elite then more concern would be expressed about them in what passes for public discourse. However, the reduction of democratic processes fits in well with the neo-liberal agenda (and, indeed, this agenda dependent on it). As Chomsky notes, *"democracy reduces to empty form"* when the votes of the general public votes no impact or role in determining economic and social development. In other words, *"neoliberal reforms are antithetical to promotion of democracy. They are not designed to shrink the state, as often asserted, but to strengthen state institutions to serve even more than before the needs of the substantial people."* This has seen *"extensive gerrymandering to prevent competition for seats in the House, the most democratic of government institutions and therefore the most worrisome,"* while congress has been *"geared to implementing the pro-business policies"* and the White House has been reconstructed into top-down systems, in a similar way to that of a corporation (*"In structure, the political counterpart to a corporation is a totalitarian state."*) [**Op. Cit.**, p. 218, p. 237 and p. 238]

The aim is to exclude the general politic from civil society, creating Locke's system of rule by property owners only. As one expert (and critic) on Locke argues in his scheme, the *"labouring class, being without estate, are subject to, but not full members of civil society"* and the *"right to rule (more accurately, the right to control any government) is given to men of estate only."* The working class will be in but not part of civil society in the same way that they are in but not part of a company. The labouring class may do the actual work in a capitalist firm, but they *"cannot take part in the operation of the company at the same level as the owners."* Thus the ideal (classical) "liberal" state is a *"joint-stock company of owners whose majority decision binds not only themselves but also their employees."* [C. B. MacPherson, **The Political Theory of Possessive Individualism**, p. 248, p. 249 and p. 251] The aim of significant sections of the right and the

ruling class is to achieve this goal within the context of a nominally democratic state which, on paper, allows significant civil liberties but which, in practice, operates like a corporation. Liberty for the many will be reduced to market forms, the ability to buy and sell, within the rules designed by and for the property owners. Centralised state power within an overall authoritarian social culture is the best way to achieve this aim.

It should be stressed that the rise of inequality and centralised state power has came about by design, not by accident. Both trends delight the rich and the right, whose aim has always been to exclude the general population from the public sphere, eliminate taxation on wealth and income derived from owning it and roll back the limited reforms the general population have won over the years. In his book **Post-Conservative America** Kevin Phillips, one of the most knowledgeable and serious conservative ideologues, discusses the possibility of fundamental alterations that he regards as desirable in the US government. His proposals leave no doubt about the direction in which the Right wishes to proceed. *"Governmental power is too diffused to make difficult and necessary economic and technical decisions,"* Phillips maintains. *"[A]ccordingly, the nature of that power must be re-thought. Power at the federal level must be augmented, and lodged for the most part in the executive branch."* [p. 218] He assures us that all the changes he envisions can be accomplished without altering the Constitution.

As one moderate British Conservative MP has documented, the "free-market" Conservative Thatcher government of the 1980s increased centralisation of power and led a sustained *"assault on local government."* One key reason was *"dislike of opposition"* which applied to *"intermediate institutions"* between the individual and the state. These *"were despised and disliked because they got in the way of 'free-market forces' ... and were liable to disagree with Thatcherite policies."* Indeed, they simply abolished elected local governments (like the Greater London Council) which were opposed to the policies of the central government. They controlled the rest by removing their power to raise their own funds, which destroyed their local autonomy. The net effect of neo-liberal reforms was that Britain became *"ever more centralised"* and local government was *"fragmenting and weakening."* [**Dancing with Dogma**, p. 261, p. 262 and p. 269]

This reversal of what, traditionally, conservatives and even liberals had argued had its roots in the "free market" capitalist ideology. For *"[n]othing is to stand in the way of the free market, and no such fripperies as democratic votes are to be allowed to upset it. The unadulterated free market is unalterable, and those who dislike it or suffer from it must learn to put up with it. In Rousseau's language, they must be forced to be free."* as such there was *"no paradox"* to the *"Thatcherite devotion to both the free market and a strong state"* as the *"establishment of individualism and a free-market state is an unbending if not dictatorial venture which demands the prevention of collective action and the submission of dissenting institutions and individuals."* Thus rhetoric about "liberty" and rolling back the state can easily be *"combined in practice with centralisation and the expansion of the state's frontiers."* [**Op. Cit.**, pp. 273–4 and p. 273] A similar process occurred under Reagan in America.

As Chomsky stresses, the *"antidemocratic thrust has precedents, of course, but is reaching new heights"* under the current set of *"reactionary statists"* who *"are dedicated warriors. With consistency and passion that approach caricature, their policies serve the serve the substantial people — in fact, an unusually narrow sector of them — and disregard or harm the underlying population and future generations. They are also seeking to use their current opportunities to institutionalise these arrangements, so that it will be no small task to reconstruct a more humane and democratic society."* [**Op. Cit.**, p. 238 and p. 236] As we noted in section D.1, the likes of Reagan, Thatcher

and Bush do not appear by accident. They and the policies they implement reflect the interests of significant sectors of the ruling elite and their desires. These will not disappear if different, more progressive sounding, politicians are elected. Nor will the nature of the state machine and its bureaucracy, nor will the workings and needs of the capitalist economy.

This helps explains why the distinctions between the two major parties in the US have been, to a large extent, virtually obliterated. Each is controlled by the corporate elite, albeit by different factions within it. Despite many tactical and verbal disagreements, virtually all members of this elite share a basic set of principles, attitudes, ideals, and values. Whether Democrat or Republican, most of them have graduated from the same Ivy League schools, belong to the same exclusive social clubs, serve on the same interlocking boards of directors of the same major corporations, and send their children to the same private boarding schools (see G. William Domhoff, **Who Rules America Now?** and C. Wright Mills, **The Power Elite**). Perhaps most importantly, they share the same psychology, which means that they have the same priorities and interests: namely, those of corporate America. That the Democrats are somewhat more dependent and responsive to progressive working class people while the Republicans are beholden to the rich and sections of the religious right come election time should not make us confuse rhetoric with the reality of policies pursued and underlying common assumptions and interests.

This means that in the USA there is really only one party — the Business Party — which wears two different masks to hide its real face from the public. Similar remarks apply to the liberal democratic regimes in the rest of the advanced capitalist states. In the UK, Blair's "New Labour" has taken over the mantle of Thatcherism and have implemented policies based on its assumptions. Unsurprisingly, it received the backing of numerous right-wing newspapers as well as funding from wealthy individuals. In other words, the UK system has mutated into a more US style one of two Business parties one of which gets more trade union support than the other (needless to say, it is unlikely that Labour will be changing its name to "Capital" unless forced to by the trading standards office nor does it look likely that the trade union bureaucracy will reconsider their funding in spite of the fact New Labour simply ignored them when not actually attacking them!). The absence of a true opposition party, which itself is a main characteristic of authoritarian regimes, is thus an accomplished fact already, and has been so for many years.

Besides the reasons noted above, another cause of increasing political centralisation under capitalism is that industrialisation forces masses of people into alienated wage slavery, breaking their bonds to other people, to the land, and to tradition, which in turn encourages strong central governments to assume the role of surrogate parent and to provide direction for their citizens in political, intellectual, moral, and even spiritual matters. (see Hannah Arendt, **The Origins of Totalitarianism**). And as Marilyn French emphasises in **Beyond Power**, the growing concentration of political power in the capitalist state can also be attributed to the form of the corporation, which is a microcosm of the authoritarian state, since it is based on centralised authority, bureaucratic hierarchy, antidemocratic controls, and lack of individual initiative and autonomy. Thus the millions of people who work for large corporations tend automatically to develop the psychological traits needed to survive and "succeed" under authoritarian rule: notably, obedience, conformity, efficiency, subservience, and fear of responsibility. The political system naturally tends to reflect the psychological conditions created at the workplace, where most people spend about half their time.

Reviewing such trends, Marxist Ralph Miliband concludes that *"it points in the direction of a regime in which democratic forms have ceased to provide effective constraints upon state power."*

The *"distribution of power"* will become *"more unequal"* and so *"[h]owever strident the rhetoric of democracy and popular sovereignty may be, and despite the 'populist' overtones which politics must now incorporate, the trend is toward the ever-greater appropriation of power at the top."* [**Divided Societies**, p. 166 and p. 204] As such, this reduction in genuine liberty, democracy and growth in executive power does not flow simply from the intentions of a few bad apples. Rather, they reflect economic developments, the needs of the system as a whole plus the pressures associated with the way specific institutions are structured and operate as well as the need to exclude, control and marginalise the general population. Thus while we can struggle and resist specific manifestations of this process, we need to fight and eliminate their root causes within capitalism and statism themselves if we want to turn them back and, eventually, end them.

This increase in centralised and authoritarian rule may not result in obvious elimination of such basic rights as freedom of speech. However, this is due to the success of the project to reduce genuine freedom and democracy rather than its failure. If the general population are successfully marginalised and excluded from the public sphere (i.e. turned into Locke's system of being within but not part of a society) then a legal framework which recognises civil liberties would still be maintained. That most basic liberties would remain relatively intact and that most radicals will remain unmolested would be a testimony to the lack of power possessed by the public at large in the existing system. That is, countercultural movements need not be a concern to the government until they become broader-based and capable of challenging the existing socio-economic order — only then is it "necessary" for the repressive, authoritarian forces to work on undermining the movement. So long as there is no effective organising and no threat to the interests of the ruling elite, people are permitted to say whatever they want. This creates the illusion that the system is open to all ideas, when, in fact, it is not. But, as the decimation of the Wobblies and anarchist movement after the First World War first illustrated, the government will seek to eradicate any movement that poses a significant threat.

D.9.1 What is the relationship between wealth polarisation and authoritarian government?

We have previously noted the recent increase in the rate of wealth polarisation, with its erosion of working-class living standards (see section B.7). This process has been referred to by Noam Chomsky as "Third-Worldisation." It is appearing in a particularly acute form in the US — the "richest" industrialised nation which also has the highest level of poverty, since it is the most polarised — but the process can be seen in other "advanced" industrial nations as well, particularly in the UK. As neo-liberalism has spread, so has inequality soared.

Third World governments are typically authoritarian, since harsh measures are required to suppress rebellions among their impoverished and discontented masses. Hence "Third-Worldisation" implies not only economic polarisation but also increasingly authoritarian governments. As Philip Slater puts it, a large, educated, and alert "middle class" (i.e. average income earners) has always been the backbone of democracy, and anything that concentrates wealth tends to weaken democratic institutions. [**A Dream Deferred**, p. 68] This analysis is echoed by left-liberal economist James K. Galbraith:

"As polarisation of wages, incomes and wealth develops, the common interests and common social programs of society fall into decline. We have seen this too, in this country over thirty years, beginning with the erosion of public services and public investments, particularly in the cities, with the assault on the poor and on immigrants and the disabled that led to the welfare bill of 1996, and continuing now manufactured crises of Medicare and the social security system. The haves are on the march. With growing inequality, so grows their power. And so also diminish the voices of solidarity and mutual reinforcement, the voices of civil society, the voices of a democratic and egalitarian middle class." [**Created Unequal: The Crisis in American Pay**, p. 265]

If this is true, then along with increasing wealth polarisation in the US we should expect to see signs of growing authoritarianism. This hypothesis is confirmed by numerous facts, including the following: continuing growth of an *"imperial presidency"* (concentration of political power); extralegal operations by the executive branch (e.g. the Iran-Contra scandal, the Grenada and Panama invasions); skyrocketing incarceration rates; more official secrecy and censorship; the rise of the Far Right; more police and prisons; FBI requests for massive wiretapping capability; and so on. Public support for draconian measures to deal with crime reflect the increasingly authoritarian mood of citizens beginning to panic in the face of an ongoing social breakdown, which has been brought about, quite simply, by ruling-class greed that has gotten out of hand — a fact that is carefully obscured by the media. The 911 attacks have been used to bolster these authoritarian trends, as would be expected.

One might think that representative democracy and constitutionally guaranteed freedoms would make an authoritarian government impossible in the United States and other liberal democratic nations with similar constitutional "protections" for civil rights. In reality, however, the declaration of a "national emergency" would allow the central government to ignore constitutional guarantees with impunity and set up what Hannah Arendt calls *"invisible government"* — mechanisms allowing an administration to circumvent constitutional structures while leaving them nominally in place. The erosion of civil liberties and increase in state powers post-911 in both the US and UK should show that such concerns are extremely valid.

In response to social breakdown or "terrorism," voters may turn to martial-style leaders (aided by the media). Once elected, and with the support of willing legislatures and courts, administrations could easily create much more extensive mechanisms of authoritarian government than already exist, giving the executive branch virtually dictatorial powers. Such administrations could escalate foreign militarism, further expand the funding and scope of the police, national guard units, secret police and foreign intelligence agencies, and authorise more widespread surveillance of citizens as well as the infiltration of dissident political groups (all of which happened in post-911 America). There would be a corresponding rise of government secrecy (as *"popular understanding of the workings of government is not conducive to instilling proper reverence for powerful leaders and their nobility."* [Chomsky, **Failed States**, p.238]). These developments would not occur all at once, but so gradually, imperceptibly, and logically — given the need to maintain "law and order" — that most people would not even be aware that an authoritarian take-over was underway. Indeed, there is substantial evidence that this is already underway in the US (see **Friendly Fascism** by Bertram Gross for details).

We will examine some of the symptoms of growing authoritarianism listed above, again referring primarily to the example of the United States. The general trend has been a hollowing

out of even the limited democratic structures associated with representative states in favour of a purely formal appearance of elections which are used to justify ignoring the popular will, authoritarianism and "top-down" rule by the executive. While these have always been a feature of the state (and must be, if it is to do its function as we discussed in section B.2) the tendencies are increasing and should be of concern for all those who seek to protect, never mind, expand what human rights and civil liberties we have. While anarchists have no illusions about the nature of even so-called democratic states, we are not indifferent to the form of state we have to endure and how it changes. As Malatesta put it:

> *"there is no doubt that the worst of democracies is always preferable, if only from an educational point of view, than the best of dictatorships. Of course democracy, so-called government of the people, is a lie; but the lie always slightly binds the liar and limits the extent of his arbitrary power ... Democracy is a lie, it is oppression and is in reality, oligarchy; that is, government by the few to the advantage of a privileged class. But we can still fight it in the name of freedom and equality, unlike those who have replaced it or want to replace it with something worse."* [**The Anarchist Revolution**, p. 77]

We must stress that as long as governments exist, then this struggle against authoritarianism will continue. As Kropotkin argued, these tendencies *"do not depend on individuals; they are inherent in the institution."* We must always remember that *"[o]f its own accord, representative government does not offer real liberties, and it can accommodate itself remarkably well to despotism. Freedoms have to be seized from it, as much as they do from absolute kings; and once they have been gained they must be defended against parliament as much as they were against a king."* [**Words of a Rebel**, p. 137 and p. 123]

So we cannot assume that legal rights against and restrictions on state or economic power are enough in themselves. Liberty needs to be continually defended by the mass of the population who cannot leave it to others to act for them. *"If we want ... to leave the gates wide open to reaction,"* Kropotkin put it, *"we have only to confide our affairs to a representative government."* Only *"extra-parliamentary agitation"* will stop the state *"imping[ing] continually on the country's political rights"* or *"suppress[ing] them with a strike of the pen."* The state must always *"find itself faced by a mass of people ready to rebel."* [**Op. Cit.** p. 129 and p. 124]

D.9.2 Why is government surveillance of citizens on the increase?

Authoritarian governments are characterised by fully developed secret police forces, extensive government surveillance of civilians, a high level of official secrecy and censorship, and an elaborate system of state coercion to intimidate and silence dissenters. All of these phenomena have existed in the US since suppression of the anarchist inspired No-Conscription League and the IWW for its unionising and anti-war activity. The post-World War I Red Scare and Palmer raids continued this process of wartime jailings and intimidation, combined with the deportation of aliens (the arrest, trial and subsequent deportation of Alexander Berkman and Emma Goldman is but one example of this war on radicals). [Howard Zinn, **A People's History of America**, pp. 363–7]

However, since World War II these systems have taken more extreme forms, especially during the 1980s and 2000s. Indeed, one of the most disturbing revelations to emerge from the

Iran-Contra affair was the Reagan administration's contingency plan for imposing martial law. Alfonso Chardy, a reporter for the Miami Herald, revealed in July 1987 that Lt. Col. Oliver North, while serving on the National Security Council's staff, had worked with the Federal Emergency Management Agency on a plan to suspend the Bill of Rights by imposing martial law in the event of *"national opposition to a US military invasion abroad."* [Richard O. Curry (ed.), **Freedom at Risk: Secrecy, Censorship, and Repression in the 1980s**] However, this rise in authoritarian-style government policies is not limited to just possibilities and so in this section we will examine the operations of the secret police in the USA since the 1950s. First, however, we must stress that these tendencies are hardly US specific. For example, the secret services in the UK have regularly spied on left-wing groups as well as being heavily involved in undermining the 1984–5 Miners strike. [S. Milne, **The Enemy Within**]

The creation of an elaborate US "national security" apparatus has come about gradually since 1945 through congressional enactments, numerous executive orders and national security directives, and a series of Supreme Court decisions that have eroded First Amendment rights. The policies of the Reagan administration, however, reflected radical departures from the past, as revealed not only by their comprehensive scope but by their institutionalisation of secrecy, censorship, and repression in ways that will be difficult, if not impossible, to eradicate. As Richard Curry points out, the Reagan administration's success stems *"from major structural and technological changes that have occurred in American society during the twentieth century — especially the emergence of the modern bureaucratic State and the invention of sophisticated electronic devices that make surveillance possible in new and insidious ways."* [**Op. Cit.**, p. 4]

The FBI has used *"countersubversive"* surveillance techniques and kept lists of people and groups judged to be potential national security threats since the days of the Red Scare in the 1920s. Such activities were expanded in the late 1930s when Franklin Roosevelt instructed the FBI to gather information about Fascist and Communist activities in the US and to conduct investigations into possible espionage and sabotage (although for most of the 1920s and 1930s, fascists and fascist sympathisers were, at best, ignored and, at worse, publicly praised while anti-fascists like anarchist Carol Tresca were spied on and harassed by the authorities. [Nunzio Pernicone, **Carlo Tresca**]). FBI chief J. Edgar Hoover interpreted these directives as authorising open-ended inquiries into a very broad category of potential "subversives"; and by repeatedly misinforming a succession of careless or indifferent presidents and attorneys general about the precise scope of Roosevelt's directives, Hoover managed for more than 30 years to elicit tacit executive approval for continuous FBI investigations into an ever-expanding class of political dissidents. [Geoffrey R. Stone, *"The Reagan Administration, the First Amendment, and FBI Domestic Security Investigations,"* Curry (ed.), **Op. Cit.**]

The advent of the Cold War, ongoing conflicts with the Soviet Union, and fears of the "international Communist conspiracy" provided justification not only for covert CIA operations and American military intervention in countries all over the globe, but also contributed to the FBI's rationale for expanding its domestic surveillance activities. Thus in 1957, without authorisation from Congress or any president, Hoover launched a highly secret operation called COINTELPRO:

> *"From 1957 to 1974, the bureau opened investigative files on more than half a million 'subversive' Americans. In the course of these investigations, the bureau, in the name of 'national security,' engaged in widespread wire-tapping, bugging, mail-openings, and break-ins. Even more insidious was the bureau's extensive use of informers and under-*

cover operative to infiltrate and report on the activities and membership of 'subversive' political associations ranging from the Socialist Workers Party to the NAACP to the Medical Committee for Human Rights to a Milwaukee Boy Scout troop." [Stone, **Op. Cit.**, p. 274]

But COINTELPRO involved much more than just investigation and surveillance. As Chomsky notes, it was *"one of its major programs of repression"* and was used to discredit, weaken, and ultimately destroy the New Left and Black radical movements of the sixties and early seventies, i.e. to silence the major sources of political dissent and opposition. It's aim was to *"disrupt"* a wide range of popular movements *"by instigating violence in the ghetto, direct participation in police assassination of a Black Panther organiser, burglaries and harassment of the Socialist Workers Party over many years, and other methods of defamation and disruption."* [**Necessary Illusions**, p. 189]

The FBI fomented violence through the use of agents provocateurs and destroyed the credibility of movement leaders by framing them, bringing false charges against them, distributing offensive materials published in their name, spreading false rumours, sabotaging equipment, stealing money, and other dirty tricks. By such means the Bureau exacerbated internal frictions within movements, turning members against each other as well as other groups. For example, during the civil rights movement, while the government was making concessions and verbally supporting the movement, the FBI was harassing and breaking up black groups. Between 1956 and 1971, the FBI took 295 actions against black groups as part of COLINTELPRO. [Zinn, **Op. Cit.**, p. 455]

Government documents show the FBI and police involved in creating acrimonious disputes which ultimately led to the break-up of such groups as Students for a Democratic Society, the Black Panther Party, and the Liberation News Service. The Bureau also played a part in the failure of such groups to form alliances across racial, class, and regional lines. The FBI is implicated in the assassination of Malcolm X, who was killed in a "factional dispute" that the Bureau bragged of having "developed" in the Nation of Islam. Martin Luther King, Jr., was the target of an elaborate FBI plot to drive him to suicide before he was conveniently killed by a lone sniper. Other radicals were portrayed as "Communists", criminals, adulterers, or government agents, while still others were murdered in phoney "shoot-outs" where the only shooting was done by the police.

These activities finally came to public attention because of the Watergate investigations, congressional hearings, and information obtained under the Freedom of Information Act (FOIA). In response to the revelations of FBI abuse, Attorney General Edward Levi in 1976 set forth a set of public guidelines governing the initiation and scope of the bureau's domestic security investigations, severely restricting its ability to investigate political dissidents.

The Levi guidelines, however, proved to be only a temporary reversal of the trend. Although throughout his presidency Ronald Reagan professed to be against the increase of state power in regard to domestic policy, he in fact expanded the power of the national bureaucracy for "national security" purposes in systematic and unprecedented ways. One of the most significant of these was his immediate elimination of the safeguards against FBI abuse that the Levi guidelines had been designed to prevent. This was accomplished through two interrelated executive branch initiatives: Executive Order 12333, issued in 1981, and Attorney General William French Smith's guidelines, which replaced Levi's in 1983. The Smith guidelines permitted the FBI to launch domestic security investigations if the facts *"reasonably indicated"* that groups or individuals were involved in criminal activity. More importantly, however, the new guidelines also authorised

the FBI to *"anticipate or prevent crime."* As a result, the FBI could now investigate groups or individuals whose statements *"advocated"* criminal activity or indicated an **apparent intent** to engage in crime, particularly crimes of violence.

As Curry notes, the language of the Smith guidelines provided FBI officials with sufficient interpretative latitude to investigate virtually any group or individual it chose to target, including political activists who opposed the administration's foreign policy. Not surprisingly, under the new guidelines the Bureau immediately began investigating a wide variety of political dissidents, quickly making up for the time it had lost since 1976. Congressional sources show that in 1985 alone the FBI conducted 96 investigations of groups and individuals opposed to the Reagan Administration's Central American policies, including religious organisations who expressed solidarity with Central American refugees.

Since the 1980s, the state has used the threat of "terrorism" (both domestic and international) to bolster its means of repression. The aim has been to allow the President, on his own initiative and by his own definition, to declare any person or organisation "terrorist" and so eliminate any rights they may, in theory, have. The 911 attacks were used to pass in effect a "wish-list" (in the form of the PATRIOT act) of measures long sought by both the secret state and the right but which they had difficulty in passing previously due to public scrutiny. Post-911, as after the Oklahoma bombing, much opposition was muted while those that did raise their voices were dismissed as, at best, naive or, at worse, pro-terrorist.

Post-911, presidential rulings are considered as conclusive while the Attorney General was handed new enforcement powers, e.g. suspects would be considered guilty unless proven innocent, and the source or nature of the evidence brought against suspects would not have to be revealed if the Justice Department claimed a *"national security"* interest in suppressing such facts, as of course it would. Security agencies were given massive new powers to gather information on and act against suspected "terrorists" (i.e., any enemy of the state, dissident or critic of capitalism). As intended, the ability to abuse these powers is staggering. They greatly increased the size and funding of the FBI and gave it the power to engage in "anti-terrorist" activities all over the country, without judicial oversight. Unsurprisingly, during the run-up to the Iraq invasion of 2003, the anti-war movement was targeted with these new powers of surveillance. That the secret state, for example, seriously argued that potential "terrorists" could exist within Quaker peace groups says it all. Unsurprisingly, given the history of the secret state the new measures were turned against the Left, as COINTELPRO and similar laws were in the past.

If, as the Bush Administration continually asserted, the terrorists hate the west for our freedoms (rather than their self-proclaimed hatred of US foreign policy) then that government is the greatest appeaser the world has ever seen (not to mention the greatest recruiting agent they ever had). It has done more to undermine freedom and increase state power (along with the threat of terrorism) that the terrorists ever dreamed. However, it would be a mistake to draw the conclusion that it is simply incompetence, arrogance and ignorance which was at work (tempting as that may be). Rather, there are institutional factors at work as well (a fact that becomes obvious when looking at the history of the secret state and its activities). The fact that such draconian measures were even considered says volumes about the direction in which the US — and by implication the other "advanced" capitalist states — are headed.

D.9.3 What causes justifications for racism to appear?

The tendency toward social breakdown which is inherent in the growth of wealth polarisation, as discussed above, is also producing a growth in racism in the countries affected. As we have seen, social breakdown leads to the increasingly authoritarian government prompted by the need of the ruling class to contain protest and civil unrest among those at the bottom of the wealth pyramid. In the US those in the lowest economic strata belong mostly to racial minorities, while in several European countries there are growing populations of impoverished minorities from the Third World, often from former colonies. The desire of the more affluent strata to justify their superior economic positions is, as one would expect, causing racially based theories of privilege to become more popular.

That racist feelings are gaining strength in America is evidenced by the increasing political influence of the right, whose thinly disguised racism reflects the darkening vision of a growing segment of the conservative community. Further evidence can be seen in the growth of ultra-conservative extremist groups preaching avowedly racist philosophies, such as the Ku Klux Klan, the Aryan Nations, the White Aryan Resistance, and others (see James Ridgeway's **Blood in the Face: The Ku Klux Klan, Aryan Nations, Nazi Skinheads, and the Rise of a New White Culture**). Much the same can be said of Europe, with the growth of parties like the BNP in Britain, the FN in France and similar organisations elsewhere.

Most conservative politicians have taken pains to distance themselves officially from the extreme right. Yet they are dependent on getting votes of those influenced by the right-wing media personalities and the extreme right. This means that this racism cannot help seep into their election campaigns and, unsurprisingly, mainstream conservative politicians have used, and continue to use, code words and innuendo ("welfare queens," "quotas," etc.) to convey a thinly veiled racist message. This allows mainstream right-wingers to exploit the budding racism of lower- and middle-class white youths, who must compete for increasingly scarce jobs with desperate minorities who are willing to work at very low wages. As Lorenzo Lom'boa Ervin notes:

> *"Basing themselves on alienated white social forces, the Nazis and Klan are trying to build a mass movement which can hire itself out to the Capitalists at the proper moment and assume state power ... Fascism is the ultimate authoritarian society when in power, even though it has changed its face to a mixture of crude racism and smoother racism in the modern democratic state.*
>
> *"So in addition to the Nazis and the Klan, there are other Right-Wing forces that have been on the rise ... They include ultra-conservative rightist politicians and Christian fundamentalist preachers, along with the extreme right section of the Capitalist ruling class itself, small business owners, talk show hosts ... along with the professors, economists, philosophers and others in academia who are providing the ideological weapons for the Capitalist offensive against the workers and oppresses people. So not all racists wear sheets. These are the 'respectable' racists, the New Right conservatives ... The Capitalist class has already shown their willingness to use this conservative movement as a smoke screen for an attack on the Labor movement, Black struggle, and the entire working class."* [**Anarchism and the Black Revolution**, p. 18]

The expanding popularity of such racist groups in the US is matched by a similar phenomenon in Europe, where xenophobia and a weak economy have propelled extreme right-wing politicians

into the limelight on promises to deport foreigners. This poisons the whole mainstream political spectrum, with centre and centre-left politicians pandering to racism and introducing aspects of the right's agenda under the rhetoric of "addressing concerns" and raising the prospect that by not doing what the right wants, the right will expand in influence. How legitimising the right by implementing its ideas is meant to undercut their support is never explained, but the "greater evil" argument does have its utility for every opportunistic politician (particularly one under pressure from the right-wing media whipping up scare stories about immigration and such like to advance the interests of their wealthy backers).

What easier way is there to divert people's anger than onto scapegoats? Anger about bad housing, no housing, boring work, no work, bad wages and conditions, job insecurity, no future, and so on. Instead of attacking the real causes of these (and other) problems, people are encouraged to direct their anger against people who face the same problems just because they have a different skin colour or come from a different part of the world! Little wonder politicians and their rich backers like to play the racist card — it diverts attention away from them and the system they run (i.e. the **real** causes of our problems).

Racism, in other words, tries to turn **class** issues into "race" issues. Little wonder that sections of the ruling elite will turn to it, as and when required. Their class interests (and, often, their personal bigotry) requires them to do so — a divided working class will never challenge their position in society. This means that justifications for racism appear for two reasons. Firstly, to try and justify the existing inequalities within society (for example, the infamous — and highly inaccurate — *"Bell Curve"* and related works). Secondly, to divide the working class and divert anger about living conditions and social problems away from the ruling elite and their system onto scapegoats in our own class. After all, *"for the past fifty years American business has been organising a major class war, and they needed troops — there **are** votes after all, and you can't just come before the electorate and say, 'Vote for me, I'm trying to screw you.' So what they've had to do is appeal to the population on some other grounds. Well, there aren't a lot of other grounds, and everybody picks the same ones ... — jingoism, racism, fear, religious fundamentalism: These are ways of appealing to people if you're trying to organise a mass base of support for policies that are really intended to crush them."* [Chomsky, **Understanding Power**, pp. 294–5]

Part of the right-wing resurgence in the US and elsewhere has been the institutionalisation of the Reagan-Bush brand of conservatism, whose hallmark was the reinstatement, to some degree, of laissez-faire economic policies (and, to an even larger degree, of laissez-faire rhetoric). A "free market," Reagan's economic "experts" argued, necessarily produced inequality; but by allowing unhindered market forces to select the economically fittest and to weed out the unfit, the economy would become healthy again. The wealth of those who survived and prospered in the harsh new climate would ultimately benefit the less fortunate, through a "trickle-down" effect which was supposed to create millions of new high-paying jobs.

All this would be accomplished by deregulating business, reducing taxes on the wealthy, and dismantling or drastically cutting back federal programmes designed to promote social equality, fairness, and compassion. The aptly named Laffer Curve (although invented without the burden of any empirical research or evidence) alleged to illustrate how cutting taxes actually **raises** government revenue. When this program of pro-business policies was applied the results were, unsurprisingly, the opposite of that proclaimed, with wealth flooding upwards and the creation of low-paying, dead-end jobs (the biggest "Laffers" in this scenario were the ruling class, who saw unprecedented gains in wealth at the expense of the rest of us).

The Reaganites' doctrine of inequality gave the official seal of approval to ideas of racial superiority that right-wing extremists had used for years to rationalise the exploitation of minorities. If, on average, blacks and Hispanics earn only about half as much as whites; if more than a third of all blacks and a quarter of all Hispanics lived below the poverty line; if the economic gap between whites and non-whites was growing — well, that just proved that there was a racial component in the Social-Darwinian selection process, showing that minorities "deserved" their poverty and lower social status because they were "less fit." By focusing on individuals, laissez-faire economics hides the social roots of inequality and the effect that economic institutions and social attitudes have on inequality. In the words of left-liberal economist James K. Galbraith:

> *"What the economists did, in effect, was to reason backward, from the troublesome effect to a cause that would rationalise and justify it .. . [I]t is the work of the efficient market [they argued], and the fundamental legitimacy of the outcome is not supposed to be questioned.*
>
> *"The **apologia** is a dreadful thing. It has distorted our understanding, twisted our perspective, and crabbed our politics. On the right, as one might expect, the winners on the expanded scale of wealth and incomes are given a reason for self-satisfaction and an excuse for gloating. Their gains are due to personal merit, the application of high intelligence, and the smiles of fortune. Those on the loosing side are guilty of sloth, self-indulgence, and whining. Perhaps they have bad culture. Or perhaps they have bad genes. While no serious economist would make that last leap into racist fantasy, the underlying structure of the economists' argument has undoubtedly helped to legitimise, before a larger public, those who promote such ideas."* [**Op. Cit.**, p. 264]

The logical corollary of this social Darwinism is that whites who are "less fit" (i.e., poor) also deserve their poverty. But philosophies of racial hatred are not necessarily consistent. Thus the ranks of white supremacist organisations have been swollen in recent years by undereducated and underemployed white youths frustrated by a declining industrial labour market and a noticeably eroding social status. [Ridgeway, **Op. Cit.**, p.186] Rather than drawing the logical Social-Darwinian conclusion — that they, too, are "inferior" — they have instead blamed blacks, Hispanics, Asians, and Jews for "unfairly" taking their jobs. Thus the neo-Nazi skinheads, for example, have been mostly recruited from disgruntled working-class whites below the age of 30. This has provided leaders of right-wing extremist groups with a growing base of potential storm troopers.

Therefore, laissez-faire ideology helps create a social environment in which racist tendencies can increase. Firstly, it does so by increasing poverty, job insecurity, inequality and so on which right-wing groups can use to gather support by creating scapegoats in our own class to blame (for example, by blaming poverty on blacks "taking our jobs" rather than capitalists moving their capital to other, more profitable, countries or them cutting wages and conditions for **all** workers — and as we point out in section B.1.4, racism, by dividing the working class, makes poverty and inequality **worse** and so is self-defeating). Secondly, it abets racists by legitimising the notions that inequalities in pay and wealth are due to racial differences rather than a hierarchical system which harms **all** working class people (and uses racism to divide, and so weaken, the oppressed). By pointing to individuals rather than to institutions, organisations, customs, history and above all power — the relative power between workers and capitalists, citizens and the state, the market

power of big business, etc. — laissez-faire ideology points analysis into a dead-end as well as apologetics for the wealthy, apologetics which can be, and are, utilised by racists to justify their evil politics.

D.10 How does capitalism affect technology?

Technology has an obvious effect on individual freedom, in some ways increasing it, in others restricting it. However, since capitalism is a social system based on inequalities of power, it is a truism that technology will reflect those inequalities as it does not develop in a social vacuum. As Bookchin puts it:

> *"Along side its positive aspects, technological advance has a distinctly negative, socially regressive side. If it is true that technological progress enlarges the historical potentiality for freedom, it is also true that the bourgeois control of technology reinforces the established organisation of society and everyday life. Technology and the resources of abundance furnish capitalism with the means for assimilating large sections of society to the established system of hierarchy and authority ... By their centralistic and bureaucratic tendencies, the resource of abundance reinforce the monopolistic, centralistic and bureaucratic tendencies in the political apparatus .. . [Technology can be used] for perpetuating hierarchy, exploitation and unfreedom."* [**Post-Scarcity Anarchism**, p. 3]

No technology evolves and spreads unless there are people who benefit from it and have sufficient means to disseminate it. In a capitalist society, technologies useful to the rich and powerful are generally the ones that spread. This can be seen from capitalist industry, where technology has been implemented specifically to deskill the worker, so replacing the skilled, valued craftsperson with the easily trained and replaced "mass worker." By making trying to make any individual worker dispensable, the capitalist hopes to deprive workers of a means of controlling the relation between their effort on the job and the pay they receive. In Proudhon's words, the *"machine, or the workshop, after having degraded the labourer by giving him a master, completes his degeneracy by reducing him from the rank of artisan to that of common workman."* [**System of Economical Contradictions**, p. 202]

So, unsurprisingly, technology within a hierarchical society will tend to re-enforce hierarchy and domination. Managers/capitalists will select technology that will protect and extend their power (and profits), not weaken it. Thus, while it is often claimed that technology is "neutral" this is not (and can never be) the case. Simply put, "progress" within a hierarchical system will reflect the power structures of that system.

As sociologist George Reitzer notes, technological innovation under a hierarchical system soon results in *"increased control and the replacement of human with non-human technology. In fact, the replacement of human with non-human technology is very often motivated by a desire for greater control, which of course is motivated by the need for profit-maximisation. The great sources of uncertainty and unpredictability in any rationalising system are people ... McDonaldisation involves the search for the means to exert increasing control over both employees and customers."* [**The McDonaldisation of Society**, p. 100] For Reitzer, capitalism is marked by the *"irrationality of ra-*

tionality," in which this process of control results in a system based on crushing the individuality and humanity of those who live within it.

In this process of controlling employees for the purpose of maximising profit, deskilling comes about because skilled labour is more expensive than unskilled or semi-skilled and skilled workers have more power over their working conditions and work due to the difficulty in replacing them. Unskilled labour makes it easier to "rationalise" the production process with methods like Taylorism, a system of strict production schedules and activities based on the amount of time (as determined by management) that workers "need" to perform various operations in the workplace, thus requiring simple, easily analysed and timed movements. As companies are in competition, each has to copy the most "efficient" (i.e. profit maximising) production techniques introduced by the others in order to remain profitable, no matter how dehumanising this may be for workers. Thus the evil effects of the division of labour and deskilling becoming widespread. Instead of managing their own work, workers are turned into human machines in a labour process they do not control, instead being controlled by those who own the machines they use (see also Harry Braverman, **Labour and Monopoly Capital: The Degradation of Work in the Twentieth Century**).

As Max Stirner noted (echoing Adam Smith), this process of deskilling and controlling work means that *"[w]hen everyone is to cultivate himself into man, condemning a man to* ***machine-like labour*** *amounts to the same thing as slavery... . Every labour is to have the intent that the man be satisfied. Therefore he must become a* ***master*** *in it too, be able to perform it as a totality. He who in a pin-factory only puts on heads, only draws the wire, works, as it were mechanically, like a machine; he remains half-trained, does not become a master: his labour cannot* ***satisfy*** *him, it can only* ***fatigue*** *him. His labour is nothing by itself, has no object* ***in itself,*** *is nothing complete in itself; he labours only into another's hands, and is* ***used*** *(exploited) by this other."* [**The Ego and Its Own**, p. 121] Kropotkin makes a similar argument against the division of labour (*"machine-like labour"*) in **The Conquest of Bread** (see chapter XV — *"The Division of Labour"*) as did Proudhon (see chapters III and IV of **System of Economical Contradictions**).

Modern industry is set up to ensure that workers do not become "masters" of their work but instead follow the orders of management. The evolution of technology lies in the relations of power within a society. This is because *"the viability of a design is not simply a technical or even economic evaluation but rather a political one. A technology is deemed viable if it conforms to the existing relations of power."* [David Noble, **Progress without People**, p. 63]

This process of controlling, restricting, and de-individualising labour is a key feature of capitalism. Work that is skilled and controlled by workers is empowering to them in two ways. Firstly it gives them pride in their work and themselves. Secondly, it makes it harder to replace them or suck profits out of them. Therefore, in order to remove the "subjective" factor (i.e. individuality and worker control) from the work process, capital needs methods of controlling the workforce to prevent workers from asserting their individuality, thus preventing them from arranging their own lives and work and resisting the authority of the bosses. This need to control workers can be seen from the type of machinery introduced during the Industrial Revolution. According to Andrew Ure (author of **Philosophy of Manufactures**), a consultant for the factory owners at the time:

> *"In the factories for spinning coarse yarn ... the mule-spinners [skilled workers] have abused their powers beyond endurance, domineering in the most arrogant manner ...*

over their masters. High wages, instead of leading to thankfulness of temper and improvement of mind, have, in too many cases, cherished pride and supplied funds for supporting refractory spirits in strikes ... During a disastrous turmoil of [this] kind ... several of the capitalists ... had recourse to the celebrated machinists ... of Manchester ... [to construct] a self-acting mule ... This invention confirms the great doctrine already propounded, that when capital enlists science in her service, the refractory hand of labour will always be taught docility." [quoted by Noble, **Op. Cit.**, p. 125]

Proudhon quotes an English Manufacturer who argues the same point:

> *"The insubordination of our workmen has given us the idea of dispensing with them. We have made and stimulated every imaginable effort to replace the service of men by tools more docile, and we have achieved our object. Machinery has delivered capital from the oppression of labour."* [**System of Economical Contradictions**, p. 189]

It is important to stress that technological innovation was not driven by reasons of economic efficiency as such but rather to break the power of workers at the point of production. Once that was done, initially uneconomic investments could become economically viable. As David Noble summarises, during the Industrial Revolution *"Capital invested in machines that would reinforce the system of domination [in the workplace], and this decision to invest, which might in the long run render the chosen technique economical, was not itself an economical decision but a political one, with cultural sanction."* [**Op. Cit.**, p. 6]

Needless to say, this use of technology within the class war continued. A similar process was at work in the US, where the rise in trade unionism resulted in *"industrial managers bec[oming] even more insistent that skill and initiative not be left on the shop floor, and that, by the same token, shop floor workers not have control over the reproduction of relevant skills through craft-regulated apprenticeship training. Fearful that skilled shop-floor workers would use their scare resources to reduce their effort and increase their pay, management deemed that knowledge of the shop-floor process must reside with the managerial structure."* [William Lazonick, **Organisation and Technology in Capitalist Development**, p. 273]

American managers happily embraced Taylorism (aka "scientific management"), according to which the task of the manager was to gather into his possession all available knowledge about the work he oversaw and reorganise it. Taylor himself considered the task for workers was *"to do what they are told to do promptly and without asking questions or making suggestions."* [quoted by David Noble, **American By Design**, p. 268] Taylor also relied exclusively upon incentive-pay schemes which mechanically linked pay to productivity and had no appreciation of the subtleties of psychology or sociology (which would have told him that enjoyment of work and creativity is more important for people than just higher pay). Unsurprisingly, workers responded to his schemes by insubordination, sabotage and strikes and it was *"discovered ... that the 'time and motion' experts frequently knew very little about the proper work activities under their supervision, that often they simply guessed at the optimum rates for given operations ... it meant that the arbitrary authority of management has simply been reintroduced in a less apparent form."* [David Noble, **Op. Cit.**, p. 272] Although, now, the power of management could hide begin the "objectivity" of "science."

Katherine Stone also argues that the *"transfer of skill [from the worker to management] was not a response to the necessities of production, but was, rather, a strategy to rob workers of their power"*

by *"tak[ing] knowledge and authority from the skilled workers and creating a management cadre able to direct production."* Stone highlights that this deskilling process was combined by a *"divide and rule"* policy by management based on wage incentives and new promotion policies. This created a reward system in which workers who played by the rules would receive concrete gains in terms of income and status. Over time, such a structure would become to be seen as *"the natural way to organise work and one which offered them personal advancement"* even though, *"when the system was set up, it was neither obvious nor rational. The job ladders were created just when the skill requirements for jobs in the industry were diminishing as a result of the new technology, and jobs were becoming more and more equal as to the learning time and responsibility involved."* The modern structure of the capitalist workplace was created to break workers resistance to capitalist authority and was deliberately *"aimed at altering workers' ways of thinking and feeling — which they did by making workers' individual 'objective' self-interests congruent with that of the employers and in conflict with workers' collective self-interest."* It was a means of *"labour discipline"* and of *"motivating workers to work for the employers' gain and preventing workers from uniting to take back control of production."* Stone notes that the *"development of the new labour system in the steel industry was repeated throughout the economy in different industries. As in the steel industry, the core of these new labour systems were the creation of artificial job hierarchies and the transfer of skills from workers to the managers."* [*"The Origins of Job Structure in the Steel Industry,"* pp. 123–157, Root & Branch (ed.), **Root and Branch: The Rise of the Workers' Movements**, p. 155, p. 153, p. 152 and pp. 153–4]

This process of deskilling workers was complemented by other factors — state protected markets (in the form of tariffs and government orders — the *"lead in technological innovation came in armaments where assured government orders justified high fixed-cost investments"*); the use of *"both political and economic power [by American Capitalists] to eradicate and diffuse workers' attempts to assert shop-floor control"*; and *"repression, instigated and financed both privately and publicly, to eliminate radical elements [and often not-so-radical elements as well, we must note] in the American labour movement."* [William Lazonick, **Competitive Advantage on the Shop Floor**, p. 218 and p. 303] Thus state action played a key role in destroying craft control within industry, along with the large financial resources of capitalists compared to workers. Bringing this sorry story up to date, we find *"many, if not most, American managers are reluctant to develop skills [and initiative] on the shop floor for the fear of losing control of the flow of work."* [William Lazonick, **Organisation and Technology in Capitalist Development**, pp. 279–280] Nor should we forget that many technologies are the product of state aid. For example, in the case of automation *"the state, especially the military, has played a central role. Not only has it subsidised extravagant developments that the market could not or refused to bear but it absorbed excessive costs and thereby kept afloat those competitors who would otherwise have sunk."* [**Op. Cit.**, p. 83]

Given that there is a division of knowledge in society (and, obviously, in the workplace as well) this means that capitalism has selected to introduce a management and technology mix which leads to inefficiency and waste of valuable knowledge, experience and skills. Thus the capitalist workplace is both produced by and is a weapon in the class struggle and reflects the shifting power relations between workers and employers. The creation of artificial job hierarchies, the transfer of skills away from workers to managers and technological development are all products of class struggle. Thus technological progress and workplace organisation within capitalism have little to do with "efficiency" and far more to do with profits and power. *"Capitalism does not utilise a socially nature technology for capitalist ends,"* Cornelius Castoriadis correctly argued. It

has *"created a capitalist technology, which is by no means neutral. The real intention of capitalist technology is not to develop production for production's sake: It is to subordinate and dominate the producers"* and *"to eliminate the human element in productive labour."* This means that capitalist technologies will evolve, that there is *"a process of 'natural selection,' affecting technical inventions as they are applied to industry. Some are preferred to others"* and will be *"the ones that fit in with capitalism's basic need to deal with labour power as a measurable, supervisable, and interchangeable commodity."* Thus technology will be selected *"within the framework of its own class rationality."* [**Social and Political Writings**, vol. 2, p. 104]

This means that while self-management has consistently proven to be more efficient (and empowering) than hierarchical management structures, capitalism actively selects **against** it. This is because capitalism is motivated purely by increasing the power and profits for the bosses, and both are best done by disempowering workers and empowering bosses (i.e. the maximisation of power) — even though this concentration of power harms efficiency by distorting and restricting information flow and the gathering and use of widely distributed knowledge within the firm (as in any command economy) as well as having a serious impact on the wider economy and social efficiency. Thus the last refuge of the capitalist or technophile (namely that the productivity gains of technology outweigh the human costs or the means used to achieve them) is doubly flawed. Firstly, disempowering technology may maximise profits, but it need not increase efficient utilisation of resources or workers' time, skills or potential. Secondly, *"when investment does in fact generate innovation, does such innovation yield greater productivity? ... After conducting a poll of industry executives on trends in automation,* ***Business Week*** *concluded in 1982 that 'there is a heavy backing for capital investment in a variety of labour-saving technologies that are designed to fatten profits without necessary adding to productive output.'"* David Noble concludes that *"whenever managers are able to use automation to 'fatten profits' and enhance their authority (by eliminating jobs and extorting concessions and obedience from the workers who remain) without at the same time increasing social product, they appear more than ready to do."* [David Noble, **Progress Without People**, pp. 86–87 and p. 89] As we argue in greater detail later, in section J.5.12, efficiency and profit maximisation are two different things, with such deskilling and management control actually **reducing** efficiency — compared to workers' control — but as it allows managers to maximise profits the capitalist market selects it.

Of course the claim is that higher wages follow increased investment and technological innovation ("in the long run" — although usually "the long run" has to be helped to arrive by workers' struggle and protest!). Passing aside the question of whether slightly increased consumption really makes up for dehumanising and uncreative work, we must note that it is usually the capitalist who **really** benefits from technological change in money terms. For example, between 1920 and 1927 (a period when unemployment caused by technology became commonplace) the automobile industry (which was at the forefront of technological change) saw wages rise by 23.7%. Thus, claim supporters of capitalism, technology is in all our interests. However, capital surpluses rose by 192.9% during the same period — 8 times faster! Little wonder wages rose! Similarly, over the last 20 years the USA and many other countries have seen companies "down-sizing" and "right-sizing" their workforce and introducing new technologies. The result? Simply put, the 1970s saw the start of *"no-wage growth expansions."* Before the early 1970s, *"real wage growth tracked the growth of productivity and production in the economy overall. After ..., they ceased to do so... Real wage growth fell sharply below measured productivity growth."* [James K. Galbraith, **Created Unequal**, p. 79] So while real wages have stagnated, profits have been increasing as

productivity rises and the rich have been getting richer — technology yet again showing whose side it is on.

Overall, as David Noble notes (with regards to manufacturing in the early 1990s):

> *"U.S. Manufacturing industry over the last thirty years ... [has seen] the value of capital stock (machinery) relative to labour double, reflecting the trend towards mechanisation and automation. As a consequence ... the absolute output person hour increased 115%, more than double. But during this same period, real earnings for hourly workers ... rose only 84%, less than double. Thus, after three decades of automation-based progress, workers are now earning less relative to their output than before. That is, they are producing more for less; working more for their boss and less for themselves."* [**Op. Cit.**, pp. 92–3]

Noble continues:

> *"For if the impact of automation on workers has not been ambiguous, neither has the impact on management and those it serves — labour's loss has been their gain. During the same first thirty years of our age of automation, corporate after tax profits have increased 450%, more than five times the increase in real earnings for workers."* [**Op. Cit.**, p. 95]

But why? Because labour has the ability to produce a flexible amount of output (use value) for a given wage. Unlike coal or steel, a worker can be made to work more intensely during a given working period and so technology can be utilised to maximise that effort as well as increasing the pool of potential replacements for an employee by deskilling their work (so reducing workers' power to get higher wages for their work). Thus technology is a key way of increasing the power of the boss, which in turn can increase output per worker while ensuring that the workers' receive relatively less of that output back in terms of wages — *"Machines,"* argued Proudhon, *"promised us an increase of wealth they have kept their word, but at the same time endowing us with an increase of poverty. They promised us liberty ... [but] have brought us slavery."* [**Op. Cit.**, p. 199]

But do not get us wrong, technological progress does not imply that we are victims. Far from it, much innovation is the direct result of our resistance to hierarchy and its tools. For example, capitalists turned to Taylorism and "scientific management" in response to the power of skilled craft workers to control their work and working environment (the famous 1892 Homestead strike, for example, was a direct product of the desire of the company to end the skilled workers' control and power on the shop-floor). Such management schemes never last in the long run nor totally work in the short run either — which explains why hierarchical management continues, as does technological deskilling. Workers always find ways of using new technology to increase their power within the workplace, undermining management decisions to their own advantage). As left-wing economist William Lazonick puts it:

> *"Because it is the workers, not managers, who are actually doing the work, access to information on the effort-saving potential of a machine will be asymmetric, giving workers a distinct advantage in determining the pace of work. In addition, workers through their unions will attempt to exert industry-wide control over the relation between effort*

and pay on newly diffused technology. The resultant relation between effort and earnings will depend on the exercise of social power, not on abstract 'laws' of proportional change." [**Competitive Advantage on the Shop Floor**, pp. 66–7]

This means that the *"economic effectiveness of the factory as a mode of work organisation did not occur within a social vacuum but depend[s] on the historical evolution of conditions that determined the relative power of capitalists and workers to structure the relation between effort and pay."* As such, it is important not to overemphasise the *"independent influence of technology as opposed to the relations of production in the determination of work organisation. Because machinery does change the skill content of work, it can potentially serve as an instrument of social power. How and to what extent it does so, however, depends not only on the nature of the technology but also on the nature of the social environment into which it is introduced."* Thus the introduction of machinery into the capitalist labour process *"is only a necessary, not sufficient, condition for the displacement of worker control over the relation between effort and pay."* [Lazonick, **Op. Cit.**, p. 52 and p. 63] Needless to say, capitalists have always appealed to the state to help create a suitable social environment.

This analysis applies to both the formal and informal organisation of workers in workplace. Just as the informal structures and practices of working people evolve over time in response to new technology and practices, so does union organisation. In response to Taylorism, factory and other workers created a whole new structure of working class power – a new kind of unionism based on the industrial level. For example, the IWW was formed specifically to create industrial unions arguing that *"[l]abourers are no longer classified by difference in trade skill, but the employer assigns them according to the machine which they are attached. These divisions, far from representing differences in skill or interests among the labourers, are imposed by the employers that workers may be pitted against one another and spurred to greater exertion in the shop, and that all resistance to capitalist tyranny may be weakened by artificial distinctions."* [quoted by Stone, **Op. Cit.**, p. 157]

For this reason, anarchists and syndicalists argued for, and built, industrial unions — one union per workplace and industry — in order to combat these divisions and effectively resist capitalist tyranny. This can be seen in many different countries. In Spain, the C.N.T. (an anarcho-syndicalist union) adopted the **sindicato unico** (one union) in 1918 which united all workers of the same workplace in the same union (by uniting skilled and unskilled in a single organisation, the union increased their fighting power). In the UK, the shop stewards movement arose during the first world war based on workplace organisation (a movement inspired by the pre-war syndicalist revolt and which included many syndicalist activists). This movement was partly in response to the reformist TUC unions working with the state during the war to suppress class struggle. In Germany, the 1919 near revolution saw the creation of revolutionary workplace unions and councils (and a large increase in the size of the anarcho-syndicalist union FAU which was organised by industry).

This process was not limited to just libertarian unions. In the USA, the 1930s saw a massive and militant union organising drive by the C.I.O. based on industrial unionism and collective bargaining (inspired, in part, by the example of the I.W.W. and its broad organisation of unskilled workers). More recently, workers in the 1960s and 70s responded to the increasing reformism and bureaucratic nature of such unions as the CIO and TUC by organising themselves directly on the shop floor to control their work and working conditions. This informal movement expressed

itself in wildcat strikes against both unions and management, sabotage and unofficial workers' control of production (see John Zerzan's essay *"Organised Labour and the Revolt Against Work"* in **Elements of Refusal**). In the UK, the shop stewards' movement revived itself, organising much of the unofficial strikes and protests which occurred in the 1960s and 70s. A similar tendency was seen in many countries during this period.

So in response to a new developments in technology and workplace organisation, workers' developed new forms of resistance which in turn provokes a response by management. Thus technology and its (ab)uses are very much a product of the class struggle, of the struggle for freedom in the workplace. With a given technology, workers and radicals soon learn to resist it and, sometimes, use it in ways never dreamed of to resist their bosses and the state (which necessitates a transformation of within technology again to try and give the bosses an upper hand!). The use of the Internet, for example, to organise, spread and co-ordinate information, resistance and struggles is a classic example of this process (see Jason Wehling, *"'Netwars' and Activists Power on the Internet"*, **Scottish Anarchist** no. 2 for details). There is always a "guerrilla war" associated with technology, with workers and radicals developing their own tactics to gain counter control for themselves. Thus much technological change reflects **our** power and activity to change our own lives and working conditions. We must never forget that.

While some may dismiss our analysis as "Luddite," to do so is make "technology" an idol to be worshipped rather than something to be critically analysed. Indeed, it would be temping to argue that worshippers of technological progress are, in effect, urging us **not** to think and to sacrifice ourselves to a new abstraction like the state or capital. Moreover, such attacks misrepresent the ideas of the Luddites themselves — they never actually opposed **all** technology or machinery. Rather, they opposed *"all Machinery hurtful to Commonality"* (as a March 1812 letter to a hated Manufacturer put it). Rather than worship technological progress (or view it uncritically), the Luddites subjected technology to critical analysis and evaluation. They opposed those forms of machinery that harmed themselves or society. Unlike those who smear others as "Luddites," the labourers who broke machines were not intimidated by the modern notion of progress. As John Clark notes, they *"chose to smash the dehumanising machinery being imposed on them, rather than submit to domination and degradation in the name of technical progress."* [**The Anarchist Moment**, p. 102] Their sense of right and wrong was not clouded by the notion that technology was somehow inevitable, neutral or to be worshipped without question.

The Luddites did not think that **human** values (or their own interests) were irrelevant in evaluating the benefits and drawbacks of a given technology and its effects on workers and society as a whole. Nor did they consider their skills and livelihood as less important than the profits and power of the capitalists. In other words, they would have agreed with Proudhon's later comment that machinery *"plays the leading role in industry, man is secondary"* **and** they acted to change this relationship. [**Op. Cit.**, p. 204] The Luddites were an example of working people deciding what their interests were and acting to defend them by their own direct action — in this case opposing technology which benefited the ruling class by giving them an edge in the class struggle. Anarchists follow this critical approach to technology, recognising that it is not neutral nor above criticism. That this is simply sensible can be seen from the world around us, where capitalism has, to quote Rocker, made work *"soulless and has lost for the individual the quality of creative joy. By becoming a dreary end-in-itself it has degraded man into an eternal galley slave and robbed him of that which is most precious, the inner joy of accomplished work, the creative urge of the personality. The individual feels himself to be only an insignificant element of a gigan-*

tic mechanism in whose dull monotone every personal note dies out." He has *"became the slave of the tool he created."* There has been a *"growth of technology at the expense of human personality."* [**Nationalism and Culture**, p. 253 and p. 254]

For capital, the source of problems in industry is people. Unlike machines, people can think, feel, dream, hope and act. The "evolution" of technology must, therefore, reflect the class struggle within society and the struggle for liberty against the forces of authority. Technology, far from being neutral, reflects the interests of those with power. Technology will only be truly our friend once we control it ourselves and **modify** to reflect **human** values (this may mean that some forms of technology will have to be written off and replaces by new forms in a free society). Until that happens, most technological processes — regardless of the other advantages they may have — will be used to exploit and control people. Thus Proudhon's comments that *"in the present condition of society, the workshop with its hierarchical organisation, and machinery"* could only serve *"exclusively the interests of the least numerous, the least industrious, and the wealthiest class"* rather than *"be employed for the benefit of all."* [**Op. Cit.**, p. 205]

While resisting technological "progress" which is considered harmful to people or the planet (by means up to and including machine breaking) is essential in the here and now, the issue of technology can only be truly solved when those who use a given technology control its development, introduction and use. (*"The worker will only respect machinery **on the day** when it becomes his friend, shortening his work, rather than as **today**, his enemy, taking away jobs, killing workers,"* in the words of French syndicalist Emile Pouget [quoted by David Noble, **Op. Cit.**, p. 15]). Little wonder, therefore, that anarchists consider workers' self-management as a key means of solving the problems created by technology. Proudhon, for example, argued that the solution to the problems created by the division of labour and technology could only be solved by *"association"*, and *"by a broad education, by the obligation of apprenticeship, and by the co-operation of all who take part in the collective work."* This would ensure that *"the division of labour can no longer be a cause of degradation for the workman [or workwoman]."* [**The General Idea of the Revolution**, p. 223]

While as far as technology goes, it may not be enough to get rid of the boss this is a necessary first step. Unless this is done, it will be impossible to transform existing technologies or create new ones which enhance freedom rather than controlling and shaping the worker (or user in general) and enhancing the power and profits of the capitalist. This means that in an anarchist society, technology would have to be transformed and/or developed which empowered those who used it, so reducing any oppressive aspects of it. In the words of Cornelius Castoriadis, the *"conscious transformation of technology will therefore be a central task of a society of free workers."* [**Op. Cit.**, p. 104] As German anarchist Gustav Landauer stressed, most are *"completely unaware of how fundamentally the technology of the socialists differs from capitalist technology ... Technology will, in a cultured people, have to be directed to the psychology of free people who want to use it."* This will happen when *"the workers themselves determine under what conditions they want to work,"* step out of *"capitalism mentally and physically"*, and *"cease playing a role in it and begin to be men [and women]."* [*"For Socialism,"* pp. 184–6, **Anarchism**, Robert Graham (ed.), p. 285 and p. 286]

Thus most anarchists would agree with Bookchin's comment that technology *"is necessarily liberatory or consistently beneficial to man's development"* but we *"do not believe that man is destined to be enslaved by technology and technological modes of thought."* A free society *"will not want to negate technology precisely because it is liberated and can strike a balance"* and create a

"technology for life," a liberatory technology based on human and ecological needs. [**Op. Cit.**, p. 43 and p. 80] See section I.4.9 for more discussion on technology within an anarchist society.

D.11 Can politics and economics be separated from each other?

A key aspect of anarchism is the idea that the political and economic aspects of society cannot be separated. Section D has been an attempt to show how these two aspects of society interact and influence each other. This means that economic liberty cannot be separated from political liberty and vice versa. If working class people are subject to authoritarian political organisations then their economic liberty will likewise be restricted and, conversely, if their economic freedoms are limited then so, too, will their political freedoms. As Proudhon put it, *"industrial liberty is inseparable from political liberty."* [quoted by Alan Ritter, **The Political Thought of Pierre-Joseph Proudhon**, p. 188]

Some disagree, arguing that economic liberty is of primary importance. When Milton Friedman died in 2006, for example, many of his supporters parroted his defence of working with the Pinochet regime and noted that Chile had (eventually) become a democracy. For Friedman, this justified his praise for the "economic liberty" the regime had introduced and rationalised the advice he gave it. For him, Chile provided his earlier assertion that *"economic freedom is an indispensable means toward the achievement of political freedom."* For while Friedman stated that there was *"an intimate connection between economics and politics,"* he meant simply that capitalism was required to produce democracy (to use his words, *"capitalism is a necessary condition for political freedom"*). [**Capitalism and Freedom**, p. 8 and p. 10]

So it should first be stressed that by "economic liberty" Friedman meant capitalism and by "political liberty" he meant representative government and a democratic state. Anarchists would disagree that either of those institutions have much to do with genuine liberty. However, we will ignore this for the moment and take his general point. Sadly, such a position makes little sense. In fact, Friedman's separation of "economic" and "political" liberties is simply wrong as well as having authoritarian implications and lacking empirical basis.

The easiest way of showing that statism and capitalism cannot be separated is to look at a country where "economic liberty" (i.e. free market capitalism) existed but "political liberty" (i.e. a democratic government with basic human rights) did not. The most obvious example is Pinochet's Chile, an experiment which Friedman praised as an "economic miracle" shortly before it collapsed. In section C.11 we discussed the Chilean "economic miracle" at face value, refusing to discuss the issue of whether describing the regime as one of "economic liberty" could be justified. Rather, we exposed the results of applying what leading ideologues of capitalism have called "free market" policies on the country. As would be expected, the results were hardly an "economic miracle" if you were working class. Which shows how little our lives are valued by the elite and their "experts."

As to be expected with Friedman, the actual experience of implementing his economic dogmas in Chile refuted them. Much the same can be said of his distinction of "economic" and "political" liberty. Friedman discussed the Chilean regime in 1991, arguing that *"Pinochet and the military*

in Chile were led to adopt free market principles after they took over only because they did not have any other choice." [**Economic Freedom, Human Freedom, Political Freedom**] This is an interesting definition of *"free market principles."* It seems to be compatible with a regime in which the secret police can seize uppity workers, torture them and dump their bodies in a ditch as a warning to others.

For Friedman, the economic and political regimes could be separated. As he put it, *"I have nothing good to say about the political regime that Pinochet imposed. It was a terrible political regime. The real miracle of Chile is not how well it has done economically; the real miracle of Chile is that a military junta was willing to go against its principles and support a free market regime designed by principled believers in a free market."* [**Op. Cit.**] How, exactly, could the political regime **not** impact on the economic one? How is a "free market" possible if people who make up the labour market are repressed and in fear of their lives? True, the Chilean workers could, as workers in Tsarist Russia, *"change their jobs without getting permission from political authorities"* (as Friedman put it [**Capitalism and Freedom**, p. 10]), however this is only a small part of what anarchists consider to be genuine economic liberty.

To see why, it is useful to show a snapshot of what life was like under Friedman's "economic liberty" for working class people. Once this is done, it is easy to see how incredulous Friedman was being. Peter Winn gives a good description of what Chile's "economic liberty" was based on:

> *"In the wake of the coup, most of the 'revolutionary' leaders of the textile workers disappeared, some to unmarked graves, jails, or concentration camps, others to exile or the underground resistance. Moreover, when the textile factories resumed production, it was under military administration and with soldiers patrolling the plants. Authoritarian management and industrial discipline were reimposed at the point of a bayonet, and few workers dared to protest. Some feared for their lives or liberty; many more feared for their jobs. Military intelligence officers interrogated the workers one by one, pressing them to inform on each other and then firing those considered to be leftist activists. The dismissals often continued after the mills were returned to their former owners, at first for political reasons or for personal revenge, but, with the recession of 1975, for economic motives as well. The unions, decimated by their leadership losses, intimidated by the repression, and proscribed by military decree from collective bargaining, strikes, or other militant actions, were incapable of defending their members' jobs, wages, or working conditions. With wages frozen and prices rising rapidly, living standards fell precipitously, even for those fortunate enough to keep their jobs."* [*"No Miracle for Us"*, Peter Winn (ed.), **Victims of the Chilean Miracle: Workers and Neoliberalism in the Pinochet Era, 1973–2002**, p. 131]

In the copper mines, *"[h]undreds of leftist activists were fired, and many were arrested and tortured ... the military exercised a firm control over union leaders and activity within the unions remained dormant until the 1980s."* The *"decade following the military coup was defined by intense repression and a generalised climate of terror and fear."* Workers recalled that people who spoke at union meetings were detained and until 1980 police permission was required to hold a meeting, which was held under police supervision. At work, *"supervisors and foremen ruled with an authoritarian discipline"* while miners *"reported that spies denounced workers who talked politics*

or spoke at union meetings to the company administration and police." [Thomas Miller Klubock, *"Class, Community, and Neoliberalism in Chile"*, Winn (ed.), **Op. Cit.**, p. 214 p. 216 and p. 217]

Over all, Workers *"bore the brunt of the repression during the military take-over and throughout the Pinochet regime. The armed forces viewed workers — and the level of organisation they had achieved under previous governments — as the greatest threat to traditional power structure in Chile ... Armed troops went after workers in general and union members and leaders in particular with a virulence that contradicted their claim to be stamping out 'class hatred.'"* As for the relationship between "economic" and "political" liberty, the latter was dependent on the end of the former: *"Fear of repression was clearly essential to the implementation of free-market labour policies, but far more pervasive was the fear of unemployment"* generated by the so-called "economic miracle." [John Lear and Joseph Collins, *"Working in Chile's Free Market"*, pp. 10–29, **Latin American Perspectives**, vol. 22, No. 1, pp. 12–3 and p. 14]

Thus the ready police repression made strikes and other forms of protest both impractical and dangerous. When working class people did take to the streets after the economic crash of 1982, they were subject to intense state repression as Pinochet *"cracked down, sending in army troops to curb the demonstrators."* According to a report by the Roman Catholic Church 113 protesters had been killed during social protest, with several thousand detained for political activity and protests between May 1983 and mid-1984. Thousands of strikers were also fired and union leaders jailed. [Rayack, **Op. Cit.**, p. 70] In fact, the *"brutal government repression put even the militant copper miners on the defensive."* [Winn, *"The Pinochet Era"*, Winn (ed.), **Op. Cit.**, p. 43] Workers were aware that the regime *"was likely to use the full rigour of the law against workers who acted in defence of their interests. Moreover, even though the arbitrary actions of the secret police diminished in the last years of the dictatorship, they did not disappear, nor did their internalised legacy. Fear of becoming a target of repression still exercised a chilling effect on both workers and their leaders."* [Winn, *"No Miracle for Us"*, Winn (ed.), **Op. Cit.**, p. 133]

All of which puts into stark light Friedman's 1982 comment that *"Chile is an even more amazing political miracle. A military regime has supported reforms that sharply reduce the role of the state and replace control from the top with control from the bottom."* [quoted by Rayack, **Not so Free to Choose**, p. 37] Clearly Friedman had no idea what he was talking about. While the *"role of the state"* **was** reduced in terms of welfare for the masses, it was obviously massively **increased** in terms of warfare against them (we will address the *"control from the bottom"* nonsense shortly).

For anarchists, it is simply common-sense that "economic liberty" cannot exist within an authoritarian state for the mass of the population. In reality, the economic and political regime cannot be so easily compartmentalised. As Malatesta noted, *"every economic question of some importance automatically becomes a political question ... Workers' organisations must therefore, of necessity, adopt a line of action in face of present as well as possible future government action."* [**Errico Malatesta: His Life and Ideas**, pp. 130–1] Such common-sense is sadly lacking with Friedman who seriously seems to believe that "economic liberty" could exist without the freedom of workers to take collective action if they so desired. In other words, the "economic miracle" Friedman praises was built on the corpses, fears and backs of working class people. Unlike Friedman, Chile's workers and bosses know that *"employers could count on the backing of the military in any conflict with workers."* [Lear and Collins, **Op. Cit.**, p. 13] As can be seen, Malatesta had a much firmer grasp of the question of liberty that Friedman, as expected as the latter equals it with capitalism and its hierarchies while the former spent much of his live in prison and exile

trying to increase the freedom of working class people by fighting the former and the state which maintains them.

As we argued in section D.1.4, laissez-faire capitalism does not end statism. Rather it focuses it on purely defending economic power (i.e. "economic liberty" for the capitalist class). The example of Chile's "economic liberty" proves this beyond doubt and shows that the separation of economic and political freedom is impossible and, consequently, both capitalism **and** the state need to be fought and, ultimately, abolished.

D.11.1 What does Chile tell us about the right and its vision of liberty?

The key to understanding how Friedman managed to ignore the obvious lack of "economic liberty" for the bulk of the population under Pinochet lies in remembering that he is a supporter of capitalism. As capitalism is a hierarchical system in which workers sell their liberty to a boss, it comes as no real surprise that Friedman's concern for liberty is selective.

Pinochet did introduce free-market capitalism, but this meant real liberty only for the rich. For the working class, "economic liberty" did not exist, as they did not manage their own work nor control their workplaces and lived under a fascist state. The liberty to take economic (never mind political) action in the forms of forming unions, going on strike, organising go-slows and so on was severely curtailed by the very likely threat of repression. Of course, the supporters of the Chilean "Miracle" and its "economic liberty" did not bother to question how the suppression of political liberty effected the economy or how people acted within it. They maintained that the repression of labour, the death squads, the fear installed in rebel workers could be ignored when looking at the economy. But in the real world, people will put up with a lot more if they face the barrel of a gun than if they do not. So the claim that "economic liberty" existed in Chile makes sense only if we take into account that there was only **real** liberty for one class. The bosses may have been "left alone" but the workers were not, unless they submitted to authority (capitalist or state). Hardly what most people would term as "liberty".

Beyond the ideologues of capitalism who term themselves "economists," it is generally admitted that the "labour market," if it exists, is a somewhat unique market. As "labour" cannot be separated from its owner, it means that when you "buy" labour you "buy" the time, and so liberty, of the individual involved. Rather than be bought on the market all at once, as with a slave, the wage slave's life is bought piecemeal. This is the key to understanding Friedman's nonsensical claims for never forget that by "economic freedom" he means capitalism. To understand the difference we need only compare two of Friedman's arguments to the reality of capitalism. Once we do that then his blindness to Chile's neo-liberal dictatorship's impact on genuine economic liberty becomes clear.

The most obvious fallacy within his argument is this assertion:

> *"A characteristic feature of a free private market is that all parties to a transaction believe that they are going to be better off by that transaction. It is not a zero sum game in which some can benefit only at the expense of others. It is a situation in which everybody thinks he is going to be better off."* [**Economic Freedom, Human Freedom, Political Freedom**]

Who can deny that the worker who sells her liberty to the autocrat of a capitalist firm is *"going to be better off"* than one starving to death? As we noted in section B.4.1, Friedman avoids the obvious fact that a capitalist economy is dependent on there being a class of people who have no means of supporting themselves **except** by selling their labour (i.e. liberty). While full employment will mitigate this dependency (and, as a result, bring the system to crisis), it never goes away. And given that Pinochet's *"free market regime designed by principled believers in a free market"* had substantial unemployment, it is unsurprising that the capitalist was *"better off"* than the worker as a result. As the experience of the *"free private market"* in Chile suggests, workers need to be free to organise without the fear of death squads otherwise they will be oppressed and exploited by their bosses. By denying that freedom, Pinochet's regime could only be considered "free" by the ideologues and savants of capitalism. The only positive thing that can be said is that it provided empirical evidence that the ideal neo-classical labour market would increase inequality and exploitation (see section C.11.3).

The problem with Friedman's argument is that he fails to recognise the hierarchical nature of capitalism and the limited liberty it produces. This can be seen from Friedman's comparison of military dictatorships to capitalism:

> *"Almost all military juntas are adverse to economic freedom for obvious reasons. The military is organised from the top down: the general tells the colonel, the colonel tells the captain, the captain tells the lieutenant, and so on. A market economy is organised from the bottom up: the consumer tells the retailer, the retailer tells the wholesaler, the wholesaler tells the producer, and the producer delivers. The principles underlying a military organisation are precisely the reverse of those underlying a market organisation."* [**Op. Cit.**]

Obviously geometry was not Friedman's strong point. A "market economy" is characterised by **horizontal** links between workplaces and consumers, not vertical ones. However, the key issue is that the dominant *"market organisation"* under capitalism ***is*** marked by the *"principles underlying a military organisation."* To present a more accurate picture than Friedman, in the *"market organisation"* of a capitalist firm the boss tells the worker what to do. It is *"organised from the top down"* just as a military junta is. That Friedman ignores the organisational structure which 90% of the population have to operate within for most of their waking hours is significant. It shows how little he understands of capitalism and "economic freedom."

In Pinochet's Chile, the workplace **did** become more like *"a military organisation."* Without effective unions and basic human rights, the bosses acted like the autocrats they are. Discussing the textile industry, Peter Winn notes that *"most mill owners took full advantage of the regime's probusiness Labour Code ... At many mills, sweatshop conditions prevailed, wages were low, and management was authoritarian, even tyrannical ... Workers might resent these conditions, but they often felt powerless to oppose them. Informers and the threat of dismissal kept even alienated and discontented workers in line."* [*"No Miracle for Us"*, Winn (ed.), **Op. Cit.**, p. 132 and pp. 132–3] John Lear and Joseph Collins generalise the picture, noting that *"[i]n wake of the coup, factory owners suddenly had absolute control over their workers and could fire any worker without case. From 1973 through 1978, practically every labour right for organised and unorganised workers was suspended. All tools of collective bargaining, including of course the right to strike, were outlawed."* [**Op. Cit.**, p. 13] The Junta themselves had no illusions about the military-like regime they

desired within the workplace, stating in 1974 its intention of *"imposing authority and discipline in production and labour relations."* [quoted by Joseph Collins and John Lear, **Chile's Free-Market Miracle: A Second Look**, p. 27]

The reality of life under Pinochet for working class people should make anyone with sense wary of praising the regime in any way, but Friedman argued that the *"results were spectacular. Inflation came down sharply. After a transitory period of recession and low output that is unavoidable in the course of reversing a strong inflation, output started to expand, and ever since, the Chilean economy has performed better than any other South American economy."* [**Op. Cit.**] Of course, by downplaying the deep recession caused by applying his recommended *"shock-treatment"* policies, Friedman can confuse the high growth resulting from coming out of the boom combined with ready repression on labour with sound economic policies. Strangely he failed to mention the *"spectacular"* recession of 1982 which wiped out the gains of 1976 to 1981. As indicated in section C.11, looking over the whole of the Pinochet period the results were hardly *"spectacular"* (unless you were rich) and the moderate gains were paid for by the working class in terms of longer hours, lower pay and political and economic oppression.

In other words, Friedman and the 'Chicago boys' provided an appearance of technical respectability to the dreams, greed and power of the landlords and capitalists who made up the Chilean oligarchy. The military simply applied the brutal force required to achieve those goals. As such, there is only an apparent contradiction between political tyranny and "economic liberty," not a real one. Repression for the working class and "economic liberty" for the elite are two sides of the same coin.

This should be common-sense and, as such, it is nonsensical for the likes of Friedman to support an economic policy while pretending to reject the system of terror it required to implement. After all, economic policies do not occur in a social and political vacuum. They are conditioned by, and at the same time modify, the social and political situation where they are put into practice. Thus there cannot be "economic liberty" for workers if they expect a visit from the secret police if they talk back to their boss. Yet for Friedman and those like him, there seems to be a lack of awareness of such basic and obvious facts. There is a necessary connection between economic policy (and its outcome) and the socio-political setting in which it is implemented.

Friedman exposes the utter hypocrisy of the supporters of capitalism. His myopia about the reality of the regime was expressed in articles which amount to little more than apologetics for the dictatorship. For example, in 1982 he noted in response to the economic problems of the previous year *"the opposition to the free-market policies that had been largely silence by success is being given full voice."* [quoted by Rayack, **Op. Cit.**, p. p. 63] No mention that the real cause of the *"silence"* of the opposition was not the *"success"* of policies which had impoverished the working class and enriched the elite but, rather, the expectation of a visit by the secret police. Given that Pinochet had sent murder squads to kill prominent dissidents abroad, Friedman's comments are incredulous — particularly as Allende's former foreign minister, Orlando Letelier, was assassinated in Washington in 1976 by a car bomb.

The state terror, the violation of human rights and drastic control and suppression of every form of meaningful dissent is discussed (and often condemned) as something only indirectly linked, or indeed entirely unrelated, to the economic policies that the military imposed. To publicly praise and support the economic policies adopted by the dictatorship while regretting its political regime is simply illogical hypocrisy. However, it does expose the limited nature of the right's concept of liberty as well as its priorities and values.

D.11.2 But surely Chile proves that "economic freedom" creates political freedom?

As noted above, Friedman defended his praise for the Pinochet regime by arguing that its "economic liberty" helped produce the end of the dictatorship. In the words of Friedman:

> *"The economic development and the recovery produced by economic freedom in turn promoted the public's desire for a greater degree of political freedom ... In Chile, the drive for political freedom, that was generated by economic freedom and the resulting economic success, ultimately resulted in a referendum that introduced political democracy. Now, at long last, Chile has all three things: political freedom, human freedom and economic freedom. Chile will continue to be an interesting experiment to watch to see whether it can keep all three or whether, now that it has political freedom, that political freedom will tend to be used to destroy or reduce economic freedom."* [**Op. Cit.**]

It is hard to find an account so skewed by ideological blindness as this. The notion that Chile's "free market" capitalism provided the base for eliminating Pinochet's dictatorship is hard to defend. If it were true then we would expect Pinochet's rule to be substantially shorter than other military dictatorships in the region. However, this is **not** the case. For example, Argentina's Military Junta lasted from 1976 to 1983, 7 years; Peru's 12 years (1968 to 1980); Uruguay's 12 years (1973 to 1985); Bolivia's 18 years (1964 to 1982). Pinochet's lasted 17 years, exceeded by Brazil's 21 years (1964 to 1985). If Friedman's argument were valid then Pinochet would have fallen long before the rest. In fact, Chile was one of the last Latin American countries to return to democracy.

Nor can it be said that ending of the Pinochet regime was an automatic outcome of economic forces. Rather, it was a product of struggle by ordinary people who took to the streets in the early 1980s to protest in the face of state repression. The regime was subject to popular pressures from below and these, not capitalism, were the key factor. After all, it was not "economic liberty" which produced the desire for "political freedom." Working class people could remember what political freedom was before it was destroyed in order to create Friedman's "economic liberty" and tried to recreate it.

In the face of state terror, political activists and trade unionists fought the regime. The 1988 referendum Friedman alludes to was the product of this heroic activity, not some abstract economic force. As Cathy Schneider points out, the 1983–86 *"cycle of protests had set the stage for a negotiated transition to democracy in 1990."* These protests, it should be noted, were subject to extreme state repression (one demonstration saw Pinochet send 18,000 troops onto the streets, who shot 129 people, 29 fatally, and tortured some of the 1,000 arrested). [**Shantytown protest in Pinochet's Chile**, p. 194 and p. 165] Peter Winn, for example, notes *"the resistance of workers to both the dictatorship and its neoliberal policies, often against great odds and at great risks."* In fact, *"during the Pinochet era, with its repression and restrictions on union activism, Chile's workers displayed great creativity in devising new ways to resist ... Nor was this resistance confined to the workplace or workers' issues ... it was Chile's workers who first raised the flag of political resistance against the dictatorship in the 1970s and sustained it during the years when political parties were banned. And it was the copper miners who mobilised the social protests and political opposition to*

the military regime in the 1980s to demand an end to Pinochet's dictatorship and the restoration of democracy and civil liberties." [*"Introduction"*, Winn (ed.), **Op. Cit.**, p. 11] This is confirmed by John Lear and Joseph Collins, who note that *"[d]uring the mid-1980s, unions were fundamental to organising the national protests that led eventually to the negotiations of the 1988 plebiscite."* [**Op. Cit.**, p. 20]

This, it should be noted, has always been the case. Political freedoms have **never** been given by the powers that be but rather won by long struggles by working class people. This has always been the case, as Kropotkin stressed basic political liberties were *"extorted from parliament by force, by agitations that threatened to become rebellions. It was by establishing trade unions and practising strike action despite the edicts of Parliament and the hangings"* that workers *"won the right to associate and strike"* in Britain for example. [**Words of a Rebel**, pp. 123–4] To ignore that often heroic struggle shows an ignorance about history which only matches an ignorance about liberty. The history of capitalism is important in this regard. It first developed under Absolutist states which used its power to bolster the position of their capitalist class within both national (against the working class) and international markets (against foreign competitors). As we discuss in section F.8, they actively intervened to create the pre-conditions for generalised wage slavery before becoming a handicap to the rising bourgeoisie. These regimes were generally replaced by liberal states with limited voting rights which generally lifted the burden of state regulation from the capitalist class. The working class had to fight long and hard to win basic civil liberties and the vote. As Chomsky notes, such progress *"didn't just happen; it happened through the struggles of the labour movement, and the Civil Rights Movement, and the women's movement, and everything else. It's the popular movements which expanded the domain of freedom of speech [and other liberties] until it began to be meaningful."* [**Understanding Power**, pp. 268–9]

Once these rights were won, the ruling elite has always turned to fascism to control them once they started to threaten their power and wealth. This obviously applies to Chile. Until the coup of 11 September 1973, Chile had been seen increasing participation of the working class in economic and social decision making. The coup was, simply, a massive class revenge of the wealthy against a working class which had dared to imagine that another world was possible. Unsurprisingly, given the key role of working class people in the struggle for freedom, *"Worker leaders and activists ... were central targets of the military regime's state terror, whose goal was to intimidate them into passivity, in large part so that neoliberal policies could be imposed."* [Peter Winn, *"Introduction"*, **Op. Cit.**, p. 12] Equally unsurprising, those who had taken to the streets aimed for political freedom in order to **end** the "economic liberty" imposed by the regime.

This means that Friedman's maxim that economic liberty is required to produce political liberty is a deeply flawed position to take. Not only does it ignore the popular struggles which have always had to be fought to end minority government, it also allows its advocates to justify and work with authoritarian regimes. At best, this position ensures that you will be indifferent to the destruction of political freedom as long as "economic liberty" (i.e. capitalism) was secured. At worse, it ensures that you would actively support such a destruction as you can justify it in terms of a return to "democracy" in the long run. Friedman and the "Chicago Boys" express both ends of that spectrum. That he can comment on *"the paradox that economic freedom produces political freedom but political freedom may destroy economic freedom"* in the context of Chile is staggering, as it was the destruction of "political freedom" that allowed "economic freedom" (for the rich) to be imposed. [**Op. Cit.**] In reality, Chile provides evidence to support the alternative argument

that the introduction of free market capitalism requires the elimination or, at best, the reduction of "political liberty."

In other words, fascism was an ideal political environment to introduce "economic liberty" **because** it had destroyed political liberty. Perhaps we should conclude that the denial of political liberty is both necessary and sufficient in order to create (and preserve) "free market" capitalism? After all, the history of capitalism has been marked by the ruling class overthrowing "political liberty" when their power was threatened by popular movements. In other words, that Malatesta was right to argue that the *"capitalists can maintain the struggle in the economic field so long as workers demand small ... improvements; but as soon as they see their profits seriously diminished and the very existence of their privileges threatened, they appeal to government and if it is not sufficiently understanding and not strong enough to defend them ... they use their own wealth to finance new repressive forces and to set up a new government which will serve them better."* [**Op. Cit.**, p. 131]

Friedman's argument implies that "economic liberty" is more important than "political liberty," so making people less concerned about dictatorships as long as they support the interests of the capitalist class. While the long list of capitalists, conservatives and right-wing ("classical") liberals who supported fascism or fascist-like regimes shows that giving them an ideological prop to justify it is unnecessary, it is hardly wise.

Then there is the question of whether Chile does, in fact, have genuine political liberty (i.e. a democratic government). The answer is, not quite. Chile's democracy is a "managed" one, constrained both by the political legacy of Pinochet's constitution and the threat of military intervention. Significantly, Friedman seems unconcerned about the quality of the post-Pinochet democracy Chile experiences. Simply put, the existence of an electoral regime cannot be confused with democracy or "political liberty."

It is clear that Pinochet went into the 1988 plebiscite expecting to win (particularly as he tried to rig it like the 1980 one). According to many reports from members of his cabinet and staff, he was absolutely furious and wanted to annul the results. The popular backlash this would have created ensured he abided by the result. Instead, he ensured that the new governments had to accept his authoritarian constitution and decree-laws. In other words, knowing he would be replaced he immediately took steps to limit the subsequent democratically elected governments as well as remaining as the head of the armed forces (as we discuss below, this obviously ensures the threat of a coup hung over the new governments).

This means that post-Pinochet Chile is not your typical "democracy." Pinochet became an unelected senator for life after his retirement as armed forces commander in March 1998 and 28% of the Senate is *"designated,"* including four retired military officers named by the National Security Council. Pinochet also imposed a *"unique binomial electoral law, [in] which to elect two deputies or senators from the same district, a party or electoral alliance needed to double its opponent's vote — a difficult feat — or else the opponent received an equal number of seats in congress."* This ensured rightist control of the Senate despite a decade of majority victories by the centre-left in elections and so *"Pinochet's 'designated senators' and undemocratic electoral law continued to frustrate the popular will and limit Chile's restored democracy."* The majority could not *"pass laws without the consent of its rightist opponents."* Pinochet used *"final months as president to decree laws that would hamstring his opponents, even if a majority of the electorate supported them."* In addition, any new government was *"confronted by a judiciary and government bureaucracy packed by Pinochet with his own adherents. Moreover, the Right enjoyed a near monopoly of the press and media that grew as the decade advanced."* [Winn, *"The Pinochet Era"*, **Op. Cit.**, p. 64 and p. 49]

Thus Chile is lumbered with Pinochet's legacy, *"the authoritarian constitution of 1980, which sought to create a 'protected democracy' under military tutelage. It was written so as to be difficult to amend and designed to handcuff a future opposition government and frustrate popular will."* It *"removed the military from civilian control, while submitting future elected governments to a military-dominated National Security Council with a vague but broad purview."* It also *"banned measures against private property."* With some *"relative minor modifications of some of its most egregious features during the transition to democracy"* it remained *"in effect for the rest of the century"* and in 2004 was *"still Chile's fundamental charter."* [Winn, **Op. Cit.**, p. 30] This constitution built upon the work of right-"libertarian" Friedrich von Hayek and, unsurprisingly aimed to insulate "economic liberty" from popular pressures, i.e. to limit and reduce democracy to secure the freedom of capitalism (and, of course, the capitalist class).

In addition, the threat of military intervention is always at the forefront of political discussions. For example, on 11 September 1990, Pinochet *"warned that he would lead another coup is conditions warranted it. In 1993, when investigations into an arms procurement scandal implicated his son, Pinochet ordered combat-ready troops and tanks onto the streets for an 'exercise' ... Throughout the Aylwin presidency, Pinochet maintained an army 'shadow cabinet' that acted as a political pressure group."* Unsurprisingly, the first post-Pinochet government *"often backed down in practice for the sake of social peace – or out of fear of endangering the transition to democracy. As a result, Aylwin was unable to fulfil his promises of constitutional and institutional reforms that would reverse Pinochet's authoritarian legacy."* This was because the new government thought that the coup and dictatorship *"reflected the decision of business elites to call in the military, because they could not protect their core interests under Chile's radicalised democracy. The lesson that ... [they] drew ... was that to avoid its repetition in the 1990s it was necessary to reassure business that its interests would be protected."* [Winn, **Op. Cit.**, p. 50 and p. 53]

The limited nature of Chile's democracy was seen in 1998, when Pinochet was arrested in Britain in regard of a warrant issued by a Spanish Judge for the murders of Spanish citizens during his regime. Commentators, particularly those on the right, stressed that Pinochet's arrest could undermine Chile's "fragile democracy" by provoking the military. In other words, Chile is only a democracy in-so-far as the military let it be. Of course, few commentators acknowledged the fact that this meant that Chile was not, in fact, a democracy after all.

All of which explains why subsequent governments have only tinkered with the free-market policies introduced by Pinochet. They have dared not reverse them not due to their popular nature but to the obvious fact that recent Chilean history shows that progressive politicians and their supporters have something to fear besides losing an election. Unsurprisingly, workers *"socio-economic aspirations were postponed in the interest of not jeopardising the transition and their expectations of labour law reform were sacrificed on the same alter."* [Winn, *"Introduction"*, Winn (ed.), **Op. Cit.**, p. 10] While 2002 saw the election of the first socialist president since Allende, it is unlikely that Chile will experience anything beyond minor reforms — the legacy of fear and political restrictions will ensure that the ruling class will have little to fear from "political liberty" being used by politicians to curb their power and wealth.

Then there is the social legacy of 17 years of dictatorship. As one expert on Latin America, Cathy Scheider, noted in 1993, *"the transformation of the economic and political system"* under Pinochet *"has had a profound impact on the world view of the typical Chilean,"* with most having *"little contact with other workers or with their neighbours, and only limited time with their family. Their exposure to political or labour organisations is minimal... they lack either the political*

resources or the disposition to confront the state. The fragmentation of opposition communities has accomplished what brute military repression could not. It has transformed Chile, both culturally and politically, from a country of active participatory grassroots communities, to a land of disconnected, apolitical individuals. The cumulative impact of this change is such that we are unlikely to see any concerted challenge to the current ideology in the near future." [quoted by Noam Chomsky, **World Orders, Old and New**, p. 184]

In such circumstances, political liberty can be re-introduced, as no one is in a position to effectively use it. In addition, Chileans live with the memory that challenging the state in the near past resulted in a fascist dictatorship murdering thousands of people as well as repeated and persistent violations of human rights by the junta, not to mention the existence of "anti-Marxist" death squads — for example in 1986 *"Amnesty International accused the Chilean government of employing death squads."* [P. Gunson, A. Thompson, G. Chamberlain, **Op. Cit.**, p. 86] According to one Human Rights group, the Pinochet regime was responsible for 11,536 human rights violations between 1984 and 1988 alone. [Calculation of *"Comite Nacional de Defensa do los Derechos del Pueblo,"* reported in **Fortin**, September 23, 1988]

These facts that would have a strongly deterrent effect on people contemplating the use of political liberty to actually **change** the status quo in ways that the military and economic elites did not approve of. This does not mean, of course, that the Chilean people are not resisting oppression and exploitation and rebuilding their organisations, simply that using free speech, striking and other forms of social action is more difficult. That is protects and increases the power, wealth and authority of the employer and state over their wage slaves goes without sating — it was what was intended. As Kropotkin pointed out years ago, *"freedom of press ... and all the rest, are only respected if the people do not make use of them against the privileged classes. But the day the people begin to take advantage of them to undermine those privileges, then the so-called liberties will be cast overboard."* [**Op. Cit.**, p. 42] Chile is a classic example of this, a bloody example which helps deter genuine democracy in that country decades later.

Section E — What do anarchists think causes ecological problems?

This section of the FAQ expands upon section D.4 ("What is the relationship between capitalism and the ecological crisis?") in which we indicated that since capitalism is based upon the principle of "grow or die," a "green" capitalism is impossible. By its very nature capitalism must expand, creating new markets, increasing production and consumption, and so invading more ecosystems, using more resources, and upsetting the interrelations and delicate balances that exist with ecosystems. We have decided to include a separate section on this to stress how important green issues are to anarchism and what a central place ecology has in modern anarchism.

Anarchists have been at the forefront of ecological thinking and the green movement for decades. This is unsurprisingly, as many key concepts of anarchism are also key concepts in ecological thought. In addition, the ecological implications of many anarchist ideas (such as decentralisation, integration of industry and agriculture, and so forth) has meant that anarchists have quickly recognised the importance of ecological movements and ideas.

Murray Bookchin in particular has placed anarchist ideas at the centre of green debate as well as bringing out the links anarchism has with ecological thinking. His eco-anarchism (which he called **social ecology**) was based on emphasising the **social** nature of the ecological problems we face. In such classic works as **Post-Scarcity Anarchism**, **Toward an Ecological Society** and **The Ecology of Freedom** he has consistently argued that humanity's domination of nature is the result of domination **within** humanity itself.

However, anarchism has always had an ecological dimension. As Peter Marshall notes in his extensive overview of ecological thought, ecologists *"find in Proudhon two of their most cherished social principles: federalism and decentralisation."* He *"stands as an important forerunner of the modern ecological movement for his stress on the close communion between humanity and nature, for his belief in natural justice, for his doctrine of federalism and for his insight that liberty is the mother and not the daughter of order."* [**Nature's Web**, p. 307 and p. 308] For Proudhon, a key problem was that people viewed the land as *"something which enables them to levy a certain revenue each year. Gone is the deep feeling for nature."* People *"no longer love the soil. Landowners sell it, lease it, divide it into shares, prostitute it, bargain with it and treat it as an object of speculation. Farmers torture it, violate it, exhaust it and sacrifice it to their impatient desire for gain. They never become one with it."* We *"have lost our feeling for nature."* [**Selected Writings of Pierre-Joseph Proudhon**, p. 261]

Other precursors of eco-anarchism can be found in Peter Kropotkin's writings. For example, in his classic work **Fields, Factories and Workshops**, Kropotkin argued the case for *"small is beautiful"* 70 years before E. F. Schumacher coined the phase, advocating *"a harmonious balance between agriculture and industry. Instead of the concentration of large factories in cities, he called for economic as well as social decentralisation, believing that diversity is the best way to organise production by mutual co-operation. He favoured the scattering of industry throughout the country and the integration of industry and agriculture at the local level."* His vision of a decentralised commonwealth based on an integration of agriculture and industry as well as manual and intellectual work has obvious parallels with much modern green thought, as does his stress on the need for **appropriate** levels of technology and his recognition that the capitalist market distorts the development, size and operation of technology and industry. Through his investigations in geography and biology, Kropotkin discovered species to be interconnected with each other and with their environment. **Mutual Aid** is the classic source book on the survival value of co-operation within species which Kropotkin regarded as an important factor of evolution, arguing that those who claim competition within and between species is the chief or only factor have

distorted Darwin's work. All this ensures that Kropotkin is *"a great inspiration to the modern ecological movement."* [Marshall, **Op. Cit.**, p. 311 and p. 312]

As well as Kropotkin's work, special note must be made of French anarchist Elisee Reclus. As Clark and Martin note, Reclus introduced *"a strongly ecological dimension into the tradition of anarchist and libertarian social theory".* He made *"a powerful contribution to introducing this more ecological perspective into anarchist thought,"* of *"looking beyond the project of planetary domination and attempting to restore humanity to its rightful place within, rather than above, nature."* Reclus, *"much more than Kropotkin, introduced into anarchist theory themes that were later developed in social ecology and eco-anarchism."* [John P. Clark and Camille Martin (ed.), **Anarchy, Geography, Modernity**, p. 19] For example, in 1866 Reclus argued as follows:

> *"Wild nature is so beautiful. Is it really necessary for man, in seizing it, to proceed with mathematical precision in exploiting each new conquered domain and then mark his possession with vulgar constructions and perfectly straight boundaries? If this continues to occur, the harmonious contrasts that are one of the beauties of the earth will soon give way to depressing uniformity ...*
>
> *"The question of knowing which of the works of man serves to beautify and which contributes to the degradation of external nature can seem pointless to so-called practical minds; nevertheless, it is a matter of the greatest importance. Humanity's development is most intimately connected with the nature that surrounds it. A secret harmony exists between the earth and the peoples whom it nourishes, and when reckless societies allow themselves to meddle with that which creates the beauty of their domain, they always end up regretting it."* [quoted by Clark and Martin, **Op. Cit.**, pp. 125–6]

"Man," Reclus says, can find beauty in *"the intimate and deeply seated harmony of his work with that of nature."* Like the eco-anarchists a century later, he stressed the social roots of our environmental problems arguing that a *"complete union of Man with Nature can only be effected by the destruction of the frontiers between castes as well as between peoples."* He also indicated that the exploitation of nature is part and parcel of capitalism, for *"it matters little to the industrialist ... whether he blackens the atmosphere with fumes ... or contaminates it with foul-smelling vapours."* *"Since nature is so often desecrated by speculators precisely because of its beauty,"* Reclus argued, *"it is not surprising that farmers and industrialists, in their own exploitative endeavours, fail to consider whether they contribute to defacing the land."* The capitalist is *"concerned not with making his work harmonious with the landscape."* [quoted by Clark and Martin, **Op. Cit.**, p. 28, p. 30, p. 124 and p. 125] Few modern day eco-anarchists would disagree.

So, while a specifically ecological anarchism did not develop until the revolutionary work done by Murray Bookchin from the 1950's onwards, anarchist theory has had a significant "proto-green" content since at least the 1860s. What Bookchin and writers like him did was to make anarchism's implicit ecological aspects explicit, a work which has immensely enriched anarchist theory and practice.

In addition to pointing out the key role ecology plays within anarchism, this section is required to refute some commonly proposed solutions to the ecological problems we face. While it is wonderful that green ideas have becoming increasingly commonplace, the sad fact is that many people have jumped on the green bandwagon whose basic assumptions and practices are deeply anti-ecological. Thus we find fascists expounding on their environmental vision or defenders

of capitalism proposing "ecological" solutions based on expanding private property rights. Similarly, we find the notion of green consumerism raised as viable means of greening the planet (rather than as an addition to social struggle) or a focus on symptoms (such as population growth) rather than root causes. This section refutes many such flawed suggestions.

A key concept to remember in our discussion is that between environmentalism and ecology. Following Bookchin, eco-anarchists contrast their ideas with those who seek to reform capitalism and make it more green (a position they term *"environmentalism"* rather than ecology). The latter *"focus on specific issues like air and water pollution"* while ignoring the social roots of the problems they are trying to solve. In other words, their outlook *"rest[s] on an instrumental, almost engineering approach to solving ecological dislocations. To all appearances, they wanted to adapt the natural world to the needs of the existing society and its exploitative, capitalist imperatives by way of reforms that minimise harm to human health and well-being. The much-needed goals of formulating a project for radical social change and for cultivating a new sensibility toward the natural world tended to fall outside the orbit of their practical concerns."* Eco-anarchists, while supporting such partial struggles, stress that *"these problems originate in a hierarchical, class, and today, competitive capitalist system that nourishes a view of the natural world as a mere agglomeration of 'resources' for human production and consumption."* [**The Ecology of Freedom**, pp. 15–6] This means that while some kind of environmentalism may be possible under capitalism or some other authoritarian system, an ecological approach is impossible. Simply put, the concerns of ecology cannot be squeezed into a hierarchical perspective or private property. Just as an ecosystem cannot be commanded, divided and enclosed, nor can a truly ecological vision. Attempts to do so will impoverish both.

As we discuss in the next section, for anarchists the root cause of our ecological problems is hierarchy in society compounded by a capitalist economy. For anarchists, the notion of an ecological capitalism is, literally, impossible. Libertarian socialist Takis Fotopoulous has argued that the main reason why the project of "greening" capitalism is just a utopian dream *"lies in a fundamental contradiction that exists between the logic and dynamic of the growth economy, on the one hand, and the attempt to condition this dynamic with qualitative interests"* on the other. [*"Development or Democracy?"*, pp. 57–92, **Society and Nature**, No. 7, p. 82] Green issues, like social ones, are inherently qualitative in nature and, as such, it is unsurprising that a system based on profit would ignore them.

Under capitalism, ethics, nature and humanity all have a price tag. And that price tag is god. This is understandable as every hierarchical social system requires a belief-system. Under feudalism, the belief-system came from the Church, whereas under capitalism, it pretends to come from science, whose biased practitioners (usually funded by the state and capital) are the new priesthood. Like the old priesthoods, only those members who produce "objective research" become famous and influential — "objective research" being that which accepts the status quo as "natural" and produces what the elite want to hear (i.e. apologetics for capitalism and elite rule will always be praised as "objective" and "scientific" regardless of its actual scientific and factual content, the infamous "bell curve" and Malthus's "Law of Population" being classic examples). More importantly, capitalism needs science to be able to measure and quantify everything in order to sell it. This mathematical faith is reflected in its politics and economics, where quantity is more important than quality, where 5 votes are better than 2 votes, where $5 is better than $2. And like all religions, capitalism needs sacrifice. In the name of "free enterprise," "economic

efficiency," "stability" and "growth" it sacrifices individuality, freedom, humanity, and nature for the power and profits of the few.

Understanding the social roots of the problems we face is the key. Many greens attack what they consider the "wrong ideas" of modern society, its "materialistic values" and counter-pose **new** ideas, more in tune with a green society. This approach, however, misses the point. Ideas and values do not "just happen", but are the **product** of a given set of social relationships and the struggles they produce. This means that it is not just a matter of changing our values in a way that places humanity in harmony with nature (important though that is), but also of understanding the **social** and **structural** origins of the ecological crisis. Ideas and values **do** need to be challenged, but unless the authoritarian social relationships, hierarchy and inequalities in power (i.e. what produces these values and ideas) are also challenged and, more importantly, **changed** an ecological society is impossible. So unless other Greens recognise that this crisis did not develop in a social vacuum and is not the "fault" of people as **people** (as opposed to people in a hierarchical society), little can be done root out the systemic causes of the problems that we and the planet face.

Besides its alliance with the ecology movement, eco-anarchism also finds allies in the feminist and peace movements, which it regards, like the ecology movement, as implying the need for anarchist principles. Thus eco-anarchists think that global competition between nation-states is responsible not only for the devouring of nature but is also the primary cause of international military tensions, as nations seek to dominate each other by military force or the threat thereof. As international competition becomes more intense and weapons of mass destruction spread, the seeds are being sown for catastrophic global warfare involving nuclear, chemical, and/or biological weapons. Because such warfare would be the ultimate ecological disaster, eco-anarchism and the peace movement are but two aspects of the same basic project. Similarly, eco-anarchists recognise that domination of nature and male domination of women have historically gone hand in hand, so that eco-feminism is yet another aspect of eco-anarchism. Since feminism, ecology, and peace are key issues of the Green movement, anarchists believe that many Greens are implicitly committed to anarchism, whether they realise it or not, and hence that they should adopt anarchist principles of direct action rather than getting bogged down in trying to elect people to state offices.

Here we discuss some of the main themes of eco-anarchism and consider a few suggestions by non-anarchists about how to protect the environment. In section E.1, we summarise why anarchists consider why a green society cannot be a capitalist one (and vice versa). Section E.2 presents a short overview of what an ecological society would be like. Section E.3 refutes the false capitalist claim that the answer to the ecological crisis is to privatise everything while section E.4 discusses why capitalism is anti-ecological and its defenders, invariably, anti-green. Then we indicate why green consumerism is doomed to failure in section E.5 before, in section E.6, refuting the myth that population growth is a **cause** of ecological problems rather than the **effect** of deeper issues.

Obviously, these are hardly the end of the matter. Some tactics popular in the green movement are shared by others and we discuss these elsewhere. For example, the issue of electing Green Parties to power will be addressed in section J.2.4 ("Surely voting for radical parties will be effective?") and so will be ignored here. The question of "single-issue" campaigns (like C.N.D. and Friends of the Earth) will be discussed in section J.1.4. Remember that eco-anarchists, like

all anarchists, take a keen interest in many other issues and struggles and just because we do not discuss something here does not mean we are indifferent to it.

For anarchists, unless we resolve the underlying contradictions within society, which stem from domination, hierarchy and a capitalist economy, ecological disruption will continue and grow, putting our Earth in increasing danger. We need to resist the system and create new values based on quality, not quantity. We must return the human factor to our alienated society before we alienate ourselves completely off the planet.

Peter Marshall's **Nature's Web** presents a good overview of all aspects of green thought over human history from a libertarian perspective, including excellent summaries of such anarchists as Proudhon, Kropotkin and Bookchin (as well as libertarian socialist William Morris and his ecologically balanced utopia **News from Nowhere**).

E.1 What are the root causes of our ecological problems?

The dangers associated with environmental damage have become better known over the last few decades. In fact, awareness of the crisis we face has entered into the mainstream of politics. Those who assert that environmental problems are minor or non-existent have, thankfully, become marginalised (effectively, a few cranks and so-called "scientists" funded by corporations and right-wing think tanks). Both politicians and corporations have been keen to announce their "green" credentials. Which is ironic, as anarchists would argue that both the state and capitalism are key causes for the environmental problems we are facing.

In other words, anarchists argue that pollution and the other environmental problems we face are symptoms. The disease itself is deeply imbedded in the system we live under and need to be addressed alongside treating the more obvious results of that deeper cause. Otherwise, to try and eliminate the symptoms **by themselves** can be little more than a minor palliative and, fundamentally, pointless as they will simply keep reappearing until their root causes are eliminated.

For anarchists, as we noted in section A.3.3, the root causes for our ecological problems lie in social problems. Bookchin uses the terms *"first nature"* and *"second nature"* to express this idea. First nature is the environment while second nature is humanity. The latter can shape and influence the former, for the worse or for the better. How it does so depends on how it treats itself. A decent, sane and egalitarian society will treat the environment it inhabits in a decent, sane and respective way. A society marked by inequality, hierarchies and exploitation will trend its environment as its members treat each other. Thus *"all our notions of dominating nature stem from the very real domination of human by human."* The *"domination of human by human* ***preceded*** *the notion of dominating nature. Indeed, human domination of human gave rise to the very* ***idea*** *of dominating nature."* This means, obviously, that *"it is not until we eliminate domination in all its forms ... that we will really create a rational, ecological society."* [**Remaking Society**, p. 44]

By degrading ourselves, we create the potential for degrading our environment. This means that anarchists *"emphasise that ecological degradation is, in great part, a product of the degradation of human beings by hunger, material insecurity, class rule, hierarchical domination, patriarchy, ethnic discrimination, and competition."* [Bookchin, *"The Future of the Ecology Movement,"* pp. 1–20, **Which Way for the Ecology Movement?**, p. 17] This is unsurprising, for *"nature, as every materialist knows, is not something merely external to humanity. We are a part of nature. Consequently, in dominating nature we not only dominate an 'external world' — we also dominate ourselves."* [John Clark, **The Anarchist Moment**, p. 114]

We cannot stress how important this analysis is. We cannot ignore *"the deep-seated division in society that came into existence with hierarchies and classes."* To do so means placing *"young people and old, women and men, poor and rich, exploited and exploiters, people of colour and whites*

all *on a par that stands completely at odds with social reality. Everyone, in turn, despite the different burdens he or she is obliged to bear, is given the same responsibility for the ills of our planet. Be they starving Ethiopian children or corporate barons, all people are held to be equally culpable in producing present ecological problems."* These become *"**de-socialised**"* and so this perspective *"side-step[s] the profoundly social roots of present-day ecological dislocations"* and *"**deflects** innumerable people from engaging in a practice that could yield effective social change."* It *"easily plays into the hands of a privileged stratum who are only too eager to blame all the human victims of an exploitative society for the social and ecological ills of our time."* [**The Ecology of Freedom**, p. 33]

Thus, for eco-anarchists, hierarchy is the fundamental root cause of our ecological problems. Hierarchy, notes Bookchin includes economic class *"and even gives rise to class society historically"* but it *"goes beyond this limited meaning imputed to a largely economic form of stratification."* It refers to a system of *"command and obedience in which elites enjoy varying degrees of control over their subordinates without necessarily exploiting them."* [**Ecology of Freedom**, p. 68] Anarchism, he stressed, *"anchored ecological problems for the first time in hierarchy, not simply in economic classes."* [**Remaking Society**, p. 155]

Needless to say, the forms of hierarchy have changed and evolved over the years. The anarchist analysis of hierarchies goes *"well beyond economic forms of exploitation into cultural forms of domination that exist in the family, between generations and sexes, among ethnic groups, in institutions of political, economic, and social management, and very significantly, in the way we experience reality as a whole, including nature and non-human life-forms."* [**Op. Cit.**, p. 46] This means that anarchists recognise that ecological destruction has existed in most human societies and is not limited just to capitalism. It existed, to some degree, in all hierarchical pre-capitalist societies and, of course, in any hierarchical post-capitalist ones as well. However, as most of us live under capitalism today, anarchists concentrate our analysis to that system and seek to change it. Anarchists stress the need to end capitalism simply because of its inherently anti-ecological nature (*"The history of 'civilisation' has been a steady process of estrangement from nature that has increasingly developed into outright antagonism."*). Our society faces *"a breakdown not only of its values and institutions, but also of its natural environment. This problem is not unique to our times"* but previous environmental destruction *"pales before the massive destruction of the environment that has occurred since the days of the Industrial Revolution, and especially since the end of the Second World War. The damage inflicted on the environment by contemporary society encompasses the entire world ... The exploitation and pollution of the earth has damaged not only the integrity of the atmosphere, climate, water resources, soil, flora and fauna of specific regions, but also the basic natural cycles on which all living things depend."* [Bookchin, **Ecology of Freedom**, p. 411 and p. 83]

This has its roots in the "grow-or-die" nature of capitalism we discussed in section D.4. An ever-expanding capitalism must inevitably come into collision with a finite planet and its fragile ecology. Firms whose aim is to maximise their profits in order to grow will happily exploit whoever and whatever they can to do so. As capitalism is based on exploiting people, can we doubt that it will also exploit nature? It is unsurprising, therefore, that this system results in the exploitation of the real sources of wealth, namely nature and people. It is as much about robbing nature as it is about robbing the worker. To quote Murray Bookchin:

> *"Any attempt to solve the ecological crisis within a bourgeois framework must be dismissed as chimerical. Capitalism is inherently anti-ecological. Competition and accumulation constitute its very law of life, a law ... summarised in the phrase, 'production for the sake of production.' Anything, however hallowed or rare, 'has its price' and is fair game for the marketplace. In a society of this kind, nature is necessarily treated as a mere resource to be plundered and exploited. The destruction of the natural world, far being the result of mere hubristic blunders, follows inexorably from the very logic of capitalist production."* [**Post-Scarcity Anarchism**, pp. viii-ix]

So, in a large part, environmental problems derive from the fact that capitalism is a competitive economy, guided by the maxim "grow or die." This is its very law of life for unless a firm expands, it will be driven out of business or taken over by a competitor. Hence the capitalist economy is based on a process of growth and production for their own sake. *"No amount of moralising or pietising,"* stresses Bookchin, *"can alter the fact that rivalry at the most molecular base of society is a bourgeois law of life ... Accumulation to undermine, buy out, or otherwise absorb or outwit a competitor* ***is a condition for existence in a capitalist economic order.****"* This means *"a capitalistic society based on competition and growth for its own sake must ultimately devour the natural world, just like an untreated cancer must ultimately devour its host. Personal intentions, be they good or bad, have little to do with this unrelenting process. An economy that is structured around the maxim, 'Grow or Die,' must* ***necessarily*** *pit itself against the natural world and leave ecological ruin in its wake as its works it way through the biosphere."* [**Remaking Society**, p. 93 and p. 15]

This means that good intentions and ideals have no bearing on the survival of a capitalist enterprise. There is a very simple way to be "moral" in the capitalist economy: namely, to commit economic suicide. This helps explain another key anti-ecological tendency within capitalism, namely the drive to externalise costs of production (i.e., pass them on to the community at large) in order to minimise private costs and so maximise profits and so growth. As we will discuss in more detail in section E.3, capitalism has an in-built tendency to externalise costs in the form of pollution as it rewards the kind of short-term perspective that pollutes the planet in order to maximise the profits of the capitalist. This is also driven by the fact that capitalism's need to expand also reduces decision making from the quantitative to the qualitative. In other words, whether something produces a short-term profit is the guiding maxim of decision making and the price mechanism itself suppresses the kind of information required to make ecologically informed decisions.

As Bookchin summarises, capitalism *"has made social evolution hopelessly incompatible with ecological evolution."* [**Ecology of Freedom**, p. 14] It lacks a sustainable relation to nature not due to chance, ignorance or bad intentions but due to its very nature and workings.

Fortunately, as we discussed in section D.1, capitalism has rarely been allowed to operate for long entirely on its own logic. When it does, counter-tendencies develop to stop society being destroyed by market forces and the need to accumulate money. Opposition forces always emerge, whether these are in the form of state intervention or in social movements aiming for reforms or more radical social change (the former tends to be the result of the latter, but not always). Both force capitalism to moderate its worst tendencies.

However, state intervention is, at best, a short-term. This is because the state is just as much a system of social domination, oppression and exploitation as capitalism. Which brings us to the

next key institution which anarchists argue needs to be eliminated in order to create an ecological society: the state. If, as anarchists argue, the oppression of people is the fundamental reason for our ecological problems then it logically follows that the state **cannot** be used to either create and manage an ecological society. It is a hierarchical, centralised, top-down organisation based on the use of coercion to maintain elite rule. It is, as we stressed in section B.2, premised on the monopolisation of power in the hands of a few. In other words, it is the opposite of commonly agreed ecological principles such as freedom to develop, decentralisation and diversity.

As Bookchin put it, the *"notion that human freedom can be achieved, much less perpetuated, through a state of **any** kind is monstrously oxymoronic — a contradiction in terms."* This is because *"statist forms"* are based on *"centralisation, bureaucratisation, and the professionalisation of power in the hands of elite bodies."* This flows from its nature for one of its ***"essential functions is to confine, restrict, and essentially suppress local democratic institutions and initiatives."*** It has been organised to reduce public participation and control, even scrutiny. [*"The Ecological Crisis, Socialism, and the need to remake society,"* pp. 1–10, **Society and Nature**, vol. 2, no. 3, p. 8 and p. 9] If the creation of an ecological society requires individual freedom and social participation (and it does) then the state by its very nature and function excludes both.

The state's centralised nature is such that it cannot handle the complexities and diversity of life. *"No administrative system is capable of representing"* a community or, for that matter, an eco-system argues James C. Scott *"except through a heroic and greatly schematised process of abstraction and simplification. It is not simply a question of capacity ... It is also a question of purpose. State agents have no interest — nor should they — in describing an entire social reality . .. Their abstractions and simplifications are disciplined by a small number of objectives."* This means that the state is unable to effectively handle the needs of ecological systems, including human ones. Scott analyses various large-scale state schemes aiming at social improvement and indicates their utter failure. This failure was rooted in the nature of centralised systems. He urges us *"to consider the kind of human subject for whom all these benefits were being provided. This subject was singularly abstract."* The state was planning *"for generic subjects who needed so many square feet of housing space, acres of farmland, litres of clean water, and units of transportation and so much food, fresh air, and recreational space. Standardised citizens were uniform in their needs and even interchangeable. What is striking, of course, is that such subjects ... have, for purposes of the planning exercise, no gender; no tastes; no history; no values; no opinions or original ideas, no traditions, and no distinctive personalities to contribute to the enterprise ... The lack of context and particularity is not an oversight; it is the necessary first premise of any large-scale planning exercise. To the degree that the subjects can be treated as standardised units, the power of resolution in the planning exercise is enhanced ... The same logic applies to the transformation of the natural world."* [**Seeing like a State**, pp. 22–3 and p. 346]

A central power reduces the participation and diversity required to create an ecological society and tailor humanity's interaction with the environment in a way which respects local conditions and eco-systems. In fact, it helps creates ecological problems by centralising power at the top of society, limiting and repressing the freedom of individuals communities and peoples as well as standardising and so degrading complex societies and eco-systems. As such, the state is just as anti-ecological as capitalism is as it shares many of the same features. As Scott stresses, capitalism *"is just as much an agency of homogenisation, uniformity, grids, and heroic simplification as the state is, with the difference being that, for capitalists, simplification must pay. A market necessarily reduces quality to quantity via the price mechanism and promotes standardisation; in markets,*

money talks, not people ... the conclusions that can be drawn from the failures of modern projects of social engineering are as applicable to market-driven standardisation as they are to bureaucratic homogeneity." [**Op. Cit.**, p. 8]

In the short term, the state may be able to restrict some of the worse excesses of capitalism (this can be seen from the desire of capitalists to fund parties which promise to deregulate an economy, regardless of the social and environmental impact of so doing). However, the interactions between these two anti-ecological institutions are unlikely to produce long term environmental solutions. This is because while state intervention can result in beneficial constraints on the anti-ecological and anti-social dynamics of capitalism, it is always limited by the nature of the state itself. As we noted in section B.2.1, the state is an instrument of class rule and, consequently, extremely unlikely to impose changes that may harm or destroy the system itself. This means that any reform movement will have to fight hard for even the most basic and common-sense changes while constantly having to stop capitalists ignoring or undermining any reforms actually passed which threaten their profits and the accumulation of capital as a whole. This means that counterforces are always set into motion by ruling class and even sensible reforms (such as anti-pollution laws) will be overturned in the name of "deregulation" and profits.

Unsurprisingly, eco-anarchists, like all anarchists, reject appeals to state power as this *"invariably legitimates and strengthens the State, with the result that it disempowers the people."* They note that ecology movements *"that enter into parliamentary activities not only legitimate State power at the expense of popular power,"* they also are *"obligated to function **within** the State"* and *"must 'play the game,' which means that they must shape their priorities according to predetermined rules over which they have no control."* This results in *"an ongoing **process** of degeneration, a steady devolution of ideals, practices, and party structures"* in order to achieve *"very little"* in *"arrest[ing] environmental decay."* [**Remaking Society**, p. 161, p. 162 and p. 163] The fate of numerous green parties across the world supports that analysis.

That is why anarchists stress the importance of creating social movements based on direct action and solidarity as the means of enacting reforms under a hierarchical society. Only when we take a keen interest and act to create and enforce reforms will they stand any chance of being applied successfully. If such social pressure does not exist, then any reform will remain a dead-letter and ignored by those seeking to maximise their profits at the expense of both people and planet. As we discuss in section J, this involves creating alternative forms of organisation like federations of community assemblies (see section J.5.1) and industrial unions (see section J.5.2). Given the nature of both a capitalist economy and the state, this makes perfect sense.

In summary, the root cause of our ecological problems likes in hierarchy within humanity, particularly in the form of the state and capitalism. Capitalism is a "grow-or-die" system which cannot help destroy the environment while the state is a centralised system which destroys the freedom and participation required to interact with eco-systems. Based on this analysis, anarchists reject the notion that all we need do is get the state to regulate the economy as the state is part of the problem as well as being an instrument of minority rule. Instead, we aim to create an ecological society and end capitalism, the state and other forms of hierarchy. This is done by encouraging social movements which fight for improvements in the short term by means direct action, solidarity and the creation of popular libertarian organisations.

E.1.1 Is industry the cause of environmental problems?

Some environmentalists argue that the root cause of our ecological crisis lies in industry and technology. This leads them to stress that "industrialism" is the problem and that needs to be eliminated. An extreme example of this is primitivism (see section A.3.9), although it does appear in the works of "deep ecologists" and liberal greens. However, most anarchists are unconvinced and agree with Bookchin when he noted that "cries against 'technology' and 'industrial society' [are] two very safe, socially natural targets against which even the bourgeoisie can inveigh in Earth Day celebrations, as long as minimal attention is paid to the social relations in which the mechanisation of society is rooted." Instead, ecology needs *"a confrontational stance toward capitalism and hierarchical society"* in order to be effective and fix the root causes of our problems. [**The Ecology of Freedom**, p. 54]

Claiming that "industrialism" rather than "capitalism" is the cause of our ecological problems allowed greens to point to both the west and the so-called "socialist" countries and draw out what was common to both (i.e. terrible environmental records and a growth mentality). In addition, it allowed green parties and thinkers to portray themselves as being "above" the "old" conflicts between socialism and capitalism (hence the slogan *"Neither Right nor Left, but in front"*). Yet this position rarely convinced anyone as any serious green thinker soon notes that the social roots of our environmental problems need to be addressed and that brings green ideas into conflict with the status quo (it is no coincidence that many on the right dismiss green issues as nothing more than a form of socialism or, in America, "liberalism"). However, by refusing to clearly indicate opposition to capitalism this position allowed many reactionary ideas (and people!) to be smuggled into the green movement (the population myth being a prime example). As for "industrialism" exposing the similarities between capitalism and Stalinism, it would have been far better to do as anarchists had done since 1918 and call the USSR and related regimes what they actually were, namely "state capitalism."

Some greens (like many defenders of capitalism) point to the terrible ecological legacy of the Stalinist countries of Eastern Europe and elsewhere. For supporters of capitalism, this was due to the lack of private property in these systems while, for greens, it showed that environmental concerns where above both capitalism and "socialism." Needless to say, by "capitalism" anarchists mean both private and state forms of that system. As we argued in section B.3.5, under Stalinism the state bureaucracy controlled and so effectively owned the means of production. As under private capitalism, an elite monopolised decision making and aimed to maximise their income by oppressing and exploiting the working class. Unsurprisingly, they had as little consideration "first nature" (the environment) as they had for "second nature" (humanity) and dominated, oppressed and exploited both (just as private capitalism does).

As Bookchin emphasised the ecological crisis stems not only from private property but from the principle of domination itself — a principle embodied in institutional hierarchies and relations of command and obedience which pervade society at many different levels. Thus, *"[w]ithout changing the most molecular relationships in society — notably, those between men and women, adults and children, whites and other ethnic groups, heterosexuals and gays (the list, in fact, is considerable) — society will be riddled by domination even in a socialistic 'classless' and 'non-exploitative' form. It would be infused by hierarchy even as it celebrated the dubious virtues of 'people's democracies,' 'socialism' and the 'public ownership' of 'natural resources,' And as long as hierarchy persists, as long as domination organises humanity around a system of elites, the project of dominating na-*

ture will continue to exist and inevitably lead our planet to ecological extinction." [**Toward an Ecological Society**, p. 76]

Given this, the real reasons for why the environmental record of Stalinist regimes were worse that private capitalism can easily be found. Firstly, any opposition was more easily silenced by the police state and so the ruling bureaucrats had far more lee-way to pollute than in most western countries. In other words, a sound environment requires freedom, the freedom of people to participate and protest. Secondly, such dictatorships can implement centralised, top-down planning which renders their ecological impact more systematic and widespread (James C. Scott explores this at great length in his excellent book **Seeing like a State**).

Fundamentally, though, there is no real difference between private and state capitalism. That this is the case can be seen from the willingness of capitalist firms to invest in, say, China in order to take advantage of their weaker environmental laws and regulations plus the lack of opposition. It can also be seen from the gutting of environmental laws and regulation in the west in order to gain competitive advantages. Unsurprisingly, laws to restrict protest have been increasingly passed in many countries as they have embraced the neo-liberal agenda with the Thatcher regime in the UK and its successors trail-blazing this process. The centralisation of power which accompanies such neo-liberal experiments reduces social pressures on the state and ensures that business interests take precedence.

As we argued in section D.10, the way that technology is used and evolves will reflect the power relations within society. Given a hierarchical society, we would expect a given technology to be used in repressive ways regardless of the nature of that technology itself. Bookchin points to the difference between the Iroquois and the Inca. Both societies used the same forms of technology, but the former was a fairly democratic and egalitarian federation while the latter was a highly despotic empire. As such, technology *"does not fully or even adequately account for the institutional differences"* between societies. [**The Ecology of Freedom**, p. 331] This means that technology does not explain the causes for ecological harm and it is possible to have an anti-ecological system based on small-scale technologies:

> *"Some of the most dehumanising and centralised social systems were fashioned out of very 'small' technologies; but bureaucracies, monarchies, and military forces turned these systems into brutalising cudgels to subdue humankind and, later, to try to subdue nature. To be sure, a large-scale technics will foster the development of an oppressively large-scale society; but every warped society follows the dialectic of its own pathology of domination, irrespective of the scale of its technics. It can organise the 'small' into the repellent as surely as it can imprint an arrogant sneer on the faces of the elites who administer it ... Unfortunately, a preoccupation with technical size, scale, and even artistry deflects our attention away from the most significant problems of technics — notably, its ties with the ideals and social structures of freedom.*" [Bookchin, **Op. Cit.**, pp. 325–6]

In other words, "small-scale" technology will not transform an authoritarian society into an ecological one. Nor will applying ecologically friendly technology to capitalism reduce its drive to grow at the expense of the planet and the people who inhabit it. This means that technology is an aspect of a wider society rather than a socially neutral instrument which will **always** have the same (usually negative) results. As Bookchin stressed, a *"liberatory technology presupposes*

liberatory institutions; a liberatory sensibility requires a liberatory society. By the same token, artistic crafts are difficult to conceive without an artistically crafted society, and the 'inversion of tools' is impossible with a radical inversion of all social and productive relationships." [**Op. Cit.**, pp. 328–9]

Finally, it should be stressed that attempts to blame technology or industry for our ecological problems have another negative effect than just obscuring the real causes of those problems and turning attention away from the elites who implement specific forms of technology to further their aims. It also means denying that technology can be transformed and new forms created which can help produce an ecologically balanced society:

> *"The knowledge and physical instruments for promoting a harmonisation of humanity with nature and of human with human are largely at hand or could easily be devised. Many of the physical principles used to construct such patently harmful facilities as conventional power plants, energy-consuming vehicles, surface-mining equipment and the like could be directed to the construction of small-scale solar and wind energy devices, efficient means of transportation, and energy-saving shelters."* [Bookchin, **Op. Cit.**, p. 83]

We must understand that *"the very **idea** of dominating first nature has its origins in the domination of human by human"* otherwise *"we will lose what little understanding we have of the social origin of our most serious ecological problems."* It this happens then we cannot solve these problems, as it *"will grossly distort humanity's potentialities to play a creative role in non-human as well as human development."* For *"the human capacity to reason conceptually, to fashion tools and devise extraordinary technologies"* can all *"be used for the good of the biosphere, not simply for harming it. What is of **pivotal** importance in determining whether human beings will creatively foster the evolution of first nature or whether they will be highly destructive to non-human and human beings alike is precisely the kind of **society** we establish, not only the kind of sensibility we develop."* [**Op. Cit.**, p. 34]

E.1.2 What is the difference between environmentalism and ecology?

As we noted in section A.3.3, eco-anarchists contrast ecology with environmentalism. The difference is important as it suggests both a different analysis of where our ecological problems come from and the best way to solve them. As Bookchin put it:

> *"By 'environmentalism' I propose to designate a mechanistic, instrumental outlook that sees nature as a passive habitat composed of 'objects' such as animals, plants, minerals, and the like that must merely be rendered more serviceable for human use ... Within this context, very little of a social nature is spared from the environmentalist's vocabulary: cities become 'urban resources' and their inhabitants 'human resources' ... Environmentalism ... tends to view the ecological project for attaining a harmonious relationship between humanity and nature as a truce rather than a lasting equilibrium. The 'harmony' of the environmentalist centres around the development of new techniques for plundering the natural world with minimal disruption of the human 'habitat.' Environmentalism does not question the most basic premise of the present society, notably, that*

> *humanity must dominant nature; rather, it seeks to **facilitate** than notion by developing techniques for diminishing the hazards caused by the reckless despoliation of the environment."* [**The Ecology of Freedom**, p. 86]

So eco-anarchists call the position of those who seek to reform capitalism and make it more green "environmentalism" rather than ecology. The reasons are obvious, as environmentalists *"focus on specific issues like air and water pollution"* while ignoring the social roots of the problems they are trying to solve. In other words, their outlook *"rest[s] on an instrumental, almost engineering approach to solving ecological dislocations. To all appearances, they wanted to adapt the natural world to the needs of the existing society and its exploitative, capitalist imperatives by way of reforms that minimise harm to human health and well-being. The much-needed goals of formulating a project for radical social change and for cultivating a new sensibility toward the natural world tended to fall outside the orbit of their practical concerns."* Eco-anarchists, while supporting such partial structures, stress that *"these problems originate in a hierarchical, class, and today, competitive capitalist system that nourishes a view of the natural world as a mere agglomeration of 'resources' for human production and consumption."* [**Op. Cit.**, pp. 15–6]

This is the key. As environmentalism does not bring into question the underlying notion of the present society that man must dominate nature it cannot present anything other than short-term solutions for the various symptoms of the underlying problem. Moreover, as it does not question hierarchy, it simply adjusts itself to the status quo. Thus liberal environmentalism is so *"hopelessly ineffectual"* because *"it takes the present social order for granted"* and is mired in *"the paralysing belief that a market society, privately owned property, and the present-day bureaucratic nation-state cannot be changed in any basic sense. Thus, it is the prevailing order that sets the terms of any 'compromise' or 'trade-off'"* and so *"the natural world, including oppressed people, always loses something piece by piece, until everything is lost in the end. As long as liberal environmentalism is structured around the social status quo, property rights always prevail over public rights and power always prevails over powerlessness. Be it a forest, wetlands, or good agricultural soil, a 'developer' who owns any of these 'resources' usually sets the terms on which every negotiation occurs and ultimately succeeds in achieving the triumph of wealth over ecological considerations."* [Bookchin, **Remaking Society**, p. 15]

This means that a truly ecological perspective seeks to end the situation where a few govern the many, not to make the few nicer. As Chomsky once noted on the issue of *"corporate social responsibility"*, he could not discuss the issue as such because he did *"not accept some of its presuppositions, specifically with regard to the legitimacy of corporate power"* as he did not see any *"justification for concentration of private power"* than *"in the political domain."* Both would *"act in a socially responsible way — as benevolent despots — when social strife, disorder, protest, etc., induce them to do so for their own benefit."* He stressed that in a capitalist society *"socially responsible behaviour would be penalised quickly in that competitors, lacking such social responsibility, would supplant anyone so misguided as to be concerned with something other than private benefit."* This explains why real capitalist systems have always *"been required to safeguard social existence in the face of the destructive forces of private capitalism"* by means of *"substantial state control."* However, the *"central questions ... are not addressed, but rather begged"* when discussing corporate social responsibility. [**Language and Politics**, p. 275]

Ultimately, the key problem with liberal environmentalism (as with liberalism in general) is that it tends, by definition, to ignore class and hierarchy. The "we are all in this together" kind

of message ignores that most of decisions that got us into our current ecological and social mess were made by the rich as they have control over resources and power structures (both private and public). It also suggests that getting us out of the mess must involve taking power and wealth back from the elite — if for no other reason because working class people do not, by themselves, have the resources to solve the problem.

Moreover, the fact is the ruling class do **not** inhabit quite the same polluted planet as everyone else. Their wealth protects them, to a large degree, to the problems that they themselves have created and which, in fact, they owe so much of that wealth to (little wonder, then, they deny there is a serious problem). They have access to a better quality of life, food and local environment (no toxic dumps and motorways are near their homes or holiday retreats). Of course, this is a short term protection but the fate of the planet is a long-term abstraction when compared to the immediate returns on one's investments. So it is not true to say that **all** parts of the ruling class are in denial about the ecological problems. A few are aware but many more show utter hatred towards those who think the planet is more important than profits.

This means that such key environmentalist activities such as education and lobbying are unlikely to have much effect. While these may produce **some** improvements in terms of our environmental impact, it cannot stop the long-term destruction of our planet as the ecological crisis is *"**systemic** — and not a matter of misinformation, spiritual insensitivity, or lack of moral integrity. The present social illness lies not only in the outlook that pervades the present society; it lies above all in the very **structure** and **law of life** in the system itself, in its imperative, which no entrepreneur or corporation can ignore without facing destruction: growth, more growth, and still more growth."* [Murray Bookchin, *"The Ecological Crisis, Socialism, and the need to remake society,"* pp. 1–10, **Society and Nature**, vol. 2, no. 3, pp. 2–3] This can only be ended by ending capitalism, not by appeals to consumers to buy eco-friendly products or to capitalists to provide them:

> *"Accumulation is determined not by the good or bad intentions of the individual bourgeois, but by the commodity relationship itself ... It is not the perversity of the bourgeois that creates production for the sake of production, but the very market nexus over which he presides and to which he succumbs.... It requires a grotesque self-deception, or worse, an act of ideological social deception, to foster the belief that this society can undo its very law of life in response to ethical arguments or intellectual persuasion."* [**Toward an Ecological Society**, p. 66]

Sadly, much of what passes for the green movement is based on this kind of perspective. At worse, many environmentalists place their hopes on green consumerism and education. At best, they seek to create green parties to work within the state to pass appropriate regulations and laws. Neither option gets to the core of the problem, namely a system in which there are *"oppressive human beings who literally own society and others who are owned by it. Until society can be reclaimed by an undivided humanity that will use its collective wisdom, cultural achievements, technological innovations, scientific knowledge, and innate creativity for its own benefit and for that of the natural world, all ecological problems will have their roots in social problems."* [Bookchin, **Remaking Society**, p. 39]

E.2 What do eco-anarchists propose instead of capitalism?

Given what eco-anarchists consider to be the root cause of our ecological problems (as discussed in the last section), it should come as no surprise that they think that the current ecological crisis can only be really solved by eliminating those root causes, namely by ending domination within humanity and creating an anarchist society. So here we will summarise the vision of the free society eco-anarchists advocate before discussing the limitations of various non-anarchist proposals to solve environmental problems in subsequent sections.

However, before so doing it is important to stress that eco-anarchists consider it important to fight against ecological and social problems today. Like all anarchists, they argue for direct action and solidarity to struggle for improvements and reforms under the current system. This means that eco-anarchism *"supports every effort to conserve the environment"* in the here and now. The key difference between them and environmentalists is that eco-anarchists place such partial struggles within a larger context of changing society as a whole. The former is part of *"waging a delaying action against the rampant destruction of the environment"* the other is *"a create movement to totally revolutionise the social relations of humans to each other and of humanity to nature."* [Murray Bookchin, **Toward an Ecological Society**, p. 43] This is one of the key differences between an ecological perspective and an environmental one (a difference discussed in section E.1.2). Finding ways to resist capitalism's reduction of the living world to resources and commodities and its plunder of the planet, our resistance to specific aspects of an eco-cidal system, are merely a starting point in the critique of the whole system and of a wider struggle for a better society. As such, our outline of an ecological society (or ecotopia) is not meant to suggest an indifference to partial struggles and reforms within capitalism. It is simply to indicate why anarchists are confident that ending capitalism and the state will create the necessary preconditions for a free and ecologically viable society.

This perspective flows from the basic insight of eco-anarchism, namely that ecological problems are not separate from social ones. As we are part of nature, it means that how we interact and shape with it will be influenced by how we interact and shape ourselves. As Reclus put it *"every people gives, so to speak, new clothing to the surrounding nature. By means of its fields and roads, by its dwelling and every manner of construction, by the way it arranges the trees and the landscape in general, the populace expresses the character of its own ideals. If it really has a feeling for beauty, it will make nature more beautiful. If, on the other hand, the great mass of humanity should remain as it is today, crude, egoistic and inauthentic, it will continue to mark the face of the earth with its wretched traces. Thus will the poet's cry of desperation become a reality: 'Where can I flee? Nature itself has become hideous.'"* In order to transform how we interact with nature, we need to transform how we interact with each other. *"Fortunately,"* Reclus notes, *"a complete alliance of the beautiful and the useful is possible."* [quoted by Clark and Martin (eds.) , **Anarchy, Geography, Modernity**, p. 125 and p. 28]

Over a century later, Murray Bookchin echoed this insight:

> *"The views advanced by anarchists were deliberately called* ***social*** *ecology to emphasise that major ecological problems have their roots in social problems — problems that go back to the very beginnings of patricentric culture itself. The rise of capitalism, with a law of life based on competition, capital accumulation, and limitless growth, brought these problems — ecological and social — to an acute point; indeed, one that was unprecedented in any prior epoch of human development. Capitalist society, by recycling the organise world into an increasingly inanimate, inorganic assemblage of commodities, was destined to simplify the biosphere, thereby cutting across the grain of natural evolution with its ages-long thrust towards differentiation and diversity.*
>
> *"To reverse this trend, capitalism had to be replaced by an ecological society based on non-hierarchical relationships, decentralised communities, eco-technologies like solar power, organic agriculture, and humanly scaled industries — in short, by face-to-face democratic forms of settlement economically and structurally tailored to the ecosystems in which they were located."* [**Remaking Society**, pp. 154–5]

The vision of an ecological society rests on the obvious fact that people can have both positive and negative impacts on the environment. In current society, there are vast differences and antagonisms between privileged whites and people of colour, men and women, rich and poor, oppressor and oppressed. Remove those differences and antagonisms and our interactions with ourselves and nature change radically. In other words, there is a vast difference between free, non-hierarchical, class, and stateless societies on the one hand, and hierarchical, class-ridden, statist, and authoritarian ones and how they interact with the environment.

Given the nature of ecology, it should come as no surprise that social anarchists have been at the forefront of eco-anarchist theory and activism. It would be fair to say that most eco-anarchists, like most anarchists in general, envision an ecotopia based on communist-anarchist principles. This does not mean that individualist anarchists are indifferent to environmental issues, simply that most anarchists are unconvinced that such solutions will actually end the ecological crisis we face. Certain of the proposals in this section are applicable to individualist anarchism (for example, the arguments that co-operatives will produce less growth and be less likely to pollute). However, others are not. Most obviously, arguments in favour of common ownership and against the price mechanism are not applicable to the market based solutions of individualist anarchism. It should also be pointed out, that much of the eco-anarchist critique of capitalist approaches to ecological problems are also applicable to individualist and mutualist anarchism as well (particularly the former, as the latter does recognise the need to regulate the market). While certain aspects of capitalism would be removed in an individualist anarchism (such as massive inequalities of wealth, capitalist property rights as well as direct and indirect subsidies to big business), it is still has the informational problems associated with markets as well as a growth orientation.

Here we discuss the typical eco-anarchist view of a free ecological society, namely one rooted in social anarchist principles. Eco-anarchists, like all consistent anarchists advocate workers' self-management of the economy as a necessary component of an ecologically sustainable society. This usually means society-wide ownership of the means of production and all productive

enterprises self-managed by their workers (as described further in section I.3). This is a key aspect of making a truly ecological society. Most greens, even if they are not anarchists, recognise the pernicious ecological effects of the capitalist "grow or die" principle; but unless they are also anarchists, they usually fail to make the connection between that principle and the **hierarchical form** of the typical capitalist corporation. The capitalist firm, like the state, is centralised, top-down and autocratic. These are the opposite of what an ecological ethos would suggest. In contrast, eco-anarchists emphasise the need for socially owned and worker self-managed firms.

This vision of co-operative rather than hierarchical production is a common position for almost all anarchists. Communist and non-communist social anarchists, like mutualists and collectivists, propose co-operative workplaces but differ in how best to distribute the products produced. The former urge the abolition of money and sharing according to need while the latter see income related to work and surpluses are shared equally among all members. Both of these systems would produce workplaces which would be under far less pressure toward rapid expansion than the traditional capitalist firm (as individualist anarchism aims for the abolition of rent, profit and interest it, too, will have less expansive workplaces).

The slower growth rate of co-operatives has been documented in a number of studies, which show that in the traditional capitalist firm, owners' and executives' percentage share of profits greatly increases as more employees are added to the payroll. This is because the corporate hierarchy is designed to facilitate exploitation by funnelling a disproportionate share of the surplus value produced by workers to those at the top of the pyramid (see section C.2) Such a design gives ownership and management a very strong incentive to expand, since, other things being equal, their income rises with every new employee hired. [David Schweickart, **Against Capitalism**, pp. 153–4] Hence the hierarchical form of the capitalist corporation is one of the main causes of runaway growth as well as social inequality and the rise of big business and oligopoly in the so-called "free" market.

By contrast, in an equal-share worker co-operative, the addition of more members simply means more people with whom the available pie will have to be equally divided — a situation that immensely reduces the incentive to expand. Thus a libertarian-socialist economy will not be under the same pressure to grow. Moreover, when introducing technological innovations or facing declining decline for goods, a self-managed workplace would be more likely to increase leisure time among producers rather than increase workloads or reduce numbers of staff.

This means that rather than produce a few big firms, a worker-controlled economy would tend to create an economy with more small and medium sized workplaces. This would make integrating them into local communities and eco-systems far easier as well as making them more easily dependent on green sources of energy. Then there are the other ecological advantages to workers' self-management beyond the relative lack of expansion of specific workplaces and the decentralisation this implies. These are explained well by market socialist David Schweickart:

> *"To the extent that emissions affect the workers directly on the job (as they often do), we can expect a self-managed firm to pollute less. Workers will control the technology; it will not be imposed on them from without.*
>
> *"To the extent that emissions affect the local community, they are likely to be less severe, for two reasons. Firstly, workers (unlike capitalist owners) will necessarily live nearby, and so the decision-makers will bear more of the environmental costs directly. Second ... a self-managed firm will not be able to avoid local regulation by running away (or*

threatening to do so). The great stick that a capitalist firm holds over the head of a local community will be absent. Hence absent will be the macrophenomenon of various regions of the country trying to compete for firms by offering a 'better business climate' (i.e. fewer environmental restrictions)." [**Op. Cit.**, p. 145]

For an ecological society to work, it requires the active participation of those doing productive activity. They are often the first to be affected by industrial pollution and have the best knowledge of how to stop it happening. As such, workplace self-management is an essential requirement for a society which aims to life in harmony with its surrounds (and with itself, as a key aspect of social unfreedom would be eliminated in the form of wage slavery).

For these reasons, libertarian socialism based on producer co-operatives is essential for the type of economy necessary to solve the ecological crisis. These all feed directly into the green vision as *"ecology points to the necessity of decentralisation, diversity in natural and social systems, human-scale technology, and an end to the exploitation of nature."* [John Clark, **The Anarchist Moment**, p. 115] This can only be achieved on a society which bases itself on workers' self-management as this would facilitate the decentralisation of industries in ways which are harmonious with nature.

So far, all forms of social anarchism are in agreement. However, eco-anarchists tend to be communist-anarchists and oppose both mutualism and collectivism. This is because workers' ownership and self-management places the workers of an enterprise in a position where they can become a particularistic interest within their community. This may lead to these firms acting purely in their own narrow interests and against the local community. They would be, in other words, outside of community input and be solely accountable to themselves. This could lead to a situation where they become "collective capitalists" with a common interest in expanding their enterprises, increasing their "profits" and even subjecting themselves to irrational practices to survive in the market (i.e., harming their own wider and long-term interests as market pressures have a distinct tendency to produce a race to the bottom — see section I.1.3 for more discussion). This leads most eco-anarchists to call for a confederal economy and society in which communities will be decentralised and freely give of their resources without the use of money.

As a natural compliment to workplace self-management, eco-anarchists propose communal self-management. So, although it may have appeared that we focus our attention on the economic aspects of the ecological crisis and its solution, this is not the case. It should always be kept in mind that all anarchists see that a complete solution to our many ecological and social problems must be multi-dimensional, addressing all aspects of the total system of hierarchy and domination. This means that only anarchism, with its emphasis on the elimination of authority in **all** areas of life, goes to the fundamental root of the ecological crisis.

The eco-anarchist argument for direct (participatory) democracy is that effective protection of the planet's ecosystems requires that all people are able to take part at the grassroots level in decision-making that affects their environment, since they are more aware of their immediate eco-systems and more likely to favour stringent environmental safeguards than politicians, state bureaucrats and the large, polluting special interests that now dominate the "representative" system of government. Moreover, real change must come from below, not from above as this is the very source of the social and ecological problems that we face as it divests individuals, communities and society as a whole of their power, indeed right, to shape their own destinies as well as

draining them of their material and "spiritual" resources (i.e., the thoughts, hopes and dreams of people).

Simply put, it should be hardly necessary to explore in any great depth the sound ecological and social reasons for decentralising decision making power to the grassroots of society, i.e. to the people who have to live with the decisions being reached. The decentralised nature of anarchism would mean that any new investments and proposed solutions to existing problems would be tailored to local conditions. Due to the mobility of capital, laws passed under capitalism to protect the environment have to be created and implemented by the central government to be effective. Yet the state, as discussed in section E.1, is a centralised structure unsuited to the task of collecting and processing the information and knowledge required to customise decisions to local ecological and social circumstances. This means that legislation, precisely due to its scope, cannot be finely tuned to local conditions (and so can generate local opposition, particularly if whipped up by corporate front organisations). In an eco-anarchist society, decentralisation would not have the threat of economic power hanging over it and so decisions would be reached which reflected the actual local needs of the population. As they would be unlikely to want to pollute themselves or their neighbours, eco-anarchists are confident that such local empowerment will produce a society which lives with, rather than upon, the environment.

Thus eco-communities (or eco-communes) are a key aspect of an ecotopia. Eco-communes, Bookchin argued, will be *"networked confederally through ecosystems, bioregions, and biomes"* and be *"artistically tailored to their naturally surrounding. We can envision that their squares will be interlaced by streams, their places of assembly surrounded by groves, their physical contours respected and tastefully landscaped, their soils nurtured caringly to foster plant variety for ourselves, our domestic animals, and wherever possible the wildlife they may support on their fringes."* They would be decentralised and *"scaled to human dimensions,"* using recycling as well as integrating *"solar, wind, hydraulic, and methane-producing installations into a highly variegated pattern for producing power. Agriculture, aquaculture, stockraising, and hunting would be regarded as crafts — an orientation that we hope would be extended as much as possible to the fabrication of use-values of nearly all kinds. The need to mass-produce goods in highly mechanised installations would be vastly diminished by the communities' overwhelming emphasis on quality and permanence."* [**The Ecology of Freedom**, p. 444]

This means that local communities will generate social and economic policies tailored to their own unique ecological circumstances, in co-operation with others (it is important stress that eco-communes do not imply supporting local self-sufficiency and economic autarchy as values in themselves). Decisions that have regional impact are worked out by confederations of local assemblies, so that everybody affected by a decision can participate in making it. Such a system would be self-sufficient as workplace and community participation would foster creativity, spontaneity, responsibility, independence, and respect for individuality — the qualities needed for a self-management to function effectively. Just as hierarchy shapes those subject to it in negative ways, participation would shape us in positive ways which would strengthen our individuality and enrich our freedom and interaction with others and nature.

That is not all. The communal framework would also impact on how industry would develop. It would allow eco-technologies to be prioritised in terms of R&D and subsidised in terms of consumption. No more would green alternatives and eco-technologies be left unused simply because most people cannot afford to buy them nor would their development be under-funded simply because a capitalist sees little profit form it or a politician cannot see any benefit from it.

It also means that the broad outlines of production are established at the community assembly level while they are implemented in practice by smaller collective bodies which also operate on an egalitarian, participatory, and democratic basis. Co-operative workplaces form an integral part of this process, having control over the production process and the best way to implement any general outlines.

It is for these reasons that anarchists argue that common ownership combined with a use-rights based system of possession is better for the environment as it allows everyone the right to take action to stop pollution, not simply those who are directly affected by it. As a framework for ecological ethics, the communal system envisioned by social anarchists would be far better than private property and markets in protecting the environment. This is because the pressures that markets exert on their members would not exist, as would the perverse incentives which reward anti-social and anti-ecological practices. Equally, the anti-ecological centralisation and hierarchy of the state would be ended and replaced with a participatory system which can take into account the needs of the local environment and utilise the local knowledge and information that both the state and capitalism suppresses.

Thus a genuine solution to the ecological crisis presupposes communes, i.e. participatory democracy in the social sphere. This is a transformation that would amount to a political revolution. However, as Bakunin continually emphasised, a political revolution of this nature cannot be envisioned without a **socio-economic** revolution based on workers' self-management. This is because the daily experience of participatory decision-making, non-authoritarian modes of organisation, and personalistic human relationships would not survive if those values were denied during working hours. Moreover, as mentioned above, participatory communities would be hard pressed to survive the pressure that big business would subject them to.

Needless to say, the economic and social aspects of life cannot be considered in isolation. For example, the negative results of workplace hierarchy and its master-servant dynamic will hardly remain there. Given the amount of time that most people spend working, the political importance of turning it into a training ground for the development of libertarian values can scarcely be overstated. As history has demonstrated, political revolutions that are not based upon social changes and mass psychological transformation — that is, by a deconditioning from the master/slave attitudes absorbed from the current system — result only in the substitution of new ruling elites for the old ones (e.g. Lenin becoming the new "Tsar" and Communist Party aparatchiks becoming the new "aristocracy"). Therefore, besides having a slower growth rate, worker co-operatives with democratic self-management would lay the psychological foundations for the kind of directly democratic political system necessary to protect the biosphere. Thus "green" libertarian socialism is the only proposal radical enough to solve the ecological crisis.

Ecological crises become possible only within the context of social relations which weaken people's capacities to fight an organised defence of the planet's ecology and their own environment. This means that the restriction of participation in decision-making processes within hierarchical organisations such as the state and capitalism firms help create environmental along with social problems by denying those most affected by a problem the means of fixing it. Needless to say, hierarchy within the workplace is a prerequisite to accumulation and so growth while hierarchy within a community is a prerequisite to defend economic and social inequality as well as minority rule as the disempowered become indifferent to community and social issues they have little or no say in. Both combine to create the basis of our current ecological crisis and both need to be ended.

Ultimately, a free nature can only begin to emerge when we live in a fully participatory society which itself is free of oppression, domination and exploitation. Only then will we be able to rid ourselves of the idea of dominating nature and fulfil our potential as individuals and be a creative force in natural as well social evolution. That means replacing the current system with one based on freedom, equality and solidarity. Once this is achieved, *"social life will yield a sensitive development of human and natural diversity, falling together into a well balanced harmonious whole. Ranging from community through region to entire continents, we will see a colourful differentiation of human groups and ecosystems, each developing its unique potentialities and exposing members of the community to a wide spectrum of economic, cultural and behavioural stimuli. Falling within our purview will be an exciting, often dramatic, variety of communal forms — here marked by architectural and industrial adaptations to semi-arid ecosystems, there to grasslands, elsewhere by adaptation to forested areas. We will witness a creative interplay between individual and group, community and environment, humanity and nature."* [Bookchin, **Post-Scarcity Anarchism**, p. 39]

So, to conclude, in place of capitalism eco-anarchists favour ecologically responsible forms of libertarian socialism, with an economy based on the principles of complementarily with nature; decentralisation (where possible and desirable) of large-scale industries, reskilling of workers, and a return to more artisan-like modes of production; the use of eco-technologies and ecologically friendly energy sources to create green products; the use of recycled and recyclable raw materials and renewable resources; the integration of town and country, industry and agriculture; the creation of self-managed eco-communities which exist in harmony with their surroundings; and self-managed workplaces responsive to the wishes of local community assemblies and labour councils in which decisions are made by direct democracy and co-ordinated (where appropriate and applicable) from the bottom-up in a free federation. Such a society would aim to develop the individuality and freedom of all its members in order to ensure that we end the domination of nature by humanity by ending domination within humanity itself.

This is the vision of a green society put forth by Murray Bookchin. To quote him:

> *"We must create an ecological society — not merely because such a society is desirable but because it is direly necessary. We must begin to live in order to survive. Such a society involves a fundamental reversal of all the trends that mark the historic development of capitalist technology and bourgeois society — the minute specialisation or machines and labour, the concentration of resources and people in gigantic industrial enterprises and urban entities, the stratification and bureaucratisation of life, the divorce of town from country, the objectification of nature and human beings. In my view, this sweeping reversal means that we must begin to decentralise our cities and establish entirely new eco-communities that are artistically moulded to the ecosystems in which they are located ...*
>
> *"Such an eco-community ... would heal the split between town and country, indeed, between mind and body by fusing intellectual with physical work, industry with agriculture in a rotation or diversification of vocational tasks. An eco-community would be supported by a new kind of technology — or eco-technology — one composed of flexible, versatile machinery whose productive applications would emphasise durability and quality ..."* [**Toward an Ecological Society**, pp. 68–9]

Lastly, we need to quickly sketch out how anarchists see the change to an ecological society happening as there is little point having an aim if you have no idea how to achieve it.

As noted above, eco-anarchists (like all anarchists) do not counterpoise an ideal utopia to existing society but rather participate in current ecological struggles. Moreover, we see that struggle itself as the link between what is and what could be. This implies, at minimum, a two pronged strategy of neighbourhood movements and workplace organising as a means of both fighting and abolishing capitalism. These would work together, with the former targeting, say, the disposal of toxic wastes and the latter stopping the production of toxins in the first place. Only when workers are in a position to refuse to engage in destructive practices or produce destructive goods can lasting ecological change emerge. Unsurprisingly, modern anarchists and anarcho-syndicalists have been keen to stress the need for a green syndicalism which addresses ecological as well as economical exploitation. The ideas of community and industrial unionism are discussed in more detail in section J.5 along with other anarchist tactics for social change. Needless to say, such organisations would use direct action as their means of achieving their goals (see section J.2). It should be noted that some of Bookchin's social ecologist followers advocate, like him, greens standing in local elections as a means to create a counter-power to the state. As we discuss in section J.5.14, this strategy (called Libertarian Municipalism) finds few supporters in the wider anarchist movement.

This strategy flows, of course, into the structures of an ecological society. As we discuss in section I.2.3, anarchists argue that the framework of a free society will be created in the process of fighting the existing one. Thus the structures of an eco-anarchist society (i.e. eco-communes and self-managed workplaces) will be created by fighting the ecocidal tendencies of the current system. In other words, like all anarchists eco-anarchists seek to create the new world while fighting the old one. This means what we do now is, however imperfect, an example of what we propose instead of capitalism. That means we act in an ecological fashion today in order to ensure that we can create an ecological society tomorrow.

For more discussion of how an anarchist society would work, see section I. We will discuss the limitations of various proposed solutions to the environmental crisis in the following sections.

E.3 Can private property rights protect the environment?

Environmental issues have become increasingly important over the decades. When Murray Bookchin wrote his first works on our ecological problems in the 1950s, he was only one of a small band. Today, even right-wing politicians have to give at least some lip-service to environmental concerns while corporations are keen to present their green credentials to the general public (even if they do not, in fact, have any).

As such, there has been a significant change. This is better late than never, considering that the warnings made by the likes of Bookchin in the 1950s and 1960s have come true to a threateningly worrying degree. Sadly, eco-anarchist solutions are still ignored but that is unsurprising as they go to the heart of the ecological problem, namely domination within humanity as the precondition for the domination of nature and the workings of the capitalist economy. It is hardly likely that those who practice and benefit from that oppression and exploitation will admit that they are causing the problems! Hence the need to appear green in order to keep a fundamentally anti-green system going.

Of course, some right-wingers are totally opposed to ecological issues. They seriously seem to forget without a viable ecology, there would be no capitalism. Ayn Rand, for example, dismissed environmental concerns as being anti-human and had little problem with factory chimneys belching smoke into the atmosphere (her fondness for chimneys and skyscrapers would have have made Freud reach for his notepad). As Bob Black once noted, *"Rand remarked that she **worshipped** smokestacks. For her ... they not only stood for, they **were** the epitome of human accomplishment. She must have meant it since she was something of a human smokestack herself; she was a chain smoker, as were the other rationals in her entourage. In the end she abolished her own breathing: she died of lung cancer."* [*"Smokestack Lightning,"* **Friendly Fire**, p. 62] The fate of this guru of capitalism is a forewarning for our collective one if we ignore the environment and our impact on it.

The key to understanding why so many on the right are dismissive of ecological concerns is simply that ecology cannot be squeezed into their narrow individualistic property based politics. Ecology is about interconnectiveness, about change and interaction, about the sources of life and how we interact with them and they with us. Moreover, ecology is rooted in the **quality** of life and goes not automatically view quantity as the key factor. As such, the notion that more is better does not strike the ecologist as, in itself, a good thing. The idea that growth is good as such is the principle associated with cancer. Ecology also destroys the individualistic premise of capitalist economics. It exposes the myth that the market ensures everyone gets exactly what they want — for if you consume eco-friendly products but others do not then you are affected by their decisions as the environmental impact affects all. Equally, the notion that the solution to GM crops should letting "the market" decide fails to take into account that such crops spread into local eco-systems and contaminate whole areas (not to mention the issue of corporate power

enclosing another part of the commons). The market "solution" in this case would result in everyone, to some degree, consuming GM crops eventually. None of this can be fitted into the capitalist ideology.

However, while vocal irrational anti-green perspectives lingers on in some sections of the right (particularly those funded by the heaviest polluters), other supporters of capitalism have considered the problems of ecological destruction in some degree. Some of this is, of course, simply greenwashing (i.e., using PR and advertising to present a green image while conducting business as usual). Some of it is funding think tanks which use green-sounding names, imagery and rhetoric to help pursue a decidedly anti-ecological practice and agenda. Some of is, to some degree, genuine. Al Gore's campaign to make the world aware of the dangers of climate change is obviously sincere and important work (although it is fair to point out the lack of green policies being raised during his 2000 Presidential election campaign and the poverty of his proposed solutions and means of change). Nicholas Stern's 2006 report on climate change produced for the UK government is another example and it gives an insight into the mentality of such environmentalists. The report did produce quite an impact (plus its dismissal by the usual suspects). The key reason for that was, undoubtedly, due to it placing a money sum on the dangers of environmental disruption. Such is capitalism — people and planet can go to the dogs, but any threat to profits must be acted upon. As the British PM at the time put it, any Climate Change Bill must be *"fully compatible with the interests of businesses and consumers as well."* Which is ironic, as it is the power of money which is causing the bulk of the problems we face.

Which is what we will discuss here, namely whether private property can be used to solve our environmental problems. Liberal environmentalists base their case on capitalist markets aided with some form of state intervention. Neo-liberal and right-"libertarian" environmentalists base their case purely on capitalist markets and reject any role for the state bar that of defining and enforcing private property rights. Both, however, assume that capitalism will remain and tailor their policies around it. Anarchists question that particularly assumption particularly given, as we discussed in section E.1, the fundamental reason why capitalism cannot be green is its irrational "grow-or-die" dynamic. However, there are other aspects of the system which contribute to capitalism bringing ecological crisis sooner rather than later. These flow from the nature of private property and the market competition it produces (this discussion, we should stress, ignores such factors as economic power which will be addressed in section E.3.2).

The market itself causes ecological problems for two related reasons: externalities and the price mechanism. It is difficult making informed consumption decisions under capitalism because rather than provide enough information to make informed decisions, the market hinders the flow of relevant information and suppresses essential knowledge. This is particularly the case with environmental information and knowledge. Simply put, we have no way of knowing from a given price the ecological impact of the products we buy. One such area of suppressed information is that involving externalities. This is a commonly understood problem. The market actively rewards those companies which inflict externalities on society. This is the *"routine and regular harms caused to* ***others*** *– workers, consumers, communities, the environment."* These are termed *"externalities"* in *"the coolly technical jargon of economics"* and the capitalist company is an *"externalising machine"* and it is *"no exaggeration to say that the corporation's built in compulsion to externalise its costs is at the root of many of the world's social and environmental ills."* [Joel Bakan, **The Corporation**, p. 60 and p. 61]

The logic is simple, by externalising (imposing) costs on others (be it workers, customers or the planet) a firm can reduce its costs and make higher profits. Thus firms have a vested interest in producing externalities. To put it crudely, pollution pays while ecology costs. Every pound a business spends on environmental protections is one less in profits. As such, it makes economic sense to treat the environment like a dump and externalise costs by pumping raw industrial effluent into the atmosphere, rivers, and oceans. The social cost of so doing weighs little against the personal profits that result from inflicting diffuse losses onto the general public. Nor should we discount the pressure of market forces in this process. In order to survive on the market, firms may have to act in ways which, while profitable in the short-run, are harmful in the long term. For example, a family-owned farm may be forced to increase production using environmentally unsound means simply in order to avoid bankruptcy.

As well as economic incentives, the creation of externalities flows from the price mechanism itself. The first key issue, as green economist E. F. Schumacher stressed, is that the market is based on *"total quantification at the expense of qualitative differences; for private enterprise is not concerned with what it produces but only what it gains from production."* This means that the *"judgement of economics ... is an extremely* ***fragmentary*** *judgement; out of the large number of aspects which in real life have to be seen and judged together before a decision can be taken, economics supplies only one — whether a thing yields a profit* ***to those who undertake it*** *or not."* [**Small is Beautiful**, p. 215 and p. 28] This leads to a simplistic decision making perspective:

> *"Everything becomes crystal clear after you have reduced reality to one – one only — of its thousand aspects. You know what to do — whatever produces profits; you know what to avoid — whatever reduces them or makes a loss. And there is at the same time a perfect measuring rod for the degree of success or failure. Let no-one befog the issue by asking whether a particular action is conducive to the wealth and well-being of society, whether it leads to moral, aesthetic, or cultural enrichment. Simply find out whether it pays."* [**Op. Cit.**, p. 215]

This means that key factors in decision making are, at best, undermined by the pressing need to make profits or, at worse, simply ignored as a handicap. So *"in the market place, for practical reasons, innumerable qualitative distinctions which are of vital importance for man and society are suppressed; they are not allowed to surface. Thus the reign of quantity celebrates its greatest triumphs in 'The Market.'"* This feeds the drive to externalise costs, as it is *"based on a definition of cost which excludes all 'free goods,' that is to say, the entire God-given environment, except for those parts of it that have been privately appropriated. This means that an activity can be economic although it plays hell with the environment, and that a competing activity, if at some cost it protects and conserves the environment, will be uneconomic."* To summarise: *"it is inherent in the methodology of economics to* ***ignore man's dependence on the natural world.***" [**Op. Cit.**, p. 30 and p. 29]

Ultimately, should our decision-making be limited to a single criteria, namely whether it makes someone a profit? Should our environment be handed over to a system which bases itself on confusing efficient resource allocation with maximising profits in an economy marked by inequalities of wealth and, consequently, on unequal willingness and ability to pay? In other words, biodiversity, eco-system stability, clean water and air, and so forth only become legitimate social goals when the market places a price on them sufficient for a capitalist to make money from them. Such a system can only fail to achieve a green society simply because ecological concerns

cannot be reduced to one criteria (*"The discipline of economics achieves its formidable resolving power by transforming what might otherwise be considered qualitative matters into quantitative issues with a single metric and, as it were, a bottom line: profit or loss."* [James C. Scott, **Seeing like a State**, p. 346]). This is particularly the case when even economists admit that the market under-supplies public goods, of which a clean and aesthetically pleasing environment is the classic example. Markets may reflect, to some degree, individual consumer preferences distorted by income distribution but they are simply incapable of reflecting collective values (a clean environment and spectacular views are inherently collective goods and cannot be enclosed). As a result, capitalists will be unlikely to invest in such projects as they cannot make everyone who uses them pay for the privilege.

Then there is the tendency for the market to undermine and destroy practical and local knowledge on which truly ecological decisions need to be based. Indigenous groups, for example, have accumulated an enormous body of knowledge about local ecological conditions and species which are ignored in economic terms or eliminated by competition with those with economic power. Under markets, in other words, unarticulated knowledge of soil conditions and biodiversity which have considerable value for long-term sustainability is usually lost when it meets agribusiness.

Practical knowledge, i.e. local and tacit knowledge which James C. Scott terms metis, is being destroyed and replaced *"by standardised formulas legible from the centre"* and this *"is virtually inscribed in the activities of both the state and large-scale bureaucratic capitalism."* The *"logic animating the project ... is one of control and appropriation. Local knowledge, because it is dispersed and relatively autonomous, is all but unappropriable. The reduction or, more utopian still, the elimination of metis and the local control its entails are preconditions, in the case of the state, of administrative order and fiscal appropriation and, in the case of the large capitalism firm, of worker discipline and profit."* [**Op. Cit.**, pp. 335–6] Green socialist John O'Neill provides a similar analysis:

> *"far from fostering the existence of practical and local knowledge, the spread of markets often appears to do the opposite: the growth of global markets is associated with the disappearance of knowledge that is local and practical, and the growth of abstract codifiable information ... the market as a mode of co-ordination appears to foster forms of abstract codifiable knowledge ... The knowledge of weak and marginal actors in markets, such as peasant and marginalised indigenous communities, tends to be lost to those who hold market power. The epistemic value of knowledge claims bear no direct relation to their market value. Local and often unarticulated knowledge of soil conditions and crop varieties that have considerable value for long-term sustainability of agriculture has no value in markets and hence is always liable to loss when it comes into contact with oil-based agricultural technologies of those who do have market power. The undermining of local practical knowledge in market economies has also been exacerbated by the global nature of both markets and large corporate actors who require knowledge that is transferable across different cultures and contexts and hence abstract and codifiable ... Finally, the demand for commensurability and calculability runs against the defence of local and practical knowledge. This is not just a theoretical problem but one with real institutional embodiments. The market encourages a spirit of calculability ... That spirit is the starting point for the algorithmic account of practical reason which requires explicit common measures for rational choice and fails to acknowledge the existence of*

> *choice founded upon practical judgement. More generally it is not amicable to forms of knowledge that are practical, local and uncodifiable.*" [**Markets, Deliberation and Environment**, pp. 192–3]

Thus the market tends to replace traditional forms of agriculture and working practices (and the complex knowledge and expertises associated with both) with standardised techniques which aim to extract as much profit in the short-term as possible by concentrating power into the hands of management and their appointed experts. That they cannot even begin to comprehend the local conditions and practical knowledge and skills required to effectively use the resources available in a sustainable manner should go without saying. Unfortunately, the economic clout of big business is such that it can defeat traditional forms of knowledge in the short-term (the long-term effect of such exploitation is usually considered someone else's problem).

So, given this analysis, it comes as no surprise to anarchists that private property has not protected the environment. In fact, it is one of the root causes of our ecological problems. Markets hide the ecological and health information necessary for environmentally sound decisions. Ultimately, environmental issues almost always involve value judgements and the market stops the possibility of producing a public dialogue in which these values can be discussed and enriched. Instead, it replaces this process by an aggregation of existing preferences (shaped by economic pressures and necessity) skewed in favour of this generation's property owners. An individual's interest, like that of the public as a whole, is not something which exists independently of the decision-making processes used but rather is something which is shaped by them. Atomistic processes focused on a simplistic criteria will produce simplistic decisions which have collectively irrational results. Collective decision making based on equal participation of all will produce decisions which reflect **all** the concerns of **all** affected in a process which will help produce empowered and educated individuals along with informed decisions.

Some disagree. For these the reason why there is environmental damage is not due to too much private property but because there is too little. This perspective derives from neo-classical and related economic theory and it argues that ecological harm occurs because environmental goods and bads are unpriced. They come free, in other words. This suggests that the best way to protect the environment is to privatise everything and to create markets in all areas of life. This perspective, needless to say, is entirely the opposite of the standard eco-anarchist one which argues that our environmental problems have their root in market mechanisms, private property and the behaviour they generate. As such, applying market norms even more rigorously and into areas of life that were previously protected from markets will tend to make ecological problems worse, not better.

As would be expected, the pro-property perspective is part of the wider turn to free(r) market capitalism since the 1970s. With the apparent success of Thatcherism and Reaganism (at least for the people who count under capitalism, i.e. the wealthy) and the fall of Stalinism in the Eastern Block, the 1980s and 1990s saw a period of capitalist triumphantism. This lead to an increase in market based solutions to every conceivable social problem, regardless of how inappropriate and/or insane the suggestions were. This applies to ecological issues as well. The publication of **Free Market Environmentalism** by Terry L. Anderson and Donald R. Leal in 1991 saw ideas previously associated with the right-"libertarian" fringe become more mainstream and, significantly, supported by corporate interests and the think-tanks and politicians they fund.

Some see it as a deliberate plan to counteract a growing ecological movement which aims to change social, political and economic structures in order to get at the root cases of our environmental problems. Activist Sara Diamond suggested that *"[s]ome farsighted corporations are finding that the best 'bulwark' against 'anti-corporation' environmentalism is the creation and promotion of an alternative model called 'free market environmentalism.'"* [*"Free Market Environmentalism,"* **Z Magazine**, December 1991] Whatever the case, the net effect of this reliance on markets is to depoliticise environmental debates, to transform issues which involve values and affect many people into ones in which the property owner is given priority and where the criteria for decision making becomes one of profit and loss. It means, effectively, ending debates over **why** ecological destruction happens and what we should do about it and accepting the assumptions, institutions and social relationships of capitalism as a given as well as privatising yet more of the world and handing it over to capitalists. Little wonder it is being proposed as an alternative by corporations concerned about their green image. At the very least, it is fair to say that the corporations who punt free market environmentalism as an alternative paradigm for environmental policy making are not expecting to pay more by internalising their costs by so doing.

As with market fundamentalism in general, private property based environmentalism appears to offer solutions simply because it fails to take into account the reality of any actual capitalist system. The notion that all we have to do is let markets work ignores the fact that any theoretical claim for the welfare superiority of free-market outcomes falls when we look at any real capitalist market. Once we introduce, say, economic power, imperfect competition, public goods, externalities or asymmetric information then the market quickly becomes a god with feet of clay. This is what we will explore in the rest of this section while the next section will discuss a specific example of how laissez-faire capitalism cannot be ecological as proved by one of its most fervent ideologues. Overall, anarchists feel we have a good case on why is unlikely that private property can protect the environment.

E.3.1 Will privatising nature save it?

No, it will not. To see why, it is only necessary to look at the arguments and assumptions of those who advocate such solutions to our ecological problems.

The logic behind the notion of privatising the planet is simple. Many of our environmental problems stem, as noted in the last section, from externalities. According to the "market advocates" this is due to there being unowned resources for if someone owned them, they would sue whoever or whatever was polluting them. By means of private property and the courts, pollution would end. Similarly, if an endangered species or eco-system were privatised then the new owners would have an interest in protecting them if tourists, say, were willing to pay to see them. Thus the solution to environmental problems is simple. Privatise everything and allow people's natural incentive to care for their own property take over.

Even on this basic level, there are obvious problems. Why assume that **capitalist** property rights are the only ones, for example? However, the crux of the problem is clear enough. This solution only works if we assume that the "resources" in question make their owners a profit or if they are willing and able to track down the polluters. Neither assumption is robust enough to carry the weight that capitalism places on our planet's environment. There is no automatic mech-

anism by which capitalism will ensure that environmentally sound practices will predominate. In fact, the opposite is far more likely.

At its most basic, the underlying rationale is flawed. It argues that it is only by giving the environment a price can we compare its use for different purposes. This allows the benefits from preserving a forest to be compared to the benefits of cutting it down and building a shopping centre over it. Yet by "benefits" it simply means economic benefits, i.e. whether it is profitable for property owners to do so, rather than ecologically sensible. This is an important difference. If more money can be made in turning a lake into a toxic waste dump then, logically, its owners will do so. Similarly, if timber prices are not rising at the prevailing profit or interest rate, then a self-interested firm will seek to increase its profits and cut-down its trees as fast as possible, investing the returns elsewhere. They may even sell such cleared land to other companies to develop. This undermines any claim that private property rights and environmental protection go hand-in-hand.

As Glenn Albrecht argues, such a capitalist "solution" to environmental problems is only *"likely to be effective in protecting species [or ecosystems] which are commercially important only if the commercial value of that species [or ecosystem] exceeds that of other potential sources of income that could be generated from the same 'natural capital' that the species inhabits If, for example, the conservation of species for ecotourism generates income which is greater than that which could be gained by using their habit for the growing of cash crops, then the private property rights of the owners of the habitat will effectively protect those species ... However, this model becomes progressively less plausible when we are confronted with rare but commercially unimportant species [or ecosystems] versus very large development proposals that are inconsistent with their continual existence. The less charismatic the species, the more 'unattractive' the ecosystem, the more likely it will be that the development proposal will proceed. The 'rights' of developers will eventually win out over species and ecosystems since ... bio-diversity itself has no right to exist and even if it did, the clash of rights between an endangered species and multi-national capital would be a very uneven contest."* [*"Ethics, Anarchy and Sustainable Development"*, pp. 95–118, **Anarchist Studies**, vol. 2, no. 2, pp. 104–5]

So the conservation of endangered species or eco-systems is not automatically achieved using the market. This is especially the case when there is little, or no, economic value in the species or eco-system in question. The most obvious example is when there is only a limited profit to be made from a piece of land by maintaining it as the habitat of a rare species. If any alternative economic uses for that land yields a greater profit then that land will be developed. Moreover, if a species looses its economic value as a commodity then the property owners will become indifferent to its survival. Prices change and so an investment which made sense today may not look so good tomorrow. So if the market price of a resource decreases then it becomes unlikely that its ecological benefits will outweigh its economic ones. Overall, regardless of the wider ecological importance of a specific eco-system or species it is likely that their owner will prioritise short-term profits over environmental concerns. It should go without saying that threatened or endangered eco-systems and species will be lost under a privatised regime as it relies on the willingness of profit-orientated companies and individuals to take a loss in order to protect the environment.

Overall, advocates of market based environmentalism need to present a case that **all** plants, animals and eco-systems are valuable commodities in the same way as, say, fish are. While a case for market-based environmentalism can be made by arguing that fish have a market price and, as such, owners of lakes, rivers and oceans would have an incentive to keep their waters clean in

order to sell fish on the market, the same cannot be said of all species and habitats. Simply put, not all creatures, plants and eco-systems with an ecological value will have an economic one as well.

Moreover, markets can send mixed messages about the environmental policies which should be pursued. This may lead to over investment in some areas and then a slump. For example, rising demand for recycled goods may inspire an investment boom which, in turn, may lead to over-supply and then a crash, with plants closing as the price falls due to increased supply. Recycling may then become economically unviable, even though it remains ecologically essential. In addition, market prices hardly provide an accurate signal regarding the "correct" level of ecological demands in a society as they are constrained by income levels and reflect the economic pressures people are under. Financial security and income level play a key role, for in the market not all votes are equal. A market based allocation of environmental goods and bads does not reflect the obvious fact the poor may appear to value environmental issues less than the wealthy in this scheme simply because their preferences (as expressed in the market) are limited by lower budgets.

Ultimately, market demand can change without the underlying demand for a specific good changing. For example, since the 1970s the real wages of most Americans have stagnated while inequality has soared. As a result, fewer households can afford to go on holidays to wilderness areas or buy more expensive ecologically friendly products. Does that imply that the people involved now value the environment less simply because they now find it harder to make ends meet? Equally, if falling living standards force people to take jobs with dangerous environmental consequences does than really provide an accurate picture of people's desires? It takes a giant leap of faith (in the market) to assume that falling demand for a specific environmental good implies that reducing environmental damage has become less valuable to people. Economic necessity may compel people to act against their best impulses, even strongly felt natural values (an obvious example is that during recessions people may be more willing to tolerate greenhouse gas emissions simply because they need the work).

Nor can it be claimed that all the relevant factors in ecological decision making can take the commodity form, i.e. be given a price. This means that market prices do not, in fact, actually reflect people's environmental values. Many aspects of our environment simply cannot be given a market price (how can you charge people to look at beautiful scenery?). Then there is the issue of how to charge a price which reflects the demand of people who wish to know that, say, the rainforest or wilderness exists and is protected but who will never visit either? Nor are future generations taken into account by a value that reflects current willingness to pay and might not be consistent with long-term welfare or even survival. And how do you factor in the impact a cleaner environment has on protecting or extending human lives? Surely a healthy environment is worth much more than simply lost earnings and the medical bills and clean-up activities saved? At best, you could factor this in by assuming that the wage premium of workers in dangerous occupations reflects it but a human life is, surely, worth more than the wages required to attract workers into dangerous working conditions. Wages are **not** an objective measure of the level of environmental risks workers are willing to tolerate as they are influenced by the overall state of the economy, the balance of class power and a whole host of other factors. Simply put, fear of unemployment and economic security will ensure that workers tolerate jobs that expose them and their communities to high levels of environmental dangers.

Economic necessity drives decisions in the so-called "free" market (given a choice between clean air and water and having a job, many people would choose the latter simply because they have to in order to survive). These factors can only be ignored which means that environmental values **cannot** be treated like commodities and market prices **cannot** accurately reflect environmental values. The key thing to remember is that the market does not meet demand, it meets **effective** demand (i.e. demands backed up with money). Yet people want endangered species and eco-systems protected even if there is no effective demand for them on the market (nor could be). We will return to this critical subject in the next section.

Then there are the practicalities of privatising nature. How, for example, do we "privatise" the oceans? How do we "privatise" whales and sharks in order to conserve them? How do we know if a whaling ship kills "your" whale? And what if "your" shark feeds on "my" fish? From whom do we buy these resources in the first place? What courts must be set up to assess and try crimes and define damages? Then there are the costs of defining and enforcing private rights by means of the courts. This would mean individual case-by-case adjudications which increase transaction costs. Needless to say, such cases will be influenced by the resources available to both sides. Moreover, the judiciary is almost always the least accountable and representative branch of the state and so turning environmental policy decisions over to them will hardly ensure that public concerns are at the foremost of any decision (such a move would also help undermine trial by jury as juries often tend to reward sizeable damages against corporations in such cases, a factor corporations are all too aware of).

This brings us to the problem of actually proving that the particles of a specific firm has inflicted a specific harm on a particular person and their property. Usually, there are multiple firms engaging in polluting the atmosphere and it would be difficult, if not impossible, to legally establish the liability of any particular firm. How to identify which particular polluter caused the smog which damaged your lungs and garden? Is it an individual company? A set of companies? All companies? Or is it transportation? In which case, is it the specific car which finally caused your cancer or a specific set of car uses? Or all car users? Or is it the manufacturers for producing such dangerous products in the first place?

Needless to say, even this possibility is limited to the current generation. Pollution afflicts future generations as well and it is impossible for their interests to be reflected in court for "future harm" is not the question, only present harm counts. Nor can non-human species or eco-systems sue for damage, only their owners can and, as noted above, they may find it more profitable to tolerate (or even encourage) pollution than sue. Given that non-owners cannot sue as they are not directly harmed, the fate of the planet will rest in the hands of the property-owning class and so the majority are effectively dispossessed of any say over their environment beyond what their money can buy. Transforming ecological concerns into money ensures a monopoly by the wealthy few:

> *"In other words, the environment is assumed to be something that can be 'valued,' in a similar way that everything else is assigned a value within the market economy.*
>
> *"However, apart from the fact that there is no way to put an 'objective' value on most of the elements that constitute the environment (since they affect a subjective par excellence factor, i.e. the quality of life), the solution suggested ... implies the extension of the marketisation process to the environment itself. In other words, it implies the assignment of a market value to the environment ... so that the effects of growth onto it*

> *are 'internalised' … The outcome of such a process is easily predictable: the environment will either be put under the control of the economic elites that control the market economy (in case an actual market value be assigned to it) or the state (in case an imputed value is only possible). In either case, not only the arrest of the ecological damage is — at least — doubtful, but the control over Nature by elites who aim to dominate it — using 'green' prescriptions this time — is perpetuated."* [Takis Fotopoulous, *"Development or Democracy?"*, pp. 57–92, **Society and Nature**, No. 7, pp. 79–80]

Another key problem with using private property in regard to environmental issues is that they are almost always reactive, almost never proactive. Thus the pollution needs to have occurred before court actions are taken as strict liability generally provides after-the-fact compensation for injuries received. If someone does successfully sue for damages, the money received can hardly replace an individual or species or eco-system. At best, it could be argued that the threat of being sued will stop environmentally damaging activities but there is little evidence that this works. If a company concludes that the damages incurred by court action is less than the potential profits to be made, then they will tolerate the possibility of court action (particularly if they feel that potential victims do not have the time or resources available to sue). This kind of decision was most infamously done by General Motors when it designed its Malibu car. The company estimated that the cost of court awarded damages per car was less than ensuring that the car did not explode during certain kinds of collusion and so allowed people to die in fuel-fed fires rather than alter the design. Unfortunately for GM, the jury was horrified (on appeal, the damages were substantially reduced). [Joel Bakan, **The Corporation**, pp. 61–5]

So this means that companies seeking to maximise profits have an incentive to cut safety costs on the assumption that the risk of so doing will be sufficiently low to make it worthwhile and that any profits generated will more than cover the costs of any trial and damages imposed. As eco-anarchist David Watson noted in regards to the Prudhoe Bay disaster, it *"should go without saying that Exxon and its allies don't try their best to protect the environment or human health. Capitalist institutions produce to accumulate power and wealth, not for any social good. Predictably, in order to cut costs, Exxon steadily dismantled what emergency safeguards it had throughout the 1980s, pointing to environmental studies showing a major spill as so unlikely that preparation was unnecessary. So when the inevitable came crashing down, the response was complete impotence and negligence."* [**Against the Megamachine**, p. 57] As such, it cannot be stressed too much that the only reason companies act any different (if and when they do) is because outside agitators — people who understand and cared about the planet and people more than they did about company profits — eventually forced them to.

So given all this, it is clear that privatising nature is no guarantee that environmental problems will be reduced. In fact, it is more likely to have the opposite effect. Even its own advocates suggest that their solution may produce **more** pollution than the current system of state regulation. Terry L. Anderson and Donald R. Leal put it this way:

> *"If markets produce 'too little' clean water because dischargers do not have to pay for its use, then political solutions are equally likely to produce 'too much' clean water because those who enjoy the benefits do not pay the cost … Just as pollution externalities can generate too much dirty air, political externalities can generate too much water storage, clear-cutting, wilderness, or water quality … Free market environmentalism empha-*

sises the importance of market process in determining optimal amounts of resource use." [**Free Market Environmentalism**, p. 23]

What kind of environmentalism considers the possibility of "too much" clean air and water? This means, ironically, that from the perspective of free-market "environmentalism" that certain ecological features may be over-protected as a result of the influence of non-economic goals and priorities. Given that this model is proposed by many corporate funded think tanks, it is more than likely that their sponsors think there is "too much" clean air and water, "too much" wilderness and "too much" environmental goods. In other words, the "optimal" level of pollution is currently too low as it doubtful that corporations are seeking to increase their costs of production by internalising even more externalities.

Equally, we can be sure that "too much" pollution *"is where the company polluting the water has to pay too much to clean up the mess they make. It involves a judgement that costs to the company are somehow synonymous with costs to the community and therefore can be weighed against benefits to the community."* Such measures *"grant the highest decision-making power over environmental quality to those who currently make production decisions. A market system gives power to those most able to pay. Corporations and firms, rather than citizens or environmentalists, will have the choice about whether to pollute (and pay the charges or buy credits to do so)."* [Sharon Beder, **Global Spin**, p. 104]

The surreal notion of "too much" clean environment does indicate another key problem with this approach, namely its confusion of need and demand with **effective** demand. The fact is that people may desire a clean environment, but they may not be able to afford to pay for it on the market. In a similar way, there can be "too much" food while people are starving to death simply because people cannot afford to pay for it (there is no effective demand for food, but an obvious pressing need). Much the same can be said of environment goods. A lack of demand for a resource today does **not** mean it is not valued by individuals nor does it mean that it will not be valued in the future. However, in the short-term focus produced by the market such goods will be long-gone, replaced by more profitable investments.

The underlying assumption is that a clean environment is a luxury which we must purchase from property owners rather than a right we have as human beings. Even if we assume the flawed concept of self-ownership, the principle upon which defenders of capitalism tend to justify their system, the principle should be that our ownership rights in our bodies excludes it being harmed by the actions of others. In other words, a clean environment should be a basic right for all. Privatising the environment goes directly against this basic ecological insight.

The state's environmental record **has** often been terrible, particularly as its bureaucrats have been influenced by private interest groups when formulating and implementing environmental policies. The state is far more likely to be "captured" by capitalist interests than by environmental groups or even the general community. Moreover, its bureaucrats have all too often tended to weight the costs and benefits of specific projects in such a way as to ensure that any really desired ones will go ahead, regardless of what local people want or what the environmental impact will really be. Such projects, needless to say, will almost always have powerful economic interests behind them and will seek to ensure that "development" which fosters economic growth is pursued. This should be unsurprising. If we assume, as "market advocates" do, that state officials seek to further their own interests then classes with the most economic wealth are most

likely to be able to do that the best. That the state will reflect the interests of those with most private property and marginalise the property-less should, therefore, come as no surprise.

Yet the state is not immune to social pressure from the general public or the reality of environmental degradation. This is proved, in its own way, by the rise of corporate PR, lobbying and think-tanks into multi-million pound industries. So while the supporters of the market stress its ability to change in the face of consumer demand, their view of the alternatives is extremely static and narrow. They fail, unsurprisingly, to consider the possibility of alternative forms of social organisation. Moreover, they also fail to mention that popular struggles can influence the state by means of direct action. For them, state officials will always pursue their own private interests, irrespective of popular pressures and social struggles (or, for that matter, the impact of corporate lobbying). While it is possible that the state will favour specific interests and policies, it does not mean that it cannot be forced to consider wider ones by the general public (until such time as it can be abolished, of course).

As we discussed in section D.1.5, the fact the state can be pressured by the general public is precisely why certain of its secondary functions have been under attack by corporations and the wealthy (a task which their well-funded think-tanls provide the rationales for). If all this is the case (and it is), then why expect cutting out the middle-person by privatising nature to improve matters? By its own logic, therefore, privatising nature is hardly going to produce a better environment as it is unlikely that corporations would fund policies which would result in more costs for themselves and less access to valuable natural resources. As free market environmentalism is premised on economic solutions to ecological problems and assumes that economic agents will act in ways which maximise their own benefit, such an obvious conclusion should come naturally to its advocates. For some reason, it does not.

Ultimately, privatising nature rests on the ridiculous notion that a clean environment is a privilege which we must buy rather than a right. Under "free market environmentalism" private property is assumed to be the fundamental right while there is no right to a clean and sustainable environment. In other words, the interests of property owners are considered the most important factor and the rest of us are left with the possibility of asking them for certain environmental goods which they may supply if they make a profit from so doing. This prioritisation and categorisation is by no means obvious and uncontroversial. Surely the right to a clean and liveable environment is more fundamental than those associated with property? If we assume this then the reduction of pollution, soil erosion, and so forth are not goods for which we must pay but rather rights to which we are entitled. In other words, protecting species and ecosystem as well as preventing avoidable deaths and illnesses are fundamental issues which simply transcend the market. Being asked to put a price on nature and people is, at best, meaningless, or, at worse, degrading. It suggests that the person simply does not understand why these things are important.

But why should we be surprised? After all, private property bases itself on the notion that we must buy access to land and other resources required for a fully human life. Why should a clean environment and a healthy body be any different? Yet again, we see the derived rights (namely private property) trumping the fundamental base right (namely the right of self-ownership which should automatically exclude harm by pollution). That this happens so consistently should not come as too great a surprise, given that the theory was invented to justify the appropriation of the fruits of the worker's labour by the property owner (see section B.4.2). Why should we be sur-

prised that this is now being used to appropriate the rights of individuals to a clean environment and turn it into yet another means of expropriating them from their birthrights?

E.3.2 How does economic power contribute to the ecological crisis?

So far in this section we have discussed why markets fail to allocate environmental resources. This is due to information blocks and costs, lack of fully internalised prices (externalities) and the existence of public goods. Individual choices are shaped by the information available to them about the consequences of their actions, and the price mechanism blocks essential aspects of this and so information is usually partial at best within the market. Worse, it is usually distorted by advertising and the media as well as corporate and government spin and PR. Local knowledge is undermined by market power, leading to unsustainable practices to reap maximum short term profits. Profits as the only decision making criteria also leads to environmental destruction as something which may be ecologically essential may not be economically viable. All this means that the price of a good cannot indicate its environmental impact and so that market failure is pervasive in the environmental area. Moreover, capitalism is as unlikely to produce their fair distribution of environmental goods any more than any other good or resource due to differences in income and so demand (particularly as it takes the existing distribution of wealth as the starting point). The reality of our environmental problems provides ample evidence for this analysis.

During this discussion we have touched upon another key issue, namely how wealth can affect how environmental and other externalities are produced and dealt with in a capitalist system. Here we extend our critique by addressed an issue we have deliberately ignored until now, namely the distribution and wealth and its resulting economic power. The importance of this factor cannot be stressed too much, as "market advocates" at best downplay it or, at worse, ignore it or deny it exists. However, it plays the same role in environmental matters as it does in, say, evaluating individual freedom within capitalism. Once we factor in economic power the obvious conclusion is the market based solutions to the environment will result in, as with freedom, people selling it simply to survive under capitalism (as we discussed in section B.4, for example).

It could be argued that strictly enforcing property rights so that polluters can be sued for any damages made will solve the problem of externalities. If someone suffered pollution damage on their property which they had not consented to then they could issue a lawsuit in order to get the polluter to pay compensation for the damage they have done. This could force polluters to internalise the costs of pollution and so the threat of lawsuits can be used as an incentive to avoid polluting others.

While this approach could be considered as **part** of any solution to environmental problems under capitalism, the sad fact is it ignores the realities of the capitalist economy. The key phrase here is "not consented to" as it means that pollution would be fine if the others agree to it (in return, say, for money). This has obvious implications for the ability of capitalism to reduce pollution. For just as working class people "consent" to hierarchy within the workplace in return for access to the means of life, so to would they "consent" to pollution. In other words, the notion that pollution can be stopped by means of private property and lawsuits ignores the issue of class and economic inequality. Once these are factored in, it soon becomes clear that people may put

up with externalities imposed upon them simply because of economic necessity and the pressure big business can inflict.

The first area to discuss is inequalities in wealth and income. Not all economic actors have equal resources. Corporations and the wealthy have far greater resources at their disposal and can spend millions of pounds in producing PR and advertising (propaganda), fighting court cases, influencing the political process, funding "experts" and think-tanks, and, if need be, fighting strikes and protests. Companies can use *"a mix of cover-up, publicity campaigns and legal manoeuvres to continue operations unimpeded."* They can go to court to try an *"block more stringent pollution controls."* [David Watson, **Against the Megamachine**, p. 56] Also while, in principle, the legal system offers equal protection to all in reality, wealthy firms and individuals have more resources than members of the general public. This means that they can employ large numbers of lawyers and draw out litigation procedures for years, if not decades.

This can be seen around us today. Unsurprisingly, the groups which bear a disproportionate share of environmental burdens are the poorest ones. Those at the bottom of the social hierarchy have less resources available to fight for their rights. They may not be aware of their rights in specific situations and not organised enough to resist. This, of course, explains why companies spend so much time attacking unions and other forms of collective organisation which change that situation. Moreover as well as being less willing to sue, those on lower income may be more willing to be bought-off due to their economic situation. After all, tolerating pollution in return for some money is more tempting when you are struggling to make ends meet.

Then there is the issue of effective demand. Simply put, allocation of resources on the market is based on money and not need. If more money can be made in, say, meeting the consumption demands of the west rather than the needs of local people then the market will "efficiently" allocate resources away from the latter to the former regardless of the social and ecological impact. Take the example of Biofuels which have been presented by some as a means of fuelling cars in a less environmentally destructive way. Yet this brings people and cars into direct competition over the most "efficient" (i.e. most profitable) use of land. Unfortunately, effective demand is on the side of cars as their owners usually live in the developed countries. This leads to a situation where land is turned from producing food to producing biofuels, the net effect of which is to reduce supply of food, increase its price and so produce an increased likelihood of starvation. It also gives more economic incentive to destroy rainforests and other fragile eco-systems in order to produce more biofuel for the market.

Green socialist John O'Neill simply states the obvious:

> *"[The] treatment of efficiency as if it were logically independent of distribution is at best misleading, for the determination of efficiency already presupposes a given distribution of rights ... [A specific outcome] is always relative to an initial starting point ... If property rights are changed so also is what is efficient. Hence, the opposition between distributional and efficiency criteria is misleading. Existing costs and benefits themselves are the product of a given distribution of property rights. Since costs are not independent of rights they cannot guide the allocation of rights. Different initial distributions entail differences in whose preferences are to count. Environmental conflicts are often about who has rights to environment goods, and hence who is to bear the costs and who is to bear the benefits ... Hence, environmental policy and resource decision-making cannot avoid making normative choices which include questions of resource distribution and*

> *the relationships between conflicting rights claims … The monetary value of a 'negative externality' depends on social institutions and distributional conflicts — willing to pay measures, actual or hypothetical, consider preferences of the higher income groups [as] more important than those of lower ones. If the people damaged are poor, the monetary measure of the cost of damage will be lower — 'the poor sell cheap.'"* [**Markets, Deliberation and Environment**, pp. 58–9]

Economic power also impacts on the types of contracts people make. It does not take too much imagination to envision the possibility that companies may make signing waivers that release it from liability a condition for working there. This could mean, for example, a firm would invest (or threaten to move production) only on condition that the local community and its workers sign a form waiving the firm of any responsibility for damages that may result from working there or from its production process. In the face of economic necessity, the workers may be desperate enough to take the jobs and sign the waivers. The same would be the case for local communities, who tolerate the environmental destruction they are subjected to simply to ensure that their economy remains viable. This already happens, with some companies including a clause in their contracts which states the employee cannot join a union.

Then there is the threat of legal action by companies. *"Every year,"* records green Sharon Beder, *"thousands of Americans are sued for speaking out against governments and corporations. Multi-million dollar law suits are being filed against individual citizens and groups for circulating petitions, writing to public officials, speaking at, or even just attending, public meetings, organising a boycott and engaging in peaceful demonstrations."* This trend has spread to other countries and the intent is the same: to silence opposition and undermine campaigns. This tactic is called a SLAPP (for ***"Strategic Lawsuits Against Public Participation"***) and is a civil court action which does not seek to win compensation but rather aims *"to harass, intimidate and distract their opponents … They win the political battle, even when they lose the court case, if their victims and those associated with them stop speaking out against them."* This is an example of economic power at work, for the cost to a firm is just part of doing business but could bankrupt an individual or environmental organisation. In this way *"the legal system best serves those who have large financial resources at their disposal"* as such cases take *"an average of three years to be settled, and even if the person sued wins, can cost tens of thousands of dollars in legal fees. Emotional stress, disillusionment, diversion of time and energy, and even divisions within families, communities and groups can also result."* [**Global Spin**, pp. 63–7]

A SLAPP usually deters those already involved from continuing to freely participate in debate and protest as well as deterring others from joining in. The threat of a court case in the face of economic power usually ensures that SLAPPS do not go to trial and so its objective of scaring off potential opponents usually works quickly. The reason can be seen from the one case in which a SLAPP backfired, namely the McLibel trial. After successfully forcing apologies from major UK media outlets like the BBC, Channel 4 and the Guardian by threatening legal action for critical reporting of the company, McDonald's turned its attention to the small eco-anarchist group London Greenpeace (which is not affiliated with Greenpeace International). This group had produced a leaflet called *"What's Wrong with McDonald's"* and the company sent spies to its meetings to identify people to sue. Two of the anarchists refused to be intimidated and called McDonald's bluff. Representing themselves in court, the two unemployed activists started the longest trial in UK history. After three years and a cost of around £10 million, the trial judge found

that some of the claims were untrue (significantly, McDonald's had successfully petitioned the judge not to have a jury for the case, arguing that the issues were too complex for the public to understand). While the case was a public relations disaster for the company, McDonald's keeps going as before using the working practices exposed in the trial and remains one of the world's largest corporations confident that few people would have the time and resources to fight SLAPPs (although the corporation may now think twice before suing anarchists!).

Furthermore, companies are known to gather lists of known "trouble-makers" These "black lists" of people who could cause companies "trouble" (i.e., by union organising or suing employers over "property rights" issues) would often ensure employee "loyalty," particularly if new jobs need references. Under wage labour, causing one's employer "problems" can make one's current and future position difficult. Being black-listed would mean no job, no wages, and little chance of being re-employed. This would be the result of continually suing in defence of one's property rights — assuming, of course, that one had the time and money necessary to sue in the first place. Hence working-class people are a weak position to defend their rights under capitalism due to the power of employers both within and without the workplace. All these are strong incentives **not** to rock the boat, particularly if employees have signed a contract ensuring that they will be fired if they discuss company business with others (lawyers, unions, media, etc.).

Economic power producing terrible contracts does not affect just labour, it also effects smaller capitalists as well. As we discussed in section C.4, rather than operating "efficiently" to allocate resources within perfect competition any real capitalist market is dominated by a small group of big companies who make increased profits at the expense of their smaller rivals. This is achieved, in part, because their size gives such firms significant influence in the market, forcing smaller companies out of business or into making concessions to get and maintain contracts.

The negative environmental impact of such a process should be obvious. For example, economic power places immense pressures towards monoculture in agriculture. In the UK the market is dominated by a few big supermarkets. Their suppliers are expected to produce fruits and vegetables which meet the requirements of the supermarkets in terms of standardised products which are easy to transport and store. The large-scale nature of the operations ensure that farmers across Britain (indeed, the world) have to turn their farms into suppliers of these standardised goods and so the natural diversity of nature is systematically replaced by a few strains of specific fruits and vegetables over which the consumer can pick. Monopolisation of markets results in the monoculture of nature.

This process is at work in all capitalist nations. In American, for example, the *"centralised purchasing decisions of the large restaurant chains and their demand for standardised products have given a handful of corporations an unprecedented degree of power over the nation's food supply ... obliterating regional differences, and spreading identical stores throughout the country ... The key to a successful franchise . .. can be expressed in one world: 'uniformity.'"* This has resulted in the industrialisation of food production, with the *"fast food chains now stand[ing] atop a huge food-industrial complex that has gained control of American agriculture ... large multinationals ... dominate one commodity market after another ... The fast food chain's vast purchasing power and their demand for a uniform product have encouraged fundamental changes in how cattle are raised, slaughter, and processed into ground beef. These changes have made meatpacking ... into the most dangerous job in the United States ... And the same meat industry practices that endanger these workers have facilitated the introduction of deadly pathogens ... into America's hamburger meat."* [Eric Schlosser, **Fast Food Nation**, p. 5 and pp. 8–9]

Award winning journalist Eric Schlosser has presented an excellent insight in this centralised and concentrated food-industrial complex in his book **Fast Food Nation**. Schlosser, of course, is not alone in documenting the fundamentally anti-ecological nature of the capitalism and how an alienated society has created an alienated means of feeding itself. As a non-anarchist, he does fail to drawn the obvious conclusion (namely abolish capitalism) but his book does present a good overview of the nature of the processed at work and what drives them. Capitalism has created a world where even the smell and taste of food is mass produced as the industrialisation of agriculture and food processing has lead to the product (it is hard to call it food) becoming bland and tasteless and so chemicals are used to counteract the effects of producing it on such a scale. It is standardised food for a standardised society. As he memorably notes: *"Millions of ... people at that very moment were standing at the same counter, ordering the same food from the same menu, food that tasted everywhere the same."* The Orwellian world of modern corporate capitalism is seen in all its glory. A world in which the industry group formed to combat Occupational Safety and Health Administration regulation is called *"Alliance for Workplace Safety"* and where the processed food's taste has to have the correct *"mouthfeel."* Unsurprisingly, the executives of these companies talk about *"the very essence of freedom"* and yet their corporation's *"first commandant is that only production counts ... The employee's duty is to follow orders. Period."* In this irrational world, technology will solve all our problems, even the ones it generates itself. For example, faced with the serious health problems generated by the industrialisation of meat processing, the meatpacking industry advocated yet more technology to "solve" the problems caused by the existing technology. Rather than focusing on the primary causes of meat contamination, they proposed irradiating food. Of course the firms involved want to replace the word *"irradiation"* with the phrase *"cold pasteurisation"* due to the public being unhappy with the idea of their food being subject to radiation.

All this is achievable due to the economic power of fewer and fewer firms imposing costs onto their workers, their customers and, ultimately, the planet.

The next obvious factor associated with economic power are the pressures associated with capital markets and mobility. Investors and capitalists are always seeking the maximum return and given a choice between lower profits due to greater environmental regulation and higher profits due to no such laws, the preferred option will hardly need explaining. After all, the investor is usually concerned with the returns they get in their investment, **not** in its physical condition nor in the overall environmental state of the planet (which is someone else's concern). This means that investors and companies interest is in moving their capital to areas which return most money, not which have the best environmental impact and legacy. Thus the mobility of capital has to be taken into account. This is an important weapon in ensuring that the agenda of business is untroubled by social concerns and environmental issues. After all, if the owners and managers of capital consider that a state's environmental laws too restrictive then it can simply shift investments to states with a more favourable business climate. This creates significant pressures on communities to minimise environmental protection both in order to retain existing business and attract new ones.

Let us assume that a company is polluting a local area. It is usually the case that capitalist owners rarely live near the workplaces they own, unlike workers and their families. This means that the decision makers do not have to live with the consequences of their decisions. The "free market" capitalist argument would be, again, that those affected by the pollution would sue the company. We will assume that concentrations of wealth have little or no effect on the social

system (which is a **highly** unlikely assumption, but never mind). Surely, if local people did successfully sue, the company would be harmed economically — directly, in terms of the cost of the judgement, indirectly in terms of having to implement new, eco-friendly processes. Hence the company would be handicapped in competition, and this would have obvious consequences for the local (and wider) economy.

This gives the company an incentive to simply move to an area that would tolerate the pollution if it were sued or even threatened with a lawsuit. Not only would existing capital move, but fresh capital would not invest in an area where people stand up for their rights. This — the natural result of economic power — would be a "big stick" over the heads of the local community. And when combined with the costs and difficulties in taking a large company to court, it would make suing an unlikely option for most people. That such a result would occur can be inferred from history, where we see that multinational firms have moved production to countries with little or no pollution laws and that court cases take years, if not decades, to process.

This is the current situation on the international market, where there is competition in terms of environment laws. Unsurprisingly, industry tends to move to countries which tolerate high levels of pollution (usually because of authoritarian governments which, like the capitalists themselves, simply ignore the wishes of the general population). Thus we have a market in pollution laws which, unsurprisingly, supplies the ability to pollute to meet the demand for it. This means that developing countries *"are nothing but a dumping ground and pool of cheap labour for capitalist corporations. Obsolete technology is shipped there along with the production of chemicals, medicines and other products banned in the developed world. Labour is cheap, there are few if any safety standards, and costs are cut. But the formula of cost-benefit still stands: the costs are simply borne by others, by the victims of Union Carbide, Dow, and Standard Oil."* [David Watson, **Op. Cit.**, p. 44] This, it should be noted, makes perfect economic sense. If an accident happened and the poor actually manage to successfully sue the company, any payments will reflect their lost of earnings (i.e., not very much).

As such, there are other strong economic reasons for doing this kind of pollution exporting. You can estimate the value of production lost because of ecological damage and the value of earnings lost through its related health problems as well as health care costs. This makes it more likely that polluting industries will move to low-income areas or countries where the costs of pollution are correspondingly less (particularly compared to the profits made in selling the products in high-income areas). Rising incomes makes such goods as safety, health and the environment more valuable as the value of life is, for working people, based on their wages. Therefore, we would expect pollution to be valued less when working class people are affected by it. In other words, toxic dumps will tend to cluster around poorer areas as the costs of paying for the harm done will be much less. The same logic underlies the arguments of those who suggest that Third World countries should be dumping grounds for toxic industrial wastes since life is cheap there

This was seen in early 1992 when a memo that went out under the name of the then chief economist of the World Bank, Lawrence Summers, was leaked to the press. Discussing the issue of *"dirty"* Industries, the memo argued that the World Bank should *"be encouraging MORE migration of the dirty industries"* to Less Developed Countries and provided three reasons. Firstly, the *"measurements of the costs of health impairing pollution depends on the foregone earnings from increased morbidity and mortality"* and so *"pollution should be done in the country with the lowest cost, which will be the country with the lowest wages."* Secondly, *"that under-populated countries in*

Africa are vastly UNDER-polluted, their air quality is probably vastly inefficiently low compared to Los Angeles or Mexico City." Thirdly, the *"demand for a clean environment for aesthetic and health reasons is likely to have very high income elasticity."* Concern over pollution related illness would be higher in a country where more children survive to get them. *"Also, much of the concern over industrial atmosphere discharge is about visibility impairing particulates ... Clearly trade in goods that embody aesthetic pollution concerns could be welfare enhancing. While production is mobile the consumption of pretty air is a non-tradable."* The memo notes *"the economic logic behind dumping a load of toxic waste in the lowest wage country is impeccable and we should face up to that"* and ends by stating that the *"problem with the arguments against all of these proposals for more pollution"* in the third world *"could be turned around and used more or less effectively against every Bank proposal for liberalisation."* [**The Economist**, 08/02/1992]

While Summers accepted the criticism for the memo, it was actually written by Lant Pritchett, a prominent economist at the Bank. Summers claimed he was being ironic and provocative. **The Economist**, unsurprisingly, stated *"his economics was hard to answer"* while criticising the language used. This was because clean growth may slower than allowing pollution to occur and this would stop *"helping millions of people in the third world to escape their poverty."* [15/02/1992] So not only is poisoning the poor with pollution is economically correct, it is in fact required by morality. Ignoring the false assumption that growth, any kind of growth, always benefits the poor and the utter contempt shown for both those poor themselves and our environment what we have here is the cold logic that drives economic power to move location to maintain its right to pollute our common environment. Economically, it is perfectly logical but, in fact, totally insane (this helps explain why making people "think like an economist" takes so many years of indoctrination within university walls and why so few achieve it).

Economic power works in other ways as well. A classic example of this at work can be seen from the systematic destruction of public transport systems in America from the 1930s onwards (see David St. Clair's **The Motorization of American Cities** for a well-researched account of this). These systems were deliberately bought by automotive (General Motors), oil, and tire corporations in order to eliminate a less costly (both economically **and** ecologically) competitor to the automobile. This was done purely to maximise sales and profits for the companies involved yet it transformed the way of life in scores of cities across America. It is doubtful that if environmental concerns had been considered important at the time that they would have stopped this from happening. This means that individual consumption decisions will be made within an market whose options can be limited simply by a large company buying out and destroying alternatives.

Then there is the issue of economic power in the media. This is well understood by corporations, who fund PR, think-tanks and "experts" to counteract environmental activism and deny, for example, that humans are contributing to global warming. Thus we have the strange position that only Americans think that there is a debate on the causes of global warming rather than a scientific consensus. The actions of corporate funded "experts" and PR have ensured **that** particular outcome. As Sharon Beder recounts in her book **Global Spin: The Corporate Assault on Environmentalism**, a large amount of money is being spent on number sophisticated techniques to change the way people think about the environment, what causes the problems we face and what we can and should do about it. Compared to the resources of environmental and green organisations, it is unsurprising that this elaborate multi-billion pound industry has poisoned public debate on such a key issue for the future of humanity by propaganda and dis-information.

Having substantial resources available means that the media can be used to further an anti-green agenda and dominate the debate (at least for a while). Take, as an example, **The Skeptical Environmentalist**, a book by Bjørn Lomborg (a political scientist and professor of statistics at the University of Aarhus in Denmark). When it was published in 2001, it caused a sensation with its claims that scientists and environmental organisations were making, at best, exaggerated and, at worse, false claims about the world's environmental problems. His conclusion was panglossian in nature, namely that there was not that much to worry about and we can continue as we are. That, of course, was music to the ears of those actively destroying the environment as it reduces the likelihood that any attempt will be made to stop them.

Unsurprisingly, the book was heavily promoted by the usual suspects and, as a result received significant attention from the media. However, the **extremely** critical reviews and critiques it subsequently produced from expert scientists on the issues Lomborg discussed were less prominently reviewed in the media, if at all. That critics of the book argued that it was hardly an example of good science based on objectivity, understanding of the underlying concepts, appropriate statistical methods and careful peer review goes without saying. Sadly, the fact that numerous experts in the fields Lomborg discussed showed that his book was seriously flawed, misused data and statistics and marred by flawed logic and hidden value judgements was not given anything like the same coverage even though this information is far more important in terms of shaping public perception. Such works and their orchestrated media blitz provides those with a vested interest in the status quo with arguments that they should be allowed to continue their anti-environmental activities and agenda. Moreover, it takes up the valuable time of those experts who have to debunk the claims rather than do the research needed to understand the ecological problems we face and propose possible solutions.

As well as spin and propaganda aimed at adults, companies are increasingly funding children's education. This development implies obvious limitations on the power of education to solve ecological problems. Companies will hardly provide teaching materials or fund schools which educate their pupils on the **real** causes of ecological problems. Unsurprisingly, a 1998 study in the US by the Consumers Union found that 80% of teaching material provided by companies was biased and provided students with incomplete or slanted information that favoured its sponsor's products and views [Schlosser, **Op. Cit.**, p. 55] The more dependent a school is on corporate funds, the less likely it will be to teach its students the necessity to question the motivations and activities of business. That business will not fund education which it perceives as anti-business should go without saying. As Sharon Beder summarises, *"the infiltration of school curricula through banning some texts and offering corporate-based curriculum material and lesson plans in their place can conflict with educational objectives, and also with the attainment of an undistorted understanding of environmental problems."* [**Op. Cit.**, pp. 172–3]

This indicates the real problem of purely "educational" approaches to solving the ecological crisis, namely that the ruling elite controls education (either directly or indirectly). This is to be expected, as any capitalist elite must control education because it is an essential indoctrination tool needed to promote capitalist values and to train a large population of future wage-slaves in the proper habits of obedience to authority. Thus capitalists cannot afford to lose control of the educational system. And this means that such schools will not teach students what is really necessary to avoid ecological disaster: namely the dismantling of capitalism itself. And we may add, alternative schools (organised by libertarian unions and other associations) which used libertarian education to produce anarchists would hardly be favoured by companies and

so be effectively black-listed — a real deterrent to their spreading through society. Why would a capitalist company employ a graduate of a school who would make trouble for them once employed as their wage slave?

Finally, needless to say, the combined wealth of corporations and the rich outweighs that of even the best funded environmental group or organisation (or even all of them put together). This means that the idea of such groups buying, say, rainforest is unlikely to succeed as they simply do not have the resources needed — they will be outbid by those who wish to develop wilderness regions. This is particularly the case once we accept the framework of economic self-interest assumed by market theory. This implies that organisations aiming to increase the income of individual's will be better funded than those whose aim is to preserve the environment for future generations. As recent developments show, companies can and do use that superior resources to wage a war for hearts and minds in all aspects of society, staring in the schoolroom. Luckily no amount of spin can nullify reality or the spirit of freedom and so this propaganda war will continue as long as capitalism does.

In summary, market solutions to environmental problems under capitalism will always suffer from the fact that real markets are marked by economic inequalities and power.

E.3.3 Can capitalism's focus on short-term profitability deal with the ecological crisis?

No a word, no. This is another key problem associated with capitalism's ability to deal with the ecological crisis it helps create. Due to the nature of the market, firms are forced to focus on short-term profitability rather than long-term survival. This makes sense. If a company does not make money now, it will not be around later.

This, obviously, drives the creation of "externalities" discussed in previous sections. Harmful environmental effects such as pollution, global warming, ozone depletion, and destruction of wildlife habitat are not counted as "costs of production" in standard methods of accounting because they are borne by everyone in the society. This gives companies a strong incentive to ignore such costs as competition forces firms to cut as many costs as possible in order to boost short-term profits.

To give an obvious example, if a firm has to decide between installing a piece of costly equipment which reduces its pollution and continuing as it currently is, then it is more likely to do the latter. If the firm **does** invest then its costs are increased and it will lose its competitive edge compared to its rivals who do not make a similar investment. The "rational" decision is, therefore, not to invest, particularly if by externalising costs it can increase its profits or market share by cutting prices. In other words, the market rewards the polluters and this is a powerful incentive to maximise such activities. The market, in other words, provides incentives to firms to produce externalities as part their drive for short-term profitability. While this is rational from the firm's position, it is collectively irrational as the planet's ecology is harmed.

The short-term perspective can also be seen by the tendency of firms to under-invest in developing risky new technologies. This is because basic research which may take years, if not decades, to develop and most companies are unwilling to take on that burden. Unsurprisingly, most advanced capitalist countries see such work funded by the state (as we noted in section D.8, over 50% of total R&D funding has been provided by the federal state in the USA). Moreover,

the state has provided markets for such products until such time as markets have appeared for them in the commercial sector. Thus capitalism, by itself, will tend to under-invest in long term projects:

> *"in a competitive system you do **short-term planning only** ... Let's take corporate managers, where there's no real confusion about what they're doing. They are maximising profit and market share in the short term. In fact, if they were not to do that, they would no longer exist. Let's be concrete. Suppose that some automobile company, say General Motors, decides to devote their resources to planning for something that will be profitable ten years from now. Suppose that's where they divert their resources: they want to think in some long-term conception of market dominance. Their rivals are going to maximising profit and power in the short term, and they're going to take over the market, and General Motors won't be in business. That's true for the owners and also for the managers. The managers want to stay managers. They can fight off hostile take-over bids, they can keep from being replaced, as long as they contribute to short-term profitability. As a result, long-term considerations are rarely considered in competitive systems."* [Noam Chomsky, **Language and Politics**, p. 598]

This does not mean that firms will not look into future products nor do research and development. Many do (particularly if helped by the state). Nor does it imply that some industries do not have a longer-term perspective. It simply shows that such activity is not the normal state of affairs. Moreover, any such "long-term" perspective is rarely more than a decade while an ecological perspective demands much more than this. This also applies to agriculture, which is increasingly being turned into agribusiness as small farmers are being driven out of business. Short-termism means that progress in agriculture is whatever increases the current yield of a crop even if means destroying the sources of fertility in the long run in order to maintain current fertility by adding more and more chemicals (which run off into rivers, seep into the water table and end up in the food itself.

This kind of irrational short-term behaviour also afflicts capital markets as well. The process works in the same way Chomsky highlights. Suppose there are 3 companies, X, Y, and Z and suppose that company X invests in the project of developing a non-polluting technology within ten years. At the same time its competitors, Y and Z, will be putting their resources into increasing profits and market share in the coming days and months and over the next year. During that period, company X will be unable to attract enough capital from investors to carry out its plans, since investors will flock to the companies that are most immediately profitable. This means that the default position under capitalism is that the company (or country) with the lowest standards enjoys a competitive advantage, and drags down the standards of other companies (or countries). Sometimes, though, capital markets experience irrational bubbles. During the dot.com boom of the 1990s, investors did plough money into internet start-ups and losses were tolerated for a few years in the expectation of high profits in the near future. When that did not happen, the stock market crashed and investors turned away from that market in droves. If something similar happened to eco-technologies, the subsequent aftermath may mean that funding essential for redressing our interaction with the environment would not be forthcoming until the memories of the crash had disappeared in the next bubble frenzy.

Besides, thanks to compound interest benefits far in the future have a very small present value. If $1 were left in a bank at 5% annual interest, it would be worth more than $2 million after 300

years. So if it costs $1 today to prevent ecological damage worth $2 million in the 24th century then economic theory argues that our descendants would be better off with us putting that $1 in the bank. This would suggest that basing our responsibility to future generations on economics may not be the wisest course.

The supporter of capitalism may respond by arguing that business leaders are as able to see long-term negative environmental effects as the rest of us. But this is to misunderstand the nature of the objection. It is not that business leaders **as individuals** are any less able to see what's happening to the environment. It is that if they want to keep their jobs they have to do what the system requires, which is to concentrate on what is most profitable in the short term. Thus if the president of company X has a mystical experience of oneness with nature and starts diverting profits into pollution control while the presidents of Y and Z continue with business as usual, the stockholders of company X will get a new president who is willing to focus on short-term profits like Y and Z. As Joel Bakan stresses, managers of corporations *"have a legal duty to put shareholders' interests above all others ... Corporate social responsibility is thus illegal — at least when it is genuine."* Ones which *"choose social and environmental goals over profits — who try and act morally — are, in fact, immoral"* as their role in both the economy and economic ideology is to *"make much as much money as possible for shareholders."* [**The Corporation**, pp. 36–7 and p. 34]

In general, then, if one company tries to devote resources to develop products or processes that are ecologically responsible, they will simply be undercut by other companies which are not doing so (assuming such products or processes are more expensive, as they generally are as the costs are not inflicted on other people and the planet). While some products may survive in small niche markets which reflect the fact that many people are willing and able to pay more to protect their world, in general they will not be competitive in the market and so the ecologically damaging products will have the advantage. In other words, capitalism has a built-in bias toward short-term gain, and this bias — along with its inherent need for growth — means the planet will continue its free-fall toward ecological disaster so long as capitalism exists.

This suggests that attempts to address ecological problems like pollution and depletion of resources by calling for public education are unlikely to work. While it is true that this will raise people's awareness to the point of creating enough demand for environment-friendly technologies and products that they will be profitable to produce, it does not solve the problem that the costs involved in doing such research now cannot be met by a possible future demand. Moreover, the costs of such technology can initially be quite high and so the effective demand for such products may not be sufficient. For example, energy-saving light bulbs have been around for some time but have been far more expensive that traditional ones. This means that for those on lower-incomes who would, in theory, benefit most from lower-energy bills cannot afford them. Thus their short-term income constrains undermine long-term benefits.

Even if the research is completed, the market itself can stop products being used. For example, the ability to produce reasonably inexpensive solar photovoltaic power cells has existed for some time. The problem is that they are currently very expensive and so there is a limited demand for them. This means that no capitalist wants to risk investing in factory large enough to take advantage of the economies of scale possible. The net effect is that short-term considerations ensure that a viable eco-technology has been margainalised.

This means that no amount of education can countermand the effects of market forces and the short-term perspective they inflict on us all. If faced with a tight budget and relatively expensive

"ecological" products and technology, consumers and companies may be forced to choose the cheaper, ecologically unfriendly product to make ends meet or survive in the market. Under capitalism, we may be free to choose, but the options are usually lousy choices, and not the only ones potentially available in theory (this is a key problem with green consumerism — see section E.5).

The short-termism of capitalism has produced, in effect, a system which is *"a massive pyramid scheme that will collapse somewhere down the line when all the major players have already retired from the game. Of course when the last of these hustlers cash in their chips, there won't be any place left to retire to."* [David Watson, **Op. Cit.**, p. 57]

E.4 Can laissez-faire capitalism protect the environment?

In a word, no. Here we explain why using as our example the arguments of a leading right-"libertarian."

As discussed in the last section, there is plenty of reason to doubt the claim that private property is the best means available to protect the environment. Even in its own terms, it does not do so and this is compounded once we factor in aspects of any real capitalist system which are habitually ignored by supporters of that system (most obviously, economic power derived from inequalities of wealth and income). Rather than the problem being too little private property, our environmental problems have their source not in a failure to apply market principles rigorously enough, but in their very spread into more and more aspects of our lives and across the world.

That capitalism simply cannot have an ecological nature can be seen from the work of right-"libertarian" Murray Rothbard, an advocate of extreme laissez-faire capitalism. His position is similar to that of other free market environmentalists. As pollution can be considered as an infringement of the property rights of the person being polluted then the solution is obvious. Enforce "absolute" property rights and end pollution by suing anyone imposing externalities on others. According to this perspective, only absolute private property (i.e. a system of laissez-faire capitalism) can protect the environment.

This viewpoint is pretty much confined to the right-"libertarian" defenders of capitalism and those influenced by them. However, given the tendency of capitalists to appropriate right-"libertarian" ideas to bolster their power much of Rothbard's assumptions and arguments have a wider impact and, as such, it is useful to discuss them and their limitations. The latter is made extremely easy as Rothbard himself has indicated why capitalism and the environment simply do not go together. While paying lip-service to environmental notions, his ideas (both in theory and in practice) are inherently anti-green and his solutions, as he admitted himself, unlikely to achieve their (limited) goals.

Rothbard's argument seems straight forward enough and, in theory, promises the end of pollution. Given the problems of externalities, of companies polluting our air and water resources, he argued that their root lie not in capitalist greed, private property or the market rewarding anti-social behaviour but by the government refusing to protect the rights of private property. The remedy is simple: privatise everything and so owners of private property would issue injunctions and pollution would automatically stop. For example, if there were "absolute" private property rights in rivers and seas their owners would not permit their pollution:

> *"if private firms were able to own the rivers and lakes ... then anyone dumping garbage ... would promptly be sued in the courts for their aggression against private property and would be forced by the courts to pay damages and to cease and desist from any further aggression. Thus, only private property rights will insure an end to pollution-*

invasion of resources. Only because rivers are unowned is there no owner to rise up and defend his precious resource from attack." [**For a New Liberty**, p. 255]

The same applies to air pollution:

> *"The remedy against air pollution is therefore crystal clear ... The remedy is simply for the courts to return to their function of defending person and property rights against invasion, and therefore to enjoin anyone from injecting pollutants into the air ... The argument against such an injunctive prohibition against pollution that it would add to the costs of industrial production is as reprehensible as the pre-Civil War argument that the abolition of slavery would add to the costs of growing cotton, and therefore abolition, however morally correct, was 'impractical.' For this means that the polluters are able to impose all of the high costs of pollution upon those whose lungs and property rights they have been allowed to invade with impunity.*" [**Op. Cit.**, p. 259]

This is a valid point. Regulating or creating markets for emissions means that governments tolerate pollution and so allows capitalists to impose its often high costs onto others. The problem is that Rothbard's solution cannot achieve this goal as it ignores economic power. Moreover, this argument implies that the consistent and intellectually honest right-"libertarian" would support a zero-emissions environmental policy. However, as we discuss in the next section, Rothbard (like most right-"libertarians") turned to various legalisms like "provable harm" and ideological constructs to ensure that this policy would not be implemented. In fact, he argued extensively on how polluters **could** impose costs on other people under his system. First, however, we need to discuss the limitations of his position before discussing how he later reprehensibly refuted his own arguments. Then in section E.4.2 we will indicate how his own theory cannot support the privatisation of water or the air nor the preservation of wilderness areas. Needless to say, much of the critique presented in section E.3 is also applicable here and so we will summarise the key issues in order to reduce repetition.

As regards the issue of privatising natural resources like rivers, the most obvious issue is that Rothbard ignores one major point: why **would** the private owner be interested in keeping it clean? What if the rubbish dumper is the corporation that owns the property? Why not just assume that the company can make more money turning the lakes and rivers into dumping sites, or trees into junk mail? This scenario is no less plausible. In fact, it is more likely to happen in many cases as there is a demand for such dumps by wealthy corporations who would be willing to pay for the privilege.

So to claim that capitalism will protect the environment is just another example of free market capitalists trying to give the reader what he or she wants to hear. In practice, the idea that extending property rights to rivers, lakes and so forth (if possible) will stop ecological destruction all depends on the assumptions used. Thus, for example, if it is assumed that ecotourism will produce more income from a wetland than draining it for cash crops, then, obviously, the wetlands are saved. If the opposite assumption is made, the wetlands are destroyed.

But, of course, the supporter of capitalism will jump in and say that if dumping were allowed, this would cause pollution, which would affect others who would then sue the owner in question. "Maybe" is the answer to this claim, for there are many circumstances where a lawsuit would be unlikely to happen. For example, what if the locals are slum dwellers and cannot afford to sue?

What if they are afraid that their landlords will evict them if they sue (particularly if the landlords also own the polluting property in question)? What if many members of the affected community work for the polluting company and stand to lose their jobs if they sue? All in all, this argument ignores the obvious fact that resources are required to fight a court case and to make and contest appeals. In the case of a large corporation and a small group of even average income families, the former will have much more time and resources to spend in fighting any lawsuit. This is the case today and it seems unlikely that it will change in any society marked by inequalities of wealth and power. In other words, Rothbard ignores the key issue of economic power:

> *"Rothbard appears to assume that the courts will be as accessible to the victims of pollution as to the owner of the factory. Yet it is not unlikely that the owner's resources will far exceed those of his victims. Given this disparity, it is not at all clear that persons who suffer the costs of pollution will be able to bear the price of relief.*
>
> *"Rothbard's proposal ignores a critical variable: power. This is not surprising. Libertarians [sic!] are inclined to view 'power' and 'market' as antithetical terms ... In Rothbard's discussion, the factor owner has no power over those who live near the factory. If we define power as comparative advantage under restricted circumstances, however, we can see that he may. He can exercise that power by stretching out the litigation until his opponent's financial resources are exhausted. In what is perhaps a worst case example, though by no means an unrealistic scenario, the owner of an industry on which an entire community depends for its livelihood may threaten to relocate unless local residents agree to accept high levels of pollution. In this instance, the 'threat' is merely an announcement by the owner that he will move his property, as is his right, unless the people of the community 'freely' assent to his conditions ... There is no reason to believe that all such persons would seek injunctive relief ... Some might be willing to tolerate the pollution if the factory owner would provide compensation. In short, the owner could pay to pollute. This solution ... ignores the presence of power in the market. It is unlikely that the 'buyers' and 'sellers' of pollution will be on an equal footing."* [Stephen L. Newman, **Liberalism at wits' end**, pp. 121–2]

There is strong reason to believe that some people may tolerate pollution in return for compensation (as, for example, a poor person may agree to let someone smoke in their home in return for $100 or accept a job in a smoke filled pub or bar in order to survive in the short term regardless of the long-term danger of lung cancer). As such, it is always possible that, due to economic necessity in an unequal society, that a company may pay to be able to pollute. As we discussed in section E.3.2, the demand for the ability to pollute freely has seen a shift in industries from the west to developing nations due to economic pressures and market logic:

> *"Questions of intergenerational equity and/or justice also arise in the context of industrial activity which is clearly life threatening or seriously diminishes the quality of life. Pollution of the air, water, soil and food in a way that threatens human health is obviously not sustainable, yet it is characteristic of much industrial action. The greatest burden of the life and health threatening by-products of industrial processes falls on those least able to exercise options that provide respite. The poor have risks to health* ***imposed*** *on them while the wealthy can afford to purchase a healthy lifestyle. In newly*

> *industrialising countries the poorest people are often faced with no choice in living close to plants which present a significant threat to the local population ... With the international trend toward moving manufacturing industry to the cheapest sources of labour, there is an increasing likelihood that standards in occupational health and safety will decline and damage to human and environmental health will increase."* [Glenn Albrecht, *"Ethics, Anarchy and Sustainable Development"*, pp. 95–118, **Anarchist Studies**, vol. 2, no. 2, pp. 107–8]

The tragedy at Bhopal in India is testimony to this process. This should be unsurprising, as there is a demand for the ability to pollute from wealthy corporations and this has resulted in many countries supplying it. This reflects the history of capitalism within the so-called developed countries as well. As Rothbard laments:

> *"[F]actory smoke and many of its bad effects have been known ever since the Industrial Revolution, known to the extent that the American courts, during the late — and as far back as the early — 19th century made the deliberate decision to allow property rights to be violated by industrial smoke. To do so, the courts had to — and did — systematically change and weaken the defences of property rights embedded in Anglo-Saxon common law ... the courts systematically altered the law of negligence and the law of nuisance to **permit** any air pollution which was not unusually greater than any similar manufacturing firm, one that was not more extensive than the customary practice of polluters."* [**Op. Cit.**, p. 257]

Left-wing critic of right-"libertarianism" Alan Haworth points out the obvious by stating that *"[i]n this remarkably — wonderfully — self-contradictory passage, we are invited to draw the conclusion that private property **must** provide the solution to the pollution problem from an account of how it clearly did **not.**"* In other words 19th-century America — which for many right-"libertarians" is a kind of "golden era" of free-market capitalism — saw a move *"from an initial situation of well-defended property rights to a later situation where greater pollution was tolerated."* This means that private property cannot provide a solution the pollution problem. [**Anti-Libertarianism**, p. 113]

It is likely, as Haworth points out, that Rothbard and other free marketeers will claim that the 19th-century capitalist system was not pure enough, that the courts were motivated to act under pressure from the state (which in turn was pressured by powerful industrialists). But can it be purified by just removing the government and privatising the courts, relying on a so-called "free market for justice"? The pressure from the industrialists remains, if not increases, on the privately owned courts trying to make a living on the market. Indeed, the whole concept of private courts competing in a "free market for justice" becomes absurd once it is recognised that those with the most money will be able to buy the most "justice" (as is largely the case now). Also, this faith in the courts ignores the fact suing would only occur **after** the damage has already been done. It's not easy to replace ecosystems and extinct species. And if the threat of court action had a "deterrent" effect, then pollution, murder, stealing and a host of other crimes would long ago have disappeared.

To paraphrase Haworth, the characteristically "free market" capitalist argument that if X were privately owned, Y would almost certainly occur, is just wishful thinking.

Equally, it would be churlish to note that this change in the law (like so many others) was an essential part of the creation of capitalism in the first place. As we discuss in section F.8, capitalism has always been born of state intervention and the toleration of pollution was one of many means by which costs associated with creating a capitalist system were imposed on the general public. This is still the case today, with (for example) the **Economist** magazine happily arguing that the migration of dirty industries to the third world is *"desirable"* as there is a *"trade-off between growth and pollution control."* Inflicting pollution on the poorest sections of humanity is, of course, in their own best interests. As the magazine put it, *"[i]f clean growth means slower growth, as it sometimes will, its human cost will be lives blighted by a poverty that would otherwise have been mitigated. That is why it is wrong for the World Bank or anybody else to insist upon rich-country standards of environmental practices in developing countries ... when a trade off between cleaner air and less poverty has to be faced, most poor countries will rightly want to tolerate more pollution than rich countries do in return for more growth."* ["*Pollution and the Poor*", **The Economist**, 15/02/1992] That "poor countries" are just as state, class and hierarchy afflicted as "rich-country" ones and so it is **not** the poor who will be deciding to *"tolerate"* pollution in return for higher profits (to use the correct word rather than the economically correct euphemism). Rather, it will be inflicted upon them by the ruling class which runs their country. That members of the elite are willing to inflict the costs of industrialisation on the working class in the form of pollution is unsurprising to anyone with a grasp of reality and how capitalism develops and works (it should be noted that the magazine expounded this particular argument to defend the infamous Lawrence Summers memo discussed in section E.3.2).

Finally, let us consider what would happen is Rothbard's schema could actually be applied. It would mean that almost every modern industry would be faced with law suits over pollution. This would mean that the costs of product would soar, assuming production continued at all. It is likely that faced with demands that industry stop polluting, most firms would simply go out of business (either due to the costs involved in damages or simply because no suitable non-polluting replacement technology exists) As Rothbard here considers **all** forms of pollution as an affront to property rights, this also applies to transport. In other words, "pure" capitalism would necessitate the end of industrial society. While such a prospect may be welcomed by some deep ecologists and primitivists, few others would support such a solution to the problems of pollution.

Within a decade of his zero-emissions argument, however, Rothbard had changed his position and presented a right-"libertarian" argument which essentially allowed the polluters to continue business as usual, arguing for a system which, he admitted, would make it nearly impossible for individuals to sue over pollution damage. As usual, given a choice between individual freedom and capitalism Rothbard choose the latter. As such, as Rothbard himself proves beyond reasonable doubt, the extension of private property rights will be unable to protect the environment. We discuss this in the next section.

E.4.1 Will laissez-faire capitalism actually end pollution?

No, it will not. In order to show why, we need only quote Murray Rothbard's own arguments. It is worth going through his arguments to see exactly why "pure" capitalism simply cannot solve the ecological crisis.

As noted in the last section, Rothbard initially presented an argument that free market capitalism would have a zero-emissions policy. Within a decade, he had substantially changed his tune in an article for the right-"libertarian" think-tank the **Cato Institute**. Perhaps this change of heart is understandable once you realise that most free market capitalist propagandists are simply priests of a religion convenient to the interests of the people who own the marketplace. Rothbard founded the think-tank which published this article along with industrialist Charles Koch in 1977. Koch companies are involved in the petroleum, chemicals, energy, minerals, fertilisers industries as well as many others. To advocate a zero-pollution policy would hardly be in the Institute's enlightened self-interest as its backers would soon be out of business (along with industrial capitalism as a whole).

Rothbard's defence of the right to pollute is as ingenious as it is contradictory to his original position. As will be discussed in section F.4, Rothbard subscribes to a *"homesteading"* theory of property and he utilises this not only to steal the actual physical planet (the land) from this and future generations but also our (and their) right to a clean environment. He points to *"more sophisticated and modern forms of homesteading"* which can be used to *"homestead"* pollution rights. If, for example, a firm is surrounded by unowned land then it can pollute to its hearts content. If anyone moves to the area then the firm only becomes liable for any excess pollution over this amount. Thus firms *"can be said to have **homesteaded a pollution easement** of a certain degree and type."* He points to an *"exemplary"* court case which rejected the argument of someone who moved to an industrial area and then sued to end pollution. As the plaintiff had voluntarily moved to the area, she had no cause for complaint. In other words, polluters can simply continue to pollute under free market capitalism. This is particularly the case as clean air acts would not exist in libertarian legal theory, such an act being *"illegitimate and itself invasive and a criminal interference with the property rights of noncriminals."* [*"Law, Property Rights, and Air Pollution,"* pp. 55–99, **Cato Journal**, Vol. 2, No. 1, p. 77, p. 79 and p. 89]

In the last section, we showed how Rothbard had earlier argued that the solution to pollution was to privatise everything. Given that rivers, lakes and seas are currently **unowned** this implies that the current levels of pollution would be the initial "homesteaded" level and so privatisation will not, in fact, reduce pollution at all. At best, it may stop pollution getting worse but even this runs into the problem that pollution usually increases slowly over time and would be hard to notice and much harder to prove which incremental change produced the actual quantitative change.

Which leads to the next, obvious, problem. According to Rothbard you can sue provided that *"the polluter has not previously established a homestead easement," "prove strict causality from the actions of the defendant... beyond a reasonable doubt"* and identify *"**those who actually** commit the deed"* (i.e. the employees involved, **not** the company). [**Op. Cit.**, p. 87] Of course, how do you know and prove that a specific polluter is responsible for a specific environmental or physical harm? It would be near impossible to identify which company contributed which particles to the smog which caused pollution related illnesses. Polluters, needless to say, have the right to buy-off a suit which would be a handy tool for wealthy corporations in an unequal society to continue polluting as economic necessity may induce people to accept payment in return for tolerating it.

Turning to the pollution caused by actual products, such as cars, Rothbard argues that *"libertarian [sic!] principle"* requires a return to **privity,** a situation where the manufacturers of a product are not responsible for any negative side-effects when it is used. In terms of transport

pollution, the *"guilty polluter should be each individual car owner and not the automobile manufacturer, who is not responsible for the actual tort and the actual emission."* This is because the manufacturer does not know how the car will be used (Rothbard gives an example that it may not be driven but was bought *"mainly for aesthetic contemplation by the car owner"*!). He admits that *"the situation for plaintiffs against auto emissions might seem hopeless under libertarian law."* Rest assured, though, as *"the roads would be privately owned"* then the owner of the road could be sued for the emissions going *"into the lungs or airspace of other citizens"* and so *"would be liable for pollution damage."* This would be *"much more feasible than suing each individual car owner for the minute amount of pollutants he might be responsible for."* [**Op. Cit.**, p. 90 and p. 91]

The problems with this argument should be obvious. Firstly, roads are currently "unowned" under the right-"libertarian" perspective (they are owned by the state which has no right to own anything). This means, as Rothbard has already suggested, any new road owners would have already created a "homesteading" right to pollute (after all, who would buy a road if they expected to be sued by so doing?). Secondly, it would be extremely difficult to say that specific emissions from a specific road caused the problems and Rothbard stresses that there must be *"proof beyond reasonable doubt."* Road-owners as well as capitalist firms which pollute will, like the tobacco industry, be heartened to read that *"statistical correlation ... cannot establish causation, certainly not for a rigorous legal proof of guilt or harm."* After all, *"many smokers never get lung cancer"* and *"many lung cancer sufferers have never smoked."* [**Op. Cit.**, p. 92 and p. 73] So if illnesses cluster around, say, roads or certain industries then this cannot be considered as evidence of harm caused by the pollution they produce.

Then there is the question of who is responsible for the damage inflicted. Here Rothbard runs up against the contradictions within wage labour. Capitalism is based on the notion that a person's liberty/labour can be sold/alienated to another who can then use it as they see fit. This means that, for the capitalist, the worker has no claim on the products and services that labour has produced. Strangely, according to Rothbard, this alienation of responsibility suddenly is rescinded when that sold labour commits an action which has negative consequences for the employer. Then it suddenly becomes nothing to do with the employer and the labourer becomes responsible for their labour again.

Rothbard is quite clear that he considers that the owners of businesses are **not** responsible for their employee's action. He gives the example of an employer who hires an incompetent worker and suffers the lost of his wages as a result. However, *"there appears to be no legitimate reason for forcing the employer to bear the **additional** cost of his employee's tortious behaviour."* For a corporation *"does not act; only individuals act, and each must be responsible for his own actions and those alone."* He notes that employers are sued because they *"generally have more money than employees, so that it becomes more convenient ... to stick the wealthier class with the liability."* [**Op. Cit.**, p. 76 and p. 75]

This ignores the fact that externalities are imposed on others in order to maximise the profits of the corporation. The stockholders directly benefit from the "tortious behaviour" of their wage slaves. For example, if a manager decides to save £1,000,000 by letting toxic waste damage to occur to then the owners benefit by a higher return on their investment. To state that is the manager who must pay for any damage means that the owners of a corporation or business are absolved for any responsibility for the actions of those hired to make money for them. In other words, they accumulate the benefits in the form of more income but not the risks or costs

associated with, say, imposing externalities onto others. That the *"wealthier class"* would be happy to see such a legal system should go without saying.

The notion that as long as *"the tort is committed by the employee in the course of furthering, even only in part, his employer's business, then the employer is also liable"* is dismissed as *"a legal concept so at war with libertarianism, individualism, and capitalism, and suited only to a precapitalist society."* [**Op. Cit.**, p. 74 and p. 75] If this principle is against "individualism" then it is simply because capitalism violates individualism. What Rothbard fails to appreciate is that the whole basis of capitalism is that it is based on the worker selling his time/liberty to the boss. As Mark Leier puts it in his excellent biography of Bakunin:

> *"The primary element of capitalism is wage labour It is this that makes capitalism what it is ... The employer owns and controls the coffee shop or factory where production takes place and determines who will be hired and fired and how things will be produced; that's what it means to be a 'boss.' Workers produce goods or services for their employer. Everything they produce on the job belongs to the capitalist: workers have no more right to the coffee or cars they produce than someone off the street. Their employer, protected by law and by the apparatus of the state, owns all they produce. The employer then sells the goods that have been produced and gives the workers a portion of the value they have created. Capitalists and workers fight over the precise amounts of this portion, but the capitalist system is based on the notion that the capitalist owns everything that is produced and controls how everything is produced."* [**Bakunin: The Creative Passion**, p. 26]

This is clearly the case when a worker acts in a way which increases profits without externalities. The most obvious case is when workers' produce more goods than they receive back in wages (i.e. the exploitation at the heart of capitalism — see section C.2). Why should that change when the action has an externality? While it may benefit the boss to argue that he should gain the profits of the worker's actions but not the costs it hardly makes much logical sense. The labour sold becomes the property of the buyer who is then entitled to appropriate the produce of that labour. There is no reason for this to suddenly change when the product is a negative rather than a positive. It suggests that the worker has sold both her labour and its product to the employer unless it happens to put her employer in court, then it suddenly becomes her's again!

And we must note that it is Rothbard's arguments own arguments which are *"suited only to a precapitalist society."* As David Ellerman notes, the slave was considered a piece of property under the law **unless** he or she committed a crime. Once that had occurred, the slave became an autonomous individual in the eyes of the law and, as a result, could be prosecuted as an individual rather than his owner. This exposed a fundamental inconsistency *"in a legal system that treats the same individual as a thing in normal work and legally as a person when committing a crime."* Much the same applies to wage labour as well. When an employee commits a negligent tort then *"the tortious servant emerges from the cocoon of non-responsibility metamorphosed into a responsible human agent."* In other words, *"the employee is said to have stepped outside the employee's role."* [**Property and Contract in Economics**, p. 125, p. 128 and p. 133] Rothbard's argument is essentially the same as that of the slave-owner, with the boss enjoying the positive fruits of their wage slaves activities but not being responsible for any negative results.

So, to summarise, we have a system which will allow pollution to continue as this right has been "homesteaded" while, at the same, making it near impossible to sue individual firms for

their contribution to the destruction of the earth. Moreover, it rewards the owners of companies for any externalities inflicted while absolving them of any responsibility for the actions which enriched them. And Rothbard asserts that *"private ownership"* can solve *"many 'externality' problems"*! The key problem is, of course, that for Rothbard the *"overriding factor in air pollution law, as in other parts of the law, should be libertarian and property rights principles"* rather than, say, stopping the destruction of our planet or even defending the right of individual's not to die of pollution related diseases. [**Op. Cit.**, p. 91 and p. 99] Rothbard shows that for the defender of capitalism, given a choice between property and planet/people the former will always win.

To conclude, Rothbard provides more than enough evidence to disprove his own arguments. This is not a unique occurrence. As discussed in the next section he does the same as regards owning water and air resources.

E.4.2 Can wilderness survive under laissez-faire capitalism?

No. This conclusion comes naturally from the laissez-faire capitalist defence of private property as expounded by Murray Rothbard. Moreover, ironically, he also destroys his own arguments for ending pollution by privatising water and air.

For Rothbard, labour is the key to turning unowned natural resources into private property. As he put it, *"before the homesteader, no one really used and controlled — and hence owned — the land. The pioneer, or homesteader, is the man who first brings the valueless unused natural objects into production and use."* [**The Ethics of Liberty**, p. 49]

Starting with the question of wilderness (a topic close to many eco-anarchists' and other ecologists' hearts) we run into the usual problems and self-contradictions which befalls right-"libertarian" ideology. Rothbard states clearly that *"libertarian theory must invalidate [any] claim to ownership"* of land that has *"never been transformed from its natural state"* (he presents an example of an owner who has left a piece of his *"legally owned"* land untouched). If another person appears who **does** transform the land, it becomes *"justly owned by another"* and the original owner cannot stop her (and should the original owner *"use violence to prevent another settler from entering this never-used land and transforming it into use"* they also become a *"criminal aggressor"*). Rothbard also stresses that he is **not** saying that land must continually be in use to be valid property. [**Op. Cit.**, pp. 63–64] This is unsurprising, as that would justify landless workers seizing the land from landowners during a depression and working it themselves and we cannot have that now, can we?

Now, where does that leave wilderness? In response to ecologists who oppose the destruction of the rainforest, many supporters of capitalism suggest that they put their money where their mouth is and **buy** rainforest land. In this way, it is claimed, rainforest will be protected (see section B.5 for why such arguments are nonsense). As ecologists desire the rainforest **because it is wilderness** they are unlikely to "transform" it by human labour (its precisely that they want to stop). From Rothbard's arguments it is fair to ask whether logging companies have a right to "transform" the virgin wilderness owned by ecologists, after all it meets Rothbard's criteria (it is still wilderness). Perhaps it will be claimed that fencing off land "transforms" it (hardly what you imagine "mixing labour" with to mean, but never mind) — but that allows large companies and rich individuals to hire workers to fence in vast tracks of land (and recreate the land monopoly by a "libertarian" route). But as discussed in section F.4.1, fencing off land does not seem to imply

that it becomes property in Rothbard's theory. And, of course, fencing in areas of rainforest disrupts the local eco-system — animals cannot freely travel, for example — which, again, is what ecologists desire to stop. Would Rothbard have accepted a piece of paper as "transforming" land? We doubt it (after all, in his example the wilderness owner **did** legally own it) — and so most ecologists will have a hard time in pure capitalism (wilderness is just not an option).

Moreover, Rothbard's "homesteading" theory actually violates his support for unrestricted property rights. What if a property owner **wants** part of her land to remain wilderness? Their desires are violated by the "homesteading" theory (unless, of course, fencing things off equals "transforming" them, which it apparently does not). How can companies provide wilderness holidays to people if they have no right to stop settlers (including large companies) "homesteading" that wilderness? Then there is the question of wild animals. Obviously, they can only become owned by either killing them or by domesticating them (the only possible means of "mixing your labour" with them). Does it mean that someone only values, say, a polar bear when they kill it or capture it for a zoo?

At best, it could be argued that wilderness would be allowed **if** the land was transformed first then allowed to return to the wild. This flows from Rothbard's argument that there is no requirement that land continue to be used in order for it to continue to be a person's property. As he stresses, *"our libertarian [sic!] theory holds that land needs only be transformed **once** to pass into private ownership."* [**Op. Cit.**, p. 65] This means that land could be used and then allowed to fall into disuse for the important thing is that once labour is mixed with the natural resources, it remains owned in perpetuity. However, destroying wilderness in order to recreate it is simply an insane position to take as many eco-systems are extremely fragile and will not return to their previous state. Moreover, this process takes a long time during which access to the land will be restricted to all but those the owner consents to.

And, of course, where does Rothbard's theory leave hunter-gatherer or nomad societies. They **use** the resources of the wilderness, but they do not "transform" them (in this case you cannot easily tell if virgin land is empty or being used). If a group of nomads find its traditionally used, but natural, oasis appropriated by a homesteader what are they to do? If they ignore the homesteaders claims he can call upon the police (public or private) to stop them — and then, in true Rothbardian fashion, the homesteader can refuse to supply water to them unless they pay for the privilege. And if the history of the United States and other colonies are anything to go by, such people will become "criminal aggressors" and removed from the picture.

As such, it is important to stress the social context of Rothbard's Lockean principles. As John O'Neill notes, Locke's labour theory of property was used not only to support enclosing common land in England but also as a justification for stealing the land of indigenous population's across the world. For example, the *"appropriation of America is justified by its being brought into the world of commence and hence cultivation ... The Lockean account of the 'vast wilderness' of America as land uncultivated and unshaped by the pastoral activities of the indigenous population formed part of the justification of the appropriation of native land."* [**Markets, Deliberation and Environment**, p. 119] That the native population was **using** the land was irrelevant as Rothbard himself noted. As he put it, the Indians *"laid claim to vast reaches of land which they hunted but which they did not transform by cultivation."* [**Conceived in Liberty**, vol. 1, p. 187]. This meant that *"the bulk of Indian-claimed land was not settled and transformed by the Indians"* and so settlers were *"at least justified in ignoring vague, abstract claims."* The Indian hunting based claims were *"dubious."* [**Op. Cit.**, vol. 2, p. 54 and p. 59] The net outcome, of course, was that the *"vague, abstract"*

Indian claims to hunting lands were meet with the concrete use of force to defend the newly appropriated (i.e. stolen) land (force which quickly reached the level of genocide).

So unless people bestowed some form of transforming labour over the wilderness areas then any claims of ownership are unsubstantiated. At most, tribal people and nomads could claim the wild animals they killed and the trails that they cleared. This is because a person would *"have to use the land, to 'cultivate' it in some way, before he could be asserted to own it."* This cultivation is not limited to *"tilling the soil"* but also includes clearing it for a house or pasture or caring for some plots of timber. [**Man, Economy, and State, with Power and Market**, p. 170] Thus game preserves or wilderness areas could **not** exist in a pure capitalist society. This has deep ecological implications as it automatically means the replacement of wild, old-growth forests with, at best, managed ones. These are **not** an equivalent in ecological terms even if they have approximately the same number of trees. As James C. Scott stresses:

> *"Old-growth forests, polycropping, and agriculture with open-pollinated landraces **may** not be as productive, in the short run, as single-species forests and fields or identical hybrids. But they are demonstrably more stable, more self-sufficient, and less vulnerable to epidemics and environmental stress ... Every time we replace 'natural capital' (such as wild fish stocks or old-growth forests) with what might be termed 'cultivated natural capital' (such as fish farms or tree plantations), we gain ease of appropriation and in immediate productivity, but at the cost of more maintenance expenses and less 'redundancy, resiliency, and stability' ... Other things being equal . .. the less diverse the cultivated natural capital, the more vulnerable and nonsustainable it becomes. The problem is that in most economic systems, the external costs (in water or air pollution, for example, or the exhaustion of non-renewable resources, including a reduction in biodiversity) accumulate long before the activity becomes unprofitable in a narrow profit-and-loss sense."* [**Seeing like a State**, p. 353]

Forests which are planned as a resource are made ecologically simplistic in order to make them economically viable (i.e., to reduce the costs involved in harvesting the crop). They tend to be monocultures of one type of tree and conservationists note that placing all eggs in one basket could prompt an ecological disaster. A palm oil monoculture which replaces rainforest to produce biofuel, for example, would be unable to support the rich diversity of wildlife as well as leaving the environment vulnerable to catastrophic disease. Meanwhile, local people dependent on the crop could be left high and dry if it fell out of favour on the global market.

To summarise, capitalism simply cannot protect wilderness and, by extension, the planet's ecology. Moreover, it is no friend to the indigenous population who use but do not "transform" their local environment.

It should also be noted that underlying assumption behind this and similar arguments is that other cultures and ways of life, like many eco-systems and species, are simply not worth keeping. While lip-service is made to the notion of cultural diversity, the overwhelming emphasis is on universalising the capitalist model of economic activity, property rights and way of life (and a corresponding ignoring of the role state power played in creating these as well as destroying traditional customs and ways of life). Such a model for development means the replacement of indigenous customs and communitarian-based ethics by a commercial system based on an abstract individualism with a very narrow vision of what constitutes self-interest. These new

converts to the international order would be forced, like all others, to survive on the capitalist market. With vast differences in wealth and power such markets have, it is likely that the net result would simply be that new markets would be created out of the natural 'capital' in the developing world and these would soon be exploited.

As an aside, we must note that Rothbard fails to realise — and this comes from his worship of capitalism and his "Austrian economics" — is that people value many things which do not, indeed cannot, appear on the market. He claims that wilderness is *"valueless unused natural objects"* for it people valued them, they would use — i.e. transform — them. But unused things may be of **considerable** value to people, wilderness being a classic example. And if something **cannot** be transformed into private property, does that mean people do not value it? For example, people value community, stress-free working environments, meaningful work — if the market cannot provide these, does that mean they do not value them? Of course not (see Juliet Schor's **The Overworked American** on how working people's desire for shorter working hours was not transformed into options on the market).

So it should be remembered that in valuing impacts on nature, there is a difference between use values (i.e. income from commodities produced by a resource) and non-use values (i.e., the value placed on the existence of a species or wilderness). The former are usually well-defined, but often small while the latter are often large, but poorly defined. For example, the Exxon Valdez oil spill in Alaska resulted in losses to people who worked and lived in the affected area of an estimated $300 million. However, the existence value of the area to the American population was $9 billion. In other words, the amount that American households were reportedly willing to pay to prevent a similar oil spill in a similar area was 30 times larger. Yet this non-use value cannot be taken into account in Rothbard's schema as nature is not considered a value in itself but merely a resource to be exploited.

Which brings us to another key problem with Rothbard's argument: he simply cannot justify the appropriation of water and atmosphere by means of his own principles. To show why, we need simply consult Rothbard's own writings on the subject.

Rothbard has a serious problem here. As noted above, he subscribed to a Lockean vision of property. In this schema, property is generated by mixing labour with unowned resources. Yet you simply cannot mix your labour with water or air. In other words, he is left with a system of property rights which cannot, by their very nature, be extended to common goods like water and air. Let us quote Rothbard on this subject:

> *"it is true that the high seas, in relation to shipping lanes, are probably inappropriable, because of their abundance in relation to shipping routes. This is **not** true, however, of **fishing** rights. Fish are definitely not available in unlimited quantities, relatively to human wants. Therefore, they are appropriable ... In a free [sic!] society, fishing rights to the appropriate areas of oceans would be owned by the first users of these areas and then useable or saleable to other individuals. Ownership of areas of water that contain fish is directly analogous to private ownership of areas of land or forests that contain animals to be hunted ... water can definitely be marked off in terms of latitudes and longitudes. These boundaries, then would circumscribe the area owned by individuals, in the full knowledge that fish and water can move from one person's property to another."* [**Man, Economy, and State, with Power and Market**, pp. 173–4]

In a footnote to this surreal passage, he added that it *"is rapidly becoming evident that air lanes for planes are becoming scare and, in a free [sic!] society, would be owned by first users."*

So, travellers crossing the sea gain no property rights by doing so but those travelling through the air do. Why this should be the case is hard to explain as, logically, both acts "transform" the commons by "labour" in exactly the same manner (i.e. not at all). Why **should** fishing result in absolute property rights in oceans, seas, lakes and rivers? Does picking a fruit give you property rights in the tree or the forest it stands in? Surely, at best, it gives you a property right in the fish and fruit? And what happens if area of water is so polluted that there are no fish? Does that mean that this body of water is impossible to appropriate? How does it become owned? Surely it cannot and so it will always remain a dumping ground for waste?

Looking at the issue of land and water, Rothbard asserts that owning water is *"directly analogous"* to owning land for hunting purposes. Does this mean that the landowner who hunts cannot bar travellers from their land? Or does it mean that the sea-owner can bar travellers from crossing their property? Ironically, as shown above, Rothbard later explicitly rejected the claims of Native Americans to own their land because they hunted animals on it. The same, logically, applies to his arguments that bodies of water can be appropriated.

Given that Rothbard is keen to stress that labour is required to transform land into private property, his arguments are self-contradictory and highly illogical. It should also be stressed that here Rothbard nullifies his criteria for appropriating private property. Originally, only labour being used on the resource can turn it into private property. Now, however, the only criteria is that it is scare. This is understandable, as fishing and travelling through the air cannot remotely be considered "mixing labour" with the resource.

It is easy to see why Rothbard produced such self-contradictory arguments over the years as each one was aimed at justifying and extending the reach of capitalist property rights. Thus the Indians' hunting claims could be rejected as these allowed the privatising of the land while the logically identical fishing claims could be used to allow the privatisation of bodies of water. Logic need not bother the ideologue when he seeking ways to justify the supremacy of the ideal (capitalist private property, in this case).

Finally, since Rothbard (falsely) claims to be an anarchist, it is useful to compare his arguments to that of Proudhon's. Significantly, in the founding work of anarchism Proudhon presented an analysis of this issue directly opposite to Rothbard's. Let us quote the founding father of anarchism on this important matter:

> *"A man who should be prohibited from walking in the highways, from resting in the fields, from taking shelter in caves, from lighting fires, from picking berries, from gathering herbs and boiling them in a bit of baked clay, — such a man could not live. Consequently the earth – like water, air, and light — is a primary object of necessity which each has a right to use freely, without infringing another's right. Why, then, is the earth appropriated? ... [An economist] assures us that it is because it is not INFINITE. The land is limited in amount. Then ... it ought to be appropriated. It would seem, on the contrary, that he ought to say, Then it ought not to be appropriated. Because, no matter how large a quantity of air or light any one appropriates, no one is damaged thereby; there always remains enough for all. With the soil, it is very different. Lay hold who will, or who can, of the sun's rays, the passing breeze, or the sea's billows; he has my consent, and my pardon for his bad intentions. But let any living man dare to*

> *change his right of territorial possession into the right of property, and I will declare war upon him, and wage it to the death!"* [**What is Property?**, p. 106]

Unlike Locke who at least paid lip-service to the notion that the commons can be enclosed when there is enough and as good left for others to use, Rothbard turn this onto its head. In his "Lockean" schema, a resource can be appropriated only when it is scare (i.e. there is **not** enough and as good left for others). Perhaps it comes as no surprise that Rothbard rejects the ***"Lockean proviso"*** (and essentially argues that Locke was not a consistent Lockean as his work is *"riddled with contradictions and inconsistencies"* and have been *"expanded and purified"* by his followers. [**The Ethics of Liberty**, p. 22]).

Rothbard is aware of what is involved in accepting the Lockean Proviso – namely the existence of private property (*"Locke's proviso may lead to the outlawry of **all** private property of land, since one can always say that the reduction of available land leaves everyone else .. . worse off"* [**Op. Cit.**, p. 240]). The Proviso **does** imply the end of capitalist property rights which is why Rothbard, and other right-"libertarians", reject it while failing to note that Locke himself simply assumed that the invention of money transcended this limitation. [C.B. MacPherson, **The Political Theory of Individualism**, pp. 203–20] As we discussed in section B.3.4, it should be stressed that this limitation is considered to be transcended purely in terms of material wealth rather than its impact on individual liberty or dignity which, surely, should be of prime concern for someone claiming to favour "liberty." What Rothbard failed to understand that Locke's Proviso of apparently limiting appropriation of land as long as there was enough and as good for others was a ploy to make the destruction of the commons palatable to those with a conscience or some awareness of what liberty involves. This can be seen from the fact this limitation could be transcended at all (in the same way, Locke justified the exploitation of labour by arguing that it was the property of the worker who sold it to their boss — see section B.4.2 for details). By getting rid of the Proviso, Rothbard simply exposes this theft of our common birthright in all its unjust glory.

It is simple. Either you reject the Proviso and embrace capitalist property rights (and so allow one class of people to be dispossessed and another empowered at their expense) or you take it seriously and reject private property in favour of possession and liberty. Anarchists, obviously, favour the latter option. Thus Proudhon:

> *"Water, air, and light are **common** things, not because they are **inexhaustible**, but because they are **indispensable**; and so indispensable that for that very reason Nature has created them in quantities almost infinite, in order that their plentifulness might prevent their appropriation. Likewise the land is indispensable to our existence, — consequently a common thing, consequently unsusceptible of appropriation; but land is much scarcer than the other elements, therefore its use must be regulated, not for the profit of a few, but in the interest and for the security of all.*
>
> *"In a word, equality of rights is proved by equality of needs. Now, equality of rights, in the case of a commodity which is limited in amount, can be realised only by equality of possession ... From whatever point we view this question of property — provided we go to the bottom of it — we reach equality."* [**Op. Cit.**, p. 107]

To conclude, it would be unfair to simply quote Keynes evaluation of one work by von Hayek, another leading "Austrian Economist," namely that it *"is an extraordinary example of how, starting*

with a mistake, a remorseless logician can end up in bedlam." This is only partly true as Rothbard's account of property rights in water and air is hardly logical (although it is remorseless once we consider its impact when applied in an unequal and hierarchical society). That this nonsense is in direct opposition to the anarchist perspective on this issue should not come as a surprise any more than its incoherence. As we discuss in section F, Rothbard's claims to being an "anarchist" are as baseless as his claim that capitalism will protect the environment.

E.5 Can ethical consumerism stop the ecological crisis?

No. At best, it can have a limited impact in reducing environmental degradation and so postpone the ecological crisis. At worse, it could accelerate that crisis by creating new markets and thus increasing growth.

Before discussing why and just so there is no misunderstanding, we must stress that anarchists fully recognise that using recycled or renewable raw materials, reducing consumption and buying "ecologically friendly" products and technologies **are** very important. As such, we would be the last to denounce such a thing. But such measures are of very limited use as solutions to the ecological problems we face. At best they can only delay, not prevent, capitalism's ultimate destruction of the planet's ecological base.

Green consumerism is often the only thing capitalism has to offer in the face of mounting ecological destruction. Usually it boils down to nothing more than slick advertising campaigns by big corporate polluters to hype band-aid measures such as using a few recycled materials or contributing money to a wildlife fund, which are showcased as "concern for the environment" while off camera the pollution and devouring of non-renewable resources goes on. They also engage in "greenwashing", in which companies lavishly fund PR campaigns to paint themselves "green" without altering their current polluting practices!

This means that apparently "green" companies and products actually are not. Many firms hire expensive Public Relations firms and produce advertisements to paint a false image of themselves as being ecologically friendly (i.e. perform "greenwashing"). This indicates a weakness of market economies — they hinder (even distort) the flow of information required for consumers to make informed decisions. The market does not provide enough information for consumers to determine whether a product **is** actually green or not — it just gives them a price supplemented by (often deliberately misleading) advertising designed to manipulate the consumer and present an appropriate corporate image. Consumers have to rely on other sources, many of which are minority journals and organisations and so difficult to find, to provide them with the accurate information required to countermand the power and persuasion of advertising and the work of PR experts. This helps explain why, for example, *"large agribusiness firms are now attempting, like Soviet commissars, to stifle criticism of their policies"* by means of *"veggie libel laws."* These laws, which in 2001 had been passed in 13 American states (*"backed by agribusiness"*) *"make it illegal to criticise agricultural commodities in a manner inconsistent with 'reasonable' scientific evidence. The whole concept of 'veggie libel' laws is probably unconstitutional; nevertheless, these laws remain on the books."* [Eric Schlosser, **Fast Food Nation**, p. 266]

We should not discount the impact of PR experts in shaping the way people see the world or decide to consume. A lot of resources are poured into corporate Public Relations in order to present a green image. *"In the perverse world of corporate public relations,"* note critics John Stauber and Sheldon Rampton, *"propagandising and lobbying **against** environmental protection*

*is called 'environmental' or 'green' PR. 'Greenwashing' is a more accurate pejorative now commonly used to describe the ways that polluters employ deceptive PR to falsely paint themselves an environmentally responsible public image ... Today a virulent, pro-industry, **anti**-environmentalism is on the rise ... PR experts ... are waging and winning a war against environmentalists on behalf of corporate clients in the chemical, energy, food, automobile, forestry and mining industries."* A significant amount of cash is spent (an estimated $1 billion a year by the mid-1990s) *"on the services of anti-environmental PR professionals and on 'greenwashing' their corporate image."* [**Toxic Sludge is Good for You!**, p. 125] See the chapter called *"Silencing Spring"* in Stauber's and Rampton's book **Toxic Sludge is Good for You!** for a good summary of this use of PR firms.

Even apparently ecologically friendly firms like "The Body Shop" can present a false image of what they do. For example, journalist Jon Entine investigated that company in 1994 and discovered that only a minuscule fraction of its ingredients came from **Trade Not Aid** (a program claimed to aid developing countries). Entine also discovered that the company also used many outdated, off-the-shelf product formulas filled with non-renewable petrochemicals as well as animal tested ingredients. When Entine contacted the company he received libel threats and it hired a PR company to combat his story. [Stauber and Rampton, **Op. Cit.**, pp. 74–5] This highlights the dangers of looking to consumerism to solve ecological problems. As Entine argued:

> *"The Body Shop is a corporation with the privileges and power in society as all others. Like other corporations it makes products that are unsustainable, encourages consumerism, uses non-renewable materials, hires giant PR and law firms, and exaggerates its environment policies. If we are to become a sustainable society, it is crucial that we have institutions ... that are truly sustainable. The Body Shop has deceived the public by trying to make us think that they are a lot further down the road to sustainability than they really are. We should ... no longer ... lionise the Body Shop and others who claim to be something they are not."* [quoted by Stauber and Rampton, **Op. Cit.**, p. 76]

Even ignoring the distorting influence of advertising and corporate-paid PR, the fundamental issue remains of whether consumerism can actually fundamentally influence how business works. One environmental journalist puts the arguments well in his excellent book on "Fast Food" (from the industrialisation of farming, to the monopolisation of food processing, to the standardisation of food consumption it). As he puts corporations will *"sell free-range, organic, grass-fed hamburgers if you demand it. They will sell whatever sells at a profit."* [Eric Schlosser, **Op. Cit.**, p. 269] He complements this position by suggesting various regulations and some role for trade unions.

Which, of course, is true. It is equally true that we are not forced to buy any specific product, which is why companies spend so much in convincing us to buy their products. Yet even ignoring the influence of advertising, it is unlikely that using the market will make capitalism nicer. Sadly, the market rewards the anti-social activities that Schlosser and other environmentalists chronicle. As he himself notes, the *"low price of a fast food hamburger does not reflect its real cost ... The profits of the fast food chains have been made possible by the losses imposed on the rest of society."* [**Op. Cit.**, p. 261] This means that the idea that by using the market we can "reform" capitalism is flawed simply because even "good" companies have to make a profit and so will be tempted to cut costs, inflict them on third parties (such as workers, consumers and the planet). The most obvious form

of such externalities is pollution. Such anti-social and anti-ecological behaviour makes perfect business sense as prices fall when costs are passed on to others in the form of externalities. Thus firms which employ debt-slaves in sweatshops while polluting the atmosphere in a third-world dictatorship will have lower costs and so prices than those employing unionised workers under eco-friendly regulations.

The amazing thing is that being concerned about such issues is considered as a flaw in economics. In fact, seeking the lowest price and ignoring the social and ecological impact of a product is *"considered virtuousness"* by the market and by economists for, as green economist E. F. Schumacher, pointed out *"[i]f a buyer refused a good bargain because he suspected that the cheapness of the goods in question stemmed from exploitation or other despicable practices (except theft), he would be open to criticism of behaving 'uneconomically' which is viewed as nothing less than a fall from grace. Economists and others are wont to treat such eccentric behaviour with derision if not indignation. The religion of economics has its own code of ethics, and the First Commandment is to behave 'economically.'"* [**Small is Beautiful**, p. 30] And, of course, such a consumer would face numerous competitors who will happily take advantage of such activities.

Then there is the issue of how the market system hides much more information than it gives (a factor we will return to in section I.1.2). Under the price system, customers have no way of knowing the ecological (or social) impact of the products they buy. All they have is a price and that simply does not indicate how the product was produced and what costs were internalised in the final price and which were externalised. Such information, unsurprisingly, is usually supplied **outside** the market by ecological activists, unions, customer groups and so on. Then there is the misinformation provided by the companies themselves in their adverts and PR campaigns. The skilfully created media images of advertising can easily swamp the efforts of these voluntary groups to inform the public of the facts of the social and environmental costs of certain products. Besides, any company has the threat of court action to silence their critics as the cost in money, resources, energy and time to fight for free speech in court is an effective means to keep the public ignorant about the dark side of capitalism.

This works the other way too. Simply put, a company has no idea whether you not buying a product is based on ethical consumption decisions or whether it is due to simple dislike of the product. Unless there is an organised consumer boycott, i.e. a collective campaign, then the company really has no idea that it is being penalised for its anti-ecological and/or anti-social actions. Equally, corporations are so interlinked that it can make boycotts ineffective. For example, unless you happened to read the business section on the day McDonalds bought a sizeable share in Pret-a-Manger you would have no idea that going there instead of McDonalds would be swelling the formers profits.

Ultimately, the price mechanism does not provide enough information for the customer to make an informed decision about the impact of their purchase and, by reducing prices, actively rewards the behaviour Schlosser condemns. After all, what is now "organic" production was just the normal means of doing it. The pressures of the market, the price mechanism so often suggested as a tool for change, ensured the industrialisation of farming which so many now rightly condemn. By reducing costs, market demand increased for the cheaper products and these drove the other, more ecologically and socially sound, practices out of business.

Which feeds into the issue of effective demand and income limitations. The most obvious problem is that the market is **not** a consumer democracy as some people have more votes than others (in fact, the world's richest people have more "votes" than the poorest billions, combined!). Those

with the most "votes" (i.e. money) will hardly be interested in changing the economic system which placed them in that position. Similarly, those with the least "votes" will be more willing to buy ecologically destructive products simply to make ends meet rather than any real desire to do so. In addition, one individual's decision **not** to buy something will easily be swamped by others seeking the best deal, i.e. the lowest prices, due to economic necessity or ignorance. Money (quantity) counts in the market, not values (quality).

Then there is the matter of sourcing of secondary products. After all, most products we consume are made up of a multitude of other goods and it is difficult, if not impossible, to know where these component parts come from. Thus we have no real way of knowing whether your latest computer has parts produced in sweatshops in third-world countries nor would a decision not to buy it be communicated that far back down the market chain (in fact, the company would not even know that you were even **thinking** about buying a product unless you used non-market means to inform them and then they may simply dismiss an individual as a crank).

So the notion that consumerism can be turned to pressurising companies is deeply flawed. This is **not** to suggest that we become unconcerned about how we spend our money. Far from it. Buying greener products rather than the standard one does have an impact. It just means being aware of the limitations of green consumerism, particularly as a means of changing the world. Rather, we must look to changing how goods are produced. This applies, of course, to shareholder democracy as well. Buying shares in a firm rarely results in an majority at the annual meetings nor, even if it did, does it allow an effective say in the day-to-day decisions management makes.

Thus green consumerism is hindered by the nature of the market — how the market reduces everything to price and so hides the information required to make truly informed decisions on what to consume. Moreover, it is capable of being used to further ecological damage by the use of PR to paint a false picture of the companies and their environmental activities. In this way, the general public think things are improving while the underlying problems remain (and, perhaps, get worse). Even assuming companies are honest and do minimise their environmental damage they cannot face the fundamental cause of the ecological crisis in the "grow-or-die" principle of capitalism ("green" firms need to make profits, accumulate capital and grow bigger), nor do they address the pernicious role of advertising or the lack of public control over production and investment under capitalism. Hence it is a totally inadequate solution.

As green Sharon Beder notes, green marketing aims at *"increasing consumption, not reducing it. Many firms [seek] to capitalise on new markets created by rising environmental consciousness"* with such trends prompting *"a surge of advertisements and labels claiming environmental benefits. Green imagery was used to sell products, and caring for the environment became a marketing strategy"* and was a *"way of redirecting a willingness to spend less into a willingness to buy green products."* This means that firms can *"expand their market share to include consumers that want green products. Since manufacturers still make environmentally damaging products and retailers still sell non-green products on shelves next to green ones, it is evident that green marketing is merely a way of expanding sales. If they were genuinely concerned to protect the environment they would replace the unsound products with sound ones, not just augment their existing lines."* Moreover, green marketing *"does not necessarily mean green products, but false and misleading claims can be hard for consumers to detect"* while the *"most cynical marketers simply use environmental imagery to conjure up the impression that a product is good for the environment without making any real claims at all."* Ultimately, green consumerism *"reduces people to consumers. Their power to influence society is reduced to their purchasing power."* It *"does not deal with issues such as economic*

growth on a finite planet, the power of transnational corporations, and the way power is structured in our society." [**Global Spin**, pp. 176–80]

Andrew Watson sums up green consumerism very eloquently as follows:

> *"green consumerism, which is largely a cynical attempt to maintain profit margins, does not challenge capital's eco-cidal accumulation, but actually facilitates it by opening a new market. All products, no matter how 'green', cause some pollution, use some resources and energy, and cause some ecological disturbance. This would not matter in a society in which production was rationally planned, but in an exponentially expanding economy, production, however 'green', would eventually destroy the Earth's environment. Ozone-friendly aerosols, for example, still use other harmful chemicals; create pollution in their manufacture, use and disposal; and use large amounts of resources and energy. Of course, up to now, the green pretensions of most companies have been exposed largely as presenting an acceptably green image, with little or no substance. The market is presented as the saviour of the environment. Environmental concern is commodified and transformed into ideological support for capitalism. Instead of raising awareness of the causes of the ecological crisis, green consumerism mystifies them. The solution is presented as an individual act rather than as the collective action of individuals struggling for social change. The corporations laugh all the way to the bank."* [**From Green to Red**, pp. 9–10]

"Ethical" consumerism, like "ethical" investment, is still based on profit making, the extraction of surplus value from others. This is hardly "ethical," as it cannot challenge the inequality in exchange and power that lies at the heart of capitalism nor the authoritarian social relationships it creates. Therefore it cannot really undermine the ecologically destructive nature of capitalism.

In addition, since capitalism is a world system, companies can produce and sell their non-green and dangerous goods elsewhere. Many of the products and practices banned or boycotted in developed countries are sold and used in developing ones. For example, Agent Orange (used as to defoliate forests during the Vietnam War by the US) is used as an herbicide in the Third World, as is DDT. Agent Orange contains one of the most toxic compounds known to humanity and was responsible for thousands of deformed children in Vietnam. Ciba-Geigy continued to sell Enterovioform (a drug which caused blindness and paralysis in at least 10,000 Japanese users of it) in those countries that permitted it to do so. Many companies have moved to developing countries to escape the stricter pollution and labour laws in the developed countries.

Neither does green consumerism question why it should be the ruling elites within capitalism that decide what to produce and how to produce it. Since these elites are driven by profit considerations, if it is profitable to pollute, pollution will occur. Moreover, green consumerism does not challenge the (essential) capitalist principle of consumption for the sake of consumption, nor can it come to terms with the fact that "demand" is created, to a large degree, by "suppliers," specifically by advertising agencies that use a host of techniques to manipulate public tastes, as well as using their financial clout to ensure that "negative" (i.e. truthful) stories about companies' environmental records do not surface in the mainstream media.

Because ethical consumerism is based **wholly** on market solutions to the ecological crisis, it is incapable even of recognising a key **root** cause of that crisis, namely the atomising nature of capitalism and the social relationships it creates. Atomised individuals ("soloists") cannot

change the world, and "voting" on the market hardly reduces their atomisation. As Murray Bookchin argues, *"[t]ragically, these millions [of "soloists"] have surrendered their social power, indeed, their very personalities, to politicians and bureaucrats who live in a nexus of obedience and command in which they are normally expected to play subordinate roles.* ***Yet this is precisely the immediate cause of the ecological crisis of our time*** *— a cause that has its historic roots in the market society that engulfs us."* [**Toward an Ecological Society**, p. 81] This means that fighting ecological destruction today must be a **social** movement rather than one of individual consumption decisions or personalistic transformation. These can go on without questioning the ecocidal drive of capitalism which *"will insidiously simplify the biosphere (making due allowances for 'wilderness' reserves and theme parks), steadily reduce the organic to the inorganic and the complex to the simple, and convert soil into sand — all at the expense of the biosphere's integrity and viability. The state will still be an ever-present means for keeping oppressed people at bay and will 'manage' whatever crises emerge as best it can. Ultimately, society will tend to become more and more authoritarian, public life will atrophy."* [Bookchin, *"The Future of the Ecology Movement,"* pp. 1–20, **Which Way for the Ecology Movement?**, p. 14]

All this is not to suggest that individual decisions on what to consume are irrelevant, far from it. Nor are consumer boycotts a waste of time. If organised into mass movements and linked to workplace struggle they can be very effective. It is simply to point out that individual actions, important as they are, are no solution to **social** problems. Thus Bookchin:

> *"The fact is that we are confronted by a thoroughly irrational social system, not simply by predatory individuals who can be won over to ecological ideas by moral arguments, psychotherapy, or even the challenges of a troubled public to their products and behaviour ... One can only commend the individuals who by virtue of their consumption habits, recycling activities. and appeals for a new sensibility undertake public activities to stop ecological degradation. Each surely does his or her part. But it will require a much greater effort — and organised, clearly conscious, and forward-looking political* ***movement*** *– to meet the basic challenges posed by our aggressively* ***anti****-ecological society.*
>
> *"Yes, we as individuals should change our lifestyles as much as possible, but it is the utmost short-sightedness to believe that that is all or even primarily what we have to do. We need to restructure the entire society, even as we engage in lifestyle changes and single-issue struggles against pollution, nuclear power plants, the excessive use of fossil fuels, the destruction of soil, and so forth. We must have a coherent analysis of the deep-seated hierarchical relationships and systems of domination, as well as class relationships and economic exploitation, that degrade people as well as the environment."* [*"The Ecological Crisis, Socialism, and the need to remake society,"* pp. 1–10, **Society and Nature**, vol. 2, no. 3, p. 4]

Using the capitalist market to combat the effects produced by that same market is no alternative. Until capitalism and the state are dismantled, solutions like ethical consumerism will be about as effective as fighting a forest fire with a water pistol. Such solutions are doomed to failure because they promote individual responses to social problems, problems that by their very nature require collective action, and deal only with the symptoms, rather than focusing on the cause of the problem in the first place. Real change comes from collective struggle, not individual

decisions within the market place which cannot combat the cancerous growth principle of the capitalist economy. As such, ethical consumerism does not break from the logic of capitalism and so is doomed to failure.

E.6 What is the population myth?

The idea that population growth is the **key** cause of ecological problems is extremely commonplace. Even individuals associated with such radical green groups as **Earth First!** have promoted it. It is, however, a gross distortion of the truth. **Capitalism** is the main cause of both overpopulation **and** the ecological crisis.

Firstly, we should point out that all the "doomsday" prophets of the "population bomb" have been proved wrong time and time again. The dire predictions of Thomas Malthus, the originator of the population myth, have not come true, yet neo-Malthusians continue to mouth his reactionary ideas. In fact Malthus wrote his infamous *"Essay on the Principles of Population"* which inflicted his *"law of population"* onto the world in response to the anarchist William Godwin and other social reformers. In other words, it was explicitly conceived as an attempt to "prove" that social stratification, and so the status quo, was a "law of nature" and that poverty was the fault of the poor themselves, not the fault of an unjust and authoritarian socio-economic system. As such, the "theory" was created with political goals in mind and as a weapon in the class struggle (as an aside, it should be noted that Darwin argued his theory of natural selection was *"the doctrine of Malthus applied to the whole animal and vegetable kingdom."* [quoted by Peter Marshall, **Nature's Web**, p. 320] In other words, anarchism, indirectly, inspired the theory of evolution. Perhaps unsurprisingly, in the form of Social Darwinism this was also used against working class people and social reform).

As Kropotkin summarised, Malthus work was *"pernicious"* in its influence. It *"summed up ideas already current in the minds of the wealth-possessing minority"* and arose to combat the *"ideas of equality and liberty"* awakened by the French and American revolutions. Malthus asserted against Godwin *"that no equality is possible; that the poverty of the many is not due to institutions, but is a natural **law.**"* This meant he *"thus gave the rich a kind of scientific argument against the ideas of equality."* However, it was simply *"a pseudo-scientific"* assertion which reflected *"the secret desires of the wealth-possessing classes"* and not a scientific hypothesis. This is obvious as technology has ensured that Malthus's fears are *"groundless"* while they are continually repeated. [**Fields, Factories and Workshops Tomorrow**, p. 77, p. 78 and p. 79]

That the theory was fundamentally ideological in nature can be seen from Malthus himself. It is interesting to note that in contrast, and in direct contradiction to his population "theory," as an economist Malthus was worried about the danger of **over-production** within a capitalist economy. He was keen to defend the landlords from attacks by Ricardo and had to find a reason for their existence. To do this, he attacked Say's Law (the notion that over-production was impossible in a free market economy). Utilising the notion of effective demand, he argued that capitalist saving caused the threat of over-production and it was the landlords luxury consumption which made up the deficit in demand this caused and ensured a stable economy. As Marxist David McNally points out, the *"whole of this argument is completely at odds with the economic analysis"* of his essay on population. According to that, the *"chronic ... danger which confronts society is **underproduction** of food relative to people."* In his economics book, the world *"is threatened*

*by **overproduction.** Rather than there being too little supply relative to demand, there is now too little demand relative to supply."* In fact, Malthus even went so far as to argue for the poor to be employed in building roads and public works! No mention of "excess" population there, which indicates well the ideological nature of his over-population theory. As McNally shows, it was the utility of Malthus's practical conclusions in his "Essay on the Principles of Population" for fighting the poor law and the right to subsistence (i.e. welfare provisions) which explained his popularity: *"he made classical economics an open enemy of the working class."* [*"The Malthusian Moment: Political Economy versus Popular Radicalism"*, pp. 62–103, **Against the Market**, p. 85 and p. 91]

So it is easy to explain the support Malthus and his assertions got in spite of the lack of empirical evidence and the self-contradictory utterances of its inventor. Its support rests simply in its utility as a justification for the inhuman miseries inflicted upon the British people by "its" ruling class of aristocrats and industrialists was the only reason why it was given the time of day. Similarly today, its utility to the ruling class ensures that it keeps surfacing every so often, until forced to disappear again once the actual facts of the case are raised. That the population myth, like "genetic" justifications for race-, class- and gender-based oppression, keeps appearing over and over again, even after extensive evidence has disproved it, indicates its usefulness to the ideological guardians of the establishment.

Neo-Malthusianism basically blames the victims of capitalism for their victimisation, criticising ordinary people for "breeding" or living too long, thus ignoring (at best) or justifying (usually) **privilege** — the social root of hunger. To put it simply, the hungry are hungry because they are excluded from the land or cannot earn enough to survive. In Latin America, for example, 11% of the population was landless in 1961, by 1975 it was 40%. Approximately 80% of all Third World agricultural land is owned by 3% of landowners. As anarchist George Bradford stresses, Malthusians *"do not consider the questions of land ownership, the history of colonialism, and where social power lies. So when the poor demand their rights, the Malthusians see 'political instability' growing from population pressure."* [**Woman's Freedom: Key to the Population Question**, p. 77] Bookchin makes a similar critique:

> *"the most sinister feature about neo-Malthusianism is the extent to which it actively deflects us from dealing with the social origins of our ecological problems — indeed, the extent to which it places the blame for them on the victims of hunger rather than those who victimise them. Presumably, if there is a 'population problem' and famine in Africa, it is the ordinary people who are to blame for having too many children or insisting on living too long — an argument advanced by Malthus nearly two centuries ago with respect to England's poor. The viewpoint not only justifies privilege; it fosters brutalisation and degrades the neo-Malthusians even more than it degrades the victims of privilege."* [*"The Population Myth"*, pp. 30–48, **Which Way for the Ecology Movement?**, p. 34]

Increased population is not the cause of landlessness, it is the result of it. If a traditional culture, its values, and its sense of identity are destroyed, population growth rates increase dramatically. As in 17th- and 18th-century Britain, peasants in the Third World are kicked off their land by the local ruling elite, who then use the land to produce cash crops for export while their fellow country people starve. Like Ireland during the Potato Famine, the Third World nations most

affected by famine have also been exporters of food to the developed nations. Malthusianism is handy for the wealthy, giving them a "scientific" excuse for the misery they cause so they can enjoy their blood-money without remorse. It is unwise for greens to repeat such arguments:

> *"It's a betrayal of the entire message of social ecology to ask the world's poor to deny themselves access to the necessities of life on grounds that involve long-range problems of ecological dislocation, the shortcomings of 'high' technology, and very specious claims of natural shortages in materials, while saying nothing at all about the artificial scarcity engineered by corporate capitalism."* [**The Ecology of Freedom**, p. 350]

In a country that is being introduced to the joys of capitalism by state intervention (the usual means by which traditional cultures and habits are destroyed to create a "natural system of liberty"), population soon explodes as a result of the poor social and economic conditions in which people find themselves. In the inner-city ghettos of the First World, social and economic conditions similar to those of the Third World give rise to similarly elevated birth rates. When ghetto populations are composed mostly of minorities, as in countries like the US, higher birth rates among the minority poor provides a convenient extra excuse for racism, "proving" that the affected minorities are "inferior" because they "lack self-control," are "mere animals obsessed with procreation," etc. Much the same was said of Irish Catholics in the past and, needless to say, such an argument ignores the fact that slum dwellers in, for example, Britain during the Industrial Revolution were virtually all white but still had high birth rates.

Population growth, far from being the cause of poverty, is in fact a result of it. There is an inverse relationship between per capita income and the fertility rate — as poverty decreases, so do the population rates. When people are ground into the dirt by poverty, education falls, women's rights decrease, and contraception is less available. Having children then becomes virtually the only survival means, with people resting their hopes for a better future in their offspring. Therefore social conditions have a major impact on population growth. In countries with higher economic and cultural levels, population growth soon starts to fall off. Today, for example, much of Europe has seen birth rates fall beyond the national replacement rate. This is the case even in Catholic countries, which one would imagine would have religious factors encouraging large families.

To be clear, we are **not** saying that overpopulation is not a very serious problem. Obviously, population growth **cannot** be ignored or solutions put off until capitalism is eliminated. We need to immediately provide better education and access to contraceptives across the planet as well as raising cultural levels and increasing women's rights in order to combat overpopulation **in addition to** fighting for land reform, union organising and so on. Overpopulation only benefits the elite by keeping the cost of labour low. This was the position of the likes of Emma Goldman and other radicals of her time:

> *"Many working-class radicals accepted the logic that excessive numbers were what kept the poor in their misery. During the nineteenth century there were courageous attempts to disseminate birth-control information both to promote lower population and to make it possible for women to control their own reproductivity and escape male domination. Birth control was the province of feminism, radical socialism and anarchism."* [Bradford, **Op. Cit.**, p. 69]

Unlike many neo-Malthusians Goldman was well aware that **social** reasons explained why so many people went hungry. As she put it, *"if the masses of people continue to be poor and the rich grow ever richer, it is not because the earth is lacking in fertility and richness to supply the need of an excessive race, but because the earth is monopolised in the hands of the few to the exclusion of the many."* She noted that the promotion of large families had vested interests behind it, although working class people *"have learned to see in large families a millstone around their necks, deliberately imposed upon them by the reactionary forces in society because a large family paralyses the brain and benumbs the muscles of the masses ... [The worker] continues in the rut, compromises and cringes before his master, just to earn barely enough to feed the many little mouths. He dare not join a revolutionary organisation; he dare not go on strike; he dare not express an opinion."* [*"The Social Aspects of Birth Control"*, **Anarchy! An Anthology of Emma Goldman's Mother Earth**, p. 135 and pp. 136–7] This support for birth control, it should be stressed, resulted in Goldman being arrested. Malthus, like many of his followers *"opposed contraception as immoral, preferring to let the poor starve as a 'natural' method of keeping numbers down. For him, only misery, poverty, famine, disease, and war would keep population from expanding beyond the carrying capacity of the land."* [Bradford, **Op. Cit.**, p. 69]

Unsurprisingly, Goldman linked the issue of birth control to that of women's liberation arguing that *"I never will acquiesce or submit to authority, nor will I make peace with a system which degrades woman to a mere incubator and which fattens on her innocent victims. I now and here declare war upon this system."* The key problem was that woman *"has been on her knees before the altar of duty imposed by God, by Capitalism, by the State, and by Morality"* for ages. Once that changed, the issue of population would solve itself for *"[a]fter all it is woman whom is risking her health and sacrificing her youth in the reproduction of the race. Surely she ought to be in a position to decide how many children she should bring into world, whether they should be brought into the world by the man she loves and because she wants the child, or should be born in hatred and loathing."* [**Op. Cit.**, p. 140 and p. 136]

Other anarchists have echoed this analysis. George Bradford, for example, correctly notes that *"the way out of the [ecological] crisis lies in the practical opening toward freedom of self-expression and selfhood for women that is the key to the destruction of hierarchy."* In other words, women's *"freedom and well-being are at the centre of the resolution to the population problem, and that can only be faced within the larger social context."* That means *"real participation in social decision-making, real health concerns, access to land, and the overthrow of patriarchal domination."* [**Op. Cit.**, p. 68 and p. 82] Bookchin makes the same point, noting that population growth rates have fallen in developed countries because *"of the **freedom** that women have acquired over recent decades to transcend the role that patriarchy assigned to them as mere reproductive factories."* [*"The Future of the Ecology Movement,"* pp. 1–20, **Which Way for the Ecology Movement?**, p. 19]

This means that an **increase** of freedom will solve the population question. Sadly, many advocates of neo-Malthusianism extend control over people from women to all. The advocates of the "population myth," as well as getting the problem wrong, also (usually) suggest very authoritarian "solutions" — for example, urging an increase in state power with a "Bureau of Population Control" to "police" society and ensure that the state enters the bedroom and our most personal relationships. Luckily for humanity and individual freedom, since they misconceive the problem, such "Big Brother" solutions are not required.

So, it must be stressed the "population explosion" is not a neutral theory, and its invention reflected class interests at the time and continual use since then is due to its utility to vested

interests. We should not be fooled into thinking that overpopulation is the main cause of the ecological crisis, as this is a strategy for distracting people from the root-cause of both ecological destruction and population growth today: namely, the capitalist economy and the inequalities and hierarchical social relationships it produces. As such, those who stress the issue of population numbers get it backward. Poverty causes high birth rates as people gamble on having large families so that some children will survive in order to look after the parents in their old age. Eliminate economic insecurity and poverty, then people have less children.

Some Greens argue that it is impossible for **everyone** to have a high standard of living, as this would deplete available resources and place too much pressure on the environment. However, their use of statistics hides a sleight of hand which invalidates their argument. As Bookchin correctly argues:

> *"Consider the issue of population and food supply in terms of mere numbers and we step on a wild merry-go-round that does not support neo-Malthusian predictions of a decade ago, much less a generation ago. Such typically neo-Malthusian stunts as determining the 'per capita consumption' of steel, oil, paper, chemicals, and the like of a nation by dividing the total tonnage of the latter by the national population, such that every man, women, and child is said to 'consume' a resultant quantity, gives us a picture that is blatantly false and functions as a sheer apologia for the upper classes. The steel that goes into a battleship, the oil that is used to fuel a tank, and the paper that is covered by ads hardly depicts the human consumption of materials. Rather, it is stuff consumed by all the Pentagons of the world that help keep a 'grow-or-die economy in operation — goods, I may add, whose function is to destroy and whose destiny is to be destroyed."* [*"The Population Myth"*, pp. 30–48, **Which Way for the Ecology Movement?**, pp. 34–5]

Focusing on averages, in other words, misses out the obvious fact we live in a highly unequal societies which results in a few people using many resources. To talk about consumption and not to wonder how many Rolls Royces and mansions the "average" person uses means producing skewed arguments. Equally, it is possible to have more just societies with approximately the same living standards with significantly **less** consumption of resources and **less** pollution and waste produced. We need only compare America with Europe to see this. One could point out, for example, that Europeans enjoy more leisure time, better health, less poverty, less inequality and thus more economic security, greater intergenerational economic mobility, better access to high-quality social services like health care and education, and manage to do it all in a far more environmentally sustainable way (Europe generates about half the CO2 emissions for the same level of GDP) compared to the US.

In fact, even relatively minor changes in how we work can have significant impact. For example, two economists at the Center for Economic and Policy Research produced a paper comparing U.S. and European energy consumption and related it to hours worked. They concluded that if Americans chose to take advantage of their high level of productivity by simply shortening the workweek or taking longer holidays rather than producing more, there would follow a number of benefits. Specifically, if the U.S. followed Western Europe in terms of work hours then not only would workers find themselves with seven additional weeks of time off, the US would consume some 20% less energy and if this saving was directly translated into lower carbon emissions

then it would have emitted 3% less carbon dioxide in 2002 than in 1990 (this level of emissions is only 4% above the negotiated target of the Kyoto Protocol). If Europe following IMF orthodoxy and increased working hours, this would have a corresponding negative impact on energy use and emissions (not to mention quality of life). [David Rosnick and Mark Weisbrot, **Are Shorter Work Hours Good for the Environment?**] Of course, any such choice is influenced by social institutions and pressures and, as such, part of a wider social struggle for change.

In other words, we must question the underlying assumption of the neo-Malthusians that society and technology are static and that the circumstances that produced historic growth and consumption rates will remain unchanged. This is obviously false, since humanity is not static. To quote Bookchin again:

> *"by reducing us to studies of line graphs, bar graphs, and statistical tables, the neo-Malthusians literally freeze reality as it is. Their numerical extrapolations do not construct any reality that is new; they mere extend, statistic by statistic, what is basically old and given .. . We are taught to accept society, behaviour, and values as they **are**, not as they should be or even **could** be. This procedure places us under the tyranny of the status quo and divests us of any ability to think about radically changing the world. I have encountered very few books or articles written by neo-Malthusians that question whether we should live under any kind of money economy at all, any statist system of society, or be guided by profit oriented behaviour. There are books and articles aplenty that explain 'how to' become a 'morally responsible' banker, entrepreneur, landowner, 'developer,' or, for all I know, arms merchant. But whether the whole system called capitalism (forgive me!), be it corporate in the west or bureaucratic in the east, must be abandoned if we are to achieve an ecological society is rarely discussed."* [**Op. Cit.**, p. 33]

It is probably true that an "American" living standard is not possible for the population of the world at its present level (after all, the US consumes 40% of the world's resources to support only 5% of its population). For the rest of the world to enjoy that kind of standard of living we would require the resources of multiple Earths! Ultimately, anything which is not renewable is exhaustible. The real question is when will it be exhausted? How? Why? And by whom? As such, it is important to remember that this "standard of living" is a product of an hierarchical system which produces an alienated society in which consumption for the sake of consumption is the new god. In a grow-or-die economy, production and consumption must keep increasing to prevent economic collapse. This need for growth leads to massive advertising campaigns to indoctrinate people with the capitalist theology that more and more must be consumed to find "happiness" (salvation), producing consumerist attitudes that feed into an already-present tendency to consume in order to compensate for doing boring, pointless work in a hierarchical workplace. Unless a transformation of values occurs that recognises the importance of **living** as opposed to **consuming,** the ecological crisis **will** get worse. It is impossible to imagine such a radical transformation occurring under capitalism and so a key aim of eco-anarchists is to encourage people to consider what they need to live enriched, empowering and happy lives rather than participate in the rat race capitalism produces (even if you do win, you remain a rat).

Nor it cannot be denied that developments like better health care, nutrition, and longer lifespans contribute to overpopulation and are made possible by "industry." But to see such developments as primary causes of population growth is to ignore the central role played by poverty,

the disruption of cultural patterns, and the need for cheap labour due to capitalism. There are always elevated birth rates associated with poverty, whether or not medical science improves significantly (for example, during the early days of capitalism). "Industrialism" is in fact a term used by liberal Greens (even when they call themselves "deep") who do not want to admit that the ecological crisis cannot be solved without the complete overthrow of capitalism, pretending instead that the system can become "green" through various band-aid reforms. "Controlling population growth" is always a key item on such liberals' agendas, taking the place of "eliminating capitalism," which should be the centrepiece. *"Population control is substituted for social justice, and the problem is actually aggravated by the Malthusian 'cure',"* points out feminist Betsy Hartmann. [quoted by Bradford, **Op. Cit.**, p. 77]

After all, there **is** enough food to feed the world's population but its distribution reflects inequalities in wealth, power and effective demand (this is most obviously seen when food is exported from famine areas as there is no effective demand for it there, a sadly regular occurrence). The *"myth that population increases in places like the Sudan, for example, result in famine"* can only survive if we ignore *"the notorious fact that the Sudanese could easily feed themselves if they were not forced by the American-controlled World Bank and International Monetary Fund to grow cotton instead of grains."* [Bookchin, **Remaking Society**, p. 11] Hence the importance of class analysis and an awareness of hierarchy. We can hardly talk of "our" resources when those resources are owned by a handful of giant corporations. Equally, we cannot talk about "our" industrial impact on the planet when the decisions of industry are made by a bosses and most of us are deliberately excluded from the decision making process. While it makes sense for the ruling elite to ignore such key issues, it counter-productive for radicals to do so and blame "people" or their numbers for social and environmental problems:

> *"The most striking feature of such way of thinking is not only that it closely parallels the way of thinking that is found in the corporate world. What is more serious is that it serves to deflect our attention from the role society plays in producing ecological breakdown. If 'people' as a **species** are responsible for environmental dislocations, these dislocations cease to be the result of **social** dislocations. A mythic 'Humanity' is created — irrespective of whether we are talking about oppressed minorities, women, Third World people, or people in the First World — in which everyone is brought into complicity with powerful corporate elites in producing environmental dislocations. In this way, the social roots of ecological problems are shrewdly obscured ... [W]e can dismiss or explain away hunger, misery, or illness as 'natural checks' that are imposed on human beings to retain the 'balance of nature.' We can comfortably forget that much of the poverty and hunger that afflicts the world has its origins in the corporate exploitation of human beings and nature — in agribusiness and social oppression."* [**Op. Cit.**, pp. 9–10]

Looking at population numbers simply misses the point. As Murray Bookchin argues, this *"arithmetic mentality which disregards the social context of demographics is incredibly short-sighted. Once we accept without any reflection or criticism that we live in a 'grow-or-die' capitalistic society in which accumulation is literally a law of economic survival and competition is the motor of 'progress,' anything we have to say about population is basically meaningless. The biosphere will eventually be destroyed whether five billion or fifty million live on the planet. Competing firms in a 'dog-eat-dog' market must outproduce each other if they are to remain in existence. They must plunder the*

soil, remove the earth's forests, kill off its wildlife, pollute its air and waterways not because their intentions are necessarily bad, although they usually are … but because they must simply survive. Only a radical restructuring of society as a whole, including its anti-ecological sensibilities, can remove this all commanding social compulsion." [*"The Population Myth"*, pp. 30–48, **Op. Cit.**, p. 34] A sane society would not be driven by growth for the sake of growth and would aim to reduce production by reducing the average working week to ensure both an acceptable standard of living **plus** time to enjoy it. So it is not a case that the current industrial system is something we need to keep. Few anarchists consider a social revolution as simply expropriating current industry and running it more or less as it is now. While expropriating the means of life is a necessary first step, it is only the start of a process in which we transform the way we interact with nature (which, of course, includes people).

To conclude, as Bradford summarises the *"salvation of the marvellous green planet, our Mother Earth, depends on the liberation of women — and children, and men — from social domination, exploitation and hierarchy. They must go together."* [**Op. Cit.**, p. 68] By focusing attention away from the root causes of ecological and social disruption – i.e. capitalism and hierarchy — and onto their victims, the advocates of the "population myth" do a great favour to the system that creates mindless growth. Hence the population myth will obviously find favour with ruling elites, and this — as opposed to any basis for the myth in scientific fact — will ensure its continual re-appearance in the media and education.

Section F — Is “anarcho”-capitalism a type of anarchism?

Anyone who has followed political discussion on the net has probably come across people calling themselves "libertarians" but arguing from a right-wing, pro-capitalist perspective. For most people outside of North America, this is weird as the term *"libertarian"* is almost always used in conjunction with *"socialist"* or *"communist"* (particularly in Europe and, it should be stressed, historically in America). In the US, though, the Right has partially succeeded in appropriating the term "libertarian" for itself. Even stranger is that a few of these right-wingers have started calling themselves "anarchists" in what must be one of the finest examples of an oxymoron in the English language: "Anarcho-capitalist"‼!

Arguing with fools is seldom rewarded, but to let their foolishness to go unchallenged risks allowing them to deceive those who are new to anarchism. This is what this section of the FAQ is for, to show why the claims of these "anarchist" capitalists are false. Anarchism has always been anti-capitalist and any "anarchism" that claims otherwise cannot be part of the anarchist tradition. It is important to stress that anarchist opposition to the so-called capitalist "anarchists" do **not** reflect some kind of debate within anarchism, as many of these types like to pretend, but a debate between anarchism and its old enemy, capitalism. In many ways this debate mirrors the one between Peter Kropotkin and Herbert Spencer (an English capitalist minimal statist) at the turn the 19th century and, as such, it is hardly new.

At that time, people like Spencer tended to call themselves "liberals" while, as Bookchin noted, *"libertarian"* was *"a term created by nineteenth-century European anarchists, not by contemporary American right-wing proprietarians."* [**The Ecology of Freedom**, p. 57] David Goodway concurs, stating that *"libertarian"* has been *"frequently employed by anarchists"* as an alternative name for our politics for over a century. However, the *"situation has been vastly complicated in recent decades with the rise of ... extreme right-wing laissez-faire philosophy ... and [its advocates] adoption of the words 'libertarian' and 'libertarianism.' It has therefore now become necessary to distinguish between their right libertarianism and the left libertarianism of the anarchist tradition."* [**Anarchist Seeds Beneath the Snow**, p. 4] This appropriation of the term "libertarian" by the right not only has bred confusion, but also protest as anarchists have tried to point out the obvious, namely that capitalism is marked by **authoritarian** social relationships and so there are good reasons for anarchism being a fundamentally anti-capitalist socio-political theory and movement. That a minority of the right "libertarians" have also tried to appropriate "anarchist" to describe their authoritarian politics is something almost all anarchists reject and oppose.

That the vast majority of anarchists reject the notion of "anarcho"-capitalism as a form of anarchism is an inconvenient fact for its supporters. Rather than address this, they generally point to the fact that some academics state that "anarcho"-capitalism is a form of anarchism and include it in their accounts of our movement and ideas. That some academics do this is true, but irrelevant. What counts is what anarchists think anarchism is. To place the opinions of academics above that of anarchists implies that anarchists know nothing about anarchism, that we do not really understand the ideas we advocate but academics do! Yet this is the implication. As such the near universal rejection of "anarcho"-capitalism as a form of anarchism within anarchist circles is significant. However, it could be argued that as a few anarchists (usually individualist ones, but not always) **do** admit "anarcho"-capitalism into our movement that this (very small) minority shows that the majority are "sectarian." Again, this is not convincing as some individuals in any movement will hold positions which the majority reject and which are, sometimes, incompatible with the basic principles of the movement (Proudhon's sexism and racism are obvious examples). Equally, given that anarchists and "anarcho"-capitalists have fundamentally ***different*** analyses

and goals it is hardly "sectarian" to point this out (being "sectarian" in politics means prioritising differences and rivalries with politically close groups).

Some scholars do note the difference. For example, Jeremy Jennings, in his excellent overview of anarchist theory and history, argues that it is *"hard not to conclude that these ideas ["anarcho"-capitalism] — with roots deep in classical liberalism — are described as anarchist only on the basis of a misunderstanding of what anarchism is."* [*"Anarchism"*, **Contemporary Political Ideologies**, Roger Eatwell and Anthony Wright (eds.), p. 142] Barbara Goodwin reaches a similar conclusion, noting that the "anarcho"-capitalists' *"true place is in the group of right-wing libertarians"* not in anarchism for *"[w]hile condemning absolutely state coercion, they tacitly condone the economic and interpersonal coercion which would prevail in a totally* ***laissez-faire*** *society. Most anarchists share the egalitarian ideal with socialists: anarcho-capitalists abhor equality and socialism equally."* [**Using Political Ideas**, p. 138]

Sadly, these seem to be the minority in academic circles as most are happy to discuss right-"libertarian" ideology as a subclass of anarchism in spite of there being so little in common between the two. Their inclusion does really seem to derive from the fact that "anarcho"-capitalists **call** themselves anarchists and the academics take this at face value. Yet, as one anarchist notes, having a *"completely fluid definition of anarchism, allows for anyone and anything to be described as such, no matter how authoritarian and anti-social."* [Benjamin Franks, *"Mortal Combat"*, pp. 4–6, **A Touch of Class**, no. 1, p. 5] Also, given that many academics approach anarchism from what could be termed the "dictionary definition" methodology rather than as a political movement approach there is a tendency for "anarcho"-capitalist claims to be taken at face value. As such, it is useful to stress that anarchism is a social movement with a long history and while its adherents have held divergent views, it has never been limited to simply opposition to the state (i.e. the dictionary definition).

The "anarcho"-capitalist argument that it is a form of anarchism hinges on using the dictionary definition of "anarchism" and/or "anarchy." They try to define anarchism as being "opposition to government," and nothing else. Of course, many (if not most) dictionaries "define" anarchy as "chaos" or "disorder" but we never see "anarcho"-capitalists use those particular definitions! Moreover, and this should go without saying, dictionaries are hardly politically sophisticated and their definitions rarely reflect the wide range of ideas associated with political theories and their history. Thus the dictionary "definition" of anarchism will tend to ignore its consistent views on authority, exploitation, property and capitalism (ideas easily discovered if actual anarchist texts are read). And for this strategy to work, a lot of "inconvenient" history and ideas from all branches of anarchism must be ignored. From individualists like Tucker to communists like Kropotkin and considered anarchism as part of the wider socialist movement. Therefore "anarcho"-capitalists are not anarchists in the same sense that rain is not dry.

Significantly, the inventor of the term "anarcho"-capitalism, Murray Rothbard had no impact on the anarchist movement even in North America. His influence, unsurprisingly, was limited to the right, particularly in so-called "libertarian" circles. The same can be said of "anarcho"-capitalism in general. This can be seen from the way Rothbard is mentioned in Paul Nursey-Bray's bibliography on anarchist thinkers. This is an academic book, a reference for libraries. Rothbard is featured, but the context is very suggestive. The book includes Rothbard in a section titled *"On the Margins of Anarchist Theory."* His introduction to the Rothbard section is worth quoting:

> *"Either the inclusion or the omission of Rothbard as an anarchist is likely, in one quarter or another, to be viewed as contentious. Here, his Anarcho-Capitalism is treated as marginal, since, while there are linkages with the tradition of individualist anarchism, there is a dislocation between the mutualism and communitarianism of that tradition and the free market theory, deriving from Ludwig von Mises and Friedrich von Hayek, that underpins Rothbard's political philosophy, and places him in the modern Libertarian tradition."* [**Anarchist Thinkers and Thought**, p. 133]

This is important, for while Rothbard (like other "anarcho"-capitalists) appropriates **some** aspects of individualist anarchism he does so in a highly selective manner and places what he does take into an utterly different social environment and political tradition. So while there are similarities between both systems, there are important differences as we will discuss in detail in section G along with the anti-capitalist nature of individualist anarchism (i.e. those essential bits which Rothbard and his followers ignore or dismiss). Needless to say, Nursey-Bray does not include "anarcho"-capitalism in his discussion of anarchist schools of thought in the bibliography's introduction.

Of course, we cannot stop the "anarcho"-capitalists using the words "anarcho", "anarchism" and "anarchy" to describe their ideas. The democracies of the west could not stop the Chinese Stalinist state calling itself the People's Republic of China. Nor could the social democrats stop the fascists in Germany calling themselves "National Socialists". Nor could the Italian anarcho-syndicalists stop the fascists using the expression "National Syndicalism". This does not mean their names reflected their content — China is a dictatorship, not a democracy; the Nazi's were not socialists (capitalists made fortunes in Nazi Germany because it crushed the labour movement); and the Italian fascist state had nothing in common with anarcho-syndicalist ideas of decentralised, "from the bottom up" unions and the abolition of the state and capitalism.

It could be argued (and it has) that the previous use of a word does not preclude new uses. Language changes and, as such, it is possible for a **new** kind of "anarchism" to develop which has little, or no, similarities with what was previously known as anarchism. Equally, it could be said that new developments of anarchism have occurred in the past which were significantly different from old versions (for example, the rise of communist forms of anarchism in opposition to Proudhon's anti-communist mutualism). Both arguments are unconvincing. The first just makes a mockery of the concept of language and breeds confusion. If people start calling black white, it does not make it so. Equally, to call an ideology with little in common with a known and long established socio-political theory and movement the same name simply results in confusion. No one takes, say, fascists seriously when they call their parties "democratic" nor would we take Trotskyists seriously if they started to call themselves "libertarians" (as some have started to do). The second argument fails to note that developments within anarchism built upon what came before and did not change its fundamental (socialistic) basis. Thus communist and collectivist anarchism are valid forms of anarchism because they built upon the key insights of mutualism rather than denying them.

A related defence of "anarcho"-capitalism as a form of anarchism is the suggestion that the problem is one of terminology. This argument is based on noting that "anarcho"-capitalists are against "actually existing" capitalism and so *"we must distinguish between 'free-market capitalism' ... and 'state capitalism' ... The two are as different as day and night."* [Rothbard, **The Logic of Action II**, p. 185] It would be churlish indeed to point out that the **real** difference is that one

exists while the other has existed only in Rothbard's head. Yet point it out we must, for the simple fact is that not only do "anarcho"-capitalists use the word anarchism in an unusual way (i.e. in opposition to what has always been meant by the term), they also use the word capitalism in a like manner (i.e., to refer to something that has never existed). It should go without saying that using words like "capitalism" and "anarchism" in ways radically different to traditional uses cannot help but provoke confusion. Yet is it a case that "anarcho"-capitalists have simply picked a bad name for their ideology? Hardly, as its advocates will quickly rush to defend exploitation (non-labour income) and capitalist property rights as well as the authoritarian social structures produced with them. Moreover, as good capitalist economists the notion of an economy without interest, rent and profit is considered highly inefficient and so unlikely to develop. As such, their ideology is rooted in a perspective and an economy marked by wage labour, landlords, banking and stock markets and so hierarchy, oppression and exploitation, i.e. a capitalist one.

So they have chosen their name well as it shows in clear light how far they are from the anarchist tradition. As such, almost all anarchists would agree with long-time anarchist activist Donald Rooum's comment that *"self-styled 'anarcho-capitalists' (not to be confused with anarchists of any persuasion) [simply] want the state abolished as a regulator of capitalism, and government handed over to capitalists."* They are *"wrongly self-styled 'anarchists'"* because they *"do not oppose capitalist oppression"* while genuine anarchists are *"extreme libertarian socialists."* [**What Is Anarchism?**, p. 7, pp. 12–13 and p. 10] As we stress in section F.1, "anarcho"-capitalists do not oppose the hierarchies and exploitation associated with capitalism (wage labour and landlordism) and, consequently, have no claim to the term "anarchist." Just because someone uses a label it does not mean that they support the ideas associated with that label and this is the case with "anarcho"-capitalism — its ideas are at odds with the key ideas associated with all forms of traditional anarchism (even individualist anarchism which is often claimed, usually by "anarcho"-capitalists, as being a forefather of the ideology).

We are covering this topic in an anarchist FAQ for three reasons. Firstly, the number of "libertarian" and "anarcho"-capitalists on the net means that those seeking to find out about anarchism may conclude that they are "anarchists" as well. Secondly, unfortunately, some academics and writers have taken their claims of being anarchists at face value and have included their ideology in general accounts of anarchism (the better academic accounts do note that anarchists generally reject the claim). These two reasons are obviously related and hence the need to show the facts of the matter. The last reason is to provide other anarchists with arguments and evidence to use against "anarcho"-capitalism and its claims of being a new form of "anarchism."

So this section of the FAQ does not, as we noted above, represent some kind of "debate" within anarchism. It reflects the attempt by anarchists to reclaim the history and meaning of anarchism from those who are attempting to steal its name. However, our discussion also serves two other purposes. Firstly, critiquing right "libertarian" theories allows us to explain anarchist ones at the same time and indicate why they are better. Secondly, and more importantly, it shares many of the same assumptions and aims of neo-liberalism. This was noted by Bob Black in the early 1980s, when a *"wing of the Reaganist Right ... obviously appropriated, with suspect selectivity, such libertarian themes as deregulation and voluntarism. Ideologues indignate that Reagan has travestied their principles. Tough shit! I notice that it's* ***their*** *principles, not mine, that he found suitable to travesty."* [*"The Libertarian As Conservative"*, pp. 141–8, **The Abolition of Work and Other Essays**, pp. 141–2] This was echoed by Noam Chomsky two decades later when he stated that *"nobody takes [right-wing libertarianism] seriously"* (as *"everybody knows that a society that worked by ...*

[its] principles would self-destruct in three seconds"). The *"only reason"* why some people in the ruling elite *"pretend to take it seriously is because you can use it as a weapon"* in the class struggle [**Understanding Power**, p. 200] As neo-liberalism is being used as the ideological basis of the current attack on the working class, critiquing "anarcho"-capitalism also allows us to build theoretical weapons to use to resist this attack and aid our side in the class war.

The results of the onslaught of free(r) market capitalism along with anarchist criticism of "anarcho"-capitalism has resulted in some "anarcho"-capitalists trying to re-brand their ideology as "market anarchism." This, from their perspective, has two advantages. Firstly, it allows them to co-opt the likes of Tucker and Spooner (and, sometimes, even Proudhon!) into their family tree as all these supported markets (while systematically attacking capitalism). Secondly, it allows them to distance their ideology from the grim reality of neo-liberalism and the results of making capitalism more "free market." Simply put, going on about the benefits of "free market" capitalism while freer market capitalism is enriching the already wealthy and oppressing and impoverishing the many is hard going. Using the term "market anarchism" to avoid both the reality of anarchism's anti-capitalist core and the reality of the freer market capitalism they have helped produce makes sense in the marketplace of ideas (the term "blackwashing" seems appropriate here). The fact is that however laudable its stated aims, "anarcho"-capitalism is deeply flawed due to its simplistic nature and is easy to abuse on behalf of the economic oligarchy that lurks behind the rhetoric of economic textbooks in that "special case" so ignored by economists, namely reality.

Anarchism has always been aware of the existence of "free market" capitalism, particularly its extreme (minimal state) wing, and has always rejected it. As we discuss in section F.7, anarchists from Proudhon onwards have rejected it (and, significantly, vice versa). As academic Alan Carter notes, anarchist concern for equality as a necessary precondition for genuine freedom *"is one very good reason for not confusing anarchists with liberals or economic 'libertarians' — in other words, for not lumping together everyone who is in some way or another critical of the state. It is why calling the likes of Nozick 'anarchists' is highly misleading."* [*"Some notes on 'Anarchism'"*, pp. 141–5, **Anarchist Studies**, vol. 1, no. 2, p. 143] So anarchists have evaluated "free market" capitalism and rejected it as non-anarchist since the birth of anarchism and so attempts by "anarcho"-capitalism to say that their system is "anarchist" flies in the face of this long history of anarchist analysis. That some academics fall for their attempts to appropriate the anarchist label for their ideology is down to a false premise: it *"is judged to be anarchism largely because some anarcho-capitalists **say** they are 'anarchists' and because they criticise the State."* [Peter Sabatini, **Social Anarchism**, no. 23, p. 100]

More generally, we must stress that most (if not all) anarchists do not want to live in a society **just like this one** but without state coercion and (the initiation of) force. Anarchists do not confuse "freedom" with the "right" to govern and exploit others nor with being able to change masters. It is not enough to say we can start our own (co-operative) business in such a society. We want the abolition of the capitalist system of authoritarian relationships, not just a change of bosses or the possibility of little islands of liberty within a sea of capitalism (islands which are always in danger of being flooded and our freedom destroyed). Thus, in this section of the FAQ, we analysis many "anarcho"-capitalist claims on their own terms (for example, the importance of equality in the market or why replacing the state with private defence firms is simply changing the name of the state rather than abolishing it) but that does not mean we desire a society nearly

identical to the current one. Far from it, we want to transform this society into one more suited for developing and enriching individuality and freedom.

Finally, we dedicate this section of the FAQ to those who have seen the real face of "free market" capitalism at work: the working men and women (anarchist or not) murdered in the jails and concentration camps or on the streets by the hired assassins of capitalism.

For more discussion on this issue, see the appendix "Anarchism and 'Anarcho'-capitalism"

F.1 Are "anarcho"-capitalists really anarchists?

In a word, no. While "anarcho"-capitalists obviously try to associate themselves with the anarchist tradition by using the word "anarcho" or by calling themselves "anarchists" their ideas are distinctly at odds with those associated with anarchism. As a result, any claims that their ideas are anarchist or that they are part of the anarchist tradition or movement are false.

"Anarcho"-capitalists claim to be anarchists because they say that they oppose government. As noted in the last section, they use a dictionary definition of anarchism. However, this fails to appreciate that anarchism is a **political theory**. As dictionaries are rarely politically sophisticated things, this means that they fail to recognise that anarchism is more than just opposition to government, it is also marked a opposition to capitalism (i.e. exploitation and private property). Thus, opposition to government is a necessary but not sufficient condition for being an anarchist — you also need to be opposed to exploitation and capitalist private property. As "anarcho"-capitalists do not consider interest, rent and profits (i.e. capitalism) to be exploitative nor oppose capitalist property rights, they are not anarchists.

Part of the problem is that Marxists, like many academics, also tend to assert that anarchists are simply against the state. It is significant that both Marxists and "anarcho"-capitalists tend to define anarchism as purely opposition to government. This is no co-incidence, as both seek to exclude anarchism from its place in the wider socialist movement. This makes perfect sense from the Marxist perspective as it allows them to present their ideology as the only serious anti-capitalist one around (not to mention associating anarchism with "anarcho"-capitalism is an excellent way of discrediting our ideas in the wider radical movement). It should go without saying that this is an obvious and serious misrepresentation of the anarchist position as even a superficial glance at anarchist theory and history shows that no anarchist limited their critique of society simply at the state. So while academics and Marxists seem aware of the anarchist opposition to the state, they usually fail to grasp the anarchist critique applies to all other authoritarian social institutions and how it fits into the overall anarchist analysis and struggle. They seem to think the anarchist condemnation of capitalist private property, patriarchy and so forth are somehow superfluous additions rather than a logical position which reflects the core of anarchism:

> *"Critics have sometimes contended that anarchist thought, and classical anarchist theory in particular, has emphasised opposition to the state to the point of neglecting the real hegemony of economic power. This interpretation arises, perhaps, from a simplistic and overdrawn distinction between the anarchist focus on political domination and the Marxist focus on economic exploitation ... there is abundant evidence against such a thesis throughout the history of anarchist thought."* [John P. Clark and Camille Martin, **Anarchy, Geography, Modernity**, p. 95]

So Reclus simply stated the obvious when he wrote that *"the anti-authoritarian critique to which the state is subjected applies equally to all social institutions."* [quoted by Clark and Martin, **Op. Cit.**, p. 140] Proudhon, Bakunin, Kropotkin, Goldman and so on would all agree with that. While they all stressed that anarchism was against the state they quickly moved on to present a critique of private property and other forms of hierarchical authority. So while anarchism obviously opposes the state, *"sophisticated and developed anarchist theory proceeds further. It does not stop with a criticism of political organisation, but goes on to investigate the authoritarian nature of economic inequality and private property, hierarchical economic structures, traditional education, the patriarchal family, class and racial discrimination, and rigid sex- and age-roles, to mention just a few of the more important topics."* For the *"essence of anarchism is, after all, not the theoretical opposition to the state, but the practical and theoretical struggle against domination."* [John Clark, **The Anarchist Moment**, p. 128 and p. 70]

This is also the case with individualist anarchists whose defence of certain forms of property did stop them criticising key aspects of **capitalist** property rights. As Jeremy Jennings notes, the *"point to stress is that all anarchists, and not only those wedded to the predominant twentieth-century strain of anarchist communism have been critical of private property to the extent that it was a source of hierarchy and privilege."* He goes on to state that anarchists like Tucker and Spooner *"agreed with the proposition that property was legitimate only insofar as it embraced no more than the total product of individual labour."* [*"Anarchism"*, **Contemporary Political Ideologies**, Roger Eatwell and Anthony Wright (eds.), p. 132] This is acknowledged by the likes of Rothbard who had to explicitly point how that his position on such subjects was fundamentally different (i.e., at odds) with individualist anarchism.

As such, it would be fair to say that most "anarcho"-capitalists are capitalists first and foremost. If aspects of anarchism do not fit with some element of capitalism, they will reject that element of anarchism rather than question capitalism (Rothbard's selective appropriation of the individualist anarchist tradition is the most obvious example of this). This means that right-"libertarians" attach the "anarcho" prefix to their ideology because they believe that being against government intervention is equivalent to being an anarchist (which flows into their use of the dictionary definition of anarchism). That they ignore the bulk of the anarchist tradition should prove that there is hardly anything anarchistic about them at all. They are not against authority, hierarchy or the state — they simply want to privatise them.

Ironically, this limited definition of "anarchism" ensures that "anarcho"-capitalism is inherently self-refuting. This can be seen from leading "anarcho"-capitalist Murray Rothbard. He thundered against the evil of the state, arguing that it *"arrogates to itself a monopoly of force, of ultimate decision-making power, over a given territorial area."* In and of itself, this definition is unremarkable. That a few people (an elite of rulers) claim the right to rule others must be **part** of any sensible definition of the state or government. However, the problems begin for Rothbard when he notes that *"[o]bviously, in a free society, Smith has the ultimate decision-making power over his own just property, Jones over his, etc."* [**The Ethics of Liberty**, p. 170 and p. 173] The logical contradiction in this position should be obvious, but not to Rothbard. It shows the power of ideology, the ability of mere words (the expression *"private property"*) to turn the bad (*"ultimate decision-making power over a given area"*) into the good (*"ultimate decision-making power over a given area"*).

Now, this contradiction can be solved in only **one** way — the users of the *"given area"* are also its owners. In other words, a system of possession (or "occupancy and use") as favoured by

anarchists. However, Rothbard is a capitalist and supports private property, non-labour income, wage labour, capitalists and landlords. This means that he supports a divergence between ownership and use and this means that this *"ultimate decision-making power"* extends to those who **use,** but do not own, such property (i.e. tenants and workers). The statist nature of private property is clearly indicated by Rothbard's words — the property owner in an "anarcho"-capitalist society possesses the *"ultimate decision-making power"* over a given area, which is also what the state has currently. Rothbard has, ironically, proved by his own definition that "anarcho"-capitalism is not anarchist.

Of course, it would be churlish to point out that the usual name for a political system in which the owner of a territory is also its ruler is, in fact, monarchy. Which suggests that while "anarcho"-capitalism may be called "anarcho-statism" a far better term could be "anarcho-monarchism." In fact, some "anarcho"-capitalists have made explicit this obvious implication of Rothbard's argument. Hans-Hermann Hoppe is one.

Hoppe prefers monarchy to democracy, considering it the superior system. He argues that the monarch is the **private** owner of the government — all the land and other resources are **owned** by him. Basing himself on Austrian economics (what else?) and its notion of time preference, he concludes that the monarch will, therefore, work to maximise both current income and the total capital value of his estate. Assuming self-interest, his planning horizon will be farsighted and exploitation be far more limited. Democracy, in contrast, is a publicly-owned government and the elected rulers have use of resources for a short period only and **not** their capital value. In other words, they do not own the country and so will seek to maximise their short-term interests (and the interests of those they think will elect them into office). In contrast, Bakunin stressed that if anarchism rejects democracy it was *"hardly in order to reverse it but rather to advance it,"* in particular to extend it via *"the great economic revolution without which every right is but an empty phrase and a trick."* He rejected wholeheartedly *"the camp of aristocratic … reaction."* [**The Basic Bakunin**, p. 87]

However, Hoppe is not a traditional monarchist. His ideal system is one of **competing** monarchies, a society which is led by a *"voluntarily acknowledged 'natural' elite — a* ***nobilitas naturalis****"* comprised of *"families with long-established records of superior achievement, farsightedness, and exemplary personal conduct."* This is because *"a few individuals quickly acquire the status of an elite"* and their inherent qualities will *"more likely than not [be] passed on within a few — noble — families."* The sole "problem" with traditional monarchies was *"with* ***monopoly****, not with elites or nobility,"* in other words the King monopolised the role of judge and their subjects could not turn to other members of the noble class for services. [*"The Political Economy of Monarchy and Democracy and the Idea of a Natural Order,"* pp. 94–121, **Journal of Libertarian Studies**, vol. 11, no. 2, p. 118 and p. 119]

Which simply confirms the anarchist critique of "anarcho"-capitalism, namely that it is **not** anarchist. This becomes even more obvious when Hoppe helpfully expands on the reality of "anarcho"-capitalism:

> *"In a covenant concluded among proprietor and community tenants for the purpose of protecting their private property, no such thing as a right to free (unlimited) speech exists, not even to unlimited speech on one's own tenant-property. One may say innumerable things and promote almost any idea under the sun, but naturally no one is permitted to advocate ideas contrary to the very purpose of the covenant of preserv-*

> *ing private property, such as democracy and communism. There can be no tolerance towards democrats and communists in a libertarian social order. They will have to be physically separated and expelled from society. Likewise in a covenant founded for the purpose of protecting family and kin, there can be no tolerance toward those habitually promoting lifestyles incompatible with this goal. They — the advocates of alternative, non-family and kin-centred lifestyles such as, for instance, individual hedonism, parasitism, nature-environment worship, homosexuality, or communism — will have to be physically removed from society, too, if one is to maintain a libertarian order."* [**Democracy: the God that Failed**, p. 218]

Thus the proprietor has power/authority over his tenants and can decree what they can and cannot do, excluding anyone whom they consider as being subversive (in the tenants' own interests, of course). In other words, the autocratic powers of the boss are extended into **all** aspects of society — all under the mask of advocating liberty. Sadly, the preservation of property rights destroys liberty for the many (Hoppe states clearly that for the "anarcho"-capitalist the *"natural outcome of the voluntary transactions between various private property owners is decidedly non-egalitarian, hierarchical and elitist."* [*"The Political Economy of Monarchy and Democracy and the Idea of a Natural Order,"* **Op. Cit.**, p. 118]). Unsurprisingly, Chomsky argued that right-wing "libertarianism" has *"no objection to tyranny as long as it is private tyranny."* In fact it (like other contemporary ideologies) *"reduce[s] to advocacy of one or another form of illegitimate authority, quite often real tyranny."* [**Chomsky on Anarchism**, p. 235 and p. 181] As such, it is hard not to conclude that "anarcho"-capitalism is little more than a play with words. It is not anarchism but a cleverly designed and worded surrogate for elitist, autocratic conservatism. Nor is too difficult to conclude that genuine anarchists and libertarians (of all types) would not be tolerated in this so-called *"libertarian social order."*

Some "anarcho"-capitalists do seem dimly aware of this glaringly obvious contradiction. Rothbard, for example, does present an argument which could be used to solve it, but he utterly fails. He simply ignores the crux of the matter, that capitalism is based on hierarchy and, therefore, cannot be anarchist. He does this by arguing that the hierarchy associated with capitalism is fine as long as the private property that produced it was acquired in a "just" manner. Yet in so doing he yet again draws attention to the identical authority structures and social relationships of the state and property. As he puts it:

> *"**If** the State may be said to properly **own** its territory, then it is proper for it to make rules for everyone who presumes to live in that area. It can legitimately seize or control private property because there **is** no private property in its area, because it really owns the entire land surface. **So long** as the State permits its subjects to leave its territory, then, it can be said to act as does any other owner who sets down rules for people living on his property."* [**Op. Cit.**, p. 170]

Obviously Rothbard argues that the state does not "justly" own its territory. He asserts that *"our homesteading theory"* of the creation of private property *"suffices to demolish any such pretensions by the State apparatus"* and so the problem with the state is that it *"claims and exercises a compulsory monopoly of defence and ultimate decision-making over an area larger than an individual's justly-acquired property."* [**Op. Cit.**, p. 171 and p. 173] There are four fundamental problems with his argument.

First, it assumes his "homesteading theory" is a robust and libertarian theory, but neither is the case (see section F.4.1). Second, it ignores the history of capitalism. Given that the current distribution of property is just as much the result of violence and coercion as the state, his argument is seriously flawed. It amounts to little more than an ***"immaculate conception of property"*** unrelated to reality. Third, even if we ignore these issues and assume that private property could be and was legitimately produced by the means Rothbard assumes, it does not justify the hierarchy associated with it as current and future generations of humanity have, effectively, been excommunicated from liberty by previous ones. If, as Rothbard argues, property is a natural right and the basis of liberty then why should the many be excluded from their birthright by a minority? In other words, Rothbard denies that liberty should be universal. He chooses property over liberty while anarchists choose liberty over property. Fourthly, it implies that the fundamental problem with the state is **not**, as anarchists have continually stressed, its hierarchical and authoritarian nature but rather the fact that it does not justly own the territory it claims to rule.

Even worse, the possibility that private property can result in **more** violations of individual freedom (at least for non-proprietors) than the state of its citizens was implicitly acknowledged by Rothbard. He uses as a hypothetical example a country whose King is threatened by a rising "libertarian" movement. The King responses by *"employ[ing] a cunning stratagem,"* namely he *"proclaims his government to be dissolved, but just before doing so he arbitrarily parcels out the entire land area of his kingdom to the 'ownership' of himself and his relatives."* Rather than taxes, his subjects now pay rent and he can *"regulate the lives of all the people who presume to live on"* his property as he sees fit. Rothbard then asks:

> *"Now what should be the reply of the libertarian rebels to this pert challenge? If they are consistent utilitarians, they must bow to this subterfuge, and resign themselves to living under a regime no less despotic than the one they had been battling for so long. Perhaps, indeed,* ***more*** *despotic, for now the king and his relatives can claim for themselves the libertarians' very principle of the absolute right of private property, an absoluteness which they might not have dared to claim before."* [**Op. Cit.**, p. 54]

It should go without saying that Rothbard argues that we should reject this *"cunning stratagem"* as a con as the new distribution of property would not be the result of "just" means. However, he failed to note how his argument undermines his own claims that capitalism can be libertarian. As he himself argues, not only does the property owner have the same monopoly of power over a given area as the state, it is **more** despotic as it is based on the *"absolute right of private property"*! And remember, Rothbard is arguing **in favour** of "anarcho"-capitalism (*"if you have unbridled capitalism, you will have all kinds of authority: you will have* ***extreme*** *authority."* [Chomsky, **Understanding Power**, p. 200]). The fundamental problem is that Rothbard's ideology blinds him to the obvious, namely that the state and private property produce identical social relationships (ironically, he opines the theory that the state owns its territory *"makes the State, as well as the King in the Middle Ages, a feudal overlord, who at least theoretically* ***owned*** *all the land in his domain"* without noticing that this makes the capitalist or landlord a King and a feudal overlord within "anarcho"-capitalism. [**Op. Cit.**, p. 171]).

One group of Chinese anarchists pointed out the obvious in 1914. As anarchism *"takes opposition to authority as its essential principle,"* anarchists aim to *"sweep away all the evil systems of present society which have an authoritarian nature"* and so *"our ideal society"* would be *"without*

landlords, capitalists, leaders, officials, representatives or heads of families." [quoted by Arif Dirlik, **Anarchism in the Chinese Revolution**, p. 131] Only this, the elimination of all forms of hierarchy (political, economic and social) would achieve genuine anarchism, a society without authority (an-archy). In practice, private property is a major source of oppression and authoritarianism within society — there is little or no freedom subject to a landlord or within capitalist production (as Bakunin noted, *"the worker sells his person and his liberty for a given time"*). In stark contrast to anarchists, "anarcho"-capitalists have no problem with landlords and factory fascism (i.e. wage labour), a position which seems highly illogical for a theory calling itself libertarian. If it were truly libertarian, it would oppose all forms of domination, not just statism (*"Those who reject authoritarianism will require nobody' permission to breathe. The libertarian ... is not grateful to get permission to reside anywhere on his own planet and denies the right of any one to screen off bits of it for their own use or rule."* [Stuart Christie and Albert Meltzer, **Floodgates of Anarchy**, p. 31]). This illogical and self-contradictory position flows from the "anarcho"-capitalist definition of freedom as the absence of coercion and will be discussed in section F.2 in more detail. The ironic thing is that "anarcho"-capitalists implicitly prove the anarchist critique of their own ideology.

Of course, the "anarcho"-capitalist has another means to avoid the obvious, namely the assertion that the market will limit the abuses of the property owners. If workers do not like their ruler then they can seek another. Thus capitalist hierarchy is fine as workers and tenants "consent" to it. While the logic is obviously the same, it is doubtful that an "anarcho"-capitalist would support the state just because its subjects can leave and join another one. As such, this does not address the core issue — the authoritarian nature of capitalist property (see section A.2.14). Moreover, this argument completely ignores the reality of economic and social power. Thus the "consent" argument fails because it ignores the social circumstances of capitalism which limit the choice of the many.

Anarchists have long argued that, as a class, workers have little choice but to "consent" to capitalist hierarchy. The alternative is either dire poverty or starvation. "Anarcho"-capitalists dismiss such claims by denying that there is such a thing as economic power. Rather, it is simply freedom of contract. Anarchists consider such claims as a joke. To show why, we need only quote (yet again) Rothbard on the abolition of slavery and serfdom in the 19th century. He argued, correctly, that the *"**bodies** of the oppressed were freed, but the property which they had worked and eminently deserved to own, remained in the hands of their former oppressors. With economic power thus remaining in their hands, the former lords soon found themselves virtual masters once more of what were now free tenants or farm labourers. The serfs and slaves had tasted freedom, but had been cruelly derived of its fruits."* [**Op. Cit.**, p. 74]

To say the least, anarchists fail to see the logic in this position. Contrast this with the standard "anarcho"-capitalist claim that if market forces ("voluntary exchanges") result in the creation of *"tenants or farm labourers"* then they are free. Yet labourers dispossessed by market forces are in exactly the same social and economic situation as the ex-serfs and ex-slaves. If the latter do not have the fruits of freedom, neither do the former. Rothbard sees the obvious *"economic power"* in the latter case, but denies it in the former (ironically, Rothbard dismissed economic power under capitalism in the same work. [**Op. Cit.**, pp. 221–2]). It is only Rothbard's ideology that stops him from drawing the obvious conclusion — identical economic conditions produce identical social relationships and so capitalism is marked by *"economic power"* and *"virtual masters."* The only solution is for "anarcho"-capitalist to simply say that the ex-serfs and ex-slaves were actually free

to choose and, consequently, Rothbard was wrong. It might be inhuman, but at least it would be consistent!

Rothbard's perspective is alien to anarchism. For example, as individualist anarchist William Bailie noted, under capitalism there is a class system marked by *"a dependent industrial class of wage-workers"* and *"a privileged class of wealth-monopolisers, each becoming more and more distinct from the other as capitalism advances."* This has turned property into *"a social power, an economic force destructive of rights, a fertile source of injustice, a means of enslaving the dispossessed."* He concluded: *"Under this system equal liberty cannot obtain."* Bailie notes that the modern *"industrial world under capitalistic conditions"* have *"arisen under the **regime** of status"* (and so *"law-made privileges"*) however, it seems unlikely that he would have concluded that such a class system would be fine if it had developed naturally or the current state was abolished while leaving that class structure intact. [**The Individualist Anarchists**, p. 121] As we discuss in section G.4, Individualist Anarchists like Tucker and Yarrows ended up recognising that even the freest competition had become powerless against the enormous concentrations of wealth associated with corporate capitalism.

Therefore anarchists recognise that "free exchange" or "consent" in unequal circumstances will reduce freedom as well as increasing inequality between individuals and classes. As we discuss in section F.3, inequality will produce social relationships which are based on hierarchy and domination, **not** freedom. As Noam Chomsky put it:

> *"Anarcho-capitalism, in my opinion, is a doctrinal system which, if ever implemented, would lead to forms of tyranny and oppression that have few counterparts in human history. There isn't the slightest possibility that its (in my view, horrendous) ideas would be implemented, because they would quickly destroy any society that made this colossal error. The idea of 'free contract' between the potentate and his starving subject is a sick joke, perhaps worth some moments in an academic seminar exploring the consequences of (in my view, absurd) ideas, but nowhere else."* [**Noam Chomsky on Anarchism**, interview with Tom Lane, December 23, 1996]

Clearly, then, by its own arguments "anarcho"-capitalism is not anarchist. This should come as no surprise to anarchists. Anarchism, as a political theory, was born when Proudhon wrote **What is Property?** specifically to refute the notion that workers are free when capitalist property forces them to seek employment by landlords and capitalists. He was well aware that in such circumstances property *"violates equality by the rights of exclusion and increase, and freedom by despotism ... [and has] perfect identity with robbery."* He, unsurprisingly, talks of the *"proprietor, to whom [the worker] has sold and surrendered his liberty."* For Proudhon, anarchy was *"the absence of a master, of a sovereign"* while *"proprietor"* was *"synonymous"* with *"sovereign"* for he *"imposes his will as law, and suffers neither contradiction nor control."* This meant that *"property engenders despotism,"* as *"each proprietor is sovereign lord within the sphere of his property."* [**What is Property**, p. 251, p. 130, p. 264 and pp. 266–7] It must also be stressed that Proudhon's classic work is a lengthy critique of the kind of apologetics for private property Rothbard espouses to salvage his ideology from its obvious contradictions.

So, ironically, Rothbard repeats the same analysis as Proudhon but draws the **opposite** conclusions and expects to be considered an anarchist! Moreover, it seems equally ironic that "anarcho"-capitalism calls itself "anarchist" while basing itself on the arguments that anarchism was created

in opposition to. As shown, "anarcho"-capitalism makes as much sense as "anarcho-statism" — an oxymoron, a contradiction in terms. The idea that "anarcho"-capitalism warrants the name "anarchist" is simply false. Only someone ignorant of anarchism could maintain such a thing. While you expect anarchist theory to show this to be the case, the wonderful thing is that "anarcho"-capitalism itself does the same.

Little wonder Bob Black argues that *"[t]o demonise state authoritarianism while ignoring identical albeit contract-consecrated subservient arrangements in the large-scale corporations which control the world economy is fetishism at its worst."* [*"The Libertarian As Conservative"*, **The Abolition of Work and Other Essays**, pp. 142] Left-liberal Stephen L. Newman makes the same point:

> *"The emphasis [right-wing] libertarians place on the opposition of liberty and political power tends to obscure the role of authority in their worldview ... the authority exercised in private relationships, however — in the relationship between employer and employee, for instance — meets with no objection... . [This] reveals a curious insensitivity to the use of private authority as a means of social control. Comparing public and private authority, we might well ask of the [right-wing] libertarians: When the price of exercising one's freedom is terribly high, what practical difference is there between the commands of the state and those issued by one's employer? ... Though admittedly the circumstances are not identical, telling disgruntled empowers that they are always free to leave their jobs seems no different in principle from telling political dissidents that they are free to emigrate."* [**Liberalism at Wit's End**, pp. 45–46]

As Bob Black pointed out, right libertarians argue that *"'one can at least change jobs.' But you can't avoid having a job — just as under statism one can at least change nationalities but you can't avoid subjection to one nation-state or another. But freedom means more than the right to change masters."* [**Op. Cit.**, p. 147] The similarities between capitalism and statism are clear — and so why "anarcho"-capitalism cannot be anarchist. To reject the authority (the *"ultimate decision-making power"*) of the state and embrace that of the property owner indicates not only a highly illogical stance but one at odds with the basic principles of anarchism. This whole-hearted support for wage labour and capitalist property rights indicates that "anarcho"-capitalists are not anarchists because they do not reject all forms of **archy.** They obviously support the hierarchy between boss and worker (wage labour) and landlord and tenant. Anarchism, by definition, is against all forms of archy, including the hierarchy generated by capitalist property. To ignore the obvious archy associated with capitalist property is highly illogical and trying to dismiss one form of domination as flowing from "just" property while attacking the other because it flows from "unjust" property is not seeing the wood for the trees.

In addition, we must note that such inequalities in power and wealth will need "defending" from those subject to them ("anarcho"-capitalists recognise the need for private police and courts to defend property from theft — and, anarchists add, to defend the theft and despotism associated with property!). Due to its support of private property (and thus authority), "anarcho"-capitalism ends up retaining a state in its "anarchy": namely a **private** state whose existence its proponents attempt to deny simply by refusing to call it a state, like an ostrich hiding its head in the sand. As one anarchist so rightly put it, "anarcho"-capitalists *"simply replaced the state with private security firms, and can hardly be described as anarchists as the term is normally understood."* [Brian Morris, *"Global Anti-Capitalism"*, pp. 170–6, **Anarchist Studies**, vol. 14, no. 2, p. 175] As we discuss

more fully in section F.6 this is why "anarcho"-capitalism is better described as "private state" capitalism as there would be a functional equivalent of the state and it would be just as skewed in favour of the propertied elite as the existing one (if not more so). As Albert Meltzer put it:

> *"Commonsense shows that any capitalist society might dispense with a 'State' ... but it could not dispense with organised government, or a privatised form of it, if there were people amassing money and others working to amass it for them. The philosophy of 'anarcho-capitalism' dreamed up by the 'libertarian' New Right, has nothing to do with Anarchism as known by the Anarchist movement proper. It is a lie ... Patently unbridled capitalism ... needs some force at its disposal to maintain class privileges, either from the State itself or from private armies. What they believe in is in fact a limited State — that is, one in which the State has one function, to protect the ruling class, does not interfere with exploitation, and comes as cheap as possible for the ruling class. The idea also serves another purpose ... a moral justification for bourgeois consciences in avoiding taxes without feeling guilty about it."* [**Anarchism: Arguments For and Against**, p. 50]

For anarchists, this need of capitalism for some kind of state is unsurprising. For *"Anarchy without socialism seems equally as impossible to us [as socialism without anarchy], for in such a case it could not be other than the domination of the strongest, and would therefore set in motion right away the organisation and consolidation of this domination; that is to the constitution of government."* [Errico Malatesta, **Errico Malatesta: His Life and Ideas**, p. 148] Because of this, the "anarcho"-capitalist rejection of the anarchist critique of capitalism and our arguments on the need for equality, they cannot be considered anarchists or part of the anarchist tradition. To anarchists it seems bizarre that "anarcho"-capitalists want to get rid of the state but maintain the system it helped create and its function as a defender of the capitalist class's property and property rights. In other words, to reduce the state purely to its function as (to use Malatesta's apt word) the gendarme of the capitalist class is ***not*** an anarchist goal.

Thus anarchism is far more than the common dictionary definition of "no government" — it also entails being against all forms of **archy**, including those generated by capitalist property. This is clear from the roots of the word "anarchy." As we noted in section A.1, the word anarchy means "no rulers" or "contrary to authority." As Rothbard himself acknowledges, the property owner is the ruler of their property and, therefore, those who use it. For this reason "anarcho"-capitalism cannot be considered as a form of anarchism — a real anarchist must logically oppose the authority of the property owner along with that of the state. As "anarcho"-capitalism does not explicitly (or implicitly, for that matter) call for economic arrangements that will end wage labour and usury it cannot be considered anarchist or part of the anarchist tradition. While anarchists have always opposed capitalism, "anarcho"-capitalists have embraced it and due to this embrace their "anarchy" will be marked by relationships based upon subordination and hierarchy (such as wage labour), **not** freedom (little wonder that Proudhon argued that *"property is despotism"* — it creates authoritarian and hierarchical relationships between people in a similar way to statism). Their support for "free market" capitalism ignores the impact of wealth and power on the nature and outcome of individual decisions within the market (see sections F.2 and F.3 for further discussion). Furthermore, any such system of (economic and social) power will require extensive force to maintain it and the "anarcho"-capitalist system of competing "defence firms" will simply be a new state, enforcing capitalist power, property rights and law.

Thus the "anarcho"-capitalist and the anarchist have different starting positions and opposite ends in mind. Their claims to being anarchists are bogus simply because they reject so much of the anarchist tradition as to make what little they do pay lip-service to non-anarchist in theory and practice. Little wonder Peter Marshall said that *"few anarchists would accept the 'anarcho-capitalists' into the anarchist camp since they do not share a concern for economic equality and social justice."* As such, "anarcho"-capitalists, *"even if they do reject the State, might therefore best be called right-wing libertarians rather than anarchists."* [**Demanding the Impossible**, p. 565]

F.2 What do "anarcho"-capitalists mean by freedom?

For "anarcho"-capitalists, the concept of freedom is limited to the idea of *"freedom from."* For them, freedom means simply freedom from the *"initiation of force,"* or the *"non-aggression against anyone's person and property."* [Murray Rothbard, **For a New Liberty**, p. 23] The notion that real freedom must combine both freedom *"to"* **and** freedom *"from"* is missing in their ideology, as is the social context of the so-called freedom they defend.

Before continuing, it is useful to quote Alan Haworth when he notes that *"[i]n fact, it is surprising how **little** close attention the concept of freedom receives from libertarian writers. Once again **Anarchy, State, and Utopia** is a case in point. The word 'freedom' doesn't even appear in the index. The word 'liberty' appears, but only to refer the reader to the 'Wilt Chamberlain' passage. In a supposedly 'libertarian' work, this is more than surprising. It is truly remarkable."* [**Anti-Libertarianism**, p. 95] Why this is the case can be seen from how the right-"libertarian" defines freedom.

In right-"libertarian" and "anarcho"-capitalist ideology, freedom is considered to be a product of property. As Murray Rothbard puts it, *"the libertarian defines the concept of 'freedom' or 'liberty'...[as a] condition in which a person's ownership rights in his body and his legitimate material property rights are not invaded, are not aggressed against... . Freedom and unrestricted property rights go hand in hand."* [**Op. Cit.**, p.41]

This definition has some problems, however. In such a society, one cannot (legitimately) do anything with or on another's property if the owner prohibits it. This means that an individual's only **guaranteed** freedom is determined by the amount of property that he or she owns. This has the consequence that someone with no property has no guaranteed freedom at all (beyond, of course, the freedom not to be murdered or otherwise harmed by the deliberate acts of others). In other words, a distribution of property is a distribution of freedom, as the right-"libertarians" themselves define it. It strikes anarchists as strange that an ideology that claims to be committed to promoting freedom entails the conclusion that some people should be more free than others. Yet this is the logical implication of their view, which raises a serious doubt as to whether "anarcho"-capitalists are actually interested in freedom at all.

Looking at Rothbard's definition of "liberty" quoted above, we can see that freedom is actually no longer considered to be a fundamental, independent concept. Instead, freedom is a derivative of something more fundamental, namely the *"legitimate rights"* of an individual, which are identified as property rights. In other words, given that "anarcho"-capitalists and right-"libertarians" in general consider the right to property as "absolute," it follows that freedom and property become one and the same. This suggests an alternative name for the right Libertarian, namely ***"Propertarian."*** And, needless to say, if we do not accept the right-libertarians' view of what constitutes "legitimate rights," then their claim to be defenders of liberty is weak.

Another important implication of this "liberty as property" concept is that it produces a strangely alienated concept of freedom. Liberty, as we noted, is no longer considered absolute, but a derivative of property – which has the important consequence that you can "sell" your liberty and still be considered free by the ideology. This concept of liberty is usually termed "self-ownership." But, to state the obvious, I do not "own" myself, as if were an object somehow separable from my subjectivity — I **am** myself (see section B.4.2). However, the concept of "self-ownership" is handy for justifying various forms of domination and oppression — for by agreeing (usually under the force of circumstances, we must note) to certain contracts, an individual can "sell" (or rent out) themselves to others (for example, when workers sell their labour power to capitalists on the "free market"). In effect, "self-ownership" becomes the means of justifying treating people as objects — ironically, the very thing the concept was created to stop! As anarchist L. Susan Brown notes, *"[a]t the moment an individual 'sells' labour power to another, he/she loses self-determination and instead is treated as a subjectless instrument for the fulfilment of another's will."* [**The Politics of Individualism**, p. 4]

Given that workers are paid to obey, you really have to wonder which planet Murray Rothbard was on when he argued that a person's *"labour service is alienable, but his **will** is not"* and that he *"cannot alienate his **will**, more particularly his control over his own mind and body."* He contrasts private property and self-ownership by arguing that *"[a]ll physical property owned by a person is alienable ... I can give away or sell to another person my shoes, my house, my car, my money, etc. But there are certain vital things which, in natural fact and in the nature of man, are **in**alienable ... [his] will and control over his own person are inalienable."* [**The Ethics of Liberty**, p. 40, p. 135 and pp. 134–5] Yet *"labour services"* are unlike the private possessions Rothbard lists as being alienable. As we argued in section B.1 a person's *"labour services"* and *"will"* cannot be divided — if you sell your labour services, you also have to give control of your body and mind to another person. If a worker does not obey the commands of her employer, she is fired. That Rothbard denied this indicates a total lack of common-sense. Perhaps Rothbard would have argued that as the worker can quit at any time she does not really alienate their will (this seems to be his case against slave contracts — see section F.2.2). But this ignores the fact that between the signing and breaking of the contract and during work hours (and perhaps outside work hours, if the boss has mandatory drug testing or will fire workers who attend union or anarchist meetings or those who have an "unnatural" sexuality and so on) the worker **does** alienate his will and body. In the words of Rudolf Rocker, *"under the realities of the capitalist economic form ... there can ... be no talk of a 'right over one's own person,' for that ends when one is compelled to submit to the economic dictation of another if he does not want to starve."* [**Anarcho-Syndicalism**, p. 10]

Ironically, the rights of property (which are said to flow from an individual's self-ownership of themselves) becomes the means, under capitalism, by which self-ownership of non-property owners is denied. The foundational right (self-ownership) becomes denied by the derivative right (ownership of things). *"To treat others and oneself as property,"* argues L. Susan Brown, *"objectifies the human individual, denies the unity of subject and object and is a negation of individual will ... [and] destroys the very freedom one sought in the first place. The liberal belief in property, both real and in the person, leads not to freedom but to relationships of domination and subordination."* [**Op. Cit.**, p. 3] Under capitalism, a lack of property can be just as oppressive as a lack of legal rights because of the relationships of domination and subjection this situation creates. That people "consent" to this hierarchy misses the point. As Alexander Berkman put it:

> *"The law says your employer does not steal anything from you, because it is done with your consent. You have agreed to work for your boss for certain pay, he to have all that you produce ...*
>
> *"But did you really consent?*
>
> *"When the highway man holds his gun to your head, you turn your valuables over to him. You 'consent' all right, but you do so because you cannot help yourself, because you are **compelled** by his gun.*
>
> *"Are you not **compelled** to work for an employer? Your need compels you just as the highwayman's gun. You must live ... You can't work for yourself ... The factories, machinery, and tools belong to the employing class, so you **must** hire yourself out to that class in order to work and live. Whatever you work at, whoever your employer may be, it always comes to the same: you must work **for him**. You can't help yourself. You are **compelled**."* [**What is Anarchism?**, p. 11]

Due to this class monopoly over the means of life, workers (usually) are at a disadvantage in terms of bargaining power — there are more workers than jobs (see section C.9). Within capitalism there is no equality between owners and the dispossessed, and so property is a source of **power.** To claim that this power should be "left alone" or is "fair" is *"to the anarchists... preposterous. Once a State has been established, and most of the country's capital privatised, the threat of physical force is no longer necessary to coerce workers into accepting jobs, even with low pay and poor conditions. To use [right-"libertarian"] Ayn Rand's term, 'initial force' has **already taken place,** by those who now have capital against those who do not... . In other words, if a thief died and willed his 'ill-gotten gain' to his children, would the children have a right to the stolen property? Not legally. So if 'property is theft,' to borrow Proudhon's quip, and the fruit of exploited labour is simply legal theft, then the only factor giving the children of a deceased capitalist a right to inherit the 'booty' is the law, the State. As Bakunin wrote, 'Ghosts should not rule and oppress this world, which belongs only to the living.'"* [Jeff Draughn, **Between Anarchism and Libertarianism**]

Or, in other words, right-Libertarianism fails to *"meet the charge that normal operations of the market systematically places an entire class of persons (wage earners) in circumstances that compel them to accept the terms and conditions of labour dictated by those who offer work. While it is true that individuals are formally free to seek better jobs or withhold their labour in the hope of receiving higher wages, in the end their position in the market works against them; they cannot live if they do not find employment. When circumstances regularly bestow a relative disadvantage on one class of persons in their dealings with another class, members of the advantaged class have little need of coercive measures to get what they want."* [Stephen L. Newman, **Liberalism at Wit's End**, p. 130] Eliminating taxation does not end oppression, in other words. As Tolstoy put it:

> *"in Russia serfdom was only abolished when all the land had been appropriated. When land was granted to the peasants, it was burdened with payments which took the place of the land slavery. In Europe, taxes that kept the people in bondage began to be abolished only when the people had lost their land, were unaccustomed to agricultural work, and ... quite dependent on the capitalists ... [They] abolish the taxes that fall on the workers ... only because the majority of the people are already in the hands of the capitalists. One form of slavery is not abolished until another has already replaced it."* [**The Slavery of Our Times**, p. 32]

So Rothbard's argument (as well as being contradictory) misses the point (and the reality of capitalism). Yes, **if** we define freedom as *"the absence of coercion"* then the idea that wage labour does not restrict liberty is unavoidable, but such a definition is useless. This is because it hides structures of power and relations of domination and subordination. As Carole Pateman argues, *"the contract in which the worker allegedly sells his labour power is a contract in which, since he cannot be separated from his capacities, he sells command over the use of his body and himself ... To sell command over the use of oneself for a specified period ... is to be an unfree labourer. The characteristics of this condition are captured in the term* ***wage slave****."* [**The Sexual Contract**, p. 151]

In other words, contracts about property in the person inevitably create subordination. "Anarcho"-capitalism defines this source of unfreedom away, but it still exists and has a major impact on people's liberty. For anarchists freedom is better described as "self-government" or "self-management" — to be able to govern ones own actions (if alone) or to participate in the determination of join activity (if part of a group). Freedom, to put it another way, is not an abstract legal concept, but the vital concrete possibility for every human being to bring to full development all their powers, capacities, and talents which nature has endowed them. A key aspect of this is to govern one own actions when within associations (self-management). If we look at freedom this way, we see that coercion is condemned but so is hierarchy (and so is capitalism for during working hours people are not free to make their own plans and have a say in what affects them. They are order takers, **not** free individuals).

It is because anarchists have recognised the authoritarian nature of capitalist firms that they have opposed wage labour and capitalist property rights along with the state. They have desired to replace institutions structured by subordination with institutions constituted by free relationships (based, in other words, on self-management) in **all** areas of life, including economic organisations. Hence Proudhon's argument that the *"workmen's associations ... are full of hope both as a protest against the wage system, and as an affirmation of* ***reciprocity****"* and that their importance lies *"in their denial of the rule of capitalists, money lenders and governments."* [**The General Idea of the Revolution**, pp. 98–99]

Unlike anarchists, the "anarcho"-capitalist account of freedom allows an individual's freedom to be rented out to another while maintaining that the person is still free. It may seem strange that an ideology proclaiming its support for liberty sees nothing wrong with the alienation and denial of liberty but, in actual fact, it is unsurprising. After all, contract theory is a *"theoretical strategy that justifies subjection by presenting it as freedom"* and has *"turned a subversive proposition [that we are born free and equal] into a defence of civil subjection."* Little wonder, then, that contract *"creates a relation of subordination"* and not of freedom [Carole Pateman, **Op. Cit.**, p. 39 and p. 59] Little wonder, then, that Colin Ward argued that, as an anarchist, he is *"by definition, a socialist"* and that *"[w]orkers' control of industrial production"* is *"the only approach compatible with anarchism."* [**Talking Anarchy**, p. 25 and p. 26]

Ultimately, any attempt to build an ethical framework starting from the abstract individual (as Rothbard does with his *"legitimate rights"* method) will result in domination and oppression between people, **not** freedom. Indeed, Rothbard provides an example of the dangers of idealist philosophy that Bakunin warned about when he argued that while *"[m]aterialism denies free will and ends in the establishment of liberty; idealism, in the name of human dignity, proclaims free will, and on the ruins of every liberty founds authority."* [**God and the State**, p. 48] That this is the case with "anarcho"-capitalism can be seen from Rothbard's wholehearted support for wage

labour, landlordism and the rules imposed by property owners on those who use, but do not own, their property. Rothbard, basing himself on abstract individualism, cannot help but justify authority over liberty. This, undoubtedly, flows from the right-liberal and conservative roots of his ideology. Individualist anarchist Shawn Wilbar once defined Wikipedia as *"the most successful modern experiment in promoting obedience to authority as freedom."* However, Wikipedia pales into insignificance compared to the success of liberalism (in its many forms) in doing precisely that. Whether politically or economically, liberalism has always rushed to justify and rationalise the individual subjecting themselves to some form of hierarchy. That "anarcho"-capitalism does this under the name "anarchism" is deeply insulting to anarchists.

Overall, we can see that the logic of the right-"libertarian" definition of "freedom" ends up negating itself because it results in the creation and encouragement of **authority,** which is an **opposite** of freedom. For example, as Ayn Rand pointed out, *"man has to sustain his life by his own effort, the man who has no right to the product of his effort has no means to sustain his life. The man who produces while others dispose of his product, is a slave."* [**The Ayn Rand Lexicon: Objectivism from A to Z**, pp. 388–9] But, as was shown in section C.2, capitalism is based on, as Proudhon put it, workers working *"for an entrepreneur who pays them and keeps their products,"* and so is a form of **theft.** Thus, by "libertarian" capitalism's **own** logic, capitalism is based not on freedom, but on (wage) slavery; for interest, profit and rent are derived from a worker's **unpaid** labour, i.e. *"others dispose of his [sic] product."*

Thus it is debatable that a right-"libertarian" or "anarcho" capitalist society would have less unfreedom or authoritarianism in it than "actually existing" capitalism. In contrast to anarchism, "anarcho"-capitalism, with its narrow definitions, restricts freedom to only a few areas of social life and ignores domination and authority beyond those aspects. As Peter Marshall points out, their *"definition of freedom is entirely negative. It calls for the absence of coercion but cannot guarantee the positive freedom of individual autonomy and independence."* [**Demanding the Impossible**, p. 564] By confining freedom to such a narrow range of human action, "anarcho"-capitalism is clearly **not** a form of anarchism. Real anarchists support freedom in every aspect of an individual's life.

In short, as French anarchist Elisee Reclus put it there is *"an abyss between two kinds of society,"* one of which is *"constituted freely by men of good will, based on a consideration of their common interests"* and another which *"accepts the existence of either temporary or permanent masters to whom [its members] owe obedience."* [quoted by Clark and Martin, **Anarchy, Geography, Modernity**, p. 62] In other words, when choosing between anarchism and capitalism, "anarcho"-capitalists pick the latter and call it the former.

F.2.1 How does private property affect freedom?

The right-"libertarian" either does not acknowledge or dismisses as irrelevant the fact that the (absolute) right of private property may lead to extensive control by property owners over those who use, but do not own, property (such as workers and tenants). Thus a free-market capitalist system leads to a very selective and class-based protection of "rights" and "freedoms." For example, under capitalism, the "freedom" of employers inevitably conflicts with the "freedom" of employees. When stockholders or their managers exercise their "freedom of enterprise" to decide how their company will operate, they violate their employee's right to decide how their

labouring capacities will be utilised and so under capitalism the "property rights" of employers will conflict with and restrict the "human right" of employees to manage themselves. Capitalism allows the right of self-management only to the few, not to all. Or, alternatively, capitalism does not recognise certain human rights as **universal** which anarchism does.

This can be seen from Austrian Economist W. Duncan Reekie's defence of wage labour. While referring to *"intra-firm labour markets"* as *"hierarchies"*, Reekie (in his best ***ex cathedra*** tone) states that *"[t]here is nothing authoritarian, dictatorial or exploitative in the relationship. Employees order employers to pay them amounts specified in the hiring contract just as much as employers order employees to abide by the terms of the contract."* [**Markets, Entrepreneurs and Liberty**, p. 136 and p. 137]. Given that *"the terms of contract"* involve the worker agreeing to obey the employers orders and that they will be fired if they do not, its pretty clear that the ordering that goes on in the *"intra-firm labour market"* is decidedly **one way**. Bosses have the power, workers are paid to obey. And this begs the question: **if** the employment contract creates a free worker, why must she abandon her liberty during work hours?

Reekie actually recognises this lack of freedom in a "round about" way when he notes that *"employees in a firm at any level in the hierarchy can exercise an entrepreneurial role. The area within which that role can be carried out increases the more authority the employee has."* [**Op. Cit.**, p. 142] Which means workers **are** subject to control from above which restricts the activities they are allowed to do and so they are **not** free to act, make decisions, participate in the plans of the organisation, to create the future and so forth within working hours. And it is strange that while recognising the firm as a hierarchy, Reekie tries to deny that it is authoritarian or dictatorial — as if you could have a hierarchy without authoritarian structures or an unelected person in authority who is not a dictator. His confusion is shared by Austrian guru Ludwig von Mises, who asserted that the *"entrepreneur and capitalist are not irresponsible autocrats"* because they are *"unconditionally subject to the sovereignty of the consumer"* while, **on the next page**, admitting there was a *"managerial hierarchy"* which contains *"the average subordinate employee."* [**Human Action**, p. 809 and p. 810] It does not enter his mind that the capitalist may be subject to some consumer control while being an autocrat to their subordinated employees. Again, we find the right-"libertarian" acknowledging that the capitalist managerial structure is a hierarchy and workers are subordinated while denying it is autocratic to the workers! Thus we have "free" workers within a relationship distinctly **lacking** freedom — a strange paradox. Indeed, if your personal life were as closely monitored and regulated as the work life of millions of people across the world, you would rightly consider it the worse form of oppression and tyranny.

Somewhat ironically, right-wing liberal and "free market" economist Milton Friedman contrasted *"central planning involving the use of coercion — the technique of the army or the modern totalitarian state"* with *"voluntary co-operation between individuals — the technique of the market-place"* as two distinct ways of co-ordinating the economic activity of large groups (*"millions"*) of people. [**Capitalism and Freedom**, p. 13] However, this misses the key issue of the internal nature of the company. As right-"libertarians" themselves note, the internal structure of a capitalist company is hierarchical. Indeed, the capitalist company **is** a form of central planning and so shares the same "technique" as the army. As Peter Drucker noted in his history of General Motors, *"[t]here is a remarkably close parallel between General Motors' scheme of organisation and those of the two institutions most renowned for administrative efficiency: that of the Catholic Church and that of the modern army."* [quoted by David Engler, **Apostles of Greed**, p. 66] Thus capitalism is marked by a series of totalitarian organisations. Dictatorship does not change much — nor

does it become less fascistic — when discussing economic structures rather than political ones. To state the obvious, *"the employment contract (like the marriage contract) is not an exchange; both contracts create social relations that endure over time — social relations of subordination."* [Carole Pateman, **The Sexual Contract**, p. 148]

Perhaps Reekie (like most right-"libertarians") will maintain that workers voluntarily agree ("consent") to be subject to the bosses dictatorship (he writes that *"each will only enter into the contractual agreement known as a firm if each believes he will be better off thereby. The firm is simply another example of mutually beneficial exchange."* [**Op. Cit.**, p. 137]). However, this does not stop the relationship being authoritarian or dictatorial (and so exploitative as it is **highly** unlikely that those at the top will not abuse their power). Representing employment relations as voluntary agreement simply mystifies the existence and exercise of power within the organisation so created.

As we argue further in the section F.3, in a capitalist society workers have the option of finding a job or facing abject poverty and/or starvation. Little wonder, then, that people "voluntarily" sell their labour and "consent" to authoritarian structures! They have little option to do otherwise. So, **within** the labour market workers **can** and **do** seek out the best working conditions possible, but that does not mean that the final contract agreed is "freely" accepted and not due to the force of circumstances, that both parties have equal bargaining power when drawing up the contract or that the freedom of both parties is ensured.

Which means to argue (as right-"libertarians" do) that freedom cannot be restricted by wage labour because people enter into relationships they consider will lead to improvements over their initial situation totally misses the point. As the initial situation is not considered relevant, their argument fails. After all, agreeing to work in a sweatshop 14 hours a day **is** an improvement over starving to death — but it does not mean that those who so agree are free when working there or actually **want** to be there. They are not and it is the circumstances, created and enforced by the law (i.e., the state), that have ensured that they "consent" to such a regime (given the chance, they would desire to **change** that regime but cannot as this would violate their bosses property rights and they would be repressed for trying).

So the right-wing "libertarian" right is interested only in a narrow concept of freedom (rather than in freedom or liberty as such). This can be seen in the argument of Ayn Rand that *"**Freedom**, in a political context, means freedom from government coercion. It does **not** mean freedom from the landlord, or freedom from the employer, or freedom from the laws of nature which do not provide men with automatic prosperity. It means freedom from the coercive power of the state — and nothing else!"* [**Capitalism: The Unknown Ideal**, p. 192] By arguing in this way, right-"libertarians" ignore the vast number of authoritarian social relationships that exist in capitalist society and, as Rand does here, imply that these social relationships are like *"the laws of nature."* However, if one looks at the world without prejudice but with an eye to maximising freedom, the major coercive institutions are the state **and** capitalist social relationships (and the latter relies on the former). It should also be noted that, unlike gravity, the power of the landlord and boss depends on the use of force — gravity does not need policemen to make things fall!

The right "libertarian," then, far from being a defender of freedom, is in fact a keen defender of certain forms of authority. As Kropotkin argued against a forerunner of right-"libertarianism":

> *"The modern Individualism initiated by Herbert Spencer is, like the critical theory of Proudhon, a powerful indictment against the dangers and wrongs of government, but*

> *its practical solution of the social problem is miserable — so miserable as to lead us to inquire if the talk of 'No force' be merely an excuse for supporting landlord and capitalist domination."* [**Act For Yourselves**, p. 98]

To defend the "freedom" of property owners is to defend authority and privilege — in other words, statism. So, in considering the concept of liberty as "freedom from," it is clear that by defending private property (as opposed to possession) the "anarcho"-capitalist is defending the power and authority of property owners to govern those who use "their" property. And also, we must note, defending all the petty tyrannies that make the work lives of so many people frustrating, stressful and unrewarding.

Anarchism, by definition, is in favour of organisations and social relationships which are non-hierarchical and non-authoritarian. Otherwise, some people are more free than others. Failing to attack hierarchy leads to massive contradiction. For example, since the British Army is a volunteer one, it is an "anarchist" organisation! Ironically, it can also allow a state to appear "libertarian" as that, too, can be considered voluntary arrangement as long as it allows its subjects to emigrate freely. So equating freedom with (capitalist) property rights does not protect freedom, in fact it actively denies it. This lack of freedom is only inevitable as long as we accept capitalist private property rights. If we reject them, we can try and create a world based on freedom in all aspects of life, rather than just in a few.

F.2.2 Do "libertarian"-capitalists support slavery?

Yes. It may come as a surprise to many people, but right-"Libertarianism" is one of the few political theories that justifies slavery. For example, Robert Nozick asks whether *"a free system would allow [the individual] to sell himself into slavery"* and he answers *"I believe that it would."* [**Anarchy, State and Utopia**, p. 371] While some right-"libertarians" do not agree with Nozick, there is no logical basis in their ideology for such disagreement.

This can be seen from "anarcho"-capitalist Walter Block, who, like Nozick, supports voluntary slavery. As he puts it, *"if I own something, I can sell it (and should be allowed by law to do so). If I can't sell, then, and to that extent, I really don't own it."* Thus agreeing to sell yourself for a lifetime *"is a bona fide contract"* which, if *"abrogated, theft occurs."* He critiques those other right-wing "libertarians" (like Murray Rothbard) who oppose voluntary slavery as being inconsistent to their principles. Block, in his words, seeks to make *"a tiny adjustment"* which *"strengthens libertarianism by making it more internally consistent."* He argues that his position shows *"that contract, predicated on private property [can] reach to the furthest realms of human interaction, even to voluntary slave contracts."* [*"Towards a Libertarian Theory of Inalienability: A Critique of Rothbard, Barnett, Smith, Kinsella, Gordon, and Epstein,"* pp. 39–85, **Journal of Libertarian Studies**, vol. 17, no. 2, p. 44, p. 48, p. 82 and p. 46]

So the logic is simple, you cannot really own something unless you can sell it. Self-ownership is one of the cornerstones of laissez-faire capitalist ideology. Therefore, since you own yourself you can sell yourself.

This defence of slavery should not come as a surprise to any one familiar with classical liberalism. An elitist ideology, its main rationale is to defend the liberty and power of property owners and justify unfree social relationships (such as government and wage labour) in terms of "consent." Nozick and Block just takes it to its logical conclusion. This is because his position is

not new but, as with so many other right-"libertarian" ones, can be found in John Locke's work. The key difference is that Locke refused the term *"slavery"* and favoured *"drudgery"* as, for him, slavery mean a relationship *"between a lawful conqueror and a captive"* where the former has the power of life and death over the latter. Once a *"compact"* is agreed between them, *"an agreement for a limited power on the one side, and obedience on the other ... slavery ceases."* As long as the master could not kill the slave, then it was *"drudgery."* Like Nozick, he acknowledges that *"men did sell themselves; but, it is plain, this was only to drudgery, not to slavery: for, it is evident, the person sold was not under an absolute, arbitrary, despotical power: for the master could not have power to kill him, at any time, whom, at a certain time, he was obliged to let go free out of his service."* [Locke, **Second Treatise of Government**, Section 24] In other words, voluntary slavery was fine but just call it something else.

Not that Locke was bothered by **involuntary** slavery. He was heavily involved in the slave trade. He owned shares in the **"Royal Africa Company"** which carried on the slave trade for England, making a profit when he sold them. He also held a significant share in another slave company, the **"Bahama Adventurers."** In the *"Second Treatise"*, Locke justified slavery in terms of *"Captives taken in a just war,"* a war waged against aggressors. [Section 85] That, of course, had nothing to do with the **actual** slavery Locke profited from (slave raids were common, for example). Nor did his "liberal" principles stop him suggesting a constitution that would ensure that *"every freeman of Carolina shall have absolute power and authority over his Negro slaves."* The constitution itself was typically autocratic and hierarchical, designed explicitly to *"avoid erecting a numerous democracy."* [**The Works of John Locke**, vol. X, p. 196]

So the notion of contractual slavery has a long history within right-wing liberalism, although most refuse to call it by that name. It is of course simply embarrassment that stops many right-"libertarians" calling a spade a spade. They incorrectly assume that slavery has to be involuntary. In fact, historically, voluntary slave contracts have been common (David Ellerman's **Property and Contract in Economics** has an excellent overview). Any new form of voluntary slavery would be a "civilised" form of slavery and could occur when an individual would "agree" to sell their lifetime's labour to another (as when a starving worker would "agree" to become a slave in return for food). In addition, the contract would be able to be broken under certain conditions (perhaps in return for breaking the contract, the former slave would have pay damages to his or her master for the labour their master would lose — a sizeable amount no doubt and such a payment could result in debt slavery, which is the most common form of "civilised" slavery. Such damages may be agreed in the contract as a "performance bond" or "conditional exchange."

In summary, right-"libertarians" are talking about "civilised" slavery (or, in other words, civil slavery) and not forced slavery. While some may have reservations about calling it slavery, they agree with the basic concept that since people own themselves they can sell themselves, that is sell their labour for a lifetime rather than piecemeal.

We must stress that this is no academic debate. "Voluntary" slavery has been a problem in many societies and still exists in many countries today (particularly third world ones where bonded labour — i.e. where debt is used to enslave people — is the most common form). With the rise of sweat shops and child labour in many "developed" countries such as the USA, "voluntary" slavery (perhaps via debt and bonded labour) may become common in all parts of the world — an ironic (if not surprising) result of "freeing" the market and being indifferent to the actual freedom of those within it.

Some right-"libertarians" are obviously uneasy with the logical conclusion of their definition of freedom. Murray Rothbard, for example, stressed the *"unenforceability, in libertarian theory, of voluntary slave contracts."* Of course, **other** "libertarian" theorists claim the exact opposite, so *"libertarian theory"* makes no such claim, but never mind! Essentially, his objection revolves around the assertion that a person *"cannot, in nature, sell himself into slavery and have this sale enforced — for this would mean that his future will over his own body was being surrendered in advance"* and that if a *"labourer remains totally subservient to his master's will voluntarily, he is not yet a slave since his submission is voluntary."* However, as we noted in section F.2, Rothbard emphasis on quitting fails to recognise the actual denial of will and control over ones own body that is explicit in wage labour. It is this failure that pro-slave contract "libertarians" stress — they consider the slave contract as an extended wage contract. Moreover, a modern slave contract would likely take the form of a *"performance bond,"* on which Rothbard laments about its *"unfortunate suppression"* by the state. In such a system, the slave could agree to perform X years labour or pay their master substantial damages if they fail to do so. It is the threat of damages that enforces the contract and such a "contract" Rothbard does agree is enforceable. Another means of creating slave contracts would be *"conditional exchange"* which Rothbard also supports. As for debt bondage, that too, seems acceptable. He surreally notes that paying damages and debts in such contracts is fine as *"money, of course, **is** alienable"* and so forgets that it needs to be earned by labour which, he asserts, is **not** alienable! [**The Ethics of Liberty,** pp. 134–135, p. 40, pp. 136–9, p. 141 and p. 138]

It should be noted that the slavery contract cannot be null and void because it is unenforceable, as Rothbard suggests. This is because the doctrine of specific performance applies to all contracts, not just to labour contracts. This is because **all** contracts specify some future performance. In the case of the lifetime labour contract, then it can be broken as long as the slave pays any appropriate damages. As Rothbard puts it elsewhere, *"if A has agreed to work for life for B in exchange for 10,000 grams of gold, he will have to return the proportionate amount of property if he terminates the arrangement and ceases to work."* [**Man, Economy, and State**, vol. I , p. 441] This is understandable, as the law generally allows material damages for breached contracts, as does Rothbard in his support for the *"performance bond"* and *"conditional exchange."* Needless to say, having to pay such damages (either as a lump sum or over a period of time) could turn the worker into the most common type of modern slave, the debt-slave.

And it is interesting to note that even Murray Rothbard is not against the selling of humans. He argued that children are the property of their parents who can (bar actually murdering them by violence) do whatever they please with them, even sell them on a *"flourishing free child market."* [**The Ethics of Liberty**, p. 102] Combined with a whole hearted support for child labour (after all, the child can leave its parents if it objects to working for them) such a "free child market" could easily become a "child slave market" — with entrepreneurs making a healthy profit selling infants and children or their labour to capitalists (as did occur in 19th century Britain). Unsurprisingly, Rothbard ignores the possible nasty aspects of such a market in human flesh (such as children being sold to work in factories, homes and brothels). But this is besides the point.

Of course, this theoretical justification for slavery at the heart of an ideology calling itself "libertarianism" is hard for many right-"libertarians" to accept and so they argue that such contracts would be very hard to enforce. This attempt to get out of the contradiction fails simply because it ignores the nature of the capitalist market. If there is a demand for slave contracts to be enforced, then companies will develop to provide that "service" (and it would be interesting to see

how two "protection" firms, one defending slave contracts and another not, could compromise and reach a peaceful agreement over whether slave contracts were valid). Thus we could see a so-called "free" society producing companies whose specific purpose was to hunt down escaped slaves (i.e. individuals in slave contracts who have not paid damages to their owners for freedom). Of course, perhaps Rothbard would claim that such slave contracts would be "outlawed" under his *"general libertarian law code"* but this is a denial of market "freedom". If slave contracts **are** "banned" then surely this is paternalism, stopping individuals from contracting out their "labour services" to whom and however long they "desire". You cannot have it both ways.

So, ironically, an ideology proclaiming itself to support "liberty" ends up justifying and defending slavery. Indeed, for the right-"libertarian" the slave contract is an exemplification, not the denial, of the individual's liberty! How is this possible? How can slavery be supported as an expression of liberty? Simple, right-"libertarian" support for slavery is a symptom of a **deeper** authoritarianism, namely their uncritical acceptance of contract theory. The central claim of contract theory is that contract is the means to secure and enhance individual freedom. Slavery is the antithesis to freedom and so, in theory, contract and slavery must be mutually exclusive. However, as indicated above, some contract theorists (past and present) have included slave contracts among legitimate contracts. This suggests that contract theory cannot provide the theoretical support needed to secure and enhance individual freedom.

As Carole Pateman argues, *"contract theory is primarily about a way of creating social relations constituted by subordination, not about exchange."* Rather than undermining subordination, contract theorists justify modern subjection — *"contract doctrine has proclaimed that subjection to a master — a boss, a husband — is freedom."* [**The Sexual Contract**, p. 40 and p. 146] The question central to contract theory (and so right-Libertarianism) is not "are people free" (as one would expect) but "are people free to subordinate themselves in any manner they please." A radically different question and one only fitting to someone who does not know what liberty means.

Anarchists argue that not all contracts are legitimate and no free individual can make a contract that denies his or her own freedom. If an individual is able to express themselves by making free agreements then those free agreements must also be based upon freedom internally as well. Any agreement that creates domination or hierarchy negates the assumptions underlying the agreement and makes itself null and void. In other words, voluntary government is still government and a defining characteristic of an anarchy must be, surely, "no government" and "no rulers."

This is most easily seen in the extreme case of the slave contract. John Stuart Mill stated that such a contract would be "null and void." He argued that an individual may voluntarily choose to enter such a contract but in so doing *"he abdicates his liberty; he foregoes any future use of it beyond that single act. He therefore defeats, in his own case, the very purpose which is the justification of allowing him to dispose of himself…The principle of freedom cannot require that he should be free not to be free. It is not freedom, to be allowed to alienate his freedom."* He adds that *"these reasons, the force of which is so conspicuous in this particular case, are evidently of far wider application."* [quoted by Pateman, **Op. Cit.**, pp. 171–2]

And it is such an application that defenders of capitalism fear (Mill did in fact apply these reasons wider and unsurprisingly became a supporter of a market syndicalist form of socialism). If we reject slave contracts as illegitimate then, logically, we must also reject **all** contracts that express qualities similar to slavery (i.e. deny freedom) including wage slavery. Given that, as David Ellerman points out, *"the voluntary slave … and the employee cannot in fact take their will*

out of their intentional actions so that they could be 'employed' by the master or employer" we are left with *"the rather implausible assertion that a person can vacate his or her will for eight or so hours a day for weeks, months, or years on end but cannot do so for a working lifetime."* [**Property and Contract in Economics**, p. 58] This is Rothbard's position.

The implications of supporting voluntary slavery is quite devastating for all forms of right-wing "libertarianism." This was proven by Ellerman when he wrote an extremely robust defence of it under the pseudonym "J. Philmore" called **The Libertarian Case for Slavery** (first published in **The Philosophical Forum**, xiv, 1982). This classic rebuttal takes the form of "proof by contradiction" (or **reductio ad absurdum**) whereby he takes the arguments of right-libertarianism to their logical end and shows how they reach the memorably conclusion that the *"time has come for liberal economic and political thinkers to stop dodging this issue and to critically re-examine their shared prejudices about certain voluntary social institutions ... this critical process will inexorably drive liberalism to its only logical conclusion: libertarianism that finally lays the true moral foundation for economic and political slavery."* Ellerman shows how, from a right-"libertarian" perspective there is a *"fundamental contradiction"* in a modern liberal society for the state to prohibit slave contracts. He notes that there *"seems to be a basic shared prejudice of liberalism that slavery is inherently involuntary, so the issue of genuinely voluntary slavery has received little scrutiny. The perfectly valid liberal argument that involuntary slavery is inherently unjust is thus taken to include voluntary slavery (in which case, the argument, by definition, does not apply). This has resulted in an abridgement of the freedom of contract in modern liberal society."* Thus it is possible to argue for a *"civilised form of contractual slavery."* ["J. Philmore,", **Op. Cit.**]

So accurate and logical was Ellerman's article that many of its readers were convinced it **was** written by a right-"libertarian" (including, we have to say, us!). One such writer was Carole Pateman, who correctly noted that *"[t]here is a nice historical irony here. In the American South, slaves were emancipated and turned into wage labourers, and now American contractarians argue that all workers should have the opportunity to turn themselves into civil slaves."* [**Op. Cit.**, p. 63]).

The aim of Ellerman's article was to show the problems that employment (wage labour) presents for the concept of self-government and how contract need not result in social relationships based on freedom. As "Philmore" put it, *"[a]ny thorough and decisive critique of voluntary slavery or constitutional non-democratic government would carry over to the employment contract — which is the voluntary contractual basis for the free-market free-enterprise system. Such a critique would thus be a* ***reductio ad absurdum****."* As *"contractual slavery"* is an *"extension of the employer-employee contract,"* he shows that the difference between wage labour and slavery is the time scale rather than the principle or social relationships involved. [**Op. Cit.**] This explains why the early workers' movement called capitalism ***"wage slavery"*** and why anarchists still do. It exposes the unfree nature of capitalism and the poverty of its vision of freedom. While it is possible to present wage labour as "freedom" due to its "consensual" nature, it becomes much harder to do so when talking about slavery or dictatorship (and let us not forget that Nozick also had no problem with autocracy — see section B.4). Then the contradictions are exposed for all to see and be horrified by.

All this does not mean that we must reject free agreement. Far from it! Free agreement is **essential** for a society based upon individual dignity and liberty. There are a variety of forms of free agreement and anarchists support those based upon co-operation and self-management (i.e. individuals working together as equals). Anarchists desire to create relationships which reflect (and so express) the liberty that is the basis of free agreement. Capitalism creates relationships

that deny liberty. The opposition between autonomy and subjection can only be maintained by modifying or rejecting contract theory, something that capitalism cannot do and so the right-wing "libertarian" rejects autonomy in favour of subjection (and so rejects socialism in favour of capitalism).

So the real contrast between genuine libertarians and right-"libertarians" is best expressed in their respective opinions on slavery. Anarchism is based upon the individual whose individuality depends upon the maintenance of free relationships with other individuals. If individuals deny their capacities for self-government through a contract the individuals bring about a qualitative change in their relationship to others — freedom is turned into mastery and subordination. For the anarchist, slavery is thus the paradigm of what freedom is **not**, instead of an exemplification of what it is (as right-"libertarians" state). As Proudhon argued:

> *"If I were asked to answer the following question: What is slavery? and I should answer in one word, It is murder, my meaning would be understood at once. No extended argument would be required to show that the power to take from a man his thought, his will, his personality, is a power of life and death; and that to enslave a man is to kill him."* [**What is Property?**, p. 37]

In contrast, the right-"libertarian" effectively argues that "I support slavery because I believe in liberty." It is a sad reflection of the ethical and intellectual bankruptcy of our society that such an "argument" is actually proposed by some people under the name of liberty. The concept of "slavery as freedom" is far too Orwellian to warrant a critique — we will leave it up to right-"libertarians" to corrupt our language and ethical standards with an attempt to prove it.

From the basic insight that slavery is the opposite of freedom, the anarchist rejection of authoritarian social relations quickly follows:

> *"Liberty is inviolable. I can neither sell nor alienate my liberty; every contract, every condition of a contract, which has in view the alienation or suspension of liberty, is null: the slave, when he plants his foot upon the soil of liberty, at that moment becomes a free man .. . Liberty is the original condition of man; to renounce liberty is to renounce the nature of man: after that, how could we perform the acts of man?"* [P.J. Proudhon, **Op. Cit.**, p. 67]

The employment contract (i.e. wage slavery) abrogates liberty. It is based upon inequality of power and *"exploitation is a consequence of the fact that the sale of labour power entails the worker's subordination."* [Carole Pateman, **Op. Cit.**, p. 149] Hence Proudhon's support for self-management and opposition to capitalism — any relationship that resembles slavery is illegitimate and no contract that creates a relationship of subordination is valid. Thus in a truly anarchistic society, slave contracts would be unenforceable — people in a truly free (i.e. non-capitalist) society would **never** tolerate such a horrible institution or consider it a valid agreement. If someone was silly enough to sign such a contract, they would simply have to say they now rejected it in order to be free — such contracts are made to be broken and without the force of a law system (and private defence firms) to back it up, such contracts will stay broken.

The right-"libertarian" support for slave contracts (and wage slavery) indicates that their ideology has little to do with liberty and far more to do with justifying property and the oppression

and exploitation it produces. Their theoretical support for permanent and temporary voluntary slavery and autocracy indicates a deeper authoritarianism which negates their claims to be libertarians.

F.3 Why do anarcho"-capitalists place little or no value on equality?

Murray Rothbard argued that *"the 'rightist' libertarian is not opposed to inequality."* [**For a New Liberty**, p. 47] In contrast, genuine libertarians oppose inequality because it has harmful effects on individual liberty. Part of the reason "anarcho"-capitalism places little or no value on "equality" derives from their definition of that term. *"A and B are 'equal,'"* Rothbard argued, *"if they are identical to each other with respect to a given attribute ... There is one and only one way, then, in which any two people can really be 'equal' in the fullest sense: they must be identical in **all** their attributes."* He then pointed out the obvious fact that *"men are not uniform ... the species, mankind, is uniquely characterised by a high degree of variety, diversity, differentiation: in short, inequality."* [**Egalitarianism as a Revolt against Nature and Other Essays**, p. 4 and p.5]

In others words, every individual is unique — something no egalitarian has ever denied. On the basis of this amazing insight, he concludes that equality is impossible (except "equality of rights") and that the attempt to achieve "equality" is a *"revolt against nature."* The utility of Rothbard's sophistry to the rich and powerful should be obvious as it moves analysis away from the social system we live in and onto biological differences. This means that because we are all unique, the outcome of our actions will not be identical and so social inequality flows from natural differences and not due to the economic system we live under. Inequality of endowment, in this perspective, implies inequality of outcome and so social inequality. As individual differences are a fact of nature, attempts to create a society based on "equality" (i.e. making everyone identical in terms of possessions and so forth) is impossible and "unnatural." That this would be music to the ears of the wealthy should go without saying.

Before continuing, we must note that Rothbard is destroying language to make his point and that he is not the first to abuse language in this particular way. In George Orwell's **1984**, the expression *"all men are created equal"* could be translated into Newspeak *"but only in the same sense in which **All men are redhaired** is a possible Oldspeak sentence. It did not contain a grammatical error, but it expressed a palpable untruth — i.e. that all men are of equal size, weight, or strength."* [*"Appendix: The Principles of Newspeak"*, **1984**, p. 246] It is nice to know that "Mr. Libertarian" is stealing ideas from Big Brother, and for the same reason: to make critical thought impossible by restricting the meaning of words.

"Equality," in the context of political discussion, does not mean "identical," it means equality of rights, respect, worth, power and so forth. It does not imply treating everyone identically (for example, expecting an eighty year old man to do identical work as an eighteen violates treating both equally with respect as unique individuals). Needless to say, no anarchist has ever advocated such a notion of equality as being identical. As discussed in section A.2.5, anarchists have always based our arguments on the need for social equality on the fact that, while people are different, we all have the same right to be free and that inequality in wealth produces inequalities of liberty. For anarchists:

> *"equality does not mean an equal amount but equal **opportunity** ... Do not make the mistake of identifying equality in liberty with the forced equality of the convict camp. True anarchist equality implies freedom, not quantity. It does not mean that every one must eat, drink, or wear the same things, do the same work, or live in the same manner. Far from it: the very reverse, in fact. Individual needs and tastes differ, as appetites differ. It is **equal** opportunity to satisfy them that constitutes true equality. Far from levelling, such equality opens the door for the greatest possible variety of activity and development. For human character is diverse, and only the repression of this free diversity results in levelling, in uniformity and sameness. Free opportunity and acting out your individuality means development of natural dissimilarities and variations... . Life in freedom, in anarchy will do more than liberate man merely from his present political and economic bondage. That will be only the first step, the preliminary to a truly human existence."* [**What is Anarchism?**, pp. 164–5]

So it is precisely the diversity of individuals (their uniqueness) which drives the anarchist support for equality, not its denial. Thus anarchists reject the Rothbardian-Newspeak definition of equality as meaningless. No two people are identical and so imposing "identical" equality between them would mean treating them as **unequals**, i.e. not having equal worth or giving them equal respect as befits them as human beings and fellow unique individuals.

So what should we make of Rothbard's claim? It is tempting just to quote Rousseau when he argued *"it is ... useless to inquire whether there is any essential connection between the two inequalities [social and natural]; for this would be only asking, in other words, whether those who command are necessarily better than those who obey, and if strength of body or of mind, wisdom, or virtue are always found in particular individuals, in proportion to their power or wealth: a question fit perhaps to be discussed by slaves in the hearing of their masters, but highly unbecoming to reasonable and free men in search of the truth."* [**The Social Contract and Discourses**, p. 49] This seems applicable when you see Rothbard proclaim that inequality of individuals will lead to inequalities of income as *"each man will tend to earn an income equal to his 'marginal productivity.'"* This is because *"some men"* (and it is always men!) are *"more intelligent, others more alert and farsighted, than the remainder of the population"* and capitalism will *"allow the rise of these natural aristocracies."* In fact, for Rothbard, all government, in its essence, is a conspiracy against the superior man. [**The Logic of Action II**, p. 29 and p. 34] But a few more points should be raised.

The uniqueness of individuals has always existed but for the vast majority of human history we have lived in very egalitarian societies. If social inequality did, indeed, flow from natural inequalities then **all** societies would be marked by it. This is not the case. Indeed, taking a relatively recent example, many visitors to the early United States noted its egalitarian nature, something that soon changed with the rise of capitalism (a rise dependent upon state action, we must add). This implies that the society we live in (its rights framework, the social relationships it generates and so forth) has far more of a decisive impact on inequality than individual differences. Thus certain rights frameworks will tend to magnify "natural" inequalities (assuming that is the source of the initial inequality, rather than, say, violence and force). As Noam Chomsky argues:

> *"Presumably it is the case that in our 'real world' some combination of attributes is conducive to success in responding to 'the demands of the economic system.' Let us agree, for the sake of discussion, that this combination of attributes is in part a matter of native*

endowment. Why does this (alleged) fact pose an 'intellectual dilemma' to egalitarians? Note that we can hardly claim much insight into just what the relevant combination of attributes may be ... One might suppose that some mixture of avarice, selfishness, lack of concern for others, aggressiveness, and similar characteristics play a part in getting ahead and 'making it' in a competitive society based on capitalist principles. ... Whatever the correct collection of attributes may be, we may ask what follows from the fact, if it is a fact, that some partially inherited combination of attributes tends to material success? All that follows ... is a comment on our particular social and economic arrangements ... The egalitarian might respond, in all such cases, that the social order should be changed so that the collection of attributes that tends to bring success no longer do so. He might even argue that in a more decent society, the attributes that now lead to success would be recognised as pathological, and that gentle persuasion might be a proper means to help people to overcome their unfortunate malady." [**The Chomsky Reader**, p. 190]

So if we change society then the social inequalities we see today would disappear. It is more than probable that natural difference has been long ago been replaced with **social** inequalities, especially inequalities of property. And as we argue in section F.8 these inequalities of property were initially the result of force, **not** differences in ability. Thus to claim that social inequality flows from natural differences is false as most social inequality has flown from violence and force. This initial inequality has been magnified by the framework of capitalist property rights and so the inequality within capitalism is far more dependent upon, say, the existence of wage labour rather than "natural" differences between individuals.

This can be seen from existing society: we see that in workplaces and across industries many, if not most, unique individuals receive identical wages for identical work (although this often is not the case for women and blacks, who receive less wages than male, white workers for identical labour). Similarly, capitalists have deliberately introduced wage inequalities and hierarchies for no other reason that to divide and so rule the workforce (see section D.10). Thus, if we assume egalitarianism **is** a revolt against nature, then much of capitalist economic life is in such a revolt and when it is not, the "natural" inequalities have usually been imposed artificially by those in power either within the workplace or in society as a whole by means of state intervention, property laws and authoritarian social structures. Moreover, as we indicated in section C.2.5, anarchists have been aware of the ***collective*** nature of production within capitalism since Proudhon wrote **What is Property?** in 1840. Rothbard ignores both the anarchist tradition and reality when he stresses that individual differences produce inequalities of outcome. As an economist with a firmer grasp of the real world put it, the *"notion that wages depend on personal skill, as expressed in the value of output, makes no sense in any organisation where production is interdependent and joint — which is to say it makes no sense in virtually any organisation."* [James K. Galbraith, **Created Unequal**, p. 263]

Thus "natural" differences do not necessarily result in inequality as such nor do such differences have much meaning in an economy marked by joint production. Given a different social system, "natural" differences would be encouraged and celebrated far wider than they are under capitalism (where hierarchy ensures the crushing of individuality rather than its encouragement) without any reduction in social equality. At its most basic, the elimination of hierarchy within the workplace would not only increase freedom but also reduce inequality as the few would not be

able to monopolise the decision making process and the fruit of joint productive activity. So the claim that "natural" differences generate social inequalities is question begging in the extreme — it takes the rights framework of capitalism as a given and ignores the initial source of inequality in property and power. Indeed, inequality of outcome or reward is more likely to be influenced by social conditions rather than individual differences (as would be expected in a society based on wage labour or other forms of exploitation).

Rothbard is at pains to portray egalitarians as driven by envy of the rich. It is hard to credit "envy" as the driving force of the likes of Bakunin and Kropotkin who left the life of wealthy aristocrats to become anarchists, who suffered imprisonment in their struggles for liberty for all rather than an elite. When this is pointed out, the typical right-wing response is to say that this shows that **real** working class people are not socialists. In other words if you are a working class anarchist then you are driven by envy and if not, if you reject your class background, then you show that socialism is not a working class movement! So driven by this assumption and hatred for socialism Rothbard went so far as to distort Karl Marx's words to fit it into his own ideological position. He stated that *"Marx concedes the truth of the charge of anti-communists then and now"* that communism was the expression of envy and a desire to reduce all to a common level. Except, of course, Marx did nothing of the kind. In the passages Rothbard presented as evidence for his claims, Marx is critiquing what he termed "crude" communism (the *"this type of communism"* in the passage Rothbard quoted but clearly did not understand) and it is, therefore, not surprising Marx *"clearly did not stress this dark side of communist revolution in the his later writings"* as he explicitly **rejected** this type of communism! For Rothbard, all types of socialism seem to be identical and identified with central planning — hence his bizarre comment that *"Stalin established socialism in the Soviet Union."* [**The Logic of Action II**, pp. 394–5 and p. 200]

Another reason for "anarcho"-capitalist lack of concern for equality is that they think that (to use Robert Nozick's expression) *"liberty upsets patterns"*. It is argued that equality (or any *"end-state principle of justice"*) cannot be *"continuously realised without continuous interference with people's lives,"* i.e. can only be maintained by restricting individual freedom to make exchanges or by taxation of income. [**Anarchy, State, and Utopia**, pp. 160–3] However, what this argument fails to acknowledge is that inequality also restricts individual freedom and that the capitalist property rights framework is not the only one possible. After all, money is power and inequalities in terms of power easily result in restrictions of liberty and the transformation of the majority into order takers rather than free producers. In other words, once a certain level of inequality is reached property does not promote, but actually conflicts with, the ends which render private property legitimate. As we argue in the next section, inequality can easily led to the situation where self-ownership is used to justify its own negation and so unrestricted property rights will undermine the meaningful self-determination which many people intuitively understand by the term "self-ownership" (i.e., what anarchists would usually call "freedom" rather than self-ownership). Thus private property itself leads to continuous interference with people's lives, as does the enforcement of Nozick's "just" distribution of property and the power that flows from such inequality. Moreover, as many critics have noted Nozick's argument assumes what it sets out to proves. As one put it, while Nozick may *"wish to defend capitalist private property rights by insisting that these are founded in basic liberties,"* in fact he *"has produced ... an argument for unrestricted private property using unrestricted private property, and thus he begs the question he tries to answer."* [Andrew Kerhohan, *"Capitalism and Self-Ownership"*, pp. 60–76, **Capitalism**, Ellen Frankel Paul, Fred D. Miler, Jr, Jeffrey Paul and John Ahrens (eds.), p. 71]

So in response to the claim that equality could only be maintained by continuously interfering with people's lives, anarchists would say that the inequalities produced by capitalist property rights also involve extensive and continuous interference with people's lives. After all, as Bob Black notes *"it is apparent that the source of greatest direct duress experienced by the ordinary adult is **not** the state but rather the business that employs him [or her]. Your foreman or supervisor gives you more or-else orders in a week than the police do in a decade."* [*"The Libertarian As Conservative"*, **The Abolition of Work and Other Essays**, p. 145] For example, a worker employed by a capitalist cannot freely exchange the machines or raw materials they have been provided with to use but Nozick does not class this distribution of "restricted" property rights as infringing liberty (nor does he argue that wage slavery itself restricts freedom, of course). Thus claims that equality involves infringing liberty ignores the fact that inequality also infringes liberty (never mind the significant negative effects of inequality, both of wealth and power, we discussed in section B.1). A reorganisation of society could effectively minimise inequalities by eliminating the major source of such inequalities (wage labour) by self-management. We have no desire to restrict free exchanges (after all, most anarchists desire to see the "gift economy" become a reality sooner or later) but we argue that free exchanges need not involve the unrestricted capitalist property rights Nozick assumes (see section I.5.12 for a discussion of "capitalistic acts" within an anarchist society).

Rothbard, ironically, is aware of the fact that inequality restricts freedom for the many. As he put it *"inequality of control"* is an *"inevitable corollary of freedom"* for in any organisation *"there will always be a minority of people who will rise to the position of leaders and others who will remain as followers in the rank and file."* [**Op. Cit.**, p. 30] To requote Bob Black: *"Some people giving orders and others obeying them: this is the essence of servitude."* [**Op. Cit.**, p. 147] Perhaps if Rothbard had spent some time in a workplace rather than in a tenured academic post he may have realised that bosses are rarely the natural elite he thought they were. Like the factory owner Engels, he was blissfully unaware that it is the self-activity of the non-"elite" on the shop floor (the product of which the boss monopolises) that keeps the whole hierarchical structure going (as we discuss in section H.4.4, the work to rule — were workers do **exactly** what the boss orders them to do — is a devastating weapon in the class struggle). It does seem somewhat ironic that the anti-Marxist Rothbard should has recourse to the same argument as Engels in order to refute the anarchist case for freedom within association! It should also be mentioned that Black has also recognised this, noting that right-"libertarianism" and mainstream Marxism *"are as different as Coke and Pepsi when it comes to consecrating class society and the source of its power, work. Only upon the firm foundation of factory fascism and office oligarchy do libertarians and Leninists dare to debate the trivial issues dividing them."* [**Op. Cit.**, p. 146]

So, as Rothbard admits, inequality produces a **class** system and authoritarian social relationships which are rooted in ownership and control of private property. These produce specific areas of conflict over liberty, a fact of life which Rothbard (like other "anarcho"-capitalists) is keen to deny as we discuss in section F.3.2. Thus, for anarchists, the "anarcho"-capitalist opposition to equality misses the point and is extremely question begging. Anarchists do not desire to make people "identical" (which would be impossible and a total denial of liberty **and** equality) but to make the social relationships between individuals equal in **power.** In other words, they desire a situation where people interact together without institutionalised power or hierarchy and are influenced by each other "naturally," in proportion to how the (individual) **differences** between (social) **equals** are applicable in a given context. To quote Michael Bakunin, *"[t]he greatest intel-*

ligence would not be equal to a comprehension of the whole. Thence results ... the necessity of the division and association of labour. I receive and I give — such is human life. Each directs and is directed in his turn. Therefore there is no fixed and constant authority, but a continual exchange of mutual, temporary, and, above all, voluntary authority and subordination." [**God and the State**, p. 33]

Such an environment can only exist within self-managed associations, for capitalism (i.e. wage labour) creates very specific relations and institutions of authority. It is for this reason anarchists are socialists. In other words, anarchists support equality precisely **because** we recognise that everyone is unique. If we are serious about "equality of rights" or "equal freedom" then conditions must be such that people can enjoy these rights and liberties. If we assume the right to develop one's capacities to the fullest, for example, then inequality of resources and so power within society destroys that right simply because most people do not have the means to freely exercise their capacities (they are subject to the authority of the boss, for example, during work hours).

So, in direct contrast to anarchism, right-"libertarianism" is unconcerned about any form of equality except "equality of rights". This blinds them to the realities of life; in particular, the impact of economic and social power on individuals within society and the social relationships of domination they create. Individuals may be "equal" before the law and in rights, but they may not be free due to the influence of social inequality, the relationships it creates and how it affects the law and the ability of the oppressed to use it. Because of this, all anarchists insist that equality is essential for freedom, including those in the Individualist Anarchist tradition the "anarcho"-capitalist tries to co-opt (*"Spooner and Godwin insist that inequality corrupts freedom. Their anarchism is directed as much against inequality as against tyranny"* and so *"[w]hile sympathetic to Spooner's individualist anarchism, they [Rothbard and David Friedman] fail to notice or conveniently overlook its egalitarian implications."* [Stephen L. Newman, **Liberalism at Wit's End**, p. 74 and p. 76]). Without social equality, individual freedom is so restricted that it becomes a mockery (essentially limiting freedom of the majority to choosing **which** master will govern them rather than being free).

Of course, by defining "equality" in such a restrictive manner, Rothbard's own ideology is proved to be nonsense. As L.A. Rollins notes, *"Libertarianism, the advocacy of 'free society' in which people enjoy 'equal freedom' and 'equal rights,' is actually a specific form of egalitarianism. As such, Libertarianism itself is a revolt against nature. If people, by their very biological nature, are unequal in all the attributes necessary to achieving, and preserving 'freedom' and 'rights' ... then there is no way that people can enjoy 'equal freedom' or 'equal rights'. If a free society is conceived as a society of 'equal freedom,' then there ain't no such thing as 'a free society'."* [**The Myth of Natural Law**, p. 36] Under capitalism, freedom is a commodity like everything else. The more money you have, the greater your freedom. "Equal" freedom, in the Newspeak-Rothbardian sense, **cannot** exist! As for "equality before the law", its clear that such a hope is always dashed against the rocks of wealth and market power. As far as rights go, of course, both the rich and the poor have an "equal right" to sleep under a bridge (assuming the bridge's owner agrees of course!); but the owner of the bridge and the homeless have **different** rights, and so they cannot be said to have "equal rights" in the Newspeak-Rothbardian sense either. Needless to say, poor and rich will not "equally" use the "right" to sleep under a bridge, either.

As Bob Black observed: *"The time of your life is the one commodity you can sell but never buy back. Murray Rothbard thinks egalitarianism is a revolt against nature, but his day is 24 hours long, just like everybody else's."* [**Op. Cit.**, p. 147]

By twisting the language of political debate, the vast differences in power in capitalist society can be "blamed" not on an unjust and authoritarian system but on "biology" (we are all unique individuals, after all). Unlike genes (although biotechnology corporations are working on this, too!), human society **can** be changed, by the individuals who comprise it, to reflect the basic features we all share in common — our humanity, our ability to think and feel, and our need for freedom.

F.3.1 Why is this disregard for equality important?

Simply because a disregard for equality soon ends with liberty for the majority being negated in many important ways. Most "anarcho"-capitalists and right-Libertarians deny (or at best ignore) market power. Rothbard, for example, claims that economic power does not exist under capitalism; what people call *"economic power"* is *"simply the right under freedom to refuse to make an exchange"* and so the concept is meaningless. [**The Ethics of Liberty**, p. 222]

However, the fact is that there are substantial power centres in society (and so are the source of hierarchical power and authoritarian social relations) which are **not the state.** As Elisee Reclus put it, the *"power of kings and emperors has limits, but that of wealth has none at all. The dollar is the master of masters."* Thus wealth is a source of power as *"the essential thing"* under capitalism *"is to train oneself to pursue monetary gain, with the goal of commanding others by means of the omnipotence of money. One's power increases in direct proportion to one's economic resources."* [quoted by John P. Clark and Camille Martin (eds.), **Anarchy, Geography, Modernity**, p. 95 and pp. 96–7] Thus the central fallacy of "anarcho"-capitalism is the (unstated) assumption that the various actors within an economy have relatively equal power. This assumption has been noted by many readers of their works. For example, Peter Marshall notes that *"'anarcho-capitalists' like Murray Rothbard assume individuals would have equal bargaining power in a [capitalist] market-based society."* [**Demanding the Impossible**, p. 46] George Walford also makes this point in his comments on David Friedman's **The Machinery of Freedom**:

> *"The private ownership envisaged by the anarcho-capitalists would be very different from that which we know. It is hardly going too far to say that while the one is nasty, the other would be nice. In anarcho-capitalism there would be no National Insurance, no Social Security, no National Health Service and not even anything corresponding to the Poor Laws; there would be no public safety-nets at all. It would be a rigorously competitive society: work, beg or die. But as one reads on, learning that each individual would have to buy, personally, all goods and services needed, not only food, clothing and shelter but also education, medicine, sanitation, justice, police, all forms of security and insurance, even permission to use the streets (for these also would be privately owned), as one reads about all this a curious feature emerges: everybody always has enough money to buy all these things.*
>
> *"There are no public casualty wards or hospitals or hospices, but neither is there anybody dying in the streets. There is no public educational system but no uneducated children, no public police service but nobody unable to buy the services of an efficient security firm, no public law but nobody unable to buy the use of a private legal system. Neither is there anybody able to buy much more than anybody else; no person or group possesses economic power over others.*

> *"No explanation is offered. The anarcho-capitalists simply take it for granted that in their favoured society, although it possesses no machinery for restraining competition (for this would need to exercise authority over the competitors and it is an* ***anarcho****-capitalist society) competition would not be carried to the point where anybody actually suffered from it. While proclaiming their system to be a competitive one, in which private interest rules unchecked, they show it operating as a co-operative one, in which no person or group profits at the cost of another."* [**On the Capitalist Anarchists**]

This assumption of (relative) equality comes to the fore in Murray Rothbard's "Homesteading" concept of property (discussed in section F.4.1). "Homesteading" paints a picture of individuals and families going into the wilderness to make a home for themselves, fighting against the elements and so forth. It does **not** invoke the idea of transnational corporations employing tens of thousands of people or a population without land, resources and selling their labour to others. Rothbard as noted argued that economic power does not exist (at least under capitalism, as we saw in section F.1 he does make — highly illogical — exceptions). Similarly, David Friedman's example of a pro-death penalty and anti-death penalty "defence" firm coming to an agreement (see section F.6.3) implicitly assumes that the firms have equal bargaining powers and resources — if not, then the bargaining process would be very one-sided and the smaller company would think twice before taking on the larger one in battle (the likely outcome if they cannot come to an agreement on this issue) and so compromise.

However, the right-"libertarian" denial of market power is unsurprising. The *"necessity, not the redundancy, of the assumption about natural equality* is required *"if the inherent problems of contract theory are not to become too obvious."* If some individuals **are** assumed to have significantly more power are more capable than others, and if they are always self-interested, then a contract that creates equal partners is impossible — the pact will establish an association of masters and servants. Needless to say, the strong will present the contract as being to the advantage of both: the strong no longer have to labour (and become rich, i.e. even stronger) and the weak receive an income and so do not starve. [Carole Pateman, **The Sexual Contract**, p. 61] So if freedom is considered as a function of ownership then it is very clear that individuals lacking property (outside their own body, of course) lose effective control over their own person and labour (which was, least we forget, the basis of their equal natural rights). When ones bargaining power is weak (which is typically the case in the labour market) exchanges tend to magnify inequalities of wealth and power over time rather than working towards an equalisation.

In other words, "contract" need not replace power if the bargaining position and wealth of the would-be contractors are not equal (for, if the bargainers had equal power it is doubtful they would agree to sell control of their liberty/labour to another). This means that "power" and "market" are not antithetical terms. While, in an abstract sense, all market relations are voluntary in practice this is not the case within a capitalist market. A large company has a comparative advantage over smaller ones, communities and individual workers which will definitely shape the outcome of any contract. For example, a large company or rich person will have access to more funds and so stretch out litigations and strikes until their opponents resources are exhausted. Or, if a company is polluting the environment, the local community may put up with the damage caused out of fear that the industry (which it depends upon) would relocate to another area. If members of the community **did** sue, then the company would be merely exercising its property rights when it threatened to move to another location. In such circumstances, the community

would "freely" consent to its conditions or face massive economic and social disruption. And, similarly, *"the landlords' agents who threatened to discharge agricultural workers and tenants who failed to vote the reactionary ticket"* in the 1936 Spanish election were just exercising their legitimate property rights when they threatened working people and their families with economic uncertainty and distress. [Murray Bookchin, **The Spanish Anarchists**, p. 260]

If we take the labour market, it is clear that the "buyers" and "sellers" of labour power are rarely on an equal footing (if they were, then capitalism would soon go into crisis — see section C.7). As we stressed in section C.9, under capitalism competition in labour markets is typically skewed in favour of employers. Thus the ability to refuse an exchange weighs most heavily on one class than another and so ensures that "free exchange" works to ensure the domination (and so exploitation) of one by the other. Inequality in the market ensures that the decisions of the majority of people within it are shaped in accordance with that needs of the powerful, not the needs of all. It was for this reason, for example, that the Individual Anarchist J.K. Ingalls opposed Henry George's proposal of nationalising the land. Ingalls was well aware that the rich could outbid the poor for leases on land and so the dispossession of the working class would continue.

The market, therefore, does not end power or unfreedom — they are still there, but in different forms. And for an exchange to be truly voluntary, both parties must have equal power to accept, reject, or influence its terms. Unfortunately, these conditions are rarely meet on the labour market or within the capitalist market in general. Thus Rothbard's argument that economic power does not exist fails to acknowledge that the rich can out-bid the poor for resources and that a corporation generally has greater ability to refuse a contract (with an individual, union or community) than vice versa (and that the impact of such a refusal is such that it will encourage the others involved to compromise far sooner). In such circumstances, formally free individuals will have to "consent" to be unfree in order to survive. Looking at the tread-mill of modern capitalism, at what we end up tolerating for the sake of earning enough money to survive it comes as no surprise that anarchists have asked whether the market is serving us or are we serving it (and, of course, those who have positions of power within it).

So inequality cannot be easily dismissed. As Max Stirner pointed out, free competition *"is not 'free,' because I lack the **things** for competition."* Due to this basic inequality of wealth (of "things") we find that *"[u]nder the **regime** of the commonality the labourers always fall into the hands of the possessors ... of the capitalists, therefore. The labourer cannot **realise** on his labour to the extent of the value that it has for the customer ... The capitalist has the greatest profit from it."* [**The Ego and Its Own**, p. 262 and p. 115] It is interesting to note that even Stirner recognised that capitalism results in exploitation and that its roots lie in inequalities in property and so power. And we may add that value the labourer does not *"realise"* goes into the hands of the capitalists, who invest it in more "things" and which consolidates and increases their advantage in "free" competition. To quote Stephan L. Newman:

> *"Another disquieting aspect of the libertarians' refusal to acknowledge power in the market is their failure to confront the tension between freedom and autonomy... Wage labour under capitalism is, of course, formally free labour. No one is forced to work at gun point. Economic circumstance, however, often has the effect of force; it compels the relatively poor to accept work under conditions dictated by owners and managers. The individual worker retains freedom [i.e. negative liberty] but loses autonomy [positive liberty]."* [**Liberalism at Wit's End**, pp. 122–123]

If we consider "equality before the law" it is obvious that this also has limitations in an (materially) unequal society. Brian Morris notes that for Ayn Rand, *"[u]nder capitalism ... politics (state) and economics (capitalism) are separated ... This, of course, is pure ideology, for Rand's justification of the state is that it 'protects' private property, that is, it supports and upholds the economic power of capitalists by coercive means."* [**Ecology & Anarchism**, p. 189] The same can be said of "anarcho"-capitalism and its "protection agencies" and *"general libertarian law code."* If within a society a few own all the resources and the majority are dispossessed, then any law code which protects private property **automatically** empowers the owning class. Workers will **always** be initiating force if they rebel against their bosses or act against the code and so equality before the law" reflects and reinforces inequality of power and wealth. This means that a system of property rights protects the liberties of some people in a way which gives them an unacceptable degree of power over others. And this critique cannot be met merely by reaffirming the rights in question, we have to assess the relative importance of the various kinds of liberty and other values we hold dear.

Therefore right-"libertarian" disregard for equality is important because it allows "anarcho"-capitalism to ignore many important restrictions of freedom in society. In addition, it allows them to brush over the negative effects of their system by painting an unreal picture of a capitalist society without vast extremes of wealth and power (indeed, they often construe capitalist society in terms of an ideal — namely artisan production — that is **pre**-capitalist and whose social basis has been eroded by capitalist development). Inequality shapes the decisions we have available and what ones we make:

> *"An 'incentive' is always available in conditions of substantial social inequality that ensure that the 'weak' enter into a contract. When social inequality prevails, questions arise about what counts as voluntary entry into a contract. This is why socialists and feminists have focused on the conditions of entry into the employment contract and the marriage contract. Men and women ... are now juridically free and equal citizens, but, in unequal social conditions, the possibility cannot be ruled out that some or many contracts create relationships that bear uncomfortable resemblances to a slave contract."* [Carole Pateman, **Op. Cit.**, p. 62]

This ideological confusion of right-libertarianism can also be seen from their opposition to taxation. On the one hand, they argue that taxation is wrong because it takes money from those who "earn" it and gives it to the poor. On the other hand, "free market" capitalism is assumed to be a more equal society! If taxation takes from the rich and gives to the poor, how will "anarcho"-capitalism be more egalitarian? That equalisation mechanism would be gone (of course, it could be claimed that all great riches are purely the result of state intervention skewing the "free market" but that places all their "rags to riches" stories in a strange position). Thus we have a problem: either we have relative equality or we do not. Either we have riches, and so market power, or we do not. And its clear from the likes of Rothbard, "anarcho"-capitalism will not be without its millionaires (there is, according to him, apparently nothing un-libertarian about *"hierarchy, wage-work, granting of funds by libertarian millionaires, and a libertarian party"* [quoted by Black, **Op. Cit.**, p. 142]). And so we are left with market power and so extensive unfreedom.

Thus, for a ideology that denounces egalitarianism as a *"revolt against nature"* it is pretty funny that they paint a picture of "anarcho"-capitalism as a society of (relative) equals. In other words,

their propaganda is based on something that has never existed, and never will: an egalitarian capitalist society. Without the implicit assumption of equality which underlies their rhetoric then the obvious limitations of their vision of "liberty" become too obvious. Any real laissez-faire capitalism would be unequal and *"those who have wealth and power would only increase their privileges, while the weak and poor would go to the wall ... Right-wing libertarians merely want freedom for themselves to protect their privileges and to exploit others."* [Peter Marshall, **Op. Cit.**, p. 653]

F.3.2 Can there be harmony of interests in an unequal society?

Like the right-liberalism it is derived from, "anarcho"-capitalism is based on the concept of *"harmony of interests"* which was advanced by the likes of Frédéric Bastiat in the 19th century and Rothbard's mentor Ludwig von Mises in the 20th. For Rothbard, *"all classes live in harmony through the voluntary exchange of goods and services that mutually benefits them all."* This meant that capitalists and workers have no antagonistic class interests [**Classical Economics: An Austrian Perspective on the History of Economic Thought**, Vol. 2, p. 380 and p. 382]

For Rothbard, class interest and conflict does not exist within capitalism, except when it is supported by state power. It was, he asserted, *"fallacious to employ such terms as 'class interests' or 'class conflict' in discussing the market economy."* This was because of two things: *"harmony of interests of different groups"* **and** *"lack of homogeneity among the interests of any one social class."* It is only in *"relation to **state** action that the interests of different men become welded into 'classes'."* This means that the *"homogeneity **emerges from** the interventions of the government into society."* [**Conceived in Liberty**, vol. 1, p. 261] So, in other words, class conflict is impossible under capitalism because of the wonderful coincidence that there are, simultaneously, both common interests between individuals and classes and lack of any!

You do not need to be an anarchist or other socialist to see that this argument is nonsense. Adam Smith, for example, simply recorded reality when he noted that workers and bosses have *"interests [which] are by no means the same. The workmen desire to get as much, the masters to give as little as possible. The former are disposed to combine in order to raise, the latter to lower the wages of labour."* [**The Wealth of Nations**, p. 58] The state, Smith recognised, was a key means by which the property owning class maintained their position in society. As such, it **reflects** economic class conflict and interests and does not **create** it (this is **not** to suggest that economic class is the only form of social hierarchy of course, just an extremely important one). American workers, unlike Rothbard, were all too aware of the truth in Smith's analysis. For example, one group argued in 1840 that the bosses *"hold us then at their mercy, and make us work solely for their profit ... The capitalist has no other interest in us, than to get as much labour out of us as possible. We are hired men, and hired men, like hired horses, have no souls."* Thus *"their interests as capitalist, and ours as labourers, are directly opposite"* and *"in the nature of things, hostile, and irreconcilable."* [quoted by Christopher L. Tomlins, **Law, Labor, and Ideology in the Early American Republic**, p. 10] Then there is Alexander Berkman's analysis:

> *"It is easy to understand why the masters don't want you to be organised, why they are afraid of a real labour union. They know very well that a strong, fighting union can compel higher wages and better conditions, which means less profit for the plutocrats. That is why they do everything in their power to stop labour from organising ...*

> *"The masters have found a very effective way to paralyse the strength of organised labour. They have persuaded the workers that they have the same interests as the employers … and what is good for the employer is also good for his employees … If your interests are the same as those of your boss, then why should you fight him? That is what they tell you … It is good for the industrial magnates to have their workers believe [this] … [as they] will not think of fighting their masters for better conditions, but they will be patient and wait till the employer can 'share his prosperity' with them … If you listen to your exploiters and their mouthpieces you will be 'good' and consider only the interests of your masters … but no one cares about* ***your*** *interests … 'Don't be selfish,' they admonish you, while the boss is getting rich by your being good and unselfish. And they laugh in their sleeves and thank the Lord that you are such an idiot.*
>
> *"But … the interests of capital and labour are not the same. No greater lie was ever invented than the so-called 'identity of interests' … It is clear that … they are entirely opposite, in fact antagonistic to each other."* [**What is Anarchism?**, pp. 74–5]

That Rothbard denies this says a lot about the power of ideology.

Rothbard was clear what unions do, namely limit the authority of the boss and ensure that workers keep more of the surplus value they produce. As he put it, unions *"attempt to persuade workers that they can better their lot at the expense of the employer. Consequently, they invariably attempt as much as possible to establish work rules that hinder management's directives … In other words, instead of agreeing to submit to the work orders of management in exchange for his pay, the worker now set up not only minimum wages, but also work rules without which they refuse to work."* This will *"lower output."* [**The Logic of Action II**, p. 40 and p. 41] Notice the assumption, that the income of and authority of the boss are sacrosanct.

For Rothbard, unions lower productivity and harm profits because they contest the authority of the boss to do what they like on their property (apparently, laissez-faire was not applicable for working class people during working hours). Yet this implicitly acknowledges that there **are** conflicts of interests between workers and bosses. It does not take too much thought to discover possible conflicts of interests which could arise between workers who seek to maximise their wages and minimise their labour and bosses who seek to minimise their wage costs and maximise the output their workers produce. It could be argued that if workers do win this conflict of interests then their bosses will go out of business and so they harm themselves by not obeying their industrial masters. The rational worker, in this perspective, would be the one who best understood that his or her interests have become the same as the interests of the boss because his or her prosperity will depend on how well their firm is doing. In such cases, they will put the interest of the firm before their own and not hinder the boss by questioning their authority. If that is the case, then "harmony of interests" simply translates as "bosses know best" and "do what you are told" — and such obedience is a fine "harmony" for the order giver we are sure!

So the interesting thing is that Rothbard's perspective produces a distinctly servile conclusion. If workers do not have a conflict of interests with their bosses then, obviously, the logical thing for the employee is to do whatever their boss orders them to do. By serving their master, they automatically benefit themselves. In contrast, anarchists have rejected such a position. For example, William Godwin rejected capitalist private property precisely because of the *"spirit of oppression, the spirit of servility, and the spirit of fraud"* it produced. [**An Enquiry into Political Justice**, p. 732]

Moreover, we should note that Rothbard's diatribe against unions also implicitly acknowledges the socialist critique of capitalism which stresses that it is being subject to the authority of boss during work hours which makes exploitation possible (see section C.2). If wages represented the workers' "marginal" contribution to production, bosses would not need to ensure their orders were followed. So any real boss fights unions precisely because they limit their ability to extract as much product as possible from the worker for the agreed wage. As such, the hierarchical social relations within the workplace ensure that there are no *"harmony of interests"* as the key to a successful capitalist firm is to minimise wage costs in order to maximise profits. It should also be noted that Rothbard has recourse to another concept "Austrian" economists claims to reject during his anti-union comments. Somewhat ironically, he appeals to equilibrium analysis as, apparently, *"wage rates on the non-union labour market will always tend toward equilibrium in a smooth and harmonious manner"* (in another essay, he opines that *"in the Austrian tradition ... the entrepreneur harmoniously adjusts the economy in the direction of equilibrium"*). [**Op. Cit.**, p. 41 and p. 234] True, he does not say that the wages will reach equilibrium (and what stops them, unless, in part, it is the actions of entrepreneurs disrupting the economy?) however, it is strange that the labour market can approximate a situation which Austrian economists claim does not exist! However, as noted in section C.1.6 this fiction is required to hide the obvious economic power of the boss class under capitalism.

Somewhat ironically, given his claims of *"harmony of interests,"* Rothbard was well aware that landlords and capitalists have always used the state to further their interests. However, he preferred to call this *"mercentilism"* rather than capitalism. As such, it is amusing to read his short article *"Mercentilism: A Lesson for Our Times?"* as it closely parallels Marx's classic account of *"Primitive Accumulation"* contained in volume 1 of **Capital**. [Rothbard, **Op. Cit.**, pp. 43–55] The key difference is that Rothbard simply refused to see this state action as creating the necessary preconditions for his beloved capitalism nor does it seem to impact on his mantra of *"harmony of interests"* between classes. In spite of documenting exactly how the capitalist and landlord class used the state to enrich themselves at the expense of the working class, he refuses to consider how this refutes any claim of *"harmony of interests"* between exploiter and exploited.

Rothbard rightly notes that mercantilism involved the *"use of the state to cripple or prohibit one's competition."* This applies to both foreign capitalists and to the working class who are, of course, competitors in terms of how income is divided. Unlike Marx, he simply failed to see how mercantilist policies were instrumental for building an industrial economy and creating a proletariat. Thus he thunders against mercantilism for *"lowering interest rates artificially"* and promoting inflation which *"did not benefit the poor"* as *"wages habitually lagged behind the rise in prices."* He describes the *"desperate attempts by the ruling classes to coerce wages below their market rates."* Somewhat ironically, given the "anarcho"-capitalist opposition to legal holidays, he noted the mercantilists *"dislike of holidays, by which the 'nation' was deprived of certain amounts of labour; the desire of the individual worker for leisure was never considered worthy of note."* So why were such "bad" economic laws imposed? Simply because the landlords and capitalists were in charge of the state. As Rothbard notes, *"this was clearly legislation for the benefit of the feudal landlords and to the detriment of the workers"* while Parliament *"was heavily landlord-dominated."* In Massachusetts the upper house consisted *"of the wealthiest merchants and landowners."* The mercantilists, he notes but does not ponder, *"were frankly interested in exploiting [the workers'] labour to the utmost."* [**Op. Cit.**, p. 44, p. 46, p. 47, p. 51, p. 48, p. 51, p. 47, p. 54 and p. 47] Yet these policies made perfect sense from their class perspective, they were essential for maximising

a surplus (profits) which was subsequently invested in developing industry. As such, they were very successful and laid the foundation for the industrial capitalism of the 19th century. The key change between mercantilism and capitalism proper is that economic power is greater as the working class has been successfully dispossessed from the means of life and, as such, political power need not be appealed to as often and can appear, in rhetoric at least, defensive.

Discussing attempts by employers in Massachusetts in 1670 and 1672 to get the state to enforce a maximum wage Rothbard opined that there *"seemed to be no understanding of how wages are set in an unhampered market."* [**Conceived in Liberty**, vol. 2, p. 18] On the contrary, dear professor, the employers were perfectly aware of how wages were set in a market where workers have the upper hand and, consequently, sought to use the state to hamper the market. As they have constantly done since the dawn of capitalism as, unlike certain economists, they are fully aware of the truth of *"harmony of interests"* and acted accordingly. As we document in section F.8, the history of capitalism is filled with the capitalist class using the state to enforce the kind of *"harmony of interests"* which masters have always sought — obedience. This statist intervention has continued to this day as, in practice, the capitalist class has never totally relied on economic power to enforce its rule due to the instability of the capitalist market — see section C.7 — as well as the destructive effects of market forces on society and the desire to bolster its position in the economy at the expense of the working class – see section D.1. That the history and current practice of capitalism was not sufficient to dispel Rothbard of his *"harmony of interests"* position is significant. But, as Rothbard was always at pains to stress as a good "Austrian" economist, empirical testing does not prove or disprove a theory and so the history and practice of capitalism matters little when evaluating the pros and cons of that system (unless its history confirms Rothbard's ideology then he does make numerous empirical statements).

For Rothbard, the obvious **class** based need for such policies is missing. Instead, we get the pathetic comment that only *"certain"* merchants and manufacturers *"benefited from these mercantilist laws."* [**The Logic of Action II**, p. 44] He applied this same myopic perspective to "actually existing" capitalism as well, of course, lamenting the use of the state by certain capitalists as the product of economic ignorance and/or special interests specific to the capitalists in question. He simply could not see the forest for the trees. This is hardly a myopia limited to Rothbard. Bastiat formulated his *"harmony of interests"* theory precisely when the class struggle between workers and capitalists had become a threat to the social order, when socialist ideas of all kinds (including anarchism, which Bastiat explicitly opposed) were spreading and the labour movement was organising illegally due to state bans in most countries. As such, he was propagating the notion that workers and bosses had interests in common when, in practice, it was most obviously the case they had not. What "harmony" that did exist was due to state repression of the labour movement, itself a strange necessity if labour and capital **did** share interests.

The history of capitalism causes problems within "anarcho"-capitalism as it claims that everyone benefits from market exchanges and that this, not coercion, produces faster economic growth. If this **is** the case, then why did some individuals reject the market in order to enrich themselves by political means and, logically, impoverish themselves in the long run (and it has been an **extremely** long run)? And why have the economically dominant class generally also been the ones to control the state? After all, if there are no class interests or conflict then why has the property owning classes always sought state aid to skew the economy in its interests? If the classes **did** have harmonious interests then they would have no need to bolster their position nor would they seek to. Yet state policy has always reflected the needs of the property-owning

elite — subject to pressures from below, of course (as Rothbard rather lamely notes, without pondering the obvious implications, the *"peasantry and the urban labourers and artisans were never able to control the state apparatus and were therefore at the bottom of the state-organised pyramid and exploited by the ruling groups."* [**Conceived in Liberty**, vol. 1, p. 260]). It is no coincidence that the working classes have not been able to control the state nor that legislation is *"grossly the favourer of the rich against the poor."* [William Godwin, **Op. Cit.**, p. 93] They **are** the ones passing the laws, after all. This long and continuing anti-labour intervention in the market does, though, place Rothbard's opinion that government is a conspiracy against the superior man in a new light!

So when right-"libertarians" assert that there are *"harmony of interests"* between classes in an unhampered market, anarchists simply reply by pointing out that the very fact we have a "hampered" market shows that no such thing exists within capitalism. It will be argued, of course, that the right-"libertarian" is against state intervention for the capitalists (beyond defending their property which is a significant use of state power in and of itself) and that their political ideas aim to stop it. Which is true (and why a revolution would be needed to implement it!). However, the very fact that the capitalist class has habitually turned to the state to bolster its economic power is precisely the issue as it shows that the right-"libertarian" harmony of interests (on which they place so much stress as the foundation of their new order) simply does not exist. If it did, then the property owning class would never have turned to the state in the first place nor would it have tolerated "certain" of its members doing so.

If there were harmony of interests between classes, then the bosses would not turn to death squads to kill rebel workers as they have habitually done (and it should be stressed that libertarian union organisers have been assassinated by bosses and their vigilantes, including the lynching of IWW members and business organised death squads against CNT members in Barcelona). This use of private and public violence should not be surprising, for, at the very least, as Mexican anarchist Ricardo Flores Magon noted, there can be no real fraternity between classes *"because the possessing class is always disposed to perpetuate the economic, political, and social system that guarantees it the tranquil enjoyment of its plunders, while the working class makes efforts to destroy this iniquitous system."* [**Dreams of Freedom**, p. 139]

Rothbard's obvious hatred of unions and strikes can be explained by his ideological commitment to the *"harmony of interests."* This is because strikes and the need of working class people to organise gives the lie to the doctrine of *"harmony of interests"* between masters and workers that apologists for capitalism like Rothbard suggested underlay industrial relations. Worse, they give credibility to the notion that there exists opposed interests between classes. Strangely, Rothbard himself provides more than enough evidence to refute his own dogmas when he investigates state intervention on the market.

Every ruling class seeks to deny that it has interests separate from the people under it. Significantly those who deny class struggle the most are usually those who practice it the most (for example, Mussolini, Pinochet and Thatcher all proclaimed the end of class struggle while, in America, the Republican-right denounces anyone who points out the results of **their** class war on the working class as advocating "class war"). The elite has long been aware, as Black Nationalist Steve Biko put it, that the *"most potent weapon in the hands of the oppressor is the mind of the oppressed."* Defenders of slavery and serfdom presented it as god's will and that the master's duty was to treat the slave well just as the slave's duty was to obey (while, of course, blaming the slave if the master did not hold up his side of the covenant). So every hierarchical system has its

own version of the *"harmony of interests"* position and each hierarchical society which replaces the last mocks the previous incarnations of it while, at the same time, solemnly announcing that **this** society truly does have harmony of interests as its founding principle. Capitalism is no exception, with many economists repeating the mantra that every boss has proclaimed from the dawn of time, namely that workers and their masters have common interests. As usual, it is worthwhile to quote Rothbard on this matter. He (rightly) takes to task a defender of the slave master's version of *"harmony of interests"* and, in so doing, exposes the role of economics under capitalism. To quote Rothbard:

> *"The increasing alienation of the slaves and the servants led ... the oligarchy to try to win their allegiance by rationalising their ordeal as somehow natural, righteous, and divine. So have tyrants always tried to dupe their subjects into approving — or at least remaining resigned to — their fate ... Servants, according to the emphatically non-servant [Reverend Samuel] Willard, were duty-bound to revere and obey their masters, to serve them diligently and cheerfully, and to be patient and submissive even to the cruellest master. A convenient ideology indeed for the masters! ... All the subjects must do, in short, was to surrender their natural born gift of freedom and independence, to subject themselves completely to the whims and commands of others, who could then be blindly trusted to 'take care' of them permanently ...*
>
> *"Despite the myths of ideology and the threats of the whip, servants and slaves found many ways of protest and rebellion. Masters were continually denouncing servants for being disobedient, sullen, and lazy."* [**Conceived in Liberty**, vol. 2, pp. 18–19]

Change Reverend Samuel Willard to the emphatically non-worker Professor Murray Rothbard and we have a very succinct definition of the role his economics plays within capitalism. There are differences. The key one was that while Willard wanted permanent servitude, Rothbard sought a temporary form and allowed the worker to change masters. While Willard turned to the whip and the state, Rothbard turned to absolute private property and the capitalist market to ensure that workers had to sell their liberty to the boss class (unsurprisingly, as Willard lived in an economy whose workers had access to land and tools while in Rothbard's time the class monopolisation of the means of life was complete and workers have little alternative but to sell their liberty to the owning class).

Rothbard did not seek to ban unions and strikes. He argued that his system of absolute property rights would simply make it nearly impossible for unions to organise or for any form of collective action to succeed. Even basic picketing would be impossible for, as Rothbard noted many a time, the pavement outside the workplace would be owned by the boss who would be as unlikely to allow picketing as he would allow a union. Thus we would have private property and economic power making collective struggle **de facto** illegal rather than the **de jure** illegality which the state has so enacted on behalf of the capitalists. As he put it, while unions were *"theoretically compatible with the existence of a purely free market"* he doubted that it would be possible as unions relied on the state to be "neutral" and tolerate their activities as they *"acquire almost all their power through the wielding of force, specifically force against strike-beakers and against the property of employers."* [**The Logic of Action II**, p. 41] Thus we find right-"libertarians" in favour of "defensive" violence (i.e., that limited to defending the property and power of the capitalists and landlords) while denouncing as violence any action of those subjected to it.

Rothbard, of course, allowed workers to leave their employment in order to seek another job if they felt exploited. Yet for all his obvious hatred of unions and strikes, Rothbard does not ask the most basic question — if there is not clash of interests between labour and capital then why do unions even exist and why do bosses always resist them (often brutally)? And why has capital always turned to the state to bolster its position in the labour market? If there were really harmony of interests between classes then capital would not have turned repeatedly to the state to crush the labour movement. For anarchists, the reasons are obvious as is why the bosses always deny any clash of interests for *"it is to the interests of capital to keep the workers from understanding that they are wage slaves. The 'identity of interest'; swindle is one of the means of doing it ... All those who profit from wage slavery are interested in keeping up the system, and all of them naturally try to prevent the workers from understanding the situation."* [Berkman, **Op. Cit.**, p. 77]

Rothbard's vociferous anti-unionism and his obvious desire to make any form of collective action by workers impossible in practice if not in law shows how economics has replaced religion as a control mechanism. In any hierarchical system it makes sense for the masters to indoctrinate the servant class with such self-serving nonsense but only capitalists have the advantage that it is proclaimed a "science" rather than, say, a religion. Yet even here, the parallels are close. As Colin Ward noted in passing, the *"so-called Libertarianism of the political Right"* is simply *"the worship of the market economy."* [**Talking Anarchy**, p. 76] So while Willard appealed to god as the basis of his natural order, Rothbard appeal to "science" was nothing of the kind given the ideological apriorism of "Austrian" economics. As a particularly scathing reviewer of one of his economics books rightly put it, the *"main point of the book is to show that the never-never land of the perfectly free market economy represents the best of all conceivable worlds giving maximum satisfaction to all participants. Whatever is, is right in the free market ... It would appear that Professor Rothbard's book is more akin to systematic theology than economics ... its real interest belongs to the student of the sociology of religion."* [D.N. Winch, **The Economic Journal**, vol. 74, No. 294, pp. 481–2]

To conclude, it is best to quote Emma Goldman's biting dismissal of the right-liberal individualism that Rothbard's ideology is just another form of. She rightly attacked that *"'rugged individualism' which is only a masked attempt to repress and defeat the individual and his individuality. So-called Individualism is the social and economic* ***laissez-faire****: the exploitation of the masses by classes by means of trickery, spiritual debasement and systematic indoctrination of the servile spirit ... That corrupt and perverse 'individualism' is the strait-jacket of individuality ... This 'rugged individualism' has inevitably resulted in the greatest modern slavery, the crassest class distinctions ... 'Rugged individualism' has meant all the 'individualism' for the masters, while the people are regimented into a slave caste to serve a handful of self-seeking 'supermen' ... [and] in whose name political tyranny and social oppression are defended and held up as virtues while every aspiration and attempt of man to gain freedom and social opportunity to live is denounced as ... evil in the name of that same individualism."* [**Red Emma Speaks**, p. 112]

So, to conclude. Both the history and current practice of capitalism shows that there can be no harmony of interests in an unequal society. Anyone who claims otherwise has not been paying attention.

F.4 What is the right-"libertarian" position on private property?

Right-"libertarians" are not interested in eliminating capitalist private property and thus the authority, oppression and exploitation which goes with it. They make an idol of private property and claim to defend "absolute" and "unrestricted" property rights. In particular, taxation and theft are among the greatest evils possible as they involve coercion against "justly held" property. It is true that they call for an end to the state, but this is not because they are concerned about the restrictions of liberty experienced by wage slaves and tenants but because they wish capitalists and landlords not to be bothered by legal restrictions on what they can and cannot do on their property. Anarchists stress that the right-"libertarians" are not opposed to workers being exploited or oppressed (in fact, they deny that is possible under capitalism) but because they do not want the state to impede capitalist "freedom" to exploit and oppress workers even more than is the case now! Thus they *"are against the State simply because they are capitalists first and foremost."* [Peter Marshall, **Demanding the Impossible**, p. 564]

It should be obvious **why** someone is against the state matters when evaluating claims of a thinker to be included within the anarchist tradition. For example, socialist opposition to wage labour was shared by the pro-slavery advocates in the Southern States of America. The latter opposed wage labour as being worse than its chattel form because, it was argued, the owner had an incentive to look after his property during both good and bad times while the wage worker was left to starve during the latter. This argument does not place them in the socialist camp any more than socialist opposition to wage labour made them supporters of slavery. As such, "anarcho"-capitalist and right-"libertarian" opposition to the state should not be confused with anarchist and left-libertarian opposition. The former opposes it because it restricts capitalist power, profits and property while the latter opposes it because it is a bulwark of all three.

Moreover, in the capitalist celebration of property as the source of liberty they deny or ignore the fact that private property is a source of "tyranny" in itself (as we have indicated in sections B.3 and B.4, for example). As we saw in section F.1, this leads to quite explicit (if unaware) self-contradiction by leading "anarcho"-capitalist ideologues. As Tolstoy stressed, the *"retention of the laws concerning land and property keeps the workers in slavery to the landowners and the capitalists, even though the workers are freed from taxes."* [**The Slavery of Our Times**, pp. 39–40] Hence Malatesta:

> *"One of the basic tenets of anarchism is the abolition of [class] monopoly, whether of the land, raw materials or the means of production, and consequently the abolition of exploitation of the labour of others by those who possess the means of production. The appropriation of the labour of others is from the anarchist and socialist point of view, theft."* [**Errico Malatesta: His Life and Ideas**, pp. 167–8]

As much anarchists may disagree about other matters, they are united in condemning capitalist property. Thus Proudhon argued that property was *"theft"* and *"despotism"* while Stirner indicated the religious and statist nature of private property and its impact on individual liberty when he wrote:

> *"Property in the civic sense means **sacred** property, such that I must **respect** your property. 'Respect for property!' ... The position of affairs is different in the egoistic sense. I do not step shyly back from your property, but look upon it always as **my** property, in which I respect nothing. Pray do the like with what you call my property!*
>
> *"With this view we shall most easily come to an understanding with each other.*
>
> *"The political liberals are anxious that ... every one be free lord on his ground, even if this ground has only so much area as can have its requirements adequately filled by the manure of one person ... Be it ever so little, if one only has somewhat of his own — to wit, a **respected** property: The more such owners ... the more 'free people and good patriots' has the State.*
>
> *"Political liberalism, like everything religious, counts on **respect,** humaneness, the virtues of love. Therefore does it live in incessant vexation. For in practice people respect nothing, and everyday the small possessions are bought up again by greater proprietors, and the 'free people' change into day labourers.*
>
> *"If, on the contrary, the 'small proprietors' had reflected that the great property was also theirs, they would not have respectively shut themselves out from it, and would not have been shut out ... Instead of owning the world, as he might, he does not even own even the paltry point on which he turns around."* [**The Ego and Its Own**, pp. 248–9]

While different anarchists have different perspectives on what comes next, we are all critical of the current capitalist property rights system. Thus "anarcho"-capitalists reject totally one of the common (and so defining) features of all anarchist traditions — the opposition to capitalist property. From Individualist Anarchists like Tucker to Communist-Anarchists like Bookchin, anarchists have been opposed to what William Godwin termed *"accumulated property."* This was because it was in *"direct contradiction"* to property in the form of *"the produce of his [the worker's] own industry"* and so it allows *"one man... [to] dispos[e] of the produce of another man's industry."* [**The Anarchist Reader**, pp. 129–131]

For anarchists, capitalist property is a source exploitation and domination, **not** freedom (it undermines the freedom associated with possession by creating relations of domination between owner and employee). Hardly surprising, then, that, according to Murray Bookchin, Murray Rothbard *"attacked me as an anarchist with vigour because, as he put it, I am opposed to private property."* Bookchin, correctly, dismisses "anarcho-capitalists as *"proprietarians"* [*"A Meditation on Anarchist Ethics"*, pp. 328–346, **The Raven**, no. 28, p. 343]

We will discuss Rothbard's "homesteading" justification of private property in the next section. However, we will note here one aspect of right-"libertarian" absolute and unrestricted property rights, namely that it easily generates evil side effects such as hierarchy and starvation. As economist and famine expert Amartya Sen notes:

> *"Take a theory of entitlements based on a set of rights of 'ownership, transfer and rectification.' In this system a set of holdings of different people are judged to be just (or unjust)*

by looking at past history, and not by checking the consequences of that set of holdings. But what if the consequences are recognisably terrible? .. .[R]efer[ing] to some empirical findings in a work on famines ... evidence [is presented] to indicate that in many large famines in the recent past, in which millions of people have died, there was no over-all decline in food availability at all, and the famines occurred precisely because of shifts in entitlement resulting from exercises of rights that are perfectly legitimate... . [Can] famines ... occur with a system of rights of the kind morally defended in various ethical theories, including Nozick's[?] I believe the answer is straightforwardly yes, since for many people the only resource that they legitimately possess, viz. their labour-power, may well turn out to be unsaleable in the market, giving the person no command over food ... [i]f results such as starvations and famines were to occur, would the distribution of holdings still be morally acceptable despite their disastrous consequences? There is something deeply implausible in the affirmative answer." [**Resources, Values and Development**, pp. 311–2]

Thus "unrestricted" property rights can have seriously bad consequences and so the existence of "justly held" property need not imply a just or free society — far from it. The inequalities property can generate can have a serious on individual freedom (see section F.3). Indeed, Murray Rothbard argued that the state was evil not because it restricted individual freedom but because the resources it claimed to own were not "justly" acquired. If they were, then the state could deny freedom within its boundaries just as any other property owner could. Thus right-"libertarian" theory judges property **not** on its impact on current freedom but by looking at past history. This has the interesting side effect, as we noted in section F.1, of allowing its supporters to look at capitalist and statist hierarchies, acknowledge their similar negative effects on the liberty of those subjected to them but argue that one is legitimate and the other is not simply because of their history. As if this changed the domination and unfreedom that both inflict on people living today!

This flows from the way "anarcho"-capitalists define "freedom," namely so that only **deliberate** acts which violate your (right-"libertarian" defined) rights by other humans beings that cause unfreedom (*"we define freedom ... as the **absence of invasion** by another man of an man's person or property."* [Rothbard, **The Ethics of Liberty**, p. 41]). This means that if no-one deliberately coerces you then you are free. In this way the workings of the capitalist private property can be placed alongside the "facts of nature" and ignored as a source of unfreedom. However, a moments thought shows that this is not the case. Both deliberate and non-deliberate acts can leave individuals lacking freedom. A simply analogy will show why.

Let us assume (in an example paraphrased from Alan Haworth's excellent book **Anti-Libertarianism** [p. 49]) that someone kidnaps you and places you down a deep (naturally formed) pit, miles from anyway, which is impossible to climb up. No one would deny that you are unfree. Let us further assume that another person walks by and accidentally falls into the pit with you. According to right-"libertarianism", while you are unfree (i.e. subject to deliberate coercion) your fellow pit-dweller is perfectly free for they have subject to the "facts of nature" and not human action (deliberate or otherwise). Or, perhaps, they "voluntarily choose" to stay in the pit, after all, it is "only" the "facts of nature" limiting their actions. But, obviously, both of you are in **exactly the same position,** have **exactly the same choices** and so are **equally** unfree! Thus a definition of "liberty" that maintains that only deliberate acts of others — for

example, coercion — reduces freedom misses the point totally. In other words, freedom is path independent and the *"forces of the market cannot provide genuine conditions for freedom any more than the powers of the State. The victims of both are equally enslaved, alienated and oppressed."* [Peter Marshall, **Demanding the Impossible**, p. 565]

It is worth quoting Noam Chomsky at length on this subject:

> *"Consider, for example, the [right-'libertarian'] 'entitlement theory of justice' ... [a]ccording to this theory, a person has a right to whatever he has acquired by means that are just. If, by luck or labour or ingenuity, a person acquires such and such, then he is entitled to keep it and dispose of it as he wills, and a just society will not infringe on this right.*
>
> *"One can easily determine where such a principle might lead. It is entirely possible that by legitimate means — say, luck supplemented by contractual arrangements 'freely undertaken' under pressure of need — one person might gain control of the necessities of life. Others are then free to sell themselves to this person as slaves, if he is willing to accept them. Otherwise, they are free to perish. Without extra question-begging conditions, the society is just.*
>
> *"The argument has all the merits of a proof that 2 + 2 = 5 ... Suppose that some concept of a 'just society' is advanced that fails to characterise the situation just described as unjust... Then one of two conclusions is in order. We may conclude that the concept is simply unimportant and of no interest as a guide to thought or action, since it fails to apply properly even in such an elementary case as this. Or we may conclude that the concept advanced is to be dismissed in that it fails to correspond to the pretheorectical notion that it intends to capture in clear cases. If our intuitive concept of justice is clear enough to rule social arrangements of the sort described as grossly unjust, then the sole interest of a demonstration that this outcome might be 'just' under a given 'theory of justice' lies in the inference by* ***reductio ad absurdum*** *to the conclusion that the theory is hopelessly inadequate. While it may capture some partial intuition regarding justice, it evidently neglects others.*
>
> *"The real question to be raised about theories that fail so completely to capture the concept of justice in its significant and intuitive sense is why they arouse such interest. Why are they not simply dismissed out of hand on the grounds of this failure, which is striking in clear cases? Perhaps the answer is, in part, the one given by Edward Greenberg in a discussion of some recent work on the entitlement theory of justice. After reviewing empirical and conceptual shortcomings, he observes that such work 'plays an important function in the process of . .. 'blaming the victim,' and of protecting property against egalitarian onslaughts by various non-propertied groups.' An ideological defence of privileges, exploitation, and private power will be welcomed, regardless of its merits.*
>
> "These matters are of no small importance to poor and oppressed people here and elsewhere." [**The Chomsky Reader**, pp. 187–188]

The glorification of property rights has always been most strongly advocated by those who hold the bulk of property in a society. This is understandable as they have the most to gain from

this. Those seeking to increase freedom in society would be wise to understand why this is the case and reject it.

The defence of capitalist property does have one interesting side effect, namely the need arises to defend inequality and the authoritarian relationships inequality creates. Due to (capitalist) private property, wage labour would still exist under "anarcho"-capitalism (it is capitalism after all). This means that "defensive" force, a state, is required to "defend" exploitation, oppression, hierarchy and authority from those who suffer them. Inequality makes a mockery of free agreement and "consent" as we have continually stressed. As Peter Kropotkin pointed out long ago:

> *"When a workman sells his labour to an employer ... it is a mockery to call that a free contract. Modern economists may call it free, but the father of political economy — Adam Smith — was never guilty of such a misrepresentation. As long as three-quarters of humanity are compelled to enter into agreements of that description, force is, of course, necessary, both to enforce the supposed agreements and to maintain such a state of things. Force — and a good deal of force — is necessary to prevent the labourers from taking possession of what they consider unjustly appropriated by the few.... The Spencerian party [proto-right-'libertarians'] perfectly well understand that; and while they advocate no force for changing the existing conditions, they advocate still more force than is now used for maintaining them. As to Anarchy, it is obviously as incompatible with plutocracy as with any other kind of -cracy."* [**Anarchism and Anarchist Communism**, pp. 52–53]

Because of this need to defend privilege and power, "anarcho"-capitalism is best called "private-state" capitalism. As anarchists Stuart Christie and Albert Meltzer argue, the *"American oil baron, who sneers at any form of State intervention in his manner of conducting business — that is to say, of exploiting man and nature — is also able to 'abolish the State' to a certain extent. But he has to build up a repressive machine of his own (an army of sheriffs to guard his interests) and takes over as far as he can, those functions normally exercised by the government, excluding any tendency of the latter that might be an obstacle to his pursuit of wealth."* [**Floodgates of Anarchy**, p. 12] Unsurprising "anarcho"-capitalists propose private security forces rather than state security forces (police and military) — a proposal that is equivalent to bringing back the state under another name. This will be discussed in more detail in section F.6.

By advocating private property, right-"libertarians" contradict many of their other claims. For example, they tend to oppose censorship and attempts to limit freedom of association within society when the state is involved yet they will wholeheartedly support the right of the boss or landlord when they ban unions or people talking about unions on their property. They will oppose closed shops when they are worker created but have no problems when bosses make joining the company union a mandatory requirement for taking a position. Then they say that they support the right of individuals to travel where they like. They make this claim because they assume that only the state limits free travel but this is a false assumption. Owners must agree to let you on their land or property (*"people only have the right to move to those properties and lands where the owners desire to rent or sell to them."* [Murray Rothbard, **The Ethics of Liberty**, p. 119]. There is no "freedom of travel" onto private property (including private roads). Therefore immigration may be just as hard under "anarcho"-capitalism as it is under statism (after all, the state, like the property owner, only lets people in whom it wants to let in). Private property, as

can be seen from these simple examples, is the state writ small. Saying it is different when the boss does it is not convincing to any genuine libertarian.

Then there is the possibility of alternative means of living. Right-"libertarians" generally argue that people can be as communistic as they want on their own property. They fail to note that all groups would have no choice about living under laws based on the most rigid and extreme interpretation of property rights invented and surviving within the economic pressures such a regime would generate. If a community cannot survive in the capitalist market then, in their perspective, it deserves its fate. Yet this Social-Darwinist approach to social organisation is based on numerous fallacies. It confuses the market price of something with how important it is; it confuses capitalism with productive activity in general; and it confuses profits with an activities contribution to social and individual well being; it confuses freedom with the ability to pick a master rather than as an absence of a master. Needless to say, as they consider capitalism as the most efficient economy ever the underlying assumption is that capitalist systems will win out in competition with all others. This will obviously be aided immensely under a law code which is capitalist in nature.

F.4.1 What is wrong with a "homesteading" theory of property?

So how do "anarcho"-capitalists justify property? Looking at Murray Rothbard, we find that he proposes a *"homesteading theory of property"*. In this theory it is argued that property comes from occupancy and mixing labour with natural resources (which are assumed to be unowned). Thus the world is transformed into private property, for *"title to an unowned resource (such as land) comes properly only from the expenditure of labour to transform that resource into use."* [**The Ethics of Liberty**, p. 63]

His theory, it should be stressed, has its roots in the same Lockean tradition as Robert Nozick's (which we critiqued in section B.3.4). Like Locke, Rothbard paints a conceptual history of individuals and families forging a home in the wilderness by the sweat of their labour (it is tempting to rename his theory the ***"immaculate conception of property"*** as his conceptual theory is so at odds with actual historical fact). His one innovation (if it can be called that) was to deny even the rhetorical importance of what is often termed the Lockean Proviso, namely the notion that common resources can be appropriated only if there is enough for others to do likewise. As we noted in section E.4.2 this was because it could lead (horror of horrors!) to the outlawry of all private property.

Sadly for Rothbard, his "homesteading" theory of property was refuted by Proudhon in **What is Property?** in 1840 (along with many other justifications of property). Proudhon rightly argued that *"if the liberty of man is sacred, it is equally sacred in all individuals; that, if it needs property for its objective action, that is, for its life, the appropriation of material is equally necessary for all ... Does it not follow that if one individual cannot prevent another ... from appropriating an amount of material equal to his own, no more can he prevent individuals to come."* And if all the available resources are appropriated, and the owner *"draws boundaries, fences himself in ... Here, then, is a piece of land upon which, henceforth, no one has a right to step, save the proprietor and his friends ... Let [this]... multiply, and soon the people ... will have nowhere to rest, no place to shelter, no ground to till. They will die at the proprietor's door, on the edge of that property which was their birthright."* [**What is Property?**, pp. 84–85 and p. 118]

Proudhon's genius lay in turning apologies for private property against it by treating them as absolute and universal as its apologists treated property itself. To claims like Rothbard's that property was a natural right, he explained that the essence of such rights was their universality and that private property ensured that this right could not be extended to all. To claims that labour created property, he simply noted that private property ensured that most people have no property to labour on and so the outcome of that labour was owned by those who did. As for occupancy, he simply noted that most owners do not occupancy all the property they own while those who do use it do not own it. In such circumstances, how can occupancy justify property when property excludes occupancy? Proudhon showed that the defenders of property had to choose between self-interest and principle, between hypocrisy and logic.

Rothbard picks the former over the latter and his theory is simply a rationale for a specific class based property rights system (*"[w]e who belong to the proletaire class, property excommunicates us!"* [P-J Proudhon, **Op. Cit.**, p. 105]). As Rothbard **himself** admitted in respect to the aftermath of slavery and serfdom, not having access to the means of life places one the position of unjust dependency on those who do and so private property creates economic power as much under his beloved capitalism as it did in post-serfdom (see section F.1). Thus, Rothbard's account, for all its intuitive appeal, ends up justifying capitalist and landlord domination and ensures that the vast majority of the population experience property as theft and despotism rather than as a source of liberty and empowerment (which possession gives).

It also seems strange that while (correctly) attacking social contract theories of the state as invalid (because *"no past generation can bind later generations"* [**Op. Cit.**, p. 145]) he fails to see he is doing **exactly that** with his support of private property (similarly, Ayn Rand argued that *"[a]ny alleged 'right' of one man, which necessitates the violation of the right of another, is not and cannot be a right"* but, obviously, appropriating land does violate the rights of others to walk, use or appropriate that land [**Capitalism: The Unknown Ideal**, p. 325]). Due to his support for appropriation and inheritance, Rothbard is clearly ensuring that future generations are **not** born as free as the first settlers were (after all, they cannot appropriate any land, it is all taken!). If future generations cannot be bound by past ones, this applies equally to resources and property rights. Something anarchists have long realised — there is no defensible reason why those who first acquired property should control its use and exclude future generations.

Even if we take Rothbard's theory at face value we find numerous problems with it. If title to unowned resources comes via the *"expenditure of labour"* on it, how can rivers, lakes and the oceans be appropriated? The banks of the rivers can be transformed, but can the river itself? How can you mix your labour with water? "Anarcho"-capitalists usually blame pollution on the fact that rivers, oceans, and so forth are unowned but as we discussed in section E.4, Rothbard provided no coherent argument for resolving this problem nor the issue of environmental externalities like pollution it was meant to solve (in fact, he ended up providing polluters with sufficient apologetics to allow them to continue destroying the planet).

Then there is the question of what equates to "mixing" labour. Does fencing in land mean you have "mixed labour" with it? Rothbard argues that this is not the case (he expresses opposition to *"arbitrary claims"*). He notes that it is **not** the case that *"the first discoverer ... could properly lay claim to"* a piece of land by *"laying out a boundary for the area."* He thinks that *"their claim would still be no more than the boundary **itself**, and not to any of the land within, for only the boundary will have been transformed and used by men"* However, if the boundary **is** private property and the owner refuses others permission to cross it, then the enclosed land is inaccessible to others!

If an "enterprising" right-"libertarian" builds a fence around the only oasis in a desert and refuses permission to cross it to travellers unless they pay his price (which is everything they own) then the person **has** appropriated the oasis without "transforming" it by his labour. The travellers have the choice of paying the price or dying (and any oasis owner is well within his rights letting them die). Given Rothbard's comments, it is probable that he could claim that such a boundary is null and void as it allows "arbitrary" claims — although this position is not at all clear. After all, the fence builder **has** transformed the boundary and "unrestricted" property rights is what the right-"libertarian" is all about. One thing is true, if the oasis became private property by some means then refusing water to travellers would be fine as *"the owner is scarcely being 'coercive'; in fact he is supplying a vital service, and should have the right to refuse a sale or charge whatever the customers will pay. The situation may be unfortunate for the customers, as are many situations in life."* [**Op. Cit.**, p. 50f and p. 221] That the owner is providing *"a vital service"* only because he has expropriated the common heritage of humanity is as lost on Rothbard as is the obvious economic power that this situation creates.

And, of course, Rothbard ignores the fact of economic power — a transnational corporation can "transform" far more virgin resources in a day by hiring workers than a family could in a year. A transnational "mixing" the labour it has bought from its wage slaves with the land does not spring into mind reading Rothbard's account of property but in the real world that is what happens. This is, perhaps, unsurprising as the whole point of Locke's theory was to justify the appropriation of the product of other people's labour by their employer.

Which is another problem with Rothbard's account. It is completely ahistoric (and so, as we noted above, is more like an *"immaculate conception of property"*). He has transported "capitalist man" into the dawn of time and constructed a history of property based upon what he is trying to justify. He ignores the awkward historic fact that land was held in common for millennium and that the notion of "mixing" labour to enclose it was basically invented to justify the expropriation of land from the general population (and from native populations) by the rich. What **is** interesting to note, though, is that the **actual** experience of life on the US frontier (the historic example Rothbard seems to want to claim) was far from the individualistic framework he builds upon it and (ironically enough) it was destroyed by the development of capitalism.

As Murray Bookchin notes, in rural areas there *"developed a modest subsistence agriculture that allowed them to be almost wholly self-sufficient and required little, if any, currency."* The economy was rooted in barter, with farmers trading surpluses with nearby artisans. This pre-capitalist economy meant people enjoyed *"freedom from servitude to others"* and *"fostered"* a *"sturdy willingness to defend [their] independence from outside commercial interlopers. This condition of near-autarchy, however, was not individualistic; rather it made for strong community interdependence ... In fact, the independence that the New England yeomanry enjoyed was itself a function of the co-operative social base from which it emerged. To barter home-grown goods and objects, to share tools and implements, to engage in common labour during harvesting time in a system of mutual aid, indeed, to help new-comers in barn-raising, corn-husking, log-rolling, and the like, was the indispensable cement that bound scattered farmsteads into a united community."* Bookchin quotes David P. Szatmary (author of a book on Shay' Rebellion) stating that it was a society based upon *"co-operative, community orientated interchanges"* and not a *"basically competitive society."* [**The Third Revolution**, vol. 1, p. 233]

Into this non-capitalist society came capitalist elements. Market forces and economic power soon resulted in the transformation of this society. Merchants asked for payment in specie (gold

or silver coin), which the farmers did not have. In addition, money was required to pay taxes (taxation has always been a key way in which the state encouraged a transformation towards capitalism as money could only be made by hiring oneself to those who had it). The farmers *"were now cajoled by local shopkeepers"* to *"make all their payments and meet all their debts in money rather than barter. Since the farmers lacked money, the shopkeepers granted them short-term credit for their purchases. In time, many farmers became significantly indebted and could not pay off what they owed, least of all in specie."* The creditors turned to the courts and many the homesteaders were dispossessed of their land and goods to pay their debts. In response Shay's rebellion started as the *"urban commercial elites adamantly resisted [all] peaceful petitions"* while the *"state legislators also turned a deaf ear"* as they were heavily influenced by these same elites. This rebellion was an important factor in the centralisation of state power in America to ensure that popular input and control over government were marginalised and that the wealthy elite and their property rights were protected against the many (*"Elite and well-to-do sectors of the population mobilised in great force to support an instrument that clearly benefited them at the expense of the backcountry agrarians and urban poor."*) [Bookchin, **Op. Cit.**, p. 234, p. 235 and p. 243]). Thus the homestead system was, ironically, undermined and destroyed by the rise of capitalism (aided, as usual, by a state run by and for the rich).

So while Rothbard's theory as a certain appeal (reinforced by watching too many Westerns, we imagine) it fails to justify the "unrestricted" property rights theory (and the theory of freedom Rothbard derives from it). All it does is to end up justifying capitalist and landlord domination (which is what it was intended to do).

F.5 Will privatising "the commons" increase liberty?

"Anarcho"-capitalists aim for a situation in which *"no land areas, no square footage in the world shall remain 'public,'"* in other words **everything** will be *"privatised."* [Murray Rothbard, **Nations by Consent**, p. 84] They claim that privatising "the commons" (e.g. roads, parks, etc.) which are now freely available to all will increase liberty. Is this true? Here we will concern ourselves with private ownership of commonly used "property" which we all take for granted (and often pay for with taxes).

Its clear from even a brief consideration of a hypothetical society based on "privatised" roads (as suggested by Murray Rothbard [**For a New Liberty**, pp. 202–203] and David Friedman [**The Machinery of Freedom**, pp. 98–101]) that the only increase of liberty will be for the ruling elite. As "anarcho"-capitalism is based on paying for what one uses, privatisation of roads would require some method of tracking individuals to ensure that they pay for the roads they use. In the UK, for example, during the 1980s the British Tory government looked into the idea of toll-based motorways. Obviously having toll-booths on motorways would hinder their use and restrict "freedom," and so they came up with the idea of tracking cars by satellite. Every vehicle would have a tracking device installed in it and a satellite would record where people went and which roads they used. They would then be sent a bill or have their bank balances debited based on this information (in the fascist city-state/company town of Singapore such a scheme **has** been introduced). In London, the local government has introduced a scheme which allowed people to pay for public transport by electronic card. It also allowed the government to keep a detailed record of where and when people travelled, with obvious civil liberty implications.

If we extrapolate from these to a system of **fully** privatised "commons," it would clearly require all individuals to have tracking devices on them so they could be properly billed for use of roads, pavements, etc. Obviously being tracked by private firms would be a serious threat to individual liberty. Another, less costly, option would be for private guards to randomly stop and question car-owners and individuals to make sure they had paid for the use of the road or pavement in question. "Parasites" would be arrested and fined or locked up. Again, however, being stopped and questioned by uniformed individuals has more in common with police states than liberty. Toll-boothing **every** street would be highly unfeasible due to the costs involved and difficulties for use that it implies. Thus the idea of privatising roads and charging drivers to gain access seems impractical at best and distinctly freedom endangering at worse. Would giving companies that information for all travellers, including pedestrians, **really** eliminate all civil liberty concerns?

Of course, the option of owners letting users have free access to the roads and pavements they construct and run would be difficult for a profit-based company. No one could make a profit in that case. If companies paid to construct roads for their customers/employees to use, they would be financially hindered in competition with other companies that did not, and thus would be unlikely to do so. If they restricted use purely to their own customers, the tracking problem

appears again. So the costs in creating a transport network and then running it explains why capitalism has always turned to state aid to provide infrastructure (the potential power of the owners of such investments in charging monopoly prices to other capitalists explains why states have also often regulated transport).

Some may object that this picture of extensive surveillance of individuals would not occur or be impossible. However, Murray Rothbard (in a slightly different context) argued that technology would be available to collate information about individuals. He argued that *"[i]t should be pointed out that modern technology makes even more feasible the collection and dissemination of information about people's credit ratings and records of keeping or violating their contracts or arbitration agreements. Presumably, an anarchist [sic!] society would see the expansion of this sort of dissemination of data."* [**Society Without A State"**, p. 199] So with the total privatisation of society we could also see the rise of private Big Brothers, collecting information about individuals for use by property owners. The example of the **Economic League** (a British company which provided the "service" of tracking the political affiliations and activities of workers for employers) springs to mind.

And, of course, these privatisation suggestions ignore differences in income and market power. If, for example, variable pricing is used to discourage road use at times of peak demand (to eliminate traffic jams at rush-hour) as is suggested both by Murray Rothbard and David Friedman, then the rich will have far more "freedom" to travel than the rest of the population. And we may even see people having to go into debt just to get to work or move to look for work.

Which raises another problem with notion of total privatisation, the problem that it implies the end of freedom of travel. Unless you get permission or (and this seems more likely) pay for access, you will not be able to travel **anywhere.** As Rothbard **himself** makes clear, "anarcho"-capitalism means the end of the right to roam. He states that *"it became clear to me that a totally privatised country would not have open borders at all. If every piece of land in a country were owned .. . no immigrant could enter there unless invited to enter and allowed to rent, or purchase, property."* What happens to those who cannot **afford** to pay for access or travel (i.e., exit) is not addressed (perhaps, being unable to exit a given capitalist's land they will become bonded labourers? Or be imprisoned and used to undercut workers' wages via prison labour? Perhaps they will just be shot as trespassers? Who can tell?). Nor is it addressed how this situation actually **increases** freedom. For Rothbard, a *"totally privatised country would be as closed as the particular inhabitants and property owners [**not** the same thing, we must point out] desire. It seems clear, then, that the regime of open borders that exists **de facto** in the US really amounts to a compulsory opening by the central state... and does not genuinely reflect the wishes of the proprietors."* [**Nations by Consent**, p. 84 and p. 85] Of course, the wishes of **non**-proprietors (the vast majority) do not matter in the slightest. Thus, it is clear, that with the privatisation of "the commons" the right to roam, to travel, would become a privilege, subject to the laws and rules of the property owners. This can hardly be said to **increase** freedom for anyone bar the capitalist class.

Rothbard acknowledges that *"in a fully privatised world, access rights would obviously be a crucial part of land ownership."* [**Op. Cit.**, p. 86] Given that there is no free lunch, we can imagine we would have to pay for such "rights." The implications of this are obviously unappealing and an obvious danger to individual freedom. The problem of access associated with the idea of privatising the roads can only be avoided by having a "right of passage" encoded into the "general libertarian law code." This would mean that road owners would be required, by law, to let anyone use them. But where are "absolute" property rights in this case? Are the owners of roads not to

have the same rights as other owners? And if "right of passage" is enforced, what would this mean for road owners when people sue them for car-pollution related illnesses? (The right of those injured by pollution to sue polluters is the main way "anarcho"-capitalists propose to protect the environment — see section E.4). It is unlikely that those wishing to bring suit could find, never mind sue, the millions of individual car owners who could have potentially caused their illness. Hence the road-owners would be sued for letting polluting (or unsafe) cars onto "their" roads. The road-owners would therefore desire to restrict pollution levels by restricting the right to use their property, and so would resist the "right of passage" as an "attack" on their "absolute" property rights. If the road-owners got their way (which would be highly likely given the need for "absolute" property rights and is suggested by the variable pricing way to avoid traffic jams mentioned above) and were able to control who used their property, freedom to travel would be **very** restricted and limited to those whom the owner considered "desirable." Indeed, Murray Rothbard supports such a regime (*"In the free [sic!] society, they [travellers] would, in the first instance, have the right to travel only on those streets whose owners agree to have them there."* [**The Ethics of Liberty**, p. 119]). The threat to liberty in such a system is obvious – to all but Rothbard and other right-"libertarians", of course.

To take another example, let us consider the privatisation of parks, streets and other public areas. Currently, individuals can use these areas to hold political demonstrations, hand out leaflets, picket and so on. However, under "anarcho"-capitalism the owners of such property can restrict such liberties if they desire, calling such activities "initiation of force" (although they cannot explain how speaking your mind is an example of "force"). Therefore, freedom of speech, assembly and a host of other liberties we take for granted would be eliminated under a right-"libertarian" regime. Or, taking the case of pickets and other forms of social struggle, its clear that privatising "the commons" would only benefit the bosses. Strikers or political activists picketing or handing out leaflets in shopping centres are quickly ejected by private security even today. Think about how much worse it would become under "anarcho"-capitalism when the whole world becomes a series of malls — it would be impossible to hold a picket when the owner of the pavement objects (as Rothbard himself gleefully argued. [**Op. Cit.**, p. 132]). If the owner of the pavement also happens to be the boss being picketed, which Rothbard himself considered most likely, then workers' rights would be zero. Perhaps we could also see capitalists suing working class organisations for littering their property if they do hand out leaflets (so placing even greater stress on limited resources).

The I.W.W. went down in history for its rigorous defence of freedom of speech because of its rightly famous "free speech" fights in numerous American cities and towns. The city bosses worried by the wobblies' open air public meetings simply made them illegal. The I.W.W. used direct action and carried on holding them. Violence was inflicted upon wobblies who joined the struggle by "private citizens," but in the end the I.W.W. won (for Emma Goldman's account of the San Diego struggle and the terrible repression inflicted on the libertarians by the "patriotic" vigilantes see **Living My Life** [vol. 1, pp. 494–503]). Consider the case under "anarcho"-capitalism. The wobblies would have been "criminal aggressors" as the owners of the streets have refused to allow "subversives" to use them to argue their case. If they refused to acknowledge the decree of the property owners, private cops would have taken them away. Given that those who controlled city government in the historical example were the wealthiest citizens in town, its likely that the same people would have been involved in the fictional ("anarcho"-capitalist) account. Is it a good thing that in the real account the wobblies are hailed as heroes of freedom but in the

fictional one they are "criminal aggressors"? Does converting public spaces into private property **really** stop restrictions on free speech being a bad thing?

Of course, Rothbard (and other right-"libertarians") are aware that privatisation will not remove restrictions on freedom of speech, association and so on (while, at the same time, trying to portray themselves as supporters of such liberties!). However, for them such restrictions are of no consequence. As Rothbard argues, any *"prohibitions would not be state imposed, but would simply be requirements for residence or for use of some person's or community's land area."* [**Nations by Consent**, p. 85] Thus we yet again see the blindness of right-"libertarians" to the commonality between private property and the state we first noted in section F.1. The state also maintains that submitting to its authority is the requirement for taking up residence in its territory. As Tucker noted, the state can be defined as (in part) *"the assumption of sole authority over a given area and all within it."* [**The Individualist Anarchists**, p. 24] If the property owners can determine "prohibitions" (i.e. laws and rules) for those who use the property then they are the *"sole authority over a given area and all within it,"* i.e. a state. Thus privatising "the commons" means subjecting the non-property owners to the rules and laws of the property owners — in effect, privatising the state and turning the world into a series of monarchies and oligarchies without the pretence of democracy and democratic rights.

These examples can hardly be said to be increasing liberty for society as a whole, although "anarcho"-capitalists seem to think they would. So far from **increasing** liberty for all, then, privatising the commons would only increase it for the ruling elite, by giving them yet another monopoly from which to collect income and exercise their power over. It would **reduce** freedom for everyone else. Ironically, therefore, Rothbard ideology provides more than enough evidence to confirm the anarchist argument that private property and liberty are fundamentally in conflict. *"It goes without saying that th[e] absolute freedom of thought, speech, and action"* anarchists support *"is incompatible with the maintenance of institutions that restrict free thought, rigidify speech in the form of a final and irrevocable vow, and even dictate that the worker fold his arms and die of hunger at the owners' command."* [Elisee Reclus, quoted by John P. Clark and Camille Martin (eds.), **Anarchy, Geography, Modernity**, p. 159] As Peter Marshall notes, *"[i]n the name of freedom, the anarcho-capitalists would like to turn public spaces into private property, but freedom does not flourish behind high fences protected by private companies but expands in the open air when it is enjoyed by all."* [**Demanding the Impossible**, p. 564]

Little wonder Proudhon argued that *"if the public highway is nothing but an accessory of private property; if the communal lands are converted into private property; if the public domain, in short, is guarded, exploited, leased, and sold like private property — what remains for the proletaire? Of what advantage is it to him that society has left the state of war to enter the regime of police?"* [**System of Economic Contradictions**, p. 371]

F.6 Is "anarcho"-capitalism against the state?

No. Due to its basis in private property, "anarcho"-capitalism implies a class division of society into bosses and workers. Any such division will require a state to maintain it. However, it need not be the same state as exists now. Regarding this point, "anarcho"-capitalism plainly advocates "defence associations" to protect property. For the "anarcho"-capitalist these private companies are not states. For anarchists, they most definitely. As Bakunin put it, the state *"is authority, domination, and force, organised by the property-owning and so-called enlightened classes against the masses."* [**The Basic Bakunin**, p. 140] It goes without saying that "anarcho"-capitalism has a state in the anarchist sense.

According to Murray Rothbard [**Society Without A State**, p. 192], a state must have one or both of the following characteristics:

He makes the same point elsewhere. [**The Ethics of Liberty**, p. 171] Significantly, he stresses that *"our definition of anarchism"* is a system which *"provides no legal sanction"* for aggression against person and property rather than, say, being against government or authority. [**Society without a State**, p. 206]

Instead of this, the "anarcho"-capitalist thinks that people should be able to select their own "defence companies" (which would provide the needed police) and courts from a free market in "defence" which would spring up after the state monopoly has been eliminated. These companies *"all ... would have to abide by the basic law code,"* [**Op. Cit.**, p. 206] Thus a *"general libertarian law code"* would govern the actions of these companies. This "law code" would prohibit coercive aggression at the very least, although to do so it would have to specify what counted as legitimate property, how said can be owned and what actually constitutes aggression. Thus the law code would be quite extensive.

How is this law code to be actually specified? Would these laws be democratically decided? Would they reflect common usage (i.e. custom)? "Supply and demand"? "Natural law"? Given the strong dislike of democracy shown by "anarcho"-capitalists, we think we can safely say that some combination of the last two options would be used. Murray Rothbard argued for "Natural Law" and so the judges in his system would *"not [be] making the law but finding it on the basis of agreed-upon principles derived either from custom or reason."* [**Op. Cit.**, p. 206] David Friedman, on the other hand, argues that different defence firms would sell their own laws. [**The Machinery of Freedom**, p. 116] It is sometimes acknowledged that non-"libertarian" laws may be demanded (and supplied) in such a market although the obvious fact that the rich can afford to pay for more laws (either in quantity or in terms of being more expensive to enforce) is downplayed.

Around this system of "defence companies" is a free market in "arbitrators" and "appeal judges" to administer justice and the *"basic law code."* Rothbard believes that such a system would see *"arbitrators with the best reputation for efficiency and probity"* being *"chosen by the various parties in the market"* and *"will come to be given an increasing amount of business."* Judges *"will prosper on the market in proportion to their reputation for efficiency and impartiality."* [**Op. Cit.**, p. 199

and p. 204] Therefore, like any other company, arbitrators would strive for profits with the most successful ones would *"prosper"*, i.e. become wealthy. Such wealth would, of course, have no impact on the decisions of the judges, and if it did, the population (in theory) are free to select any other judge. Of course, the competing judges would **also** be striving for profits and wealth — which means the choice of character may be somewhat limited! — and the laws which they were using to guide their judgements would be enforcing capitalist rights.

Whether or not this system would work as desired is discussed in the following sections. We think that it will not. Moreover, we will argue that "anarcho"-capitalist "defence companies" meet not only the criteria of statehood we outlined in section B.2, but also Rothbard's own criteria for the state. As regards the anarchist criterion, it is clear that "defence companies" exist to defend private property; that they are hierarchical (in that they are capitalist companies which defend the power of those who employ them); that they are professional coercive bodies; and that they exercise a monopoly of force over a given area (the area, initially, being the property of the person or company who is employing the company). Not only that, as we discuss in section F.6.4 these "defence companies" also matches the right-libertarian and "anarcho"-capitalist definition of the state. For this (and other reasons), we should call the "anarcho"-capitalist defence firms "private states" — that is what they are — and "anarcho"-capitalism "private state" capitalism.

F.6.1 What's wrong with this "free market" justice?

It does not take much imagination to figure out whose interests prosperous arbitrators, judges and defence companies would defend: their own as well as those who pay their wages — which is to say, other members of the rich elite. As the law exists to defend property, then it (by definition) exists to defend the power of capitalists against their workers. Rothbard argued that the *"judges"* would *"not [be] making the law but finding it on the basis of agreed-upon principles derived either from custom or reason."* [**Society without a State**, p. 206] However, this begs the question: **whose** reason? **whose** customs? Do individuals in different classes share the same customs? The same ideas of right and wrong? Would rich and poor desire the same from a *"basic law code"*? Obviously not. The rich would only support a code which defended their power over the poor.

Rothbard does not address this issue. He stated that "anarcho"-capitalism would involve *"taking the largely libertarian common law, and correcting it by the use of man's reason, before enshrining it as a permanently fixed libertarian law code."* [*"On Freedom and the Law"*, **New Individualist Review**, Winter 1962, p. 40] Needless to say, *"man"* does not exist — it is an abstraction (and a distinctly collectivist one, we should note). There are only individual men and women and so individuals and **their** reason. By *"man's reason"* Rothbard meant, at best, the prejudices of those individuals with whom he agreed with or, at worse, his own value judgements. Needless to say, what is considered acceptable will vary from individual to individual and reflect their social position. Similarly, as Kropotkin stressed, "common law" does not develop in isolation of class struggles and so is a mishmash of customs genuinely required by social life and influences imposed by elites by means of state action. [**Anarchism**, pp. 204–6] This implies what should be *"corrected"* from the "common law" will also differ based on their class position and their general concepts of what is right and wrong. History is full of examples of lawyers, jurists and judges (not to mention states) *"correcting"* common law and social custom in favour of a propertarian

perspective which, by strange co-incidence, favoured the capitalists and landlords, i.e. those of the same class as the politicians, lawyers, jurists and judges (see section F.8 for more details). We can imagine the results of similar "correcting" of common law by those deemed worthy by Rothbard and his followers of representing both "man" and "natural law."

Given these obvious points, it should come as no surprise that Rothbard solves this problem by explicitly excluding the general population from deciding which laws they will be subject to. As he put it, *"it would not be a very difficult task for Libertarian lawyers and jurists to arrive at a rational and objective code of libertarian legal principles and procedures ... This code would then be followed and applied to specific cases by privately-competitive and free-market courts and judges, all of whom would be pledged to abide by the code."* [*"The Spooner-Tucker Doctrine: An Economist's View"*, pp. 5–15, **Journal of Libertarian Studies**, Vol. 20, No. 1, p. 7] By jurist Rothbard means a professional or an expert who studies, develops, applies or otherwise deals with the law, i.e. a lawyer or a judge. That is, law-making by privately-competitive judges and lawyers. And not only would the law be designed by experts, so would its interpretation:

> *"If legislation is replaced by such judge-made law fixity and certainty ... will replace the capriciously changing edicts of statutory legislation. The body of judge-made law changes very slowly ... decisions properly apply only to the particular case, judge-made law — in contrast to legislation — permits a vast body of voluntary, freely-adapted rules, bargains, and arbitrations to proliferate as needed in society. The twin of the free market economy, then, is ... a proliferation of voluntary rules interpreted and applied by experts in the law."* [*"On Freedom and the Law"*, **Op. Cit.** p. 38]

In other words, as well as privatising the commons in land he also seeks to privatise "common law." This will be expropriated from the general population and turned over to wealthy judges and libertarian scholars to "correct" as they see fit. Within this mandatory legal regime, there would be "voluntary" interpretations yet it hardly taxes the imagination to see how economic inequality would shape any "bargains" made on it. So we have a legal system created and run by judges and jurists within which specific interpretations would be reached by "bargains" conducted between the rich and the poor. A fine liberation indeed!

So although only *"finding"* the law, the arbitrators and judges still exert an influence in the "justice" process, an influence not impartial or neutral. As the arbitrators themselves would be part of a profession, with specific companies developing within the market, it does not take a genius to realise that when *"interpreting"* the *"basic law code,"* such companies would hardly act against their own interests as companies. As we noted in section F.3.2, the basic class interest of keeping the current property rights system going will still remain — a situation which wealthy judges would be, to say the least, happy to see continue. In addition, if the "justice" system was based on "one dollar, one vote," the "law" would best defend those with the most "votes" (the question of market forces will be discussed in section F.6.3). Moreover, even if "market forces" would ensure that "impartial" judges were dominant, all judges would be enforcing a **very** partial law code (namely one that defended **capitalist** property rights). Impartiality when enforcing partial laws hardly makes judgements less unfair.

Thus, due to these three pressures — the interests of arbitrators/judges, the influence of money and the nature of the law — the terms of "free agreements" under such a law system would be tilted in favour of lenders over debtors, landlords over tenants, employers over employees, and in

general, the rich over the poor just as we have today. This is what one would expect in a system based on "unrestricted" property rights and a (capitalist) free market.

Some "anarcho"-capitalists, however, claim that just as cheaper cars were developed to meet demand, so cheaper defence associations and "people's arbitrators" would develop on the market for the working class. In this way impartiality will be ensured. This argument overlooks a few key points.

Firstly, the general "libertarian" law code would be applicable to **all** associations, so they would have to operate within a system determined by the power of money and of capital. The law code would reflect, therefore, property **not** labour and so "socialistic" law codes would be classed as "outlaw" ones. The options then facing working people is to select a firm which best enforced the **capitalist** law in their favour. And as noted above, the impartial enforcement of a biased law code will hardly ensure freedom or justice for all. This means that saying the possibility of competition from another judge would keep them honest becomes meaningless when they are all implementing the **same** capitalist law!

Secondly, in a race between a Jaguar and a Volkswagen Beetle, who is more likely to win? The rich would have "the best justice money can buy," even more than they do now. Members of the capitalist class would be able to select the firms with the best lawyers, best private cops and most resources. Those without the financial clout to purchase quality "justice" would simply be out of luck — such is the "magic" of the marketplace.

Thirdly, because of the tendency toward concentration, centralisation, and oligopoly under capitalism (due to increasing capital costs for new firms entering the market, as discussed in section C.4), a few companies would soon dominate the market — with obvious implications for "justice." Different firms will have different resources and in a conflict between a small firm and a larger one, the smaller one is at a disadvantage. They may not be in a position to fight the larger company if it rejects arbitration and so may give in simply because, as the "anarcho"-capitalists so rightly point out, conflict and violence will push up a company's costs and so they would have to be avoided by smaller ones (it is ironic that the "anarcho"-capitalist implicitly assumes that every "defence company" is approximately of the same size, with the same resources behind it and in real life this would clearly **not** the case). Moreover, it seems likely that a Legal-Industrial complex would develop, with other companies buying shares in "defence" firms as well as companies which provide lawyers and judges (and vice versa). We would also expect mergers to develop as well as cross-ownership between companies, not to mention individual judges and security company owners and managers having shares in other capitalist firms. Even if the possibility that the companies providing security and "justice" have links with other capitalism firms is discounted then the fact remains that these firms would hardly be sympathetic to organisations and individuals seeking to change the system which makes them rich or, as property owners and bosses, seeking to challenge the powers associated with both particularly if the law is designed from a propertarian perspective.

Fourthly, it is **very** likely that many companies would make subscription to a specific "defence" firm or court a requirement of employment and residence. Just as today many (most?) workers have to sign no-union contracts (and face being fired if they change their minds), it does not take much imagination to see that the same could apply to "defence" firms and courts. This was/is the case in company towns (indeed, you can consider unions as a form of "defence" firm and these companies refused to recognise them). As the labour market is almost always a buyer's market, it is not enough to argue that workers can find a new job without this condition. They

may not and so have to put up with this situation. And if (as seems likely) the laws and rules of the property-owner will take precedence in any conflict, then workers and tenants will be at a disadvantage no matter how "impartial" the judges.

Ironically, some "anarcho"-capitalists (like David Friedman) have pointed to company/union negotiations as an example of how different defence firms would work out their differences peacefully. Sadly for this argument, union rights under "actually existing capitalism" were hard fought for, often resulting in strikes which quickly became mini-wars as the capitalists used the full might associated with their wealth to stop them getting a foothold or to destroy them if they had. In America the bosses usually had recourse to private defence firms like the Pinkertons to break unions and strikes. Since 1935 in America, union rights have been protected by the state in direct opposition to capitalist "freedom of contract." Before the law was changed (under pressure from below, in the face of business opposition and violence), unions were usually crushed by force — the companies were better armed, had more resources and had the law on their side (Rothbard showed his grasp of American labour history by asserting that union *"restrictions and strikes"* were the *"result of government privilege, notably in the Wagner Act of 1935."* [**The Logic of Action II**, p. 194]). Since the 1980s and the advent of the free(r) market, we can see what happens to "peaceful negotiation" and "co-operation" between unions and companies when it is no longer required and when the resources of both sides are unequal. The market power of companies far exceeds those of the unions and the law, by definition, favours the companies. As an example of how competing "protection agencies" will work in an "anarcho"-capitalist society, it is far more insightful than originally intended!

Now let us consider Rothbard's *"basic law code"* itself. For Rothbard, the laws in the *"general libertarian law code"* would be unchangeable, selected by those considered as "the voice of nature" (with obvious authoritarian implications). David Friedman, in contrast, argues that as well as a market in defence companies, there will also be a market in laws and rights. However, there will be extensive market pressure to unify these differing law codes into one standard one (imagine what would happen if ever CD manufacturer created a unique CD player, or every computer manufacturer different sized floppy-disk drivers — little wonder, then, that over time companies standardise their products). Friedman himself acknowledges that this process is likely (and uses the example of standard paper sizes to illustrate it). Which suggests that competition would be meaningless as **all** firms would be enforcing the same (capitalist) law.

In any event, the laws would not be decided on the basis of "one person, one vote"; hence, as market forces worked their magic, the "general" law code would reflect vested interests and so be very hard to change. As rights and laws would be a commodity like everything else in capitalism, they would soon reflect the interests of the rich — particularly if those interpreting the law are wealthy professionals and companies with vested interests of their own. Little wonder that the individualist anarchists proposed "trial by jury" as the only basis for real justice in a free society. For, unlike professional "arbitrators," juries are ad hoc, made up of ordinary people and do not reflect power, authority, or the influence of wealth. And by being able to judge the law as well as a conflict, they can ensure a populist revision of laws as society progresses.

Rothbard, unsurprisingly, is at pains to dismiss the individualist anarchist idea of juries judging the law as well as the facts, stating it would give each free-market jury *"totally free rein over judicial decisions"* and this *"could not be expected to arrive at just or even libertarian decisions."* [*"The Spooner-Tucker Doctrine: An Economist's View"*, **Op. Cit.**, p.7] However, the opposite is the case as juries made up of ordinary people will be more likely to reach just decisions which

place genuinely libertarian positions above a law dedicated to maintaining capitalist property and power. History is full of examples of juries acquitting people for so-called crimes against property which are the result of dire need or simply reflect class injustice. For example, during the Great Depression unemployed miners in Pennsylvania *"dug small mines on company property, mined coal, trucked it to cities and sold it below the commercial rate. By 1934, 5 million tons of this 'bootleg' coal were produced by twenty thousand men using four thousand vehicles. When attempts were made to prosecute, local juries would not convict, local jailers would not imprison."* [Howard Zinn, **A People's History of the United States**, pp. 385–6] It is precisely this outcome which causes Rothbard to reject that system.

Thus Rothbard postulated a **judge** directed system of laws in stark contrast to individualist anarchism's **jury** directed system. It is understandable that Rothbard would seek to replace juries with judges, it is the only way he can exclude the general population from having a say in the laws they are subjected to. Juries allow the general public to judge the law as well as any crime and so this would allow those aspects "corrected" by right-"libertarians" to seep back into the "common law" and so make private property and power accountable to the general public rather than vice versa. Moreover, concepts of right and wrong evolve over time and in line with changes in socio-economic conditions. To have a "common law" which is unchanging means that social evolution is considered to have stopped when Murray Rothbard decided to call his ideology "anarcho"-capitalism.

In a genuinely libertarian system, social customs (common law) would evolve based on what the general population thought was right and wrong based on changing social institutions and relationships between individuals. That is why ruling classes have always sought to replace it with state determined and enforced laws. Changing social norms and institutions can be seen from property. As Proudhon noted, property *"changed its nature"* over time. Originally, *"the word **property** was synonymous with ... **individual possession**"* but it became more *"complex"* and turned into **private property** — *"the right to use it by his neighbour's labour."* [**What is Property?**, p. 395] The changing nature of property created relations of domination and exploitation between people absent before. For the capitalist, however, both the tools of the self-employed artisan and the capital of a transnational corporation are both forms of "property" and so basically identical. Changing social relations impact on society and the individuals who make it up. This would be reflected in any genuinely libertarian society, something right-"libertarians" are aware of. They, therefore, seek to freeze the rights framework and legal system to protect institutions, like property, no matter how they evolve and come to replace whatever freedom enhancing features they had with oppression. Hence we find Rothbard's mentor, Ludwig von Mises asserting that *"[t]here may possibly be a difference of opinion about whether a particular institution is socially beneficial or harmful. But once it has been judged [by whom?] beneficial, one can no longer contend that, for some inexplicable reason, it must be condemned as immoral."* [**Liberalism**, p. 34] Rothbard's system is designed to ensure that the general population cannot judge whether a particular institution has changed is social impact. Thus a system of "defence" on the capitalist market will continue to reflect the influence and power of property owners and wealth and not be subject to popular control beyond choosing between companies to enforce the capitalist laws.

Ultimately, such an "anarcho"-capitalist system would be based on simple absolute principles decided in advance by a small group of ideological leaders. We are then expected to live with the consequences as best we can. If people end up in a worse condition than before then that is

irrelevant as that we have enforced the eternal principles they have proclaimed as being in our best interests.

F.6.2 What are the social consequences of such a system?

The "anarcho" capitalist imagines that there will be police agencies, "defence associations," courts, and appeals courts all organised on a free-market basis and available for hire. As David Wieck points out, however, the major problem with such a system would not be the corruption of "private" courts and police forces (although, as suggested above, this could indeed be a problem):

> *"There is something more serious than the 'Mafia danger', and this other problem concerns the role of such 'defence' institutions in a given social and economic context.*
>
> *"[The] context ... is one of a free-market economy with no restraints upon accumulation of property. Now, we had an American experience, roughly from the end of the Civil War to the 1930's, in what were in effect private courts, private police, indeed private governments. We had the experience of the (private) Pinkerton police which, by its spies, by its* ***agents provocateurs,*** *and by methods that included violence and kidnapping, was one of the most powerful tools of large corporations and an instrument of oppression of working people. We had the experience as well of the police forces established to the same end, within corporations, by numerous companies ... (The automobile companies drew upon additional covert instruments of a private nature, usually termed vigilante, such as the Black Legion). These were, in effect, private armies, and were sometimes described as such. The territories owned by coal companies, which frequently included entire towns and their environs, the stores the miners were obliged by economic coercion to patronise, the houses they lived in, were commonly policed by the private police of the United States Steel Corporation or whatever company owned the properties. The chief practical function of these police was, of course, to prevent labour organisation and preserve a certain balance of 'bargaining.' ... These complexes were a law unto themselves, powerful enough to ignore, when they did not purchase, the governments of various jurisdictions of the American federal system. This industrial system was, at the time, often characterised as feudalism."* [**Anarchist Justice**, pp. 223–224]

For a description of the weaponry and activities of these private armies, the Marxist economic historian Maurice Dobb presents an excellent summary in **Studies in Capitalist Development**. [pp. 353–357] According to a report on *"Private Police Systems"* quoted by Dobb, in a town dominated by Republican Steel the *"civil liberties and the rights of labour were suppressed by company police. Union organisers were driven out of town."* Company towns had their own (company-run) money, stores, houses and jails and many corporations had machine-guns and tear-gas along with the usual shot-guns, rifles and revolvers. The *"usurpation of police powers by privately paid 'guards and 'deputies', often hired from detective agencies, many with criminal records"* was *"a general practice in many parts of the country."*

The local (state-run) law enforcement agencies turned a blind-eye to what was going on (after all, the workers **had** broken their contracts and so were "criminal aggressors" against the companies) even when union members and strikers were beaten and killed. The workers own defence

organisations (unions) were the only ones willing to help them, and if the workers seemed to be winning then troops were called in to "restore the peace" (as happened in the Ludlow strike, when strikers originally cheered the troops as they thought they would defend them; needless to say, they were wrong).

Here we have a society which is claimed by many "anarcho"-capitalists as one of the closest examples to their "ideal," with limited state intervention, free reign for property owners, etc. What happened? The rich reduced the working class to a serf-like existence, capitalist production undermined independent producers (much to the annoyance of individualist anarchists at the time), and the result was the emergence of the corporate America that "anarcho"-capitalists (sometimes) say they oppose.

Are we to expect that "anarcho"-capitalism will be different? That, unlike before, "defence" firms will intervene on behalf of strikers? Given that the *"general libertarian law code"* will be enforcing capitalist property rights, workers will be in exactly the same situation as they were then. Support of strikers violating property rights would be a violation of the law and be costly for profit making firms to do (if not dangerous as they could be "outlawed" by the rest). This suggests that "anarcho"-capitalism will extend extensive rights and powers to bosses, but few if any rights to rebellious workers. And this difference in power is enshrined within the fundamental institutions of the system. This can easily be seen from Rothbard's numerous anti-union tirades and his obvious hatred of them, strikes and pickets (which he habitually labelled as violent). As such it is not surprising to discover that Rothbard complained in the 1960s that, because of the Wagner Act, the American police *"commonly remain 'neutral' when strike-breakers are molested or else blame the strike-breakers for 'provoking' the attacks on them ... When unions are permitted to resort to violence, the state or other enforcing agency has implicitly delegated this power to the unions. The unions, then, have become 'private states.'"* [**The Logic of Action II**, p. 41] The role of the police was to back the property owner against their rebel workers, in other words, and the state was failing to provide the appropriate service (of course, that bosses exercising power over workers provoked the strike is irrelevant, while private police attacking picket lines is purely a form of "defensive" violence and is, likewise, of no concern).

In evaluating "anarcho"-capitalism's claim to be a form of anarchism, Peter Marshall notes that *"private protection agencies would merely serve the interests of their paymasters."* [**Demanding the Impossible**, p. 653] With the increase of private "defence associations" under "really existing capitalism" today (associations that many "anarcho"-capitalists point to as examples of their ideas), we see a vindication of Marshall's claim. There have been many documented experiences of protesters being badly beaten by private security guards. As far as market theory goes, the companies are only supplying what the buyer is demanding. The rights of others are **not a factor** (yet more "externalities," obviously). Even if the victims successfully sue the company, the message is clear — social activism can seriously damage your health. With a reversion to *"a general libertarian law code"* enforced by private companies, this form of "defence" of "absolute" property rights can only increase, perhaps to the levels previously attained in the heyday of US capitalism, as described above by Wieck.

F.6.3 But surely market forces will stop abuses by the rich?

Unlikely. The rise of corporations within America indicates exactly how a *"general libertarian law code"* would reflect the interests of the rich and powerful. The laws recognising corporations as "legal persons" were **not** primarily a product of "the state" but of private lawyers hired by the rich. As Howard Zinn notes:

> *"the American Bar Association, organised by lawyers accustomed to serving the wealthy, began a national campaign of education to reverse the [Supreme] Court decision [that companies could not be considered as a person]... . By 1886, they succeeded ... the Supreme Court had accepted the argument that corporations were 'persons' and their money was property protected by the process clause of the Fourteenth Amendment ... The justices of the Supreme Court were not simply interpreters of the Constitution. They were men of certain backgrounds, of certain [class] interests."* [**A People's History of the United States**, p. 255]

Of course it will be argued that the Supreme Court is chosen by the government and is a state enforced monopoly and so our analysis is flawed. Yet this is not the case. As Rothbard made clear, the *"general libertarian law code"* would be created by lawyers and jurists and everyone would be expected to obey it. Why expect **these** lawyers and jurists to be any less class conscious then those in the 19th century? If the Supreme Court *"was doing its bit for the ruling elite"* then why would those creating the law system be any different? *"How could it be neutral between rich and poor,"* argues Zinn, *"when its members were often former wealthy lawyers, and almost always came from the upper class?"* [**Op. Cit.**, p. 254] Moreover, the corporate laws came about because there was a demand for them. That demand would still have existed in "anarcho"-capitalism. Now, while there may nor be a Supreme Court, Rothbard does maintain that *"the basic Law Code ... would have to be agreed upon by all the judicial agencies"* but he maintains that this *"would imply no unified legal system"*! Even though *"[a]ny agencies that transgressed the basic libertarian law code would be open outlaws"* and soon crushed this is **not**, apparently, a monopoly. [**The Ethics of Liberty**, p. 234] So, you either agree to the law code or you go out of business. And that is **not** a monopoly! Therefore, we think, our comments on the Supreme Court are valid (see also section F.7.2).

If all the available defence firms enforce the same laws, then it can hardly be called "competitive"! And if this is the case (and it is) *"when private wealth is uncontrolled, then a police-judicial complex enjoying a clientele of wealthy corporations whose motto is self-interest is hardly an innocuous social force controllable by the possibility of forming or affiliating with competing 'companies.'"* [Wieck, **Op. Cit.**, p. 225] This is particularly true if these companies are themselves Big Business and so have a large impact on the laws they are enforcing. If the law code recognises and protects capitalist power, property and wealth as fundamental **any** attempt to change this is "initiation of force" and so the power of the rich is written into the system from the start!

(And, we must add, if there is a general libertarian law code to which all must subscribe, where does that put customer demand? If people demand a non-libertarian law code, will defence firms refuse to supply it? If so, will not new firms, looking for profit, spring up that will supply what is being demanded? And will that not put them in direct conflict with the existing, pro-general law code ones? And will a market in law codes not just reflect economic power and wealth? David

Friedman, who is for a market in law codes, argues that *"[i]f almost everyone believes strongly that heroin addiction is so horrible that it should not be permitted anywhere under any circumstances anarcho-capitalist institutions will produce laws against heroin. Laws are being produced on the market, and that is what the market wants."* And he adds that *"market demands are in dollars, not votes. The legality of heroin will be determined, not by how many are for or against but how high a cost each side is willing to bear in order to get its way."* [**The Machinery of Freedom**, p. 127] And, as the market is less than equal in terms of income and wealth, such a position will mean that the capitalist class will have a higher effective demand than the working class and more resources to pay for any conflicts that arise. Thus any law codes that develop will tend to reflect the interests of the wealthy.)

Which brings us nicely on to the next problem regarding market forces.

As well as the obvious influence of economic interests and differences in wealth, another problem faces the "free market" justice of "anarcho"-capitalism. This is the *"general libertarian law code"* itself. Even if we assume that the system actually works like it should in theory, the simple fact remains that these "defence companies" are enforcing laws which explicitly defend capitalist property (and so social relations). Capitalists own the means of production upon which they hire wage-labourers to work and this is an inequality established **prior** to any specific transaction in the labour market. This inequality reflects itself in terms of differences in power within (and outside) the company and in the "law code" of "anarcho"-capitalism which protects that power against the dispossessed.

In other words, the law code within which the defence companies work assumes that capitalist property is legitimate and that force can legitimately be used to defend it. This means that, in effect, "anarcho"-capitalism is based on a monopoly of law, a monopoly which explicitly exists to defend the power and capital of the wealthy. The major difference is that the agencies used to protect that wealth will be in a weaker position to act independently of their pay-masters. Unlike the state, the "defence" firm is not remotely accountable to the general population and cannot be used to equalise even slightly the power relationships between worker and capitalist (as the state has, on occasion done, due to public pressure and to preserve the system as a whole). And, needless to say, it is very likely that the private police forces **will** give preferential treatment to their wealthier customers (which business does not?) and that the law code will reflect the interests of the wealthier sectors of society (particularly if prosperous judges administer that code) in reality, even if not in theory. Since, in capitalist practice, "the customer is always right," the best-paying customers will get their way in "anarcho"-capitalist society.

For example, in chapter 29 of **The Machinery of Freedom**, David Friedman presents an example of how a clash of different law codes could be resolved by a bargaining process (the law in question is the death penalty). This process would involve one defence firm giving a sum of money to the other for them accepting the appropriate (anti/pro capital punishment) court. Friedman claims that *"[a]s in any good trade, everyone gains"* but this is obviously not true. Assuming the anti-capital punishment defence firm pays the pro one to accept an anti-capital punishment court, then, yes, both defence firms have made money and so are happy, so are the anti-capital punishment consumers but the pro-death penalty customers have only (perhaps) received a cut in their bills. Their desire to see criminals hanged (for whatever reason) has been ignored (if they were not in favour of the death penalty, they would not have subscribed to that company). Friedman claims that the deal, by allowing the anti-death penalty firm to cut its costs, will ensure that it *"keep its customers and even get more"* but this is just an assumption. It is just

as likely to loose customers to a defence firm that refuses to compromise (and has the resources to back it up). Friedman's assumption that lower costs will automatically win over people's passions is unfounded as is the assumption that both firms have equal resources and bargaining power. If the pro-capital punishment firm demands more than the anti can provide and has larger weaponry and troops, then the anti defence firm may have to agree to let the pro one have its way. So, all in all, it is **not** clear that *"everyone gains"* — there may be a sizeable percentage of those involved who do not "gain" as their desire for capital punishment is traded away by those who claimed they would enforce it. This may, in turn, produce a demand for defence firms which do **not** compromise with obvious implications for public peace.

In other words, a system of competing law codes and privatised rights does not ensure that **all** individual interests are meet. Given unequal resources within society, it is clear that the "effective demand" of the parties involved to see their law codes enforced is drastically different. The wealthy head of a transnational corporation will have far more resources available to him to pay for **his** laws to be enforced than one of his employees on the assembly line. Moreover, as we noted in section F.3.1, the labour market is usually skewed in favour of capitalists. This means that workers have to compromise to get work and such compromises may involve agreeing to join a specific "defence" firm or not join one at all (just as workers are often forced to sign non-union contracts today in order to get work). In other words, a privatised law system is very likely to skew the enforcement of laws in line with the skewing of income and wealth in society. At the very least, unlike every other market, the customer is **not** guaranteed to get exactly what they demand simply because the product they "consume" is dependent on others within the same market to ensure its supply. The unique workings of the law/defence market are such as to deny customer choice (we will discuss other aspects of this unique market shortly). Wieck summed by pointing out the obvious:

> *"any judicial system is going to exist in the context of economic institutions. If there are gross inequalities of power in the economic and social domains, one has to imagine society as strangely compartmentalised in order to believe that those inequalities will fail to reflect themselves in the judicial and legal domain, and that the economically powerful will be unable to manipulate the legal and judicial system to their advantage. To abstract from such influences of context, and then consider the merits of an abstract judicial system.. . is to follow a method that is not likely to take us far. This, by the way, is a criticism that applies...to any theory that relies on a rule of law to override the tendencies inherent in a given social and economic system"* [**Op. Cit.**, p. 225]

There is another reason why "market forces" will not stop abuse by the rich, or indeed stop the system from turning from private to public statism. This is due to the nature of the "defence" market (for a similar analysis of the "defence" market see right-"libertarian" economist Tyler Cowen's *"Law as a Public Good: The Economics of Anarchy"* [**Economics and Philosophy**, no. 8 (1992), pp. 249–267] and *"Rejoinder to David Friedman on the Economics of Anarchy"* [**Economics and Philosophy**, no. 10 (1994), pp. 329–332]). In "anarcho"-capitalist theory it is assumed that the competing "defence companies" have a vested interest in peacefully settling differences between themselves by means of arbitration. In order to be competitive on the market, companies will have to co-operate via contractual relations otherwise the higher price associated with conflict will make the company uncompetitive and it will go under. Those companies that ignore

decisions made in arbitration would be outlawed by others, ostracised and their rulings ignored. By this process, it is argued, a system of competing "defence" companies will be stable and not turn into a civil war between agencies with each enforcing the interests of their clients against others by force.

However, there is a catch. Unlike every other market, the businesses in competition in the "defence" industry **must** co-operate with its fellows in order to provide its services for its customers. They need to be able to agree to courts and judges, agree to abide by decisions and law codes and so forth. In economics there are other, more accurate, terms to describe co-operative activity between companies: collusion and cartels. These are when companies in a specific market agree to work together (co-operate) to restrict competition and reap the benefits of monopoly power by working to achieve the same ends in partnership with each other. By stressing the co-operative nature of the "defence" market, "anarcho"-capitalists are implicitly acknowledging that collusion is built into the system. The necessary contractual relations between agencies in the "protection" market require that firms co-operate and, by so doing, to behave (effectively) as one large firm (and so resemble a normal state even more than they already do). Quoting Adam Smith seems appropriate here: *"People of the same trade seldom meet together, even for merriment and diversion, but the conversation ends in a conspiracy against the public, or in some contrivance to raise prices."* [**The Wealth of Nations**, p. 117] Having a market based on people of the same trade co-operating seems, therefore, an unwise move.

For example, when buying food it does not matter whether the supermarkets visited have good relations with each other. The goods bought are independent of the relationships that exist between competing companies. However, in the case of private states this is **not** the case. If a specific "defence" company has bad relationships with other companies in the market then it is against a customer's self-interest to subscribe to it. Why subscribe to a private state if its judgements are ignored by the others and it has to resort to violence to be heard? This, as well as being potentially dangerous, will also push up the prices that have to be paid. Arbitration is one of the most important services a defence firm can offer its customers and its market share is based upon being able to settle interagency disputes without risk of war or uncertainty that the final outcome will not be accepted by all parties. Lose that and a company will lose market share.

Therefore, the market set-up within the "anarcho"-capitalist "defence" market is such that private states **have to co-operate** with the others (or go out of business fast) and this means collusion can take place. In other words, a system of private states will have to agree to work together in order to provide the service of "law enforcement" to their customers and the result of such co-operation is to create a cartel. However, unlike cartels in other industries, the "defence" cartel will be a stable body simply because its members **have** to work with their competitors in order to survive.

Let us look at what would happen after such a cartel is formed in a specific area and a new "defence company" desired to enter the market. This new company will have to work with the members of the cartel in order to provide its services to its customers (note that "anarcho"-capitalists already assume that they *"will have to"* subscribe to the same law code). If the new defence firm tries to under-cut the cartel's monopoly prices, the other companies would refuse to work with it. Having to face constant conflict or the possibility of conflict, seeing its decisions being ignored by other agencies and being uncertain what the results of a dispute would be, few would patronise the new "defence company." The new company's prices would go up and it would soon face

either folding or joining the cartel. Unlike every other market, if a "defence company" does not have friendly, co-operative relations with other firms in the same industry then it will go out of business.

This means that the firms that are co-operating have simply to agree not to deal with new firms which are attempting to undermine the cartel in order for them to fail. A "cartel busting" firm goes out of business in the same way an outlaw one does — the higher costs associated with having to solve all its conflicts by force, not arbitration, increases its production costs much higher than the competitors and the firm faces insurmountable difficulties selling its products at a profit (ignoring any drop of demand due to fears of conflict by actual and potential customers). Even if we assume that many people will happily join the new firm in spite of the dangers to protect themselves against the cartel and its taxation (i.e. monopoly profits), enough will remain members of the cartel so that co-operation will still be needed and conflict unprofitable and dangerous (and as the cartel will have more resources than the new firm, it could usually hold out longer than the new firm could). In effect, breaking the cartel may take the form of an armed revolution — as it would with any state.

The forces that break up cartels and monopolies in other industries (such as free entry — although, of course the "defence" market will be subject to oligopolistic tendencies as any other and this will create barriers to entry) do not work here and so new firms have to co-operate or loose market share and/or profits. This means that "defence companies" will reap monopoly profits and, more importantly, have a monopoly of force over a given area.

It is also likely that a multitude of cartels would develop, with a given cartel operating in a given locality. This is because law enforcement would be localised in given areas as most crime occurs where the criminal lives (few criminals would live in Glasgow and commit crimes in Paris). However, as defence companies have to co-operate to provide their services, so would the cartels. Few people live all their lives in one area and so firms from different cartels would come into contact, so forming a cartel of cartels. This cartel of cartels may (perhaps) be less powerful than a local cartel, but it would still be required and for exactly the same reasons a local one is. Therefore "anarcho"-capitalism would, like "actually existing capitalism," be marked by a series of public states covering given areas, co-ordinated by larger states at higher levels. Such a set up would parallel the United States in many ways except it would be run directly by wealthy shareholders without the sham of "democratic" elections. Moreover, as in the USA and other states there will still be a monopoly of rules and laws (the *"general libertarian law code"*).

Hence a monopoly of private states will develop in addition to the existing monopoly of law and this is a de facto monopoly of force over a given area (i.e. some kind of public state run by share holders). New companies attempting to enter the "defence" industry will have to work with the existing cartel in order to provide the services it offers to its customers. The cartel is in a dominant position and new entries into the market either become part of it or fail. This is exactly the position with the state, with "private agencies" free to operate as long as they work to the state's guidelines. As with the monopolist *"general libertarian law code"*, if you do not toe the line, you go out of business fast.

"Anarcho"-capitalists claim that this will not occur, but that the co-operation needed to provide the service of law enforcement will somehow **not** turn into collusion between companies. However, they are quick to argue that renegade "agencies" (for example, the so-called "Mafia problem" or those who reject judgements) will go out of business because of the higher costs associated with conflict and not arbitration. Yet these higher costs are ensured because the firms

in question do not co-operate with others. If other agencies boycott a firm but co-operate with all the others, then the boycotted firm will be at the same disadvantage — regardless of whether it is a cartel buster or a renegade. So the "anarcho"-capitalist is trying to have it both ways. If the punishment of non-conforming firms cannot occur, then "anarcho"-capitalism will turn into a war of all against all or, at the very least, the service of social peace and law enforcement cannot be provided. If firms cannot deter others from disrupting the social peace (one service the firm provides) then "anarcho"-capitalism is not stable and will not remain orderly as agencies develop which favour the interests of their own customers and enforce their own law codes at the expense of others. If collusion cannot occur (or is too costly) then neither can the punishment of non-conforming firms and "anarcho"-capitalism will prove to be unstable.

So, to sum up, the "defence" market of private states has powerful forces within it to turn it into a monopoly of force over a given area. From a privately chosen monopoly of force over a specific (privately owned) area, the market of private states will turn into a monopoly of force over a general area. This is due to the need for peaceful relations between companies, relations which are required for a firm to secure market share. The unique market forces that exist within this market ensure collusion and the system of private states will become a cartel and so a public state — unaccountable to all but its shareholders, a state of the wealthy, by the wealthy, for the wealthy.

F.6.4 Why are these "defence associations" states?

It is clear that "anarcho"-capitalist defence associations meet the criteria of statehood outlined in section B.2 ("Why are anarchists against the state"). They defend property and preserve authority relationships, they practice coercion, and are hierarchical institutions which govern those under them on behalf of a "ruling elite," i.e. those who employ both the governing forces and those they govern. Thus, from an anarchist perspective, these "defence associations" are most definitely states.

What is interesting, however, is that by their own definitions a very good case can be made that these "defence associations" are states in the "anarcho"-capitalist sense too. Capitalist apologists usually define a "government" (or state) as something which has a monopoly of force and coercion within a given area. Relative to the rest of the society, these defence associations would have a monopoly of force and coercion of a given piece of property: thus, by the "anarcho"-capitalists' **own definition** of statehood, these associations would qualify!

If we look at Rothbard's definition of statehood, which requires (a) the power to tax and/or (b) a *"coerced monopoly of the provision of defence over a given area"*, "anarcho"-capitalism runs into trouble.

In the first place, the costs of hiring defence associations will be deducted from the wealth created by those who use, but do not own, the property of capitalists and landlords. Let us not forget that a capitalist will only employ a worker or rent out land and housing if they make a profit from so doing. Without the labour of the worker, there would be nothing to sell and no wages to pay for rent and so a company's or landlord's "defence" firm will be paid from the revenue gathered from the capitalists power to extract a tribute from those who use, but do not own, a property. In other words, workers would pay for the agencies that enforce their employers' authority over them via the wage system and rent — taxation in a more insidious form.

In the second, under capitalism most people spend a large part of their day on other people's property — that is, they work for capitalists and/or live in rented accommodation. Hence if property owners select a "defence association" to protect their factories, farms, rental housing, etc., their employees and tenants will view it as a *"coerced monopoly of the provision of defence over a given area."* For certainly the employees and tenants will not be able to hire their own defence companies to expropriate the capitalists and landlords. So, from the standpoint of the employees and tenants, the owners do have a monopoly of "defence" over the areas in question. Of course, the "anarcho"-capitalist will argue that the tenants and workers "consent" to **all** the rules and conditions of a contract when they sign it and so the property owner's monopoly is not "coerced." However, the "consent" argument is so weak in conditions of inequality as to be useless (see section F.3.1, for example) and, moreover, it can and has been used to justify the state. In other words, "consent" in and of itself does not ensure that a given regime is not statist. So an argument along these lines is deeply flawed and can be used to justify regimes which are little better than "industrial feudalism" (such as, as indicated in section B.4, company towns, for example — an institution which right-"libertarians" have no problem with). Even the *"general libertarian law code,"* could be considered a "monopoly of government over a particular area," particularly if ordinary people have no real means of affecting the law code, either because it is market-driven and so is money-determined, or because it will be "natural" law and so unchangeable by mere mortals.

In other words, **if** the state *"arrogates to itself a monopoly of force, of ultimate decision-making power, over a given area territorial area"* then its pretty clear that the property owner shares this power. As we indicated in section F.1, Rothbard agrees that the owner is, after all, the *"ultimate decision-making power"* in their workplace or on their land. If the boss takes a dislike to you (for example, you do not follow their orders) then you get fired. If you cannot get a job or rent the land without agreeing to certain conditions (such as not joining a union or subscribing to the "defence firm" approved by your employer) then you either sign the contract or look for something else. Rothbard fails to draw the obvious conclusion and instead refers to the state *"prohibiting the voluntary purchase and sale of defence and judicial services."* [**The Ethics of Liberty**, p. 170 and p. 171] But just as surely as the law of contract allows the banning of unions from a property, it can just as surely ban the sale and purchase of defence and judicial services (it could be argued that market forces will stop this happening, but this is unlikely as bosses usually have the advantage on the labour market and workers have to compromise to get a job). After all, in the company towns, only company money was legal tender and company police the only law enforcers.

Therefore, it is obvious that the "anarcho"-capitalist system meets the Weberian criteria of a monopoly to enforce certain rules in a given area of land. The *"general libertarian law code"* is a monopoly and property owners determine the rules that apply on their property. Moreover, if the rules that property owners enforce are subject to rules contained in the monopolistic *"general libertarian law code"* (for example, that they cannot ban the sale and purchase of certain products — such as defence — on their own territory) then "anarcho"-capitalism **definitely** meets the Weberian definition of the state (as described by Ayn Rand as an institution *"that holds the exclusive power to **enforce** certain rules of conduct in a given geographical area"* [**Capitalism: The Unknown Ideal**, p. 239]) as its "law code" overrides the desires of property owners to do what they like on their own property.

Therefore, no matter how you look at it, "anarcho"-capitalism and its "defence" market promotes a *"monopoly of ultimate decision making power"* over a *"given territorial area"*. It is obvious

that for anarchists, the "anarcho"-capitalist system is a state system. And, as we note, a reasonable case can be made for it also being a state in the "anarcho"-capitalist sense as well. So, in effect, "anarcho"-capitalism has a **different** sort of state, one in which bosses hire and fire the policeman. As anarchist Peter Sabatini notes:

> *"Within [right] Libertarianism, Rothbard represents a minority perspective that actually argues for the total elimination of the state. However Rothbard's claim as an anarchist is quickly voided when it is shown that he only wants an end to the public state. In its place he allows countless private states, with each person supplying their own police force, army, and law, or else purchasing these services from capitalist vendors ... Rothbard sees nothing at all wrong with the amassing of wealth, therefore those with more capital will inevitably have greater coercive force at their disposal, just as they do now."* [**Libertarianism: Bogus Anarchy**]

Far from wanting to abolish the state, then, "anarcho"-capitalists only desire to privatise it — to make it solely accountable to capitalist wealth. Their "companies" perform the same services as the state, for the same people, in the same manner. However, there is one slight difference. Property owners would be able to select between competing companies for their "services." Because such "companies" are employed by the boss, they would be used to reinforce the totalitarian nature of capitalist firms by ensuring that the police and the law they enforce are not even slightly accountable to ordinary people. Looking beyond the "defence association" to the defence market itself (as we argued in the last section), this will become a cartel and so become some kind of public state. The very nature of the private state, its need to co-operate with others in the same industry, push it towards a monopoly network of firms and so a monopoly of force over a given area. Given the assumptions used to defend "anarcho"-capitalism, its system of private statism will develop into public statism — a state run by managers accountable only to the share-holding elite.

To quote Peter Marshall again, the "anarcho"-capitalists *"claim that all would benefit from a free exchange on the market, it is by no means certain; any unfettered market system would most likely sponsor a reversion to an unequal society with defence associations perpetuating exploitation and privilege."* [**Demanding the Impossible**, p. 565] History, and current practice, prove this point.

In short, "anarcho"-capitalists are not anarchists at all, they are just capitalists who desire to see private states develop — states which are strictly accountable to their paymasters without even the sham of democracy we have today. Hence a far better name for "anarcho"-capitalism would be "private-state" capitalism. At least that way we get a fairer idea of what they are trying to sell us. Bob Black put it well: *"To my mind a right-wing anarchist is just a minarchist who'd abolish the state to his own satisfaction by calling it something else ... They don't denounce what the state does, they just object to who's doing it."* [*"The Libertarian As Conservative"*, **The Abolition of Work and Other Essays**, p. 144]

F.7 How does the history of "anarcho"-capitalism show that it is not anarchist?

Of course, "anarcho"-capitalism does have historic precedents and "anarcho"-capitalists spend considerable time trying to co-opt various individuals into their self-proclaimed tradition of "anti-statist" liberalism. That, in itself, should be enough to show that anarchism and "anarcho"-capitalism have little in common as anarchism developed in opposition to liberalism and its defence of capitalism. Unsurprisingly, these "anti-state" liberals tended to, at best, refuse to call themselves anarchists or, at worse, explicitly deny they were anarchists.

One "anarcho"-capitalist overview of their tradition is presented by David M. Hart. His perspective on anarchism is typical of the school, noting that in his essay anarchism or anarchist *"are used in the sense of a political theory which advocates the maximum amount of individual liberty, a necessary condition of which is the elimination of governmental or other organised force."* [*"Gustave de Molinari and the Anti-statist Liberal Tradition: Part I"*, pp. 263–290, **Journal of Libertarian Studies**, vol. V, no. 3, p. 284] Yet anarchism has **never** been solely concerned with abolishing the state. Rather, anarchists have always raised economic and social demands and goals along with their opposition to the state. As such, anti-statism may be a necessary condition to be an anarchist, but not a sufficient one to count a specific individual or theory as anarchist.

Specifically, anarchists have turned their analysis onto private property noting that the hierarchical social relationships created by inequality of wealth (for example, wage labour) restricts individual freedom. This means that if we do seek *"the maximum of individual liberty"* then our analysis cannot be limited to just the state or government. Thus a libertarian critique of private property is an essential aspect of anarchism. Consequently, to limit anarchism as Hart does requires substantial rewriting of history, as can be seen from his account of William Godwin.

Hart tries to co-opt of William Godwin into the ranks of "anti-state" liberalism, arguing that he *"defended individualism and the right to property."* [**Op. Cit.**, p. 265] He, of course, quotes from Godwin to support his claim yet strangely truncates Godwin's argument to exclude his conclusion that *"[w]hen the laws of morality shall be clearly understood, their excellence universally apprehended, and themselves seen to be coincident with each man's private advantage, the idea of property in this sense will remain, but no man will have the least desire, for purposes of ostentation or luxury, to possess more than his neighbours."* In other words, personal property (possession) would still exist but not private property in the sense of capital or inequality of wealth. For Godwin, *"it follows, upon the principles of equal and impartial justice, that the good things of the world are a common stock, upon which one man has a valid a title as another to draw for what he wants."* [**An Enquiry into Political Justice**, p. 199 and p. 703] Rather than being a liberal Godwin moved beyond that limited ideology to provide the first anarchist critique of private property and the

authoritarian social relationships it created. His vision of a free society would, to use modern terminology, be voluntary (***libertarian***) communism.

This analysis is confirmed in book 8 of Godwin's classic work, entitled ***"On Property."*** Needless to say, Hart fails to mention this analysis, unsurprisingly as it was later reprinted as a socialist pamphlet. Godwin thought that the *"subject of property is the key-stone that completes the fabric of political justice."* Like Proudhon, he subjected property as well as the state to an anarchist analysis. For Godwin, there were *"three degrees"* of property. The first is possession of things you need to live. The second is *"the empire to which every man is entitled over the produce of his own industry."* The third is *"that which occupies the most vigilant attention in the civilised states of Europe. It is a system, in whatever manner established, by which one man enters into the faculty of disposing of the produce of another man's industry."* He notes that it is *"clear therefore that the third species of property is in direct contradiction to the second."* [**Op. Cit.**, p. 701 and p. 710–2] The similarities with Proudhon's classic analysis of private property are obvious (and it should be stressed that the two founders of the anarchist tradition independently reached the same critique of private property).

Godwin, unlike classical liberals, saw the need to *"point out the evils of accumulated property,"* arguing that the *"spirit of oppression, the spirit of servility, and the spirit of fraud ... are the immediate growth of the established administration of property. They are alike hostile to intellectual and moral improvement."* Thus private property harms the personality and development those subjected to the authoritarian social relationships it produces, for *"accumulation brings home a servile and truckling spirit"* and such accumulated property *"treads the powers of thought in the dust, extinguishes the sparks of genius, and reduces the great mass of mankind to be immersed in sordid cares."* This meant that the *"feudal spirit still survives that reduced the great mass of mankind to the rank of slaves and cattle for the service of a few."* Like the socialist movement he inspired, Godwin argued that *"it is to be considered that this injustice, the unequal distribution of property, the grasping and selfish spirit of individuals, is to be regarded as one of the original sources of government, and, as it rises in its excesses, is continually demanding and necessitating new injustice, new penalties and new slavery."* He stressed, *"let it never be forgotten that accumulated property is usurpation"* and considered the evils produced by monarchies, courts, priests, and criminal laws to be *"imbecile and impotent compared to the evils that arise out of the established administration of property."* [**Op. Cit.**, p. 732, p. 725, p. 730, p. 726, pp. 717–8, p. 718 and p. 725]

Unsurprisingly given this analysis, Godwin argued against the current system of property and in favour of *"the justice of an equal distribution of the good things of life."* This would be based on *"[e]quality of conditions, or, in other words, an equal admission to the means of improvement and pleasure"* as this *"is a law rigorously enjoined upon mankind by the voice of justice."* [**Op. Cit.**, p. 725 and p. 736] Thus his anarchist ideas were applied to private property, noting like subsequent anarchists that economic inequality resulted in the loss of liberty for the many and, consequently, an anarchist society would see a radical change in property and property rights. As Kropotkin noted, Godwin *"stated in 1793 in a quite definite form the political and economic principle of Anarchism."* Little wonder he, like so many others, argued that Godwin was *"the first theoriser of Socialism without government — that is to say, of Anarchism."* [**Environment and Evolution**, p. 62 and p. 26] For Kropotkin, anarchism was by definition not restricted to purely political issues but also attacked economic hierarchy, inequality and injustice. As Peter Marshall confirms, *"Godwin's economics, like his politics, are an extension of his ethics."* [**Demanding the Impossible**, p. 210]

Godwin's theory of property is significant because it prefigured what was to become standard nineteenth century socialist thought on the matter. In Britain, his ideas influenced Robert Owen and, as a result, the early socialist movement in that country. His analysis of property, as noted, was identical to and predated Proudhon's classic anarchist analysis. As such, to state, as Hart did, that Godwin simply *"concluded that the state was an evil which had to be reduced in power if not eliminated completely"* while not noting his analysis of property gives a radically false presentation of his ideas. [**Op. Cit.**, p. 265] However, it does fit into his flawed assertion that anarchism is purely concerned with the state. Any evidence to the contrary is simply ignored.

F.7.1 Are competing governments anarchism?

No, of course not. Yet according to "anarcho"-capitalism, it is. This can be seen from the ideas of Gustave de Molinari.

Hart is on firmer ground when he argues that the 19th century French economist Gustave de Molinari is the true founder of "anarcho"-capitalism. With Molinari, he argues, *"the two different currents of anarchist thought converged: he combined the political anarchism of Burke and Godwin with the nascent economic anarchism of Adam Smith and Say to create a new forms of anarchism"* that has been called *"anarcho-capitalism, or free market anarchism."* [**Op. Cit.**, p. 269] Of course, Godwin (like other anarchists) did not limit his anarchism purely to "political" issues and so he discussed *"economic anarchism"* as well in his critique of private property (as Proudhon also did). As such, to artificially split anarchism into political and economic spheres is both historically and logically flawed. While some dictionaries limit "anarchism" to opposition to the state, anarchists did and do not.

The key problem for Hart is that Molinari refused to call himself an anarchist. He did not even oppose government, as Hart himself notes Molinari proposed a system of insurance companies to provide defence of property and *"called these insurance companies 'governments' even though they did not have a monopoly within a given geographical area."* As Hart notes, Molinari was the sole defender of such free-market justice at the time in France. [David M. Hart, *"Gustave de Molinari and the Anti-statist Liberal Tradition: Part II"*, pp. 399–434, **Journal of Libertarian Studies**, vol. V, no. 4, p. 415 and p. 411] Molinari was clear that he wanted *"a regime of free government,"* counterpoising *"monopolist or communist governments"* to *"free governments."* This would lead to *"freedom of government"* rather than its abolition (i.e., not freedom **from** government). For Molinari the future would not bring *"the suppression of the state which is the dream of the anarchists ... It will bring the diffusion of the state within society. That is ... 'a free state in a free society.'"* [quoted by Hart, **Op. Cit.**, p. 429, p. 411 and p. 422] As such, Molinari can hardly be considered an anarchist, even if "anarchist" is limited to purely being against government.

Moreover, in another sense Molinari was in favour of the state. As we discuss in section F.6, these companies would have a monopoly within a given geographical area — they have to in order to enforce the property owner's power over those who use, but do not own, the property in question. The key contradiction can be seen in Molinari's advocating of company towns, privately owned communities (his term was a *"proprietary company"*). Instead of taxes, people would pay rent and the *"administration of the community would be either left in the hands of the company itself or handled special organisations set up for this purpose."* Within such a regime *"those*

with the most property had proportionally the greater say in matters which affected the community." If the poor objected then they could simply leave. [**Op. Cit.**, pp. 421–2 and p. 422]

Given this, the idea that Molinari was an anarchist in any form can be dismissed. His system was based on privatising government, not abolishing it (as he himself admitted). This would be different from the current system, of course, as landlords and capitalists would be hiring police directly to enforce their decisions rather than relying on a state which they control indirectly. This system would not be anarchist as can be seen from American history. There capitalists and landlords created their own private police forces and armies, which regularly attacked and murdered union organisers and strikers. As an example, there is Henry Ford's Service Department (private police force):

> *"In 1932 a hunger march of the unemployed was planned to march up to the gates of the Ford plant at Dearborn... The machine guns of the Dearborn police and the Ford Motor Company's Service Department killed [four] and wounded over a score of others... Ford was fundamentally and entirely opposed to trade unions. The idea of working men questioning his prerogatives as an owner was outrageous ... [T]he River Rouge plant... was dominated by the autocratic regime of Bennett's service men. Bennett .. organise[d] and train[ed] the three and a half thousand private policemen employed by Ford. His task was to maintain discipline amongst the work force, protect Ford's property [and power], and prevent unionisation... Frank Murphy, the mayor of Detroit, claimed that 'Henry Ford employs some of the worst gangsters in our city.' The claim was well based. Ford's Service Department policed the gates of his plants, infiltrated emergent groups of union activists, posed as workers to spy on men on the line... Under this tyranny the Ford worker had no security, no rights. So much so that any information about the state of things within the plant could only be freely obtained from ex-Ford workers."* [Huw Beynon, **Working for Ford**, pp. 29–30]

The private police attacked women workers handing out pro-union leaflets and gave them *"a severe beating."* At Kansas and Dallas *"similar beatings were handed out to the union men."* This use of private police to control the work force was not unique. General Motors *"spent one million dollars on espionage, employing fourteen detective agencies and two hundred spies at one time [between 1933 and 1936]. The Pinkerton Detective Agency found anti-unionism its most lucrative activity."* [**Op. Cit.**, p. 34 and p. 32] We must also note that the Pinkerton's had been selling their private police services for decades before the 1930s. For over 60 years the Pinkerton Detective Agency had *"specialised in providing spies, agent provocateurs, and private armed forces for employers combating labour organisations."* By 1892 it *"had provided its services for management in seventy major labour disputes, and its 2,000 active agents and 30,000 reserves totalled more than the standing army of the nation."* [Jeremy Brecher, **Strike!**, p. 55] With this force available, little wonder unions found it so hard to survive in the USA.

Only an "anarcho"-capitalist would deny that this is a private government, employing private police to enforce private power. Given that unions could be considered as "defence" agencies for workers, this suggests a picture of how "anarcho"-capitalism may work in practice radically different from than that produced by its advocates. The reason is simple, it does not ignore inequality and subjects property to an anarchist analysis. Little wonder, then, that Proudhon stressed that it *"becomes necessary for the workers to form themselves into democratic societies,*

with equal conditions for all members, on pain of a relapse into feudalism." Anarchism, in other words, would see *"[c]apitalistic and proprietary exploitation stopped everywhere, the wage system abolished"* and so *"the economic organisation [would] replac[e] the governmental and military system.*" [**The General Idea of the Revolution**, p. 227 and p. 281] Clearly, the idea that Proudhon shared the same political goal as Molinari is a joke. He would have dismissed such a system as little more than an updated form of feudalism in which the property owner is sovereign and the workers subjects (also see section B.4).

Unsurprisingly, Molinari (unlike the individualist anarchists) attacked the jury system, arguing that its obliged people to *"perform the duties of judges. This is pure communism."* People would *"judge according to the colour of their opinions, than according to justice."* [quoted by Hart, **Op. Cit.**, p. 409] As the jury system used amateurs (i.e. ordinary people) rather than full-time professionals it could not be relied upon to defend the power and property rights of the rich. As we noted in section F.6.1, Rothbard criticised the individualist anarchists for supporting juries for essentially the same reasons.

But, as is clear from Hart's account, Molinari had little concern that working class people should have a say in their own lives beyond consuming goods and picking bosses. His perspective can be seen from his lament that in those *"colonies where slavery has been abolished without the compulsory labour being replaced with an equivalent quantity of free [sic!] labour [i.e., wage labour], there has occurred the opposite of what happens everyday before our eyes. Simple workers have been seen to exploit in their turn the industrial* ***entrepreneurs,*** *demanding from them wages which bear absolutely no relation to the legitimate share in the product which they ought to receive. The planters were unable to obtain for their sugar a sufficient price to cover the increase in wages, and were obliged to furnish the extra amount, at first out of their profits, and then out of their very capital. A considerable number of planters have been ruined as a result ... It is doubtless better that these accumulations of capital should be destroyed than that generations of men should perish [Marx: 'how generous of M. Molinari'] but would it not be better if both survived?"* [quoted by Karl Marx, **Capital**, vol. 1, p. 937f]

So workers exploiting capital is the *"opposite of what happens everyday before our eyes"*? In other words, it is normal that entrepreneurs *"exploit"* workers under capitalism? Similarly, what is a *"legitimate share"* which workers *"ought to receive"*? Surely that is determined by the eternal laws of supply and demand and not what the capitalists (or Molinari) thinks is right? And those poor former slave drivers, they really do deserve our sympathy. What horrors they face from the impositions subjected upon them by their ex-chattels — they had to reduce their profits! How dare their ex-slaves refuse to obey them in return for what their ex-owners think was their *"legitimate share in the produce"*! How *"simple"* these workers were, not understanding the sacrifices their former masters suffer nor appreciating how much more difficult it is for their ex-masters to create *"the product"* without the whip and the branding iron to aid them! As Marx so rightly comments: *"And what, if you please, is this 'legitimate share', which, according to [Molinari's] own admission, the capitalist in Europe daily neglects to pay? Over yonder, in the colonies, where the workers are so 'simple' as to 'exploit' the capitalist, M. Molinari feels a powerful itch to use police methods to set on the right road that law of supply and demand which works automatically everywhere else."* [**Op. Cit.**, p. 937f]

An added difficulty in arguing that Molinari was an anarchist is that he was a contemporary of Proudhon, the first self-declared anarchist, and lived in a country with a vigorous anarchist

movement. Surely if he was really an anarchist, he would have proclaimed his kinship with Proudhon and joined in the wider movement. He did not, as Hart notes as regards Proudhon:

> *"their differences in economic theory were considerable, and it is probably for this reason that Molinari refused to call himself an anarchist in spite of their many similarities in political theory. Molinari refused to accept the socialist economic ideas of Proudhon .. . in Molinari's mind, the term 'anarchist' was intimately linked with socialist and statist economic views."* [**Op. Cit.**, p. 415]

Yet Proudhon's economic views, like Godwin's, flowed from his anarchist analysis and principles. They cannot be arbitrarily separated as Hart suggests. So while arguing that *"Molinari was just as much an anarchist as Proudhon,"* Hart forgets the key issue. Proudhon was aware that private property ensured that the proletarian did not exercise *"self-government"* during working hours, i.e. that he was ruled by another. As for Hart claiming that Proudhon had *"statist economic views"* it simply shows how far an "anarcho"-capitalist perspective is from genuine anarchism. Proudhon's economic analysis, his critique of private property and capitalism, flowed from his anarchism and was an integral aspect of it.

By restricting anarchism purely to opposition to the state, Hart is impoverishing anarchist theory and denying its history. Given that anarchism was born from a critique of private property as well as government, this shows the false nature of Hart's claim that *"Molinari was the first to develop a theory of free-market, proprietary anarchism that extended the laws of the market and a rigorous defence of property to its logical extreme."* [**Op. Cit.**, p. 415 and p. 416] Hart shows how far from anarchism Molinari was as Proudhon had turned his anarchist analysis to property, showing that *"defence of property"* lead to the oppression of the many by the few in social relationships identical to those which mark the state. Moreover, Proudhon, argued the state would always be required to defend such social relations. Privatising it would hardly be a step forward.

Unsurprisingly, Proudhon dismissed the idea that the laissez faire capitalists shared his goals. *"The school of Say,"* Proudhon argued, was *"the chief focus of counter-revolution next to the Jesuits"* and *"has for ten years past seemed to exist only to protect and applaud the execrable work of the monopolists of money and necessities, deepening more and more the obscurity of a science [economics] naturally difficult and full of complications"* (much the same can be said of "anarcho"-capitalists, incidentally). For Proudhon, *"the disciples of Malthus and of Say, who oppose with all their might any intervention of the State in matters commercial or industrial, do not fail to avail themselves of this seemingly liberal attitude, and to show themselves more revolutionary than the Revolution. More than one honest searcher has been deceived thereby."* However, this apparent "anti-statist" attitude of supporters of capitalism is false as pure free market capitalism cannot solve the social question, which arises because of capitalism itself. As such, it was impossible to abolish the state under capitalism. Thus *"this inaction of Power in economic matters was the foundation of government. What need should we have of a political organisation, if Power once permitted us to enjoy economic order?"* Instead of capitalism, Proudhon advocated the *"constitution of Value,"* the *"organisation of credit,"* the elimination of interest, the *"establishment of workingmen's associations"* and *"the use of a just price."* [**The General Idea of the Revolution**, p. 225, p. 226 and p. 233]

Clearly, then, the claims that Molinari was an anarchist fail as he, unlike his followers, was aware of what anarchism actually stood for. Hart, in his own way, acknowledges this:

> *"In spite of his protestations to the contrary, Molinari should be considered an anarchist thinker. His attack on the state's monopoly of defence must surely warrant the description of anarchism. His reluctance to accept this label stemmed from the fact that the socialists had used it first to describe a form of non-statist society which Molinari definitely opposed. Like many original thinkers, Molinari had to use the concepts developed by others to describe his theories. In his case, he had come to the same political conclusions as the communist anarchists although he had been working within the liberal tradition, and it is therefore not surprising that the terms used by the two schools were not compatible. It would not be until the latter half of the twentieth century that radical, free-trade liberals would use the word 'anarchist' to describe their beliefs."* [**Op. Cit.**, p. 416]

It should be noted that Proudhon was **not** a communist-anarchist, but the point remains (as an aside, Rothbard also showed his grasp of anarchism by asserting that *"the demented Bakunin"* was a *"leading anarcho-communist,"* who *"emphasised [the lumpenproletariat] in the 1840s."* [**The Logic of Action II**, p. 388 and p. 381] Which would have been impressive as not only did Bakunin become an anarchist in the 1860s, anarcho-communism, as anyone with even a basic knowledge of anarchist history knows, developed after his death nor did Bakunin emphasise the lumpenproletariat as the agent of social change, Rothbardian and Marxian inventions not withstanding). The aims of anarchism were recognised by Molinari as being inconsistent with his ideology. Consequently, he (rightly) refused the label. If only his self-proclaimed followers in the *"latter half of the twentieth century"* did the same then anarchists would not have to bother with them!

It does seem ironic that the founder of "anarcho"-capitalism should have come to the same conclusion as modern day anarchists on the subject of whether his ideas are a form of anarchism or not!

F.7.2 Is government compatible with anarchism?

Of course not, but ironically this is the conclusion arrived at by Hart's analyst of the British "voluntaryists," particularly Auberon Herbert. Voluntaryism was a fringe part of the right-wing individualist movement inspired by Herbert Spencer, a leading spokesman for free market capitalism in the later half of the nineteenth century. Like Hart, leading "anarcho"-capitalist Hans-Hermann Hoppe believes that Herbert *"develop[ed] the Spencerian idea of equal freedom to its logically consistent anarcho-capitalist end."* [**Anarcho-Capitalism: An Annotated Bibliography**]

Yet, as with Molinari, there is a problem with presenting this ideology as anarchist, namely that its leading light, Herbert, explicitly rejected the label "anarchist" and called for both a government and a democratic state. Thus, apparently, both state and government are *"logically consistent"* with "anarcho"-capitalism and vice versa!

Herbert was clearly aware of individualist anarchism and distanced himself from it. He argued that such a system would be *"pandemonium."* He thought that we should *"not direct our attacks — as the anarchists do — **against all government** , against government in itself"* but *"only against the overgrown, the exaggerated, the insolent, unreasonable and indefensible forms of government, which are found everywhere today."* Government should be *"strictly limited to its legitimate duties*

in defence of self-ownership and individual rights." He stressed that *"we are governmentalists ... formally constituted by the nation, employing in this matter of force the majority method."* Moreover, Herbert knew of, and rejected, individualist anarchism, considering it to be *"founded on a fatal mistake."* [**Essay X: The Principles Of Voluntaryism And Free Life**] He repeated this argument in other words, stating that anarchy was a *"contradiction,"* and that the Voluntaryists *"reject the anarchist creed."* He was clear that they *"believe in a national government, voluntary supported ... and only entrusted with force for protection of person and property."* He called his system of a national government funded by non-coerced contributions *"the Voluntary State."* [*"A Voluntaryist Appeal"*, **Herbert Spencer and the Limits of the State**, Michael W. Taylor (ed.), p. 239 and p. 228] As such, claims that Herbert was an anarchist cannot be justified.

Hart is aware of this slight problem, quoting Herbert's claim that he aimed for *"regularly constituted government, generally accepted by all citizens for the protection of the individual."* [quoted by Hart, **Op. Cit.**, p. 86] Like Molinari, Herbert was aware that anarchism was a form of socialism and that the political aims could not be artificially separated from its economic and social aims. As such, he was right **not** to call his ideas anarchism as it would result in confusion (particularly as anarchism was a much larger movement than his). As Hart acknowledges, *"Herbert faced the same problems that Molinari had with labelling his philosophy. Like Molinari, he rejected the term 'anarchism,' which he associated with the socialism of Proudhon and .. . terrorism."* While *"quite tolerant"* of individualist anarchism, he thought they *"were mistaken in their rejections of 'government.'"* However, Hart knows better than Herbert about his own ideas, arguing that his ideology *"is in fact a new form of anarchism, since the most important aspect of the modern state, the monopoly of the use of force in a given area, is rejected in no uncertain terms by both men."* [**Op. Cit.**, p. 86] He does mention that Benjamin Tucker called Herbert a *"true anarchist in everything but name,"* but Tucker denied that Kropotkin was an anarchist suggesting that he was hardly a reliable guide. [quoted by Hart, **Op. Cit.**, p. 87] As it stands, it seems that Tucker (unlike other anarchists) was mistaken in his evaluation of Herbert's politics.

While there were similarities between Herbert's position and individualist anarchism, *"the gulf"* between them *"in other respects was unbridgeable"* notes historian Matthew Thomas. *"The primary concern of the individualists was with the preservation of existing property relations and the maintenance of some form of organisation to protect these relations... Such a vestigial government was obviously incompatible with the individualist anarchist desire to abolish the state. The anarchists also demanded sweeping changes in the structure of property relations through the destruction of the land and currency monopolies. This they argued, would create equal opportunities for all. The individualists however rejected this and sought to defend the vested interests of the property-owning classes. The implications of such differences prevented any real alliance."* [**Anarchist Ideas and Counter-Cultures in Britain, 1880–1914**, p. 20] Anarchist William R. McKercher, in his analysis of the libertarian (socialist) movement of late 19th century Britain, concludes (rightly) that Herbert *"was often mistakenly taken as an anarchist"* but *"a reading of Herbert's work will show that he was not an anarchist."* [**Freedom and Authority**, p. 199fn and p. 73fn] The leading British social anarchist journal of the time noted that the *"Auberon Herbertites in England are sometimes called Anarchists by outsiders, but they are willing to compromise with the inequity of government to maintain private property."* [**Freedom**, Vol. II, No. 17, 1888]

Some non-anarchists **did** call Herbert an anarchist. For example, J. A. Hobson, a left-wing liberal, wrote a critique of Herbert's politics called *"A Rich Man's Anarchism."* Hobson argued that Herbert's support for exclusive private property would result in the poor being enslaved to the

rich. Herbert, *"by allowing first comers to monopolise without restriction the best natural supplies"* would allow them *"to thwart and restrict the similar freedom of those who come after."* Hobson gave the *"extreme instance"* of an island *"the whole of which is annexed by a few individuals, who use the rights of exclusive property and transmission ... to establish primogeniture."* In such a situation, the bulk of the population would be denied the right to exercise their faculties or to enjoy the fruits of their labour, which Herbert claimed to be the inalienable rights of all. Hobson concluded: *"It is thus that the 'freedom' of a few (in Herbert's sense) involves the 'slavery' of the many."* [quoted by M. W. Taylor, **Men Versus the State**, pp. 248–9] M. W. Taylor notes that *"of all the points Hobson raised ... this argument was his most effective, and Herbert was unable to provide a satisfactory response."* [**Op. Cit.**, p. 249]

The ironic thing is that Hobson's critique simply echoed the **anarchist** one and, moreover, simply repeated Proudhon's arguments in **What is Property?**. As such, from an anarchist perspective, Herbert's inability to give a reply was unsurprising given the power of Proudhon's libertarian critique of private property. In fact, Proudhon used a similar argument to Hobson's, presenting *"a colony ... in a wild district"* rather than an island. His argument and conclusions are the same, though, with a small minority becoming *"proprietors of the whole district"* and the rest *"dispossessed"* and *"compelled to sell their birthright."* He concluded by saying *"[i]n this century of bourgeois morality ... the moral sense is so debased that I should not be at all surprised if I were asked, by many a worthy proprietor, what I see in this that is unjust and illegitimate? Debased creature! galvanised corpse! how can I expect to convince you, if you cannot tell robbery when I show it to you?"* [**What is Property?**, pp. 125–7] Which shows how far Herbert's position was from genuine anarchism — and how far "anarcho"-capitalism is.

So, economically, Herbert was not an anarchist, arguing that the state should protect Lockean property rights. Of course, Hart may argue that these economic differences are not relevant to the issue of Herbert's anarchism but that is simply to repeat the claim that anarchism is solely concerned with government, a claim which is hard to support. This position cannot be maintained, particularly given that both Herbert and Molinari defended the right of capitalists and landlords to force their employees and tenants to follow their orders. Their "governments" existed to defend the capitalist from rebellious workers, to break unions, strikes and occupations. In other words, they were a monopoly of the use of force in a given area to enforce the monopoly of power in a given area (namely, the wishes of the property owner). While they may have argued that this was "defence of liberty," in reality it is defence of power and authority.

What about if we just look at the political aspects of his ideas? Did Herbert actually advocate anarchism? No, far from it. He clearly demanded a minimal state based on voluntary taxation. The state would not use force of any kind, *"except for purposes of restraining force."* He argued that in his system, while *"the state should compel no services and exact no payments by force,"* it *"should be free to conduct many useful undertakings ... in competition with all voluntary agencies ... in dependence on voluntary payments."* [Herbert, **Essay X: The Principles Of Voluntaryism And Free Life**] As such, *"the state"* would remain and unless he is using the term "state" in some highly unusual way, it is clear that he means a system where individuals live under a single elected government as their common law maker, judge and defender within a given territory.

This becomes clearer once we look at how the state would be organised. In his essay **"A Politician in Sight of Haven,"** Herbert does discuss the franchise, stating it would be limited to those who paid a voluntary *"income tax"* and anyone *"paying it would have the right to vote; those who did not pay it would be — as is just — without the franchise. There would be no other tax."*

The law would be strictly limited, of course, and the *"government ... must confine itself simply to the defence of life and property, whether as regards internal or external defence."* In other words, Herbert was a minimal statist, with his government elected by a majority of those who choose to pay their income tax and funded by that (and by any other voluntary taxes they decided to pay). Whether individuals and companies could hire their own private police in such a regime is irrelevant in determining whether it is an anarchy.

This can be best seen by comparing Herbert with Ayn Rand. No one would ever claim Rand was an anarchist, yet her ideas were extremely similar to Herbert's. Like Herbert, Rand supported laissez-faire capitalism and was against the "initiation of force." Like Herbert, she extended this principle to favour a government funded by voluntary means [*"Government Financing in a Free Society,"* **The Virtue of Selfishness**, pp. 116–20] Moreover, like Herbert, she explicitly denied being an anarchist and, again like Herbert, thought the idea of competing defence agencies ("governments") would result in chaos. The similarities with Herbert are clear, yet no "anarcho"-capitalist would claim that Rand was an anarchist, yet some do claim that Herbert was.

This position is, of course, deeply illogical and flows from the non-anarchist nature of "anarcho"-capitalism. Perhaps unsurprisingly, when Rothbard discusses the ideas of the "voluntaryists" he fails to address the key issue of who determines the laws being enforced in society. For Rothbard, the key issue was **who** is enforcing the law, not where that law comes from (as long, of course, as it is a law code he approved of). The implications of this is significant, as it implies that "anarchism" need not be opposed to either the state nor government! This can be clearly seen from Rothbard's analysis of Herbert's voluntary taxation position.

Rothbard, correctly, notes that Herbert advocated voluntary taxation as the means of funding a state whose basic role was to enforce Lockean property rights. The key point of his critique was **not** who determines the law but who enforces it. For Rothbard, it should be privatised police and courts and he suggests that the *"voluntary taxationists have never attempted to answer this problem; they have rather stubbornly assumed that no one would set up a competing defence agency within a State's territorial limits."* If the state **did** bar such firms, then that system is not a genuine free market. However, *"if the government **did** permit free competition in defence service, there would soon no longer be a central government over the territory. Defence agencies, police and judicial, would compete with one another in the same uncoerced manner as the producers of any other service on the market."* [**Power and Market**, p. 122 and p. 123]

Obviously this misses the point totally. What Rothbard ignores is who determines the laws which these private "defence" agencies would enforce. If the laws are made by a central government then the fact that citizen's can hire private police and attend private courts does not stop the regime being statist. We can safely assume Rand, for example, would have had no problem with companies providing private security guards or the hiring of private detectives within the context of her minimal state. Ironically, Rothbard stresses the need for such a monopoly legal system:

> *"While 'the government' would cease to exist, the same cannot be said for a constitution or a rule of law, which, in fact, would take on in the free society a far more important function than at present. For the freely competing judicial agencies would have to be guided by a body of absolute law to enable them to distinguish objectively between defence and invasion. This law, embodying elaborations upon the basic injunction to defend person and property from acts of invasion, would be codified in the basic legal*

> *code. Failure to establish such a code of law would tend to break down the free market, for then defence against invasion could not be adequately achieved."* [**Op. Cit.**, p. 123–4]

So if you violate the *"absolute law"* defending (absolute) property rights then you would be in trouble. The problem now lies in determining who sets that law. For Rothbard, as we noted in section F.6.1, his system of monopoly laws would be determined by judges, Libertarian lawyers and jurists. The "voluntaryists" proposed a different solution, namely a central government elected by the majority of those who voluntarily decided to pay an income tax. In the words of Herbert:

> *"We agree that there must be a central agency to deal with crime — an agency that defends the liberty of all men, and employs force against the uses of force; but my central agency rests upon voluntary support, whilst Mr. Levy's central agency rests on compulsory support."* [quoted by Carl Watner, *"The English Individualists As They Appear In Liberty,"* pp. 191–211, **Benjamin R. Tucker and the Champions of Liberty**, p. 194]

And all Rothbard is concerned over private cops would exist or not! This lack of concern over the existence of the state and government flows from the strange fact that "anarcho"-capitalists commonly use the term "anarchism" to refer to any philosophy that opposes all forms of initiatory coercion. Notice that government does not play a part in this definition, thus Rothbard can analyse Herbert's politics without commenting on who determines the law his private "defence" agencies enforce. For Rothbard, *"an anarchist society"* is defined *"as one where there is no legal possibility for coercive aggression against the person and property of any individual."* He then moved onto the state, defining that as an *"institution which possesses one or both (almost always both) of the following properties: (1) it acquires its income by the physical coercion known as 'taxation'; and (2) it acquires and usually obtains a coerced monopoly of the provision of defence service (police and courts) over a given territorial area."* [**Society without a State**, p. 192]

This is highly unusual definition of "anarchism," given that it utterly fails to mention or define government. This, perhaps, is understandable as any attempt to define it in terms of *"monopoly of decision-making power"* results in showing that capitalism is statist (see section F.1 for a summary). The key issue here is the term *"legal possibility."* That suggestions a system of laws which determine what is *"coercive aggression"* and what constitutes what is and what is not legitimate "property." Herbert is considered by some "anarcho"-capitalists as one of them. Which brings us to a strange conclusion that, for "anarcho"-capitalists you can have a system of "anarchism" in which there is a government and state — as long as the state does not impose taxation nor stop private police forces from operating!

As Rothbard argues *"if a government based on voluntary taxation permits free competition, the result will be the purely free-market system ... The previous government would now simply be one competing defence agency among many on the market."* [**Power and Market**, p. 124] That the government is specifying what is and is not legal does not seem to bother him or even cross his mind. Why should it, when the existence of government is irrelevant to his definition of anarchism and the state? That private police are enforcing a monopoly law determined by the government seems hardly a step in the right direction nor can it be considered as anarchism. Perhaps this is unsurprising, for under his system there would be *"a basic, common Law Code"*

which *"all would have to abide by"* as well as *"some way of resolving disputes that will gain a majority consensus in society … whose decision will be accepted by the great majority of the public."* [**"Society without a State,"**, p. 205]

That this is simply a state under a different name can be seen from looking at other right-wing liberals. Milton Friedman, for example, noted (correctly) that the *"consistent liberal is not an anarchist."* He stated that government *"is essential"* for providing a *"legal framework"* and provide *"the definition of property rights."* In other words, to *"determine, arbitrate and enforce the rules of the game."* [**Capitalism and Freedom**, p. 34, p. 15, p. 25, p. 26 and p. 27] For Ludwig von Mises *"liberalism is not anarchism, nor has it anything whatsoever to do with anarchism."* Liberalism *"restricts the activity of the state in the economic sphere exclusively to the protection of property."* [**Liberalism**, p. 37 and p. 38] The key difference between these liberals and Rothbard's brand of liberalism is that rather than an elected parliament making laws, "anarcho"-capitalism would have a general law code produced by "libertarian" lawyers, jurists and judges. Both would have laws interpreted by judges. Rothbard's system is also based on a legal framework which would both provide a definition of property rights and determine the rules of the game. However, the means of enforcing and arbitrating those laws would be totally private. Yet even this is hardly a difference, as it is doubtful if Friedman or von Mises (like Rand or Herbert) would have barred private security firms or voluntary arbitration services as long as they followed the law of the land. The only major difference is that Rothbard's system explicitly excludes the general public from specifying or amending the laws they are subject to and allows (prosperous) judges to interpret and add to the (capitalist) law. Perhaps this dispossession of the general public is the only means by which the minimal state will remain minimal (as Rothbard claimed) and capitalist property, authority and property rights remain secure and sacrosanct, yet the situation where the general public has no say in the regime and the laws they are subjected to is usually called dictatorship, not "anarchy."

At least Herbert is clear that his politics was a governmental system, unlike Rothbard who assumes a monopoly law but seems to think that this is not a government or a state. As David Wieck argued, this is illogical for according to Rothbard *"all 'would have to' conform to the same legal code"* and this can only be achieved by means of *"the forceful action of adherents to the code against those who flout it"* and so *"in his system* ***there would stand over against every individual the legal authority of all the others.*** *An individual who did not recognise private property as legitimate would surely perceive this as a tyranny of law, a tyranny of the majority or of the most powerful — in short, a hydra-headed state. If the law code is itself unitary, then this multiple state might be said to have properly a single head — the law . .. But it looks as though one might still call this 'a state,' under Rothbard's definition, by satisfying* ***de facto*** *one of his pair of sufficient conditions: 'It asserts and usually obtains a coerced monopoly of provision of defence service (police and courts) over a given territorial area' … Hobbes's individual sovereign would seem to have become many sovereigns — with but one law, however, and in truth, therefore, a single sovereign in Hobbes's more important sense of the latter term. One might better, and less confusingly, call this a libertarian state than an anarchy."* [**Anarchist Justice**, pp. 216–7]

The obvious recipients of the coercion of the new state would be those who rejected the authority of their bosses and landlords, those who reject the Lockean property rights Rothbard and Herbert hold dear. In such cases, the rebels and any "defence agency" (like, say, a union) which defended them would be driven out of business as it violated the law of the land. How this is different from a state banning competing agencies is hard to determine. This is a *"difficulty"* argues

Wieck, which *"results from the attachment of a principle of private property, and of unrestricted accumulation of wealth, to the principle of individual liberty. This increases sharply the possibility that many reasonable people who respect their fellow men and women will find themselves outside the law because of dissent from a property interpretation of liberty."* Similarly, there are the economic results of capitalism. *"One can imagine,"* Wieck continues, *"that those who lose out badly in the free competition of Rothbard's economic system, perhaps a considerable number, might regard the legal authority as an alien power, a state for them, based on violence, and might be quite unmoved by the fact that, just as under nineteenth century capitalism, a principle of liberty was the justification for it all."* [**Op. Cit.**, p. 217 and pp. 217–8]

F.7.3 Can there be a "right-wing" anarchism?

In a word, no. This can be seen from "anarcho"-capitalism itself as well as its attempts to co-opt the US individualist anarchists into its family tree.

Hart mentions the individualist anarchists, calling Tucker's ideas *"**laissez faire** liberalism."* [**Op. Cit.**, p. 87] However, Tucker called his ideas *"socialism"* and presented a left-wing critique of most aspects of liberalism, particularly its Lockean based private property rights. Tucker based much of his ideas on property on Proudhon, so if Hart dismisses the latter as a socialist then this must apply to Tucker as well. Given that he notes that there are *"two main kinds of anarchist thought,"* namely *"communist anarchism which denies the right of an individual to seek profit, charge rent or interest and to own property"* and a *"'right-wing' proprietary anarchism, which vigorously defends these rights"* then Tucker, like Godwin, would have to be placed in the *"left-wing"* camp. [*"Gustave de Molinari and the Anti-statist Liberal Tradition: Part II"*, **Op. Cit.**, p. 427] Tucker, after all, argued that he aimed for the end of profit, interest and rent and attacked private property in land and housing beyond "occupancy and use." It is a shame that Hart was so ignorant of anarchism to ignore all the other forms of anarchism which, while anti-capitalist, were not communist.

As has been seen, Hart's account of the history of "anti-state" liberalism is flawed. Godwin is included only by ignoring his views on property, views which in many ways reflects the later "socialist" (i.e. anarchist) analysis of Proudhon. He then discusses a few individuals who were alone in their opinions even within the extreme free market right and all of whom knew of anarchism and explicitly rejected that name for their respective ideologies. In fact, they preferred the term *"government"* or *"state"* to describe their systems which, on the face of it, would be hard to reconcile with the usual "anarcho"-capitalist definition of anarchism as being "no government" or simply "anti-statism." Hart's discussion of individualist anarchism is equally flawed, failing to discuss their economic views (just as well, as its links to "left-wing" anarchism would be obvious).

However, the similarities of Molinari's views with what later became known as "anarcho"-capitalism are clear. Hart notes that with Molinari's death in 1912, *"liberal anti-statism virtually disappeared until it was rediscovered by the economist Murray Rothbard in the late 1950's"* [*"Gustave de Molinari and the Anti-statist Liberal Tradition: Part III"*, **Op. Cit.**, p. 88] While this fringe is somewhat bigger than previously, the fact remains that the ideas expounded by Rothbard are just as alien to the anarchist tradition as Molinari's. It is a shame that Rothbard, like his predecessors, did not call his ideology something other than anarchism. Not only would it have been more accurate, it would also have lead to much less confusion and no need to write this section

of the FAQ! It is a testament to their lack of common sense that Rothbard and other "anarcho"-capitalists failed to recognise that, given a long-existing socio-political theory and movement called anarchism, they could not possibly call themselves "anarchists" without conflating of their own views with those of the existing tradition. Yet rather than introducing a new term into political vocabulary (or using Molinari's terminology) they preferred to try fruitlessly to appropriate a term used by others. They seemed to have forgotten that political vocabulary and usage are path dependent. Hence we get subjected to articles which talk about the new "anarchism" while trying to disassociate "anarcho"-capitalism from the genuine anarchism found in media reports and history books. As it stands, the only reason why "anarcho"-capitalism is considered a form of "anarchism" by some is because one person (Rothbard) decided to steal the name of a well established and widespread political and social theory and movement in the 1950s and apply it to an ideology with little, if anything, in common with it.

As Hart inadvertently shows, it is not a firm base to build a claim. That anyone can consider "anarcho"-capitalism as anarchist simply flows from a lack of knowledge about anarchism — as numerous anarchists have argued. For example, *"Rothbard's conjunction of anarchism with capitalism,"* according to David Wieck, *"results in a conception that is entirely outside the mainstream of anarchist theoretical writings or social movements ... this conjunction is a self-contradiction."* He stressed that *"the main traditions of anarchism are entirely different. These traditions, and theoretical writings associated with them, express the perspectives and the aspirations, and also, sometimes, the rage, of the oppressed people in human society: not only those economically oppressed, although the major anarchist movements have been mainly movements of workers and peasants, but also those oppressed by power in all those social dimensions ... including of course that of political power expressed in the state."* In other words, anarchism represents *"a moral commitment"* which Rothbard's position is *"diametrically opposite"* to. [**Anarchist Justice**, p. 215, p. 229 and p. 234]

It is a shame that some academics consider only the word Rothbard uses as relevant rather than the content and its relation to anarchist theory and history. If they did, they would soon realise that the expressed opposition of so many anarchists to "anarcho"-capitalism is something which cannot be ignored or dismissed. In other words, a "right-wing" anarchist cannot and does not exist, no matter how often sections of the right try to use that word to describe their ideology.

The reason is simple. Anarchist economics and politics cannot be artificially separated. They are intrinsically linked. Godwin and Proudhon did not stop their analysis at the state. They extended it the social relationships produced by inequality of wealth, i.e. economic power as well as political power. To see why, we need only consult Rothbard's work. As noted in the last section, for Rothbard the key issue with the "voluntary taxationists" was not who determined the *"body of absolute law"* but rather who enforced it. In his discussion, he argued that a democratic "defence agency" is at a disadvantage in his "free market" system. As he put it:

> *"It would, in fact, be competing at a severe disadvantage, having been established on the principle of 'democratic voting.' Looked at as a market phenomenon, 'democratic voting' (one vote per person) is simply the method of the consumer 'co-operative.' Empirically, it has been demonstrated time and again that co-operatives cannot compete successfully against stock-owned companies, especially when both are equal before the law. There is no reason to believe that co-operatives for defence would be any more efficient. Hence, we may expect the old co-operative government to 'wither away' through*

> *loss of customers on the market, while joint-stock (i.e., corporate) defence agencies would become the prevailing market form."* [**Power and Market**, p. 125]

Notice how he assumes that both a co-operative and corporation would be *"equal before the law."* But who determines that law? Obviously **not** a democratically elected government, as the idea of "one person, one vote" in determining the common law all are subject to is *"inefficient."* Nor does he think, like the individualist anarchists, that the law would be judged by juries along with the facts. As we note in section F.6.1, he rejected that in favour of it being determined by *"Libertarian lawyers and jurists."* Thus the law is unchangeable by ordinary people and enforced by private defence agencies hired to protect the liberty and property of the owning class. In the case of a capitalist economy, this means defending the power of landlords and capitalists against rebel tenants and workers.

This means that Rothbard's *"common Law Code"* will be determined, interpreted, enforced and amended by corporations based on the will of the majority of shareholders, i.e. the rich. That hardly seems likely to produce equality before the law. As he argues in a footnote:

> *"There is a strong **a priori** reason for believing that corporations will be superior to co-operatives in any given situation. For if each owner receives only one vote regardless of how much money he has invested in a project (and earnings are divided in the same way), there is no incentive to invest more than the next man; in fact, every incentive is the other way. This hampering of investment militates strongly against the co-operative form."* [**Op. Cit.**, p. 125]

So **if** the law is determined and interpreted by defence agencies and courts then it will be done so by those who have invested most in these companies. As it is unlikely that the rich will invest in defence firms which do not support their property rights, power, profits and definition of property, it is clear that agencies which favour the wealthy will survive on the market. The idea that market demand will counter this class rule seems unlikely, given Rothbard's own argument. In order to compete successfully you need more than demand, you need sources of investment. If co-operative defence agencies do form, they will be at a market disadvantage due to lack of investment. As argued in section J.5.12, even though co-operatives are more efficient than capitalist firms lack of investment (caused by the lack of control by capitalists Rothbard notes) stops them replacing wage slavery. Thus capitalist wealth and power inhibits the spread of freedom in production. If we apply Rothbard's argument to his own system, we suggest that the market in "defence" will also stop the spread of more libertarian associations thanks to capitalist power and wealth. In other words, like any market, Rothbard's "defence" market will simply reflect the interests of the elite, not the masses.

Moreover, we can expect any democratic defence agency (like a union) to support, say, striking workers or squatting tenants, to be crushed. This is because, as Rothbard stresses, **all** "defence" firms would be expected to apply the *"common"* law, as written by *"Libertarian lawyers and jurists."* If they did not they would quickly be labelled "outlaw" agencies and crushed by the others. Ironically, Tucker would join Bakunin and Kropotkin in an "anarchist" court accused to violating "anarchist" law by practising and advocating "occupancy and use" rather than the approved Rothbardian property rights. Even if these democratic "defence" agencies could survive and not be driven out of the market by a combination of lack of investment and violence due to their

"outlaw" status, there is another problem. As we discussed in section F.1, landlords and capitalists have a monopoly of decision making power over their property. As such, they can simply refuse to recognise any democratic agency as a legitimate defence association and use the same tactics perfected against unions to ensure that it does not gain a foothold in their domain.

Clearly, then, a "right-wing" anarchism is impossible as any system based on capitalist property rights will simply be an oligarchy run by and for the wealthy. As Rothbard notes, any defence agency based on democratic principles will not survive in the "market" for defence simply because it does not allow the wealthy to control it and its decisions. Little wonder Proudhon argued that laissez-faire capitalism meant *"the victory of the strong over the weak, of those who own property over those who own nothing."* [quoted by Peter Marshall, **Demanding the Impossible**, p. 259]

F.8 What role did the state take in the creation of capitalism?

If the "anarcho"-capitalist is to claim with any plausibility that "real" capitalism is non-statist or that it can exist without a state, it must be shown that capitalism evolved naturally, in opposition to state intervention. In reality, the opposite is the case. Capitalism was born from state intervention. In the words of Kropotkin, *"the State .. . and capitalism ... developed side by side, mutually supporting and re-enforcing each other."* [**Anarchism**, p. 181]

Numerous writers have made this point. For example, in Karl Polanyi's flawed masterpiece **The Great Transformation** we read that *"the road to the free market was opened and kept open by an enormous increase in continuous, centrally organised and controlled interventionism"* by the state. [p. 140] This intervention took many forms — for example, state support during "mercantilism," which allowed the "manufactures" (i.e. industry) to survive and develop, enclosures of common land, and so forth. In addition, the slave trade, the invasion and brutal conquest of the Americas and other "primitive" nations, and the looting of gold, slaves, and raw materials from abroad also enriched the European economy, giving the development of capitalism an added boost. Thus Kropotkin:

> *"The history of the genesis of capital has already been told by socialists many times. They have described how it was born of war and pillage, of slavery and serfdom, of modern fraud and exploitation. They have shown how it is nourished by the blood of the worker, and how little by little it has conquered the whole world ... Law ... has followed the same phases as capital ... they have advanced hand in hand, sustaining one another with the suffering of mankind."* [**Op. Cit.**, p. 207]

This process is what Karl Marx termed ***"primitive accumulation"*** and was marked by extensive state violence. Capitalism, as he memorably put it, *"comes dripping from head to toe, from every pore, with blood and dirt"* and the *"starting-point of the development that gave rise both to the wage-labourer and to the capitalist was the enslavement of the worker."* [**Capital**, vol. 1, p. 926 and p. 875] Or, if Kropotkin and Marx seem too committed to be fair, we have John Stuart Mill's summary that the *"social arrangements of modern Europe commenced from a distribution of property which was the result, not of just partition, or acquisition by industry, but of conquest and violence."* [**Principles of Political Economy**, p. 15]

The same can be said of all countries. As such, when supporters of "libertarian" capitalism say they are against the "initiation of force," they mean only **new** initiations of force: for the system they support was born from numerous initiations of force in the past (moreover, it also requires state intervention to keep it going — section D.1 addresses this point in some detail). Indeed, many thinkers have argued that it was precisely this state support and coercion (particularly the separation of people from the land) that played the **key** role in allowing capitalism to develop rather than the theory that *"previous savings"* did so. As left-wing German thinker Franz

Oppenheimer (whom Murray Rothbard selectively quoted) argued, *"the concept of a 'primitive accumulation,' or an original store of wealth, in land and in movable property, brought about by means of purely economic forces"* while *"seem[ing] quite plausible"* is in fact *"utterly mistaken; it is a 'fairly tale,' or it is a class theory used to justify the privileges of the upper classes."* [**The State**, pp. 5–6] As Individualist anarchist Kevin Carson summarised as part of his excellent overview of this historic process:

> *"Capitalism has never been established by means of the free market. It has always been established by a revolution from above, imposed by a ruling class with its origins in the Old Regime … by a pre-capitalist ruling class that had been transformed in a capitalist manner. In England, it was the landed aristocracy; in France, Napoleon III's bureaucracy; in Germany, the Junkers; in Japan, the Meiji. In America, the closest approach to a 'natural' bourgeois evolution, industrialisation was carried out by a mercantilist aristocracy of Federalist shipping magnates and landlords."* [*"Primitive Accumulation and the Rise of Capitalism,"* **Studies in Mutualist Political Economy**]

This, the actual history of capitalism, will be discussed in the following sections. So it is ironic to hear right-"libertarians" sing the praises of a capitalism that never existed and urge its adoption by all nations, in spite of the historical evidence suggesting that only state intervention made capitalist economies viable — even in that Mecca of "free enterprise," the United States. As Noam Chomsky argues, *"who but a lunatic could have opposed the development of a textile industry in New England in the early nineteenth century, when British textile production was so much more efficient that half the New England industrial sector would have gone bankrupt without very high protective tariffs, thus terminating industrial development in the United States? Or the high tariffs that radically undermined economic efficiency to allow the United States to develop steel and other manufacturing capacities? Or the gross distortions of the market that created modern electronics?"* [**World Orders, Old and New**, p. 168] Such state interference in the economy is often denounced and dismissed by right-"libertarians" as mercantilism. However, to claim that "mercantilism" is not capitalism makes little sense. Without mercantilism, "proper" capitalism would never have developed, and any attempt to divorce a social system from its roots is ahistoric and makes a mockery of critical thought (particularly as "proper" capitalism turns to mercantilism regularly).

Similarly, it is somewhat ironic when "anarcho"-capitalists and other right "libertarians" claim that they support the freedom of individuals to choose how to live. After all, the working class was not given **that** particular choice when capitalism was developing. Instead, their right to choose their own way of life was constantly violated and denied — and justified by the leading capitalist economists of the time. To achieve this, state violence had one overall aim, to dispossess the labouring people from access to the means of life (particularly the land) and make them dependent on landlords and capitalists to earn a living. The state coercion *"which creates the capital-relation can be nothing other than the process which divorces the worker from the ownership of the conditions of his own labour; it is a process which operates two transformations, whereby the social means of subsistence and production are turned into capital, and the immediate producers are turned into wage-labourers. So-called primitive accumulation, therefore, is nothing else than the historical process of divorcing the producer from the means of production."* [Marx, **Op. Cit.**, pp. 874–5] So to claim that **now** (after capitalism has been created) we get the chance to try and live

as we like is insulting in the extreme. The available options we have are not independent of the society we live in and are decisively shaped by the past. To claim we are "free" to live as we like (within the laws of capitalism, of course) is basically to argue that we are able (in theory) to "buy" the freedom that every individual is due from those who have stolen it from us in the first place. It ignores the centuries of state violence required to produce the "free" worker who makes a "voluntary" agreement which is compelled by the social conditions that this created.

The history of state coercion and intervention is inseparable from the history of capitalism: it is contradictory to celebrate the latter while claiming to condemn the former. In practice capitalism has **always** meant intervention in markets to aid business and the rich. That is, what has been called by supporters of capitalism "laissez-faire" was nothing of the kind and represented the political-economic program of a specific fraction of the capitalist class rather than a set of principles of "hands off the market." As individualist anarchist Kevin Carson summaries, *"what is nostalgically called 'laissez-faire' was in fact a system of continuing state intervention to subsidise accumulation, guarantee privilege, and maintain work discipline."* [**The Iron Fist behind the Invisible Hand**] Moreover, there is the apparent unwillingness by such "free market" advocates (i.e. supporters of "free market" capitalism) to distinguish between historically and currently unfree capitalism and the other truly free market economy that they claim to desire. It is common to hear "anarcho"-capitalists point to the state-based capitalist system as vindication of their views (and even more surreal to see them point to **pre**-capitalist systems as examples of their ideology). It should be obvious that they cannot have it both ways.

In other words, Rothbard and other "anarcho"-capitalists treat capitalism as if it were the natural order of things rather than being the product of centuries of capitalist capture and use of state power to further their own interests. The fact that past uses of state power have allowed capitalist norms and assumptions to become the default system by their codification in property law and justified by bourgeois economic does not make it natural. The role of the state in the construction of a capitalist economy cannot be ignored or downplayed as government has always been an instrument in creating and developing such a system. As one critic of right-"libertarian" ideas put it, Rothbard *"completely overlooks the role of the state in building and maintaining a capitalist economy in the West. Privileged to live in the twentieth century, long after the battles to establish capitalism have been fought and won, Rothbard sees the state solely as a burden on the market and a vehicle for imposing the still greater burden of socialism. He manifests a kind of historical nearsightedness that allows him to collapse many centuries of human experience into one long night of tyranny that ended only with the invention of the free market and its 'spontaneous' triumph over the past. It is pointless to argue, as Rothbard seems ready to do, that capitalism would have succeeded without the bourgeois state; the fact is that all capitalist nations have relied on the machinery of government to create and preserve the political and legal environments required by their economic system."* That, of course, has not stopped him *"critis[ing] others for being unhistorical."* [Stephen L. Newman, **Liberalism at Wit's End**, pp. 77–8 and p. 79]

Thus we have a key contradiction within "anarcho"-capitalism. While they bemoan state intervention in the market, their underlying assumption is that it had no real effect on how society has evolved over the centuries. By a remarkable coincidence, the net effect of all this state intervention was to produce a capitalist economy identical in all features as one which would have been produced if society had been left alone to evolve naturally. It does seem strange that state violence would happen to produce the same economic system as that produced by right-"libertarians" and Austrian economists logically deducing concepts from a few basic axioms and

assumptions. Even more of a coincidence, these conclusions also happen to be almost exactly the same as what those who have benefited from previous state coercion want to hear — namely, the private property is good, trade unions and strikes are bad, that the state should not interfere with the power of the bosses and should not even think about helping the working class (employed or unemployed). As such, while their advice and rhetoric may have changed, the social role of economists has not. State action was required to dispossess the direct producers from the means of life (particularly the land) and to reduce the real wage of workers so that they have to provide regular work in a obedient manner. In this, it and the capitalists received much advice from the earliest economists as Marxist economic historian Michael Perelman documents in great detail. As he summarises, *"classical political economy was concerned with promoting primitive accumulation in order to foster capitalist development, even though the logic of primitive accumulation was in direct conflict with the classical political economists' purported adherence to the values of laissez-faire."* [**The Invention of Capitalism**, p. 12] The turn to "laissez-faire" was possible because direct state power could be mostly replaced by economic power to ensure the dependency of the working class.

Needless to say, some right-"libertarians" recognise that the state played **some** role in economic life in the rise and development of capitalism. So they contrast "bad" business people (who took state aid) and "good" ones (who did not). Thus Rothbard's comment that Marxists have *"made no particular distinction between 'bourgeoisie' who made use of the state, and bourgeoisie who acted on the free market."* [**The Ethics of Liberty**, p. 72] But such an argument is nonsense as it ignores the fact that the "free market" is a network (and defined by the state by the property rights it enforces). This means that state intervention in one part of the economy will have ramifications in other parts, particularly if the state action in question is the expropriation and/or protection of productive resources (land and workplaces) or the skewing of the labour market in favour of the bosses. In other words, the individualistic perspective of "anarcho"-capitalism blinds its proponents to the obvious collective nature of working class exploitation and oppression which flows from the collective and interconnected nature of production and investment in any real economy. State action supported by sectors of the capitalist class has, to use economic jargon, positive externalities for the rest. They, in general, benefit from it ***as a class*** just as working class people suffers from it collectively as it limits their available choices to those desired by their economic and political masters (usually the same people). As such, the right-"libertarian" fails to understand the **class** basis of state intervention.

For example, the owners of the American steel and other companies who grew rich and their companies big behind protectionist walls were obviously "bad" bourgeoisie. But were the bourgeoisie who supplied the steel companies with coal, machinery, food, "defence" and so on not also benefiting from state action? And the suppliers of the luxury goods to the wealthy steel company owners, did they not benefit from state action? Or the suppliers of commodities to the workers that laboured in the steel factories that the tariffs made possible, did they not benefit? And the suppliers to these suppliers? And the suppliers to these suppliers? Did not the users of technology first introduced into industry by companies protected by state orders also not benefit? Did not the capitalists who had a large pool of landless working class people to select from benefit from the "land monopoly" even though they may not have, unlike other capitalists, directly advocated it? It increased the pool of wage labour for **all** capitalists and increased their bargaining position/power in the labour market at the expense of the working class. In other words, such a policy helped maintain capitalist market power, irrespective of whether individ-

ual capitalists encouraged politicians to vote to create/maintain it. And, similarly, **all** American capitalists benefited from the changes in common law to recognise and protect capitalist private property and rights that the state enforced during the 19th century (see section B.2.5).

Rothbard, in other words, ignores class theft and the accumulative effect of stealing both productive property and the products of the workers who use it. He considered the *"moral indignation"* of socialism arose from the argument *"that the capitalists have stolen the rightful property of the workers, and therefore that existing titles to accumulated capital are unjust."* He argued that given *"this hypothesis, the remainder of the impetus for both Marxism and anarchosyndicalism follow quite logically."* However, Rothbard's "solution" to the problem of past force seems to be (essentially) a justification of existing property titles and not a serious attempt to understand or correct past initiations of force that have shaped society into a capitalist one and still shape it today. This is because he is simply concerned with returning property which has been obviously stolen and can be returned to those who have been directly dispossessed or their descendants (for example, giving land back to peasants or tenant farmers). If this cannot be done then the *"title to that property, belongs properly, justly and ethically to its current possessors."* [**Op. Cit.**, p. 52 and p. 57] At best, he allows nationalised property and any corporation which has the bulk of its income coming from the state to be "homesteaded" by their workers (which, according to Rothbard's arguments for the end of Stalinism, means they will get shares in the company). The end result of his theory is to leave things pretty much as they are. This is because he could not understand that the exploitation of the working class was/is collective in nature and, as such, is simply impossible to redress it in his individualistic term of reference.

To take an obvious example, if the profits of slavery in the Southern states of America were used to invest in factories in the Northern states (as they were), does giving the land to the freed slaves in 1865 **really** signify the end of the injustice that situation produced? Surely the products of the slaves work were stolen property just as much as the land was and, as a result, so is any investment made from it? After all, investment elsewhere was based on the profits extracted from slave labour and *"much of the profits earned in the northern states were derived from the surplus originating on the southern plantations."* [Perelman, **Op. Cit.**, p. 246] In terms of the wage workers in the North, they have been indirectly exploited by the existence of slavery as the investment this allowed reduced their bargaining power on the market as it reduced their ability to set up business for themselves by increasing the fixed costs of so doing. And what of the investment generated by the exploitation of these wage workers? As Mark Leier points out, the capitalists and landlords *"may have purchased the land and machinery, but this money represented nothing more than the expropriated labour of others."* [**Bakunin**, p. 111] If the land should be returned to those who worked it as Rothbard suggests, why not the industrial empires that were created on the backs of the generations of slaves who worked it? And what of the profits made from the generations of wage slaves who worked on these investments? And what of the investments which these profits allowed? Surely if the land should be given to those who worked it then so must any investments it generated? And assuming that those currently employed can rightly seize their workplaces, what about those previously employed and **their** descendants? Why should they be excluded from the riches their ancestors helped create?

To talk in terms of individuals misses all this and the net result is to ensure that the results of centuries of coercion and theft are undisturbed. This is because it is the working class **as a whole** who have been expropriated and whose labour has been exploited. The actual individuals involved and their descendants would be impossible to identify nor would it be possible to track

down how the stolen fruits of their labour were invested. In this way, the class theft of our planet and liberty as well as the products of generations of working class people will continue safely.

Needless to say, some governments interfere in the economy more than others. Corporations do not invest in or buy from suppliers based in authoritarian regimes by accident. They do not just happen to be here, passively benefiting from statism and authoritarianism. Rather they choose **between** states to locate in based precisely on the cheapness of the labour supply. In other words, they prefer to locate in dictatorships and authoritarian regimes in Central America and Southeast Asia **because** those regimes interfere in the labour market the most – while, of course, talking about the very "free market" and "economic liberty" those regimes deny to their subjects. For Rothbard, this seems to be just a coincidence or a correlation rather than systematic for the collusion between state and business is the fault, not of capitalism, but simply of particular capitalists. The system, in other words, is pure; only individuals are corrupt. But, for anarchists, the origins of the modern capitalist system lies not in the individual qualities of capitalists as such but in the dynamic and evolution of capitalism itself — a complex interaction of class interest, class struggle, social defence against the destructive actions of the market, individual qualities and so forth. In other words, Rothbard's claims are flawed — they fail to understand capitalism as a **system**, its dynamic nature and the authoritarian social relationships it produces and the need for state intervention these produce and require.

So, when the right suggests that "we" be "left alone," what they mean by "we" comes into clear focus when we consider how capitalism developed. Artisans and peasants were only "left alone" to starve (sometimes not even that, as the workhouse was invented to bring vagabonds to the joy of work), and the working classes of industrial capitalism were only "left alone" outside work and for only as long as they respected the rules of their "betters." As Marx memorably put it, the *"newly freed men became sellers of themselves only after they had been robbed of all their own means of production, and all the guarantees of existence afforded by the old feudal arrangements. And this history, the history of their expropriation, is written in the annals of mankind in letters of blood and fire."* [**Op. Cit.**, p. 875] As for the other side of the class divide, they desired to be "left alone" to exercise their power over others as we will see. That modern "capitalism" is, in effect, a kind of "corporate mercantilism," with states providing the conditions that allow corporations to flourish (e.g. tax breaks, subsidies, bailouts, anti-labour laws, etc.) says more about the statist roots of capitalism than the ideologically correct definition of capitalism used by its supporters.

In fact, if we look at the role of the state in creating capitalism we could be tempted to rename "anarcho"-capitalism "marxian-capitalism". This is because, given the historical evidence, a political theory can be developed by which the "dictatorship of the bourgeoisie" is created and that this capitalist state "withers away" into "anarchy". That this means replacing the economic and social ideas of Marxism and their replacement by their direct opposite should not mean that we should reject the idea (after all, that is what "anarcho"-capitalism has done to Individualist Anarchism!). But we doubt that many "anarcho"-capitalists will accept such a name change (even though this would reflect their politics far better; after all they do not object to past initiations of force, just current ones and many do seem to think that the modern state **will** wither away due to market forces).

This is suggested by the fact that Rothbard did not advocate change from below as the means of creating "anarchy." He helped found the so-called Libertarian Party in 1971 which, like Marxists, stands for political office. With the fall of Stalinism in 1989, Rothbard faced whole economies which could be "homesteaded" and he argued that *"desocialisation"* (i.e., de-nationalisation as,

like Leninists, he confused socialisation with nationalisation) *"necessarily involves the action of that government surrendering its property to its private subjects ... In a deep sense, getting rid of the socialist state requires that state to perform one final, swift, glorious act of self-immolation, after which it vanishes from the scene."* (compare to Engels' comment that *"the taking possession of the means of production in the name of society"* is the state's *"last independent act as a state."* [**Selected Works**, p. 424]). He considered the *"capital goods built by the State"* as being *"philosophically unowned"* yet failed to note whose labour was exploited and taxed to build them in the first place (needless to say, he rejected the ideas of shares to all as this would be *"egalitarian handouts ... to undeserving citizens,"* presumably the ill, the unemployed, retirees, mothers, children, and future generations). [**The Logic of Action II**, p. 213, p. 212 and p. 209]

Industrial plants would be transferred to workers currently employed there, but not by their own direct action and direct expropriation. Rather, the state would do so. This is understandable as, left to themselves, the workers may not act quite as he desired. Thus we see him advocating the transfer of industry from the state bureaucracy to workers by means of *"private, negotiable shares"* as ownership was *"not to be granted to collectives or co-operatives or workers or peasants holistically, which would only bring back the ills of socialism in a decentralised and chaotic syndicalist form."* His "homesteading" was not to be done by the workers themselves rather it was a case of *"granting shares to workers"* by the state. He also notes that it should be a *"priority"* for the government *"to return all stolen, confiscated property to its original owners, or to their heirs."* This would involve *"finding original landowners"* — i.e., the landlord class whose wealth was based on exploiting the serfs and peasants. [**Op. Cit.**, p. 210 and pp. 211–2] Thus expropriated peasants would have their land returned but not, apparently, any peasants working land which had been taken from their feudal and aristocratic overlords by the state. Thus those who had just been freed from Stalinist rule would have been subjected to "libertarian" rule to ensure that the transition was done in the economically correct way. As it was, the neo-classical economists who did oversee the transition ensured that ownership and control transferred directly to a new ruling class rather than waste time issuing "shares" which would eventually end up in a few hands due to market forces (the actual way it was done could be considered a modern form of "primitive accumulation" as it ensured that capital goods did not end up in the hands of the workers).

But this is beside the point. The fact remains that state action was required to create and maintain capitalism. Without state support it is doubtful that capitalism would have developed at all. So the only "capitalism" that has existed is a product of state support and intervention, and it has been characterised by markets that are considerably less than free. Thus, serious supporters of truly free markets (like the American Individualist Anarchists) have not been satisfied with "capitalism" — have, in fact, quite rightly and explicitly opposed it. Their vision of a free society has always been at odds with the standard capitalist one, a fact which "anarcho"-capitalists bemoan and dismiss as "mistakes" and/or the product of "bad economics." Apparently the net effect of all this state coercion has been, essentially, null. It has **not**, as the critics of capitalism have argued, fundamentally shaped the development of the economy as capitalism would have developed naturally by itself. Thus an economy marked by inequalities of wealth and power, where the bulk of the population are landless and resourceless and where interest, rent and profits are extracted from the labour of working people would have developed anyway regardless of the state coercion which marked the rise of capitalism and the need for a subservient and dependent working class by the landlords and capitalists which drove these policies simply accelerated the

process towards "economic liberty." However, it is more than mere coincidence that capitalism and state coercion are so intertwined both in history and in current practice.

In summary, like other apologists for capitalism, right-wing "libertarians" advocate that system without acknowledging the means that were necessary to create it. They tend to equate it with any market system, failing to understand that it is a specific kind of market system where labour itself is a commodity. It is ironic, of course, that most defenders of capitalism stress the importance of markets (which have pre-dated capitalism) while downplaying the importance of wage labour (which defines it) along with the violence which created it. Yet as both anarchists and Marxists have stressed, money and commodities do not define capitalism any more than private ownership of the means of production. So it is important to remember that from a socialist perspective capitalism is **not** identical to the market. As we stressed in section C.2, both anarchists and Marxists argue that where people produce for themselves, is not capitalist production, i.e. when a worker sells commodities this is not capitalist production. Thus the supporters of capitalism fail to understand that a great deal of state coercion was required to transform pre-capitalist societies of artisans and peasant farmers selling the produce of their labour into a capitalist society of wage workers selling themselves to bosses, bankers and landlords.

Lastly, it should be stressed that this process of primitive accumulation is not limited to private capitalism. State capitalism has also had recourse to such techniques. Stalin's forced collectivisation of the peasantry and the brutal industrialisation involved in five-year plans in the 1930s are the most obvious example). What took centuries in Britain was condensed into decades in the Soviet Union and other state capitalist regimes, with a corresponding impact on its human toil. However, we will not discuss these acts of state coercion here as we are concerned primarily with the actions required to create the conditions required for private capitalism.

Needless to say, this section cannot hope to go into all the forms of state intervention across the globe which were used to create or impose capitalism onto an unwilling population. All we can do is provide a glimpse into the brutal history of capitalism and provide enough references for those interested to pursue the issue further. The first starting point should be Part VIII (*"So-Called Primitive Accumulation"*) of volume 1 of Marx's **Capital**. This classic account of the origins of capitalism should be supplemented by more recent accounts, but its basic analysis is correct. Marxist writers have expanded on Marx's analysis, with Maurice Dobb's **Studies in the Development of Capitalism** and David McNally's **Against the Market** are worth consulting, as is Michael Perelman's **The Invention of Capitalism**. Kropotkin's **Mutual Aid** has a short summary of state action in destroying communal institutions and common ownership of land, as does his **The State: It's Historic Role**. Rudolf Rocker's **Nationalism and Culture** is also essential reading. Individualist Anarchist Kevin Carson's **Studies in Mutualist Political Economy** provides an excellent summary (see part 2, *"Capitalism and the State: Past, Present and Future"*) as does his essay **The Iron Fist behind the Invisible Hand**.

F.8.1 What social forces lay behind the rise of capitalism?

Capitalist society is a relatively recent development. For Marx, while markets have existed for millennium *"the capitalist era dates from the sixteenth century."* [**Capital**, vol. 1, p. 876] As Murray Bookchin pointed out, for a *"long era, perhaps spanning more than five centuries,"* capitalism *"coexisted with feudal and simple commodity relationships"* in Europe. He argues that this period

"simply cannot be treated as 'transitional' without reading back the present into the past." [**From Urbanisation to Cities**, p. 179] In other words, capitalism was not a inevitable outcome of "history" or social evolution.

Bookchin went on to note that capitalism existed *"with growing significance in the mixed economy of the West from the fourteenth century up to the seventeenth"* but that it *"literally exploded into being in Europe, particularly England, during the eighteenth and especially nineteenth centuries."* [**Op. Cit.**, p. 181] The question arises, what lay behind this *"growing significance"*? Did capitalism *"explode"* due to its inherently more efficient nature or where there other, non-economic, forces at work? As we will show, it was most definitely the second — capitalism was born not from economic forces but from the political actions of the social elites which its usury enriched. Unlike artisan (simple commodity) production, wage labour generates inequalities and wealth for the few and so will be selected, protected and encouraged by those who control the state in their own economic and social interests.

The development of capitalism in Europe was favoured by two social elites, the rising capitalist class within the degenerating medieval cities and the absolutist state. The medieval city was *"thoroughly changed by the gradual increase in the power of commercial capital, due primarily to foreign trade ... By this the inner unity of the commune was loosened, giving place to a growing caste system and leading necessarily to a progressive inequality of social interests. The privileged minorities pressed ever more definitely towards a centralisation of the political forces of the community... Mercantilism in the perishing city republics led logically to a demand for larger economic units [i.e. to nationalise the market]; and by this the desire for stronger political forms was greatly strengthened ... Thus the city gradually became a small state, paving the way for the coming national state."* [Rudolf Rocker, **Nationalism and Culture**, p. 94] Kropotkin stressed that in this destruction of communal self-organisation the state not only served the interests of the rising capitalist class but also its own. Just as the landlord and capitalist seeks a workforce and labour market made up of atomised and isolated individuals, so does the state seek to eliminate all potential rivals to its power and so opposes *"all coalitions and all private societies, whatever their aim."* [**The State: It's Historic role**, p. 53]

The rising economic power of the proto-capitalists conflicted with that of the feudal lords, which meant that the former required help to consolidate their position. That aid came in the form of the monarchical state which, in turn, needed support against the feudal lords. With the force of absolutism behind it, capital could start the process of increasing its power and influence by expanding the "market" through state action. This use of state coercion was required because, as Bookchin noted, *"[i]n every pre-capitalist society, countervailing forces ... existed to restrict the market economy. No less significantly, many pre-capitalist societies raised what they thought were insuperable obstacles to the penetration of the State into social life."* He noted the *"power of village communities to resist the invasion of trade and despotic political forms into society's abiding communal substrate."* State violence was required to break this resistance and, unsurprisingly the *"one class to benefit most from the rising nation-state was the European bourgeoisie ... This structure . .. provided the basis for the next great system of labour mobilisation: the factory."* [**The Ecology of Freedom**, pp. 207–8 and p. 336] The absolutist state, noted Rocker, *"was dependent upon the help of these new economic forces, and vice versa* and so it *"at first furthered the plans of commercial capital"* as its coffers were filled by the expansion of commerce. Its armies and fleets *"contributed to the expansion of industrial production because they demanded a number of things for whose large-scale production the shops of small tradesmen were no longer adapted. Thus gradually*

arose the so-called manufactures, the forerunners of the later large industries." [**Op. Cit.**, pp. 117–8] As such, it is impossible to underestimate the role of state power in creating the preconditions for both agricultural and industrial capitalism.

Some of the most important state actions from the standpoint of early industry were the so-called Enclosure Acts, by which the "commons" — the free farmland shared communally by the peasants in most rural villages — was "enclosed" or incorporated into the estates of various landlords as private property (see section F.8.3). This ensured a pool of landless workers who had no option but to sell their labour to landlords and capitalists. Indeed, the widespread independence caused by the possession of the majority of households of land caused the rising class of capitalists to complain, as one put it, *"that men who should work as wage-labourers cling to the soil, and in the naughtiness of their hearts prefer independence as squatters to employment by a master."* [quoted by Allan Engler, **The Apostles of Greed**, p. 12] Once in service to a master, the state was always on hand to repress any signs of *"naughtiness"* and *"independence"* (such as strikes, riots, unions and the like). For example, Seventeenth century France saw a *"number of decrees ... which forbade workers to change their employment or which prohibited assemblies of workers or strikes on pain of corporal punishment or even death. (Even the Theological Faculty of the University of Paris saw fit to pronounce solemnly against the sin of workers' organisation)."* [Maurice Dobb, **Studies in Capitalism Development**, p. 160]

In addition, other forms of state aid ensured that capitalist firms got a head start, so ensuring their dominance over other forms of work (such as co-operatives). A major way of creating a pool of resources that could be used for investment was the use of mercantilist policies which used protectionist measures to enrich capitalists and landlords at the expense of consumers and their workers. For example, one of most common complaints of early capitalists was that workers could not turn up to work regularly. Once they had worked a few days, they disappeared as they had earned enough money to live on. With higher prices for food, caused by protectionist measures, workers had to work longer and harder and so became accustomed to factory labour. In addition, mercantilism allowed native industry to develop by barring foreign competition and so allowed industrialists to reap excess profits which they could then use to increase their investments. In the words of Marxist economic historian Maurice Dobb:

> *"In short, the Mercantile System was a system of State-regulated exploitation through trade which played a highly important rule in the adolescence of capitalist industry: it was essentially the economic policy of an age of primitive accumulation."* [**Op. Cit.**, p. 209]

As Rocker summarises, *"when absolutism had victoriously overcome all opposition to national unification, by its furthering of mercantilism and economic monopoly it gave the whole social evolution a direction which could only lead to capitalism."* [**Op. Cit.**, pp. 116–7]

Mercantilist policies took many forms, including the state providing capital to new industries, exempting them from guild rules and taxes, establishing monopolies over local, foreign and colonial markets, and granting titles and pensions to successful capitalists. In terms of foreign trade, the state assisted home-grown capitalists by imposing tariffs, quotas, and prohibitions on imports. They also prohibited the export of tools and technology as well as the emigration of skilled workers to stop competition (this applied to any colonies a specific state may have had). Other policies were applied as required by the needs of specific states. For example, the English state imposed a

series of Navigation Acts which forced traders to use English ships to visit its ports and colonies (this destroyed the commerce of Holland, its chief rival). Nor should the impact of war be minimised, with the demand for weapons and transportation (including ships) injecting government spending into the economy. Unsurprisingly, given this favouring of domestic industry at the expense of its rivals and the subject working class population the mercantilist period was one of generally rapid growth, particularly in England.

As we discussed in section C.10, some kind of mercantilism has always been required for a country to industrialise. Over all, as economist Paul Ormerod puts it, the *"advice to follow pure free-market polices seems ... to be contrary to the lessons of virtually the whole of economic history since the Industrial Revolution ... every country which has moved into ... strong sustained growth . .. has done so in outright violation of pure, free-market principles."* These interventions include the use of *"tariff barriers"* to protect infant industries, *"government subsidies"* and *"active state intervention in the economy."* He summarises: *"The model of entrepreneurial activity in the product market, with judicious state support plus repression in the labour market, seems to be a good model of economic development."* [**The Death of Economics**, p. 63]

Thus the social forces at work creating capitalism was a combination of capitalist activity and state action. But without the support of the state, it is doubtful that capitalist activity would have been enough to generate the initial accumulation required to start the economic ball rolling. Hence the necessity of Mercantilism in Europe and its modified cousin of state aid, tariffs and "homestead acts" in America.

F.8.2 What was the social context of the statement "laissez-faire?"

The honeymoon of interests between the early capitalists and autocratic kings did not last long. *"This selfsame monarchy, which for weighty reasons sought to further the aims of commercial capital and was... itself aided in its development by capital, grew at last into a crippling obstacle to any further development of European industry."* [Rudolf Rocker, **Nationalism and Culture**, p. 117]

This is the social context of the expression *"laissez-faire"* — a system which has outgrown the supports that protected it in its early stages. Just as children eventually rebel against the protection and rules of their parents, so the capitalists rebelled against the over-bearing support of the absolutist state. Mercantilist policies favoured some industries and harmed the growth of others. The rules and regulations imposed upon those it did favour reduced the flexibility of capitalists to changing environments. As Rocker argues, *"no matter how the absolutist state strove, in its own interest, to meet the demands of commerce, it still put on industry countless fetters which became gradually more and more oppressive ... [it] became an unbearable burden ... which paralysed all economic and social life."* [**Op. Cit.**, p. 119] All in all, mercantilism became more of a hindrance than a help and so had to be replaced. With the growth of economic and social power by the capitalist class, this replacement was made easier. As Errico Malatesta notes:

> *"The development of production, the vast expansion of commerce, the immeasurable power assumed by money ... have guaranteed this supremacy [of economic power over political power] to the capitalist class which, no longer content with enjoying the support of the government, demanded that government arise from its own ranks. A government which owed its origin to the right of conquest ... though subject by existing circumstances to the capitalist class, went on maintaining a proud and contemptuous attitude towards*

> *its now wealthy former slaves, and had pretensions to independence of domination. That government was indeed the defender, the property owners' gendarme, but the kind of gendarmes who think they are somebody, and behave in an arrogant manner towards the people they have to escort and defend, when they don't rob or kill them at the next street corner; and the capitalist class got rid of it . .. and replac[ed] it by a government of its own choosing, at all times under its control and specifically organised to defend that class against any possible demands by the disinherited."* [**Anarchy**, pp. 22–3]

Malatesta here indicates the true meaning of *"leave us alone,"* or *"laissez-faire."* The **absolutist** state (not "the state" per se) began to interfere with capitalists' profit-making activities and authority, so they determined that it had to go — which the rising capitalist class did when they utilised such popular movements as the English, French and American revolutions. In such circumstances, when the state is not fully controlled by the capitalist class, then it makes perfect sense to oppose state intervention no matter how useful it may have been in the past — a state run by aristocratic and feudal landlords does not produce class legislation in quite the right form. That changes when members of the capitalist class hold state power and when the landlords start acting more like rural capitalists and, unsurprisingly, laissez-faire was quickly modified and then abandoned once capitalists could rely on a ***capitalist*** state to support and protect its economic power within society.

When capitalism had been rid of unwanted interference by the hostile use of state power by non-capitalist classes then laissez-faire had its utility (just as it has its utility today when attacking social welfare). Once this had been accomplished then state intervention in society was encouraged and applauded by capitalists. *"It is ironic that the main protagonists of the State, in its political and administrative authority, were the middle-class Utilitarians, on the other side of whose Statist banner were inscribed the doctrines of economic Laissez Faire."* [E.P. Thompson, **The Making of the English Working Class**, p. 90] Capitalists simply wanted **capitalist** states to replace monarchical states, so that heads of government would follow state economic policies regarded by capitalists as beneficial to their class as a whole. And as development economist Lance Taylor argues:

> *"In the long run, there are no laissez-faire transitions to modern economic growth. The state has always intervened to create a capitalist class, and then it has to regulate the capitalist class, and then the state has to worry about being taken over by the capitalist class, but the state has always been there."* [quoted by Noam Chomsky, **Year 501**, p. 104]

In order to attack mercantilism, the early capitalists had to ignore the successful impact of its policies in developing industry and a "store of wealth" for future economic activity. As William Lazonick points out, *"the political purpose of [Adam Smith's] the **Wealth of Nations** was to attack the mercantilist institutions that the British economy had built up over the previous two hundred years. Yet in proposing institutional change, Smith lacked a dynamic historical analysis. In his attack on these institutions, Smith might have asked why the extent of the world market available to Britain in the late eighteenth century was **so uniquely under British control.** If Smith had asked this 'big question,' he might have been forced to grant credit for Britain's extent of the world market to the very mercantilist institutions he was attacking."* Moreover, he *"might have recognised*

the integral relation between economic and political power in the rise of Britain to international dominance." Overall, *"[w]hat the British advocates of laissez-faire neglected to talk about was the role that a system of national power had played in creating conditions for Britain to embark on its dynamic development path ... They did not bother to ask how Britain had attained th[e] position [of 'workshop of the world'], while they conveniently ignored the on going system of national power — the British Empire — that ... continued to support Britain's position."* [**Business Organisation and the Myth of the Market Economy**, p. 2, p. 3 and p.5]

Similar comments are applicable to American supporters of laissez faire who fail to notice that the "traditional" American support for world-wide free trade is quite a recent phenomenon. It started only at the end of the Second World War (although, of course, **within** America military Keynesian policies were utilised). While American industry was developing, the state and capitalist class had no time for laissez-faire (see section F.8.5 for details). After it had grown strong, the United States began preaching laissez-faire to the rest of the world — and began to kid itself about its own history, believing its slogans about laissez-faire as the secret of its success. Yet like all other successful industrialisers, the state could aid capitalists directly and indirectly (via tariffs, land policy, repression of the labour movement, infrastructure subsidy and so on) and it would "leave them alone" to oppress and exploit workers, exploit consumers, build their industrial empires and so forth.

Takis Fotopoules indicates that the social forces at work in "freeing" the market did not represent a "natural" evolution towards freedom:

> *"Contrary to what liberals and Marxists assert, marketisation of the economy was not just an evolutionary process, following the expansion of trade under mercantilism ... modern [i.e. capitalist] markets did not evolve out of local markets and/or markets for foreign goods ... the nation-state, which was just emerging at the end of the Middle Ages, played a crucial role creating the conditions for the 'nationalisation' of the market ... and ... by freeing the market from effective social control."* [*"The Nation-state and the Market"*, pp. 37–80 **Society and Nature**, Vol. 2, No. 2, pp. 44–45]

The "freeing" of the market means freeing those who "own" most of the market (i.e. the wealthy elite) from *"effective social control,"* but the rest of society was not as lucky. Kropotkin makes a similar point: *"While giving the capitalist any degree of free scope to amass his wealth at the expense of the helpless labourers, the government has **nowhere** and **never** ... afforded the labourers the opportunity 'to do as they pleased'."* [**Anarchism**, p. 182]

So, the expression "laissez-faire" dates from the period when capitalists were objecting to the restrictions that helped create them in the first place. It has little to do with freedom as such and far more to do with the needs of capitalist power and profits. It should also be remembered that at this time the state was run by the rich and for the rich. Elections, where they took place, involved the wealthiest of male property owners. This meant there were two aspects in the call for laissez-faire. On the one hand, by the elite to eliminate regulations and interventions they found burdensome and felt unnecessary as their social position was secure by their economic power (mercantilism evolved into capitalism proper when market power was usually sufficient to produce dependency and obedience as the working class had been successfully dispossessed from the land and the means of production). On the other, serious social reformers (like Adam Smith) who recognised that the costs of such elite inspired state regulations generally fell on

working class people. The moral authority of the latter was used to bolster the desire of the former to maximise their wealth by imposing costs of others (workers, customers, society and the planet's eco-system) with the state waiting in the wings to support them as and when required.

Unsurprising, working class people recognised the hypocrisy of this arrangement (even if most modern-day right-"libertarians" do not and provide their services justifying the actions and desires of repressive and exploitative oligarchs seeking monopolistic positions). They turned to political and social activism seeking to change a system which saw economic and political power reinforce each other. Some (like the Chartists and Marxists) argued for political reforms to generalise democracy into genuine one person, one vote. In this way, political liberty would be used to end the worse excesses of so-called "economic liberty" (i.e., capitalist privilege and power). Others (like mutualists) aimed at economic reforms which ensure that the capitalist class would be abolished by means of genuine economic freedom. Finally, most other anarchists argued that revolutionary change was required as the state and capitalism were so intertwined that both had to be ended at the same time. However, the struggle against state power always came from the general population. As Murray Bookchin argued, it is an error to depict this *"revolutionary era and its democratic aspirations as 'bourgeois,' an imagery that makes capitalism a system more committed to freedom, or even ordinary civil liberties, than it was historically."* [**From Urbanisation to Cities**, p. 180f] While the capitalist class may have benefited from such popular movements as the English, American and French revolutions but these revolutions were not led, never mind started or fought, by the bourgeoisie.

Not much as changed as capitalists are today seeking maximum freedom from the state to ensure maximum authority over their wage slaves and society. The one essential form of support the "Libertarian" right wants the state (or "defence" firms) to provide capitalism is the enforcement of property rights — the right of property owners to "do as they like" on their own property, which can have obvious and extensive social impacts. What "libertarian" capitalists object to is attempts by others – workers, society as a whole, the state, etc. — to interfere with the authority of bosses. That this is just the defence of privilege and power (and **not** freedom) has been discussed in section B and elsewhere in section F, so we will not repeat ourselves here. Samuel Johnson once observed that *"we hear the loudest **yelps** for liberty among the drivers of Negroes."* [quoted by Noam Chomsky, **Year 501**, p. 141] Our modern "libertarian" capitalist drivers of wage-slaves are yelping for exactly the same kind of "liberty."

F.8.3 What other forms did state intervention in creating capitalism take?

Beyond being a paymaster for new forms of production and social relations as well as defending the owners' power, the state intervened economically in other ways as well. As we noted in section B.2.5, the state played a key role in transforming the law codes of society in a capitalistic fashion, ignoring custom and common law when it was convenient to do so. Similarly, the use of tariffs and the granting of monopolies to companies played an important role in accumulating capital at the expense of working people, as did the breaking of unions and strikes by force.

However, one of the most blatant of these acts was the enclosure of common land. In Britain, by means of the Enclosure Acts, land that had been freely used by poor peasants was claimed by large landlords as private property. As socialist historian E.P. Thompson summarised, *"the*

social violence of enclosure consisted ... in the drastic, total imposition upon the village of capitalist property-definitions." [**The Making of the English Working Class**, pp. 237–8] Property rights, which favoured the rich, replaced the use rights and free agreement that had governed peasants use of the commons. Unlike use rights, which rest in the individual, property rights require state intervention to create and maintain. *"Parliament and law imposed capitalist definitions to exclusive property in land,"* Thompson notes. This process involved ignoring the wishes of those who used the commons and repressing those who objected. Parliament was, of course, run by and for the rich who then simply *"observed the rules which they themselves had made."* [**Customs in Common**, p. 163]

Unsurprisingly, many landowners would become rich through the enclosure of the commons, heaths and downland while many ordinary people had a centuries old right taken away. Land enclosure was a gigantic swindle on the part of large landowners. In the words of one English folk poem written in 1764 as a protest against enclosure:

They hang the man, and flog the woman,
That steals the goose from off the common;
But let the greater villain loose,
That steals the common from the goose.

** It should be remembered that the process of enclosure was not limited to just the period of the industrial revolution. As Colin Ward notes,* "in Tudor times, a wave of enclosures by land-owners who sought to profit from the high price of wool had deprived the commoners of their livelihood and obliged them to seek work elsewhere or become vagrants or squatters on the wastes on the edges of villages." *[**Cotters and Squatters**, p. 30] This first wave increased the size of the rural proletariat who sold their labour to landlords. Nor should we forget that this imposition of capitalist property rights did not imply that it was illegal. As Michael Perelman notes,*"[f]ormally, this dispossession was perfectly legal. After all, the peasants did not have property rights in the narrow sense. They only had traditional rights. As markets evolved, first land-hungry gentry and later the bourgeoisie used the state to create a legal structure to abrogate these traditional rights."* [**The Invention of Capitalism**, pp. 13–4]

While technically legal as the landlords made the law, the impact of this stealing of the land should not be under estimated. Without land, you cannot live and have to sell your liberty to others. This places those with capital at an advantage, which will tend to increase, rather than decrease, the inequalities in society (and so place the landless workers at an increasing disadvantage over time). This process can be seen from early stages of capitalism. With the enclosure of the land an agricultural workforce was created which had to travel where the work was. This influx of landless ex-peasants into the towns ensured that the traditional guild system crumbled and was transformed into capitalistic industry with bosses and wage slaves rather than master craftsmen and their journeymen. Hence the enclosure of land played a key role, for *"it is clear that economic inequalities are unlikely to create a division of society into an employing master class and a subject wage-earning class, unless access to the means of production, including land, is by some means or another barred to a substantial section of the community."* [Maurice Dobb, **Studies in Capitalist Development**, p. 253]

The importance of access to land is summarised by this limerick by the followers of Henry George (a 19th century writer who argued for a *"single tax"* and the nationalisation of land). The Georgites got their basic argument on the importance of land down these few, excellent, lines:

A college economist planned
To live without access to land
He would have succeeded
But found that he needed
Food, shelter and somewhere to stand.

* *Thus anarchists concern over the* "land monopoly" *of which the Enclosure Acts were but one part. The land monopoly, to use Tucker's words,* "consists in the enforcement by government of land titles which do not rest upon personal occupancy and cultivation." *[**The Anarchist Reader**, p. 150] So it should be remembered that common land did **not** include the large holdings of members of the feudal aristocracy and other landlords. This helped to artificially limit available land and produce a rural proletariat just as much as enclosures.*

It is important to remember that wage labour first developed on the land and it was the protection of land titles of landlords and nobility, combined with enclosure, that meant people could not just work their own land. The pressing economic circumstances created by enclosing the land and enforcing property rights to large estates ensured that capitalists did not have to point a gun at people's heads to get them to work long hours in authoritarian, dehumanising conditions. In such circumstances, when the majority are dispossessed and face the threat of starvation, poverty, homelessness and so on, "initiation of force" is **not required.** But guns **were** required to enforce the system of private property that created the labour market in the first place, to enclosure common land and protect the estates of the nobility and wealthy.

By decreasing the availability of land for rural people, the enclosures destroyed working-class independence. Through these Acts, innumerable peasants were excluded from access to their former means of livelihood, forcing them to seek work from landlords or to migrate to the cities to seek work in the newly emerging factories of the budding industrial capitalists who were thus provided with a ready source of cheap labour. The capitalists, of course, did not describe the results this way, but attempted to obfuscate the issue with their usual rhetoric about civilisation and progress. Thus John Bellers, a 17th-century supporter of enclosures, claimed that commons were *"a hindrance to Industry, and ... Nurseries of Idleness and Insolence."* The *"forests and great Commons make the Poor that are upon them too much like the **indians.**"* [quoted by Thompson, **Op. Cit.**, p. 165] Elsewhere Thompson argues that the commons *"were now seen as a dangerous centre of indiscipline ... Ideology was added to self-interest. It became a matter of public-spirited policy for gentlemen to remove cottagers from the commons, reduce his labourers to dependence."* [**The Making of the English Working Class**, pp. 242–3] David McNally confirms this, arguing *"it was precisely these elements of material and spiritual independence that many of the most outspoken advocates of enclosure sought to destroy."* Eighteenth-century proponents of enclosure *"were remarkably forthright in this respect. Common rights and access to common lands, they argued, allowed a degree of social and economic independence, and thereby produced a lazy, dissolute mass of rural poor who eschewed honest labour and church attendance ... Denying such people common lands and common rights would force them to conform to the harsh discipline imposed by the market in labour."* [**Against the Market**, p. 19]

The commons gave working-class people a degree of independence which allowed them to be "insolent" to their betters. This had to be stopped, as it undermined to the very roots of authority relationships within society. The commons **increased** freedom for ordinary people and made them less willing to follow orders and accept wage labour. The reference to "Indians" is important, as the independence and freedom of Native Americans is well documented. The

common feature of both cultures was communal ownership of the means of production and free access to it (usufruct). This is discussed further in section I.7 (Won't Libertarian Socialism destroy individuality?). As Bookchin stressed, the factory *"was not born from a need to integrate labour with modern machinery,"* rather it was to regulate labour and make it regular. For the *"irregularity, or 'naturalness,' in the rhythm and intensity of traditional systems of work contributed more towards the bourgeoisie's craze for social control and its savagely anti-naturalistic outlook than did the prices or earnings demanded by its employees. More than any single technical factor, this irregularity led to the rationalisation of labour under a single ensemble of rule, to a discipline of work and regulation of time that yielded the modern factory ... the initial goal of the factory was to dominate labour and destroy the worker's independence from capital."* [**The Ecology of Freedom** p. 406]

Hence the pressing need to break the workers' ties with the land and so the *"loss of this independence included the loss of the worker's contact with food cultivation ... To live in a cottage ... often meant to cultivate a family garden, possibly to pasture a cow, to prepare one's own bread, and to have the skills for keeping a home in good repair. To utterly erase these skills and means of a livelihood from the worker's life became an industrial imperative."* Thus the worker's *"complete dependence on the factory and on an industrial labour market was a compelling precondition for the triumph of industrial society ... The need to destroy whatever independent means of life the worker could garner ... all involved the issue of reducing the proletariat to a condition of total powerlessness in the face of capital. And with that powerlessness came a supineness, a loss of character and community, and a decline in moral fibre."* [Bookchin, **Op. Cit.,**, pp. 406–7] Unsurprisingly, there was a positive association between enclosure and migration out of villages and a *"definite correlation ... between the extent of enclosure and reliance on poor rates ... parliamentary enclosure resulted in out-migration and a higher level of pauperisation."* Moreover, *"the standard of living was generally much higher in those areas where labourer managed to combine industrial work with farming ... Access to commons meant that labourers could graze animals, gather wood, stones and gravel, dig coal, hunt and fish. These rights often made the difference between subsistence and abject poverty."* [David McNally, **Op. Cit.**, p. 14 and p. 18] Game laws also ensured that the peasantry and servants could not legally hunt for food as from the time of Richard II (1389) to 1831, no person could kill game unless qualified by estate or social standing.

The enclosure of the commons (in whatever form it took — see section F.8.5 for the US equivalent) solved both problems — the high cost of labour, and the freedom and dignity of the worker. The enclosures perfectly illustrate the principle that capitalism requires a state to ensure that the majority of people do not have free access to any means of livelihood and so must sell themselves to capitalists in order to survive. There is no doubt that if the state had "left alone" the European peasantry, allowing them to continue their collective farming practices ("collective farming" because, as Kropotkin shows, the peasants not only shared the land but much of the farm labour as well), capitalism could not have taken hold (see **Mutual Aid** for more on the European enclosures [pp. 184–189]). As Kropotkin notes, *"[i]nstances of commoners themselves dividing their lands were rare, everywhere the State coerced them to enforce the division, or simply favoured the private appropriation of their lands"* by the nobles and wealthy. Thus *"to speak of the natural death of the village community [or the commons] in virtue of economical law is as grim a joke as to speak of the natural death of soldiers slaughtered on a battlefield."* [**Mutual Aid**, p. 188 and p. 189]

Once a labour market **was** created by means of enclosure and the land monopoly, the state did **not** passively let it work. When market conditions favoured the working class, the state took heed of the calls of landlords and capitalists and intervened to restore the "natural" order. The

state actively used the law to lower wages and ban unions of workers for centuries. In Britain, for example, after the Black Death there was a "servant" shortage. Rather than allow the market to work its magic, the landlords turned to the state and the result was ***"the Statute of Labourers"*** of 1351:

> *"Whereas late against the malice of servants, which were idle, and not willing to serve after the pestilence, without taking excessive wages, it was ordained by our lord the king ... that such manner of servants ... should be bound to serve, receiving salary and wages, accustomed in places where they ought to serve in the twentieth year of the reign of the king that now is, or five or six years before; and that the same servants refusing to serve in such manner should be punished by imprisonment of their bodies ... now forasmuch as it is given the king to understand in this present parliament, by the petition of the commonalty, that the said servants having no regard to the said ordinance, .. to the great damage of the great men, and impoverishing of all the said commonalty, whereof the said commonalty prayeth remedy: wherefore in the said parliament, by the assent of the said prelates, earls, barons, and other great men, and of the same commonalty there assembled, to refrain the malice of the said servants, be ordained and established the things underwritten."*

Thus state action was required because labourers had increased bargaining power and commanded higher wages which, in turn, led to inflation throughout the economy. In other words, an early version of the NAIRU (see section C.9). In one form or another this statute remained in force right through to the 19th century (later versions made it illegal for employees to "conspire" to fix wages, i.e., to organise to demand wage increases). Such measures were particularly sought when the labour market occasionally favoured the working class. For example, *"[a]fter the Restoration [of the English Monarchy],"* noted Dobb, *"when labour-scarcity had again become a serious complaint and the propertied class had been soundly frightened by the insubordination of the Commonwealth years, the clamour for legislative interference to keep wages low, to drive the poor into employment and to extend the system of workhouses and 'houses of correction' and the farming out of paupers once more reached a crescendo."* The same occurred on Continental Europe. [**Op. Cit.**, p. 234]

So, time and again employers called on the state to provide force to suppress the working class, artificially lower wages and bolster their economic power and authority. While such legislation was often difficult to enforce and often ineffectual in that real wages did, over time, increase, the threat and use of state coercion would ensure that they did not increase as fast as they may otherwise have done. Similarly, the use of courts and troops to break unions and strikes helped the process of capital accumulation immensely. Then there were the various laws used to control the free movement of workers. *"For centuries,"* notes Colin Ward, *"the lives of the poor majority in rural England were dominated by the Poor law and its ramifications, like the Settlement Act of 1697 which debarred strangers from entering a parish unless they had a Settlement Certificate in which their home parish agreed to take them back if they became in need of poor relief. Like the Workhouse, it was a hated institution that lasted into the 20th century."* [**Op. Cit.**, p. 31]

As Kropotkin stressed, *"it was the State which undertook to settle .. . griefs"* between workers and bosses *"so as to guarantee a 'convenient' livelihood"* (convenient for the masters, of course). It also acted *"severely to prohibit all combinations ... under the menace of severe punishments ... Both*

in the town and in the village the State reigned over loose aggregations of individuals, and was ready to prevent by the most stringent measures the reconstitution of any sort of separate unions among them." Workers who formed unions *"were prosecuted wholesale under the Master and Servant Act — workers being summarily arrested and condemned upon a mere complaint of misbehaviour lodged by the master. Strikes were suppressed in an autocratic way ... to say nothing of the military suppression of strike riots ... To practice mutual support under such circumstances was anything but an easy task ... After a long fight, which lasted over a hundred years, the right of combing together was conquered.*" [**Mutual Aid**, p. 210 and p. 211] It took until 1813 until the laws regulating wages were repealed while the laws against combinations remained until 1825 (although that did not stop the Tolpuddle Martyrs being convicted of "administering an illegal oath" and deported to Tasmania in 1834). Fifty years later, the provisions of the statues of labourers which made it a civil action if the boss broke his contract but a criminal action if the worker broke it were repealed. Trade unions were given legal recognition in 1871 while, at the same time, another law limited what the workers could do in a strike or lockout. The British ideals of free trade never included freedom to organise.

(Luckily, by then, economists were at hand to explain to the workers that organising to demand higher wages was against their own self-interest. By a strange coincidence, all those laws against unions had actually **helped** the working class by enforcing the necessary conditions for perfect competition in labour market! What are the chances of that? Of course, while considered undesirable from the perspective of mainstream economists — and, by strange co-incidence, the bosses — unions are generally not banned these days but rather heavily regulated. The freedom loving, deregulating Thatcherites passed six Employment Acts between 1980 and 1993 restricting industrial action by requiring pre-strike ballots, outlawing secondary action, restricting picketing and giving employers the right to seek injunctions where there is doubt about the legality of action — in the workers' interest, of course as, for some reason, politicians, bosses and economists have always known what best for trade unionists rather than the trade unionists themselves. And if they objected, well, that was what the state was for.)

So to anyone remotely familiar with working class history the notion that there could be an economic theory which ignores power relations between bosses and workers is a particularly self-serving joke. Economic relations always have a power element, even if only to protect the property and power of the wealthy — the Invisible Hand always counts on a very visible Iron Fist when required. As Kropotkin memorably put it, the rise of capitalism has always seen the State *"tighten the screw for the worker"* and *"impos[ing] industrial serfdom."* So what the bourgeoisie *"swept away as harmful to industry"* was anything considered as *"useless and harmful"* but that class *"was at pains not to sweep away was the power of the State over industry, over the factory serf."* Nor should the role of public schooling be overlooked, within which *"the spirit of voluntary servitude was always cleverly cultivated in the minds of the young, and still is, in order to perpetuate the subjection of the individual to the State."* [**The State: Its Historic Role**, pp. 52–3 and p. 55] Such education also ensured that children become used to the obedience and boredom required for wage slavery.

Like the more recent case of fascist Chile, "free market" capitalism was imposed on the majority of society by an elite using the authoritarian state. This was recognised by Adam Smith when he opposed state intervention in **The Wealth of Nations**. In Smith's day, the government was openly and unashamedly an instrument of wealth owners. Less than 10 per cent of British men (and no women) had the right to vote. When Smith opposed state interference, he was opposing

the imposition of wealth owners' interests on everybody else (and, of course, how "liberal", never mind "libertarian", is a political system in which the many follow the rules and laws set-down in the so-called interests of all by the few? As history shows, any minority given, or who take, such power **will** abuse it in their own interests). Today, the situation is reversed, with neo-liberals and right-"libertarians" opposing state interference in the economy (e.g. regulation of Big Business) so as to prevent the public from having even a minor impact on the power or interests of the elite. The fact that "free market" capitalism always requires introduction by an authoritarian state should make all honest "Libertarians" ask: How "free" is the "free market"?

F.8.4 Aren't the enclosures a socialist myth?

The short answer is no, they are not. While a lot of historical analysis has been spent in trying to deny the extent and impact of the enclosures, the simple fact is (in the words of noted historian E.P. Thompson) enclosure *"was a plain enough case of class robbery, played according to the fair rules of property and law laid down by a parliament of property-owners and lawyers."* [**The Making of the English Working Class**, pp. 237–8]

The enclosures were one of the ways that the *"land monopoly"* was created. The land monopoly referred to feudal and capitalist property rights and ownership of land by (among others) the Individualist Anarchists. Instead of an *"occupancy and use"* regime advocated by anarchists, the land monopoly allowed a few to bar the many from the land — so creating a class of people with nothing to sell but their labour. While this monopoly is less important these days in developed nations (few people know how to farm) it was essential as a means of consolidating capitalism. Given the choice, most people preferred to become independent farmers rather than wage workers (see next section). As such, the *"land monopoly"* involves more than simply enclosing common land but also enforcing the claims of landlords to areas of land greater than they can work by their own labour.

Needless to say, the titles of landlords and the state are generally ignored by supporters of capitalism who tend to concentrate on the enclosure movement in order to downplay its importance. Little wonder, for it is something of an embarrassment for them to acknowledge that the creation of capitalism was somewhat less than "immaculate" — after all, capitalism is portrayed as an almost ideal society of freedom. To find out that an idol has feet of clay and that we are still living with the impact of its origins is something pro-capitalists must deny. So **are** the enclosures a socialist myth? Most claims that it is flow from the work of the historian J.D. Chambers' famous essay *"Enclosures and the Labour Supply in the Industrial Revolution."* [**Economic History Review**, 2nd series, no. 5, August 1953] In this essay, Chambers attempts to refute Karl Marx's account of the enclosures and the role it played in what Marx called *"primitive accumulation."*

We cannot be expected to provide an extensive account of the debate that has raged over this issue (Colin Ward notes that *"a later series of scholars have provided locally detailed evidence that reinforces"* the traditional socialist analysis of enclosure and its impact. [**Cotters and Squatters**, p. 143]). All we can do is provide a summary of the work of William Lazonick who presented an excellent reply to those who claim that the enclosures were an unimportant historical event (see his *"Karl Marx and Enclosures in England."* [**Review of Radical Political Economy**, no. 6, pp. 1–32]). Here, we draw upon his subsequent summarisation of his critique provided in his books

Competitive Advantage on the Shop Floor and **Business Organisation and the Myth of the Market Economy**.

There are three main claims against the socialist account of the enclosures. We will cover each in turn.

Firstly, it is often claimed that the enclosures drove the uprooted cottager and small peasant into industry. However, this was never claimed. As Lazonick stresses while some economic historians *"have attributed to Marx the notion that, in one fell swoop, the enclosure movement drove the peasants off the soil and into the factories. Marx did not put forth such a simplistic view of the rise of a wage-labour force ... Despite gaps and omission in Marx's historical analysis, his basic arguments concerning the creation of a landless proletariat are both important and valid. The transformations of social relations of production and the emergence of a wage-labour force in the agricultural sector were the critical preconditions for the Industrial Revolution."* [**Competitive Advantage on the Shop Floor**, pp. 12–3]

It is correct, as the critics of Marx stress, that the agricultural revolution associated with the enclosures **increased** the demand for farm labour as claimed by Chambers and others. And this is the whole point — enclosures created a pool of dispossessed labourers who had to sell their time/liberty to survive and whether this was to a landlord or an industrialist is irrelevant (as Marx himself stressed). As such, the account by Chambers, ironically, *"confirms the broad outlines of Marx's arguments"* as it implicitly acknowledges that *"over the long run the massive reallocation of access to land that enclosures entailed resulted in the separation of the mass of agricultural producers from the means of production."* So the *"critical transformation was not the level of agricultural employment before and after enclosure but the changes in employment relations caused by the reorganisation of landholdings and the reallocation of access to land."* [**Op. Cit.**, p. 29, pp. 29–30 and p. 30] Thus the key feature of the enclosures was that it created a supply for farm labour, a supply that had no choice but to work for another. Once freed from the land, these workers could later move to the towns in search for better work:

> *"Critical to the Marxian thesis of the origins of the industrial labour force is the transformation of the social relations of agriculture and the creation, in the first instance, of an agricultural wage-labour force that might eventually, perhaps through market incentives, be drawn into the industrial labour force."* [**Business Organisation and the Myth of the Market Economy**, p. 273]

In summary, when the critics argue that enclosures increased the demand for farm labour they are not refuting Marx but confirming his analysis. This is because the enclosures had resulted in a transformation in employment relations in agriculture with the peasants and farmers turned into wage workers for landlords (i.e., rural capitalists). For if wage labour is the defining characteristic of capitalism then it matters little if the boss is a farmer or an industrialist. This means that the *"critics, it turns out, have not differed substantially with Marx on the facts of agricultural transformation. But by ignoring the historical and theoretical significance of the resultant changes in the social relations of* ***agricultural*** *production, the critics have missed Marx's main point."* [**Competitive Advantage on the Shop Floor**, p. 30]

Secondly, it is argued that the number of small farm owners increased, or at least did not greatly decline, and so the enclosure movement was unimportant. Again, this misses the point. Small farm owners can still employ wage workers (i.e. become capitalist farmers as opposed to

"yeomen" — an independent peasant proprietor). As Lazonick notes, *"[i]t is true that after 1750 some petty proprietors continued to occupy and work their own land. But in a world of capitalist agriculture, the yeomanry no longer played an important role in determining the course of capitalist agriculture. As a social class that could influence the evolution of British economy society, the yeomanry had disappeared."* Moreover, Chambers himself acknowledged that for the poor without legal rights in land, then enclosure injured them. For *"the majority of the agricultural population ... had only customary rights. To argue that these people were not treated unfairly because they did not possess legally enforceable property rights is irrelevant to the fact that they were dispossessed by enclosures. Again, Marx's critics have failed to address the issue of the transformation of access to the means of production as a precondition for the Industrial Revolution."* [**Op. Cit.**, p. 32 and p. 31]

Thirdly, it is often claimed that it was population growth, rather than enclosures, that caused the supply of wage workers. So was population growth more important than enclosures? Given that enclosure impacted on the individuals and social customs of the time, it is impossible to separate the growth in population from the social context in which it happened. As such, the population argument ignores the question of whether the changes in society caused by enclosures and the rise of capitalism have an impact on the observed trends towards earlier marriage and larger families after 1750. Lazonick argues that *"[t]here is reason to believe that they did."* [**Op. Cit.**, p. 33] Overall, Lazonick notes that *"[i]t can even be argued that the changed social relations of agriculture altered the constraints on early marriage and incentives to childbearing that contributed to the growth in population. The key point is that transformations in social relations in production can influence, and have influenced, the quantity of wage labour supplied on both agricultural and industrial labour markets. To argue that population growth created the industrial labour supply is to ignore these momentous social transformations"* associated with the rise of capitalism. [**Business Organisation and the Myth of the Market Economy**, p. 273]

In other words, there is good reason to think that the enclosures, far from being some kind of socialist myth, in fact played a key role in the development of capitalism. As Lazonick notes, *"Chambers misunderstood"* the *"argument concerning the 'institutional creation' of a proletarianised (i.e. landless) workforce. Indeed, Chamber's own evidence and logic tend to support the Marxian [and anarchist!] argument, when it is properly understood."* [**Op. Cit.**, p. 273]

Lastly, it must be stressed that this process of dispossession happened over hundreds of years. It was not a case of simply driving peasants off their land and into factories. In fact, the first acts of expropriation took place in agriculture and created a rural proletariat which had to sell their labour/liberty to landlords and it was the second wave of enclosures, in the eighteenth and nineteenth centuries, that was closely connected with the process of industrialisation. The enclosure movement, moreover, was imposed in an uneven way, affecting different areas at different times, depending on the power of peasant resistance and the nature of the crops being grown (and other objective conditions). Nor was it a case of an instant transformation — for a long period this rural proletariat was not totally dependent on wages, still having some access to the land and wastes for fuel and food. So while rural wage workers did exist throughout the period from 1350 to the 1600s, capitalism was not fully established in Britain yet as such people comprised only a small proportion of the labouring classes. The acts of enclosure were just one part of a long process by which a proletariat was created.

F.8.5 What about the lack of enclosures in the Americas?

The enclosure movement was but one part of a wide-reaching process of state intervention in creating capitalism. Moreover, it is just one way of creating the *"land monopoly"* which ensured the creation of a working class. The circumstances facing the ruling class in the Americas were distinctly different than in the Old World and so the "land monopoly" took a different form there. In the Americas, enclosures were unimportant as customary land rights did not really exist (at least once the Native Americans were eliminated by violence). Here the problem was that (after the original users of the land were eliminated) there were vast tracts of land available for people to use. Other forms of state intervention were similar to that applied under mercantilism in Europe (such as tariffs, government spending, use of unfree labour and state repression of workers and their organisations and so on). All had one aim, to enrich and power the masters and dispossess the actual producers of the means of life (land and means of production).

Unsurprisingly, due to the abundance of land, there was a movement towards independent farming in the early years of the American colonies and subsequent Republic and this pushed up the price of remaining labour on the market by reducing the supply. Capitalists found it difficult to find workers willing to work for them at wages low enough to provide them with sufficient profits. It was due to the difficulty in finding cheap enough labour that capitalists in America turned to slavery. All things being equal, wage labour **is** more productive than slavery but in early America all things were **not** equal. Having access to cheap (indeed, free) land meant that working people had a choice, and few desired to become wage slaves and so because of this, capitalists turned to slavery in the South and the "land monopoly" in the North.

This was because, in the words of Maurice Dobb, it *"became clear to those who wished to reproduce capitalist relations of production in the new country that the foundation-stone of their endeavour must be the restriction of land-ownership to a minority and the exclusion of the majority from any share in [productive] property."* [**Studies in Capitalist Development**, pp. 221–2] As one radical historian puts it, *"[w]hen land is 'free' or 'cheap'. as it was in different regions of the United States before the 1830s, there was no compulsion for farmers to introduce labour-saving technology. As a result, 'independent household production' ... hindered the development of capitalism ... [by] allowing large portions of the population to escape wage labour."* [Charlie Post, *"The 'Agricultural Revolution' in the United States"*, pp. 216–228, **Science and Society**, vol. 61, no. 2, p. 221]

It was precisely this option (i.e. of independent production) that had to be destroyed in order for capitalist industry to develop. The state had to violate the holy laws of "supply and demand" by controlling the access to land in order to ensure the normal workings of "supply and demand" in the labour market (i.e. that the bargaining position favoured employer over employee). Once this situation became the typical one (i.e., when the option of self-employment was effectively eliminated) a more (protectionist based) "laissez-faire" approach could be adopted, with state action used indirectly to favour the capitalists and landlords (and readily available to protect private property from the actions of the dispossessed).

So how was this transformation of land ownership achieved?

Instead of allowing settlers to appropriate their own farms as was often the case before the 1830s, the state stepped in once the army had cleared out (usually by genocide) the original users. Its first major role was to enforce legal rights of property on unused land. Land stolen from the Native Americans was sold at auction to the highest bidders, namely speculators, who then sold it on to farmers. This process started right *"after the revolution, [when] huge sections of*

land were bought up by rich speculators" and their claims supported by the law. [Howard Zinn, **A People's History of the United States**, p. 125] Thus land which should have been free was sold to land-hungry farmers and the few enriched themselves at the expense of the many. Not only did this increase inequality within society, it also encouraged the development of wage labour — having to pay for land would have ensured that many immigrants remained on the East Coast until they had enough money. Thus a pool of people with little option but to sell their labour was increased due to state protection of unoccupied land. That the land usually ended up in the hands of farmers did not (could not) countermand the shift in class forces that this policy created.

This was also the essential role of the various "Homesteading Acts" and, in general, the *"Federal land law in the 19th century provided for the sale of most of the public domain at public auction to the higher bidder ... Actual settlers were forced to buy land from speculators, at prices considerably above the federal minimal price."* (which few people could afford anyway). [Charlie Post, **Op. Cit.**, p. 222] This is confirmed by Howard Zinn who notes that 1862 Homestead Act *"gave 160 acres of western land, unoccupied and publicly owned, to anyone who would cultivate it for five years ... Few ordinary people had the $200 necessary to do this; speculators moved in and bought up much of the land. Homestead land added up to 50 million acres. But during the Civil War, over 100 million acres were given by Congress and the President to various railroads, free of charge."* [**Op. Cit.**, p. 233] Little wonder the Individualist Anarchists supported an *"occupancy and use"* system of land ownership as a key way of stopping capitalist and landlord usury as well as the development of capitalism itself.

This change in the appropriation of land had significant effects on agriculture and the desirability of taking up farming for immigrants. As Post notes, *"[w]hen the social conditions for obtaining and maintaining possession of land change, as they did in the Midwest between 1830 and 1840, pursuing the goal of preserving [family ownership and control] .. . produced very different results. In order to pay growing mortgages, debts and taxes, family farmers were compelled to specialise production toward cash crops and to market more and more of their output."* [**Op. Cit.**, p. 221–2]

So, in order to pay for land which was formerly free, farmers got themselves into debt and increasingly turned to the market to pay it off. Thus, the *"Federal land system, by transforming land into a commodity and stimulating land speculation, made the Midwestern farmers dependent upon markets for the continual possession of their farms."* Once on the market, farmers had to invest in new machinery and this also got them into debt. In the face of a bad harvest or market glut, they could not repay their loans and their farms had to be sold to so do so. By 1880, 25% of all farms were rented by tenants, and the numbers kept rising. In addition, the *"transformation of social property relations in northern agriculture set the stage for the 'agricultural revolution' of the 1840s and 1850s ... [R]ising debts and taxes forced Midwestern family farmers to compete as commodity producers in order to maintain their land-holding ... The transformation ... was the central precondition for the development of industrial capitalism in the United States."* [Charlie Post, **Op. Cit.**, p. 223 and p. 226]

It should be noted that feudal land owning was enforced in many areas of the colonies and the early Republic. Landlords had their holdings protected by the state and their demands for rent had the full backing of the state. This lead to numerous anti-rent conflicts. [Howard Zinn, **A People's History of the United States**, p. 84 and pp. 206–11] Such struggles helped end such arrangements, with landlords being "encouraged" to allow the farmers to buy the land which was rightfully theirs. The wealth appropriated from the farmers in the form of rent and the price of the land could then be invested in industry so transforming feudal relations on the land into

capitalist relations in industry (and, eventually, back on the land when the farmers succumbed to the pressures of the capitalist market and debt forced them to sell).

This means that Murray Rothbard's comment that *"once the land was purchased by the settler, the injustice disappeared"* is nonsense — the injustice was transmitted to other parts of society and this, the wider legacy of the original injustice, lived on and helped transform society towards capitalism. In addition, his comment about *"the establishment in North America of a truly libertarian land system"* would be one the Individualist Anarchists of the period would have seriously disagreed with! [**The Ethics of Liberty**, p. 73] Rothbard, at times, seems to be vaguely aware of the importance of land as the basis of freedom in early America. For example, he notes in passing that *"the abundance of fertile virgin land in a vast territory enabled individualism to come to full flower in many areas."* [**Conceived in Liberty**, vol. 2, p. 186] Yet he did not ponder the transformation in social relationships which would result when that land was gone. In fact, he was blasé about it. *"If latecomers are worse off,"* he opined, *"well then that is their proper assumption of risk in this free and uncertain world. There is no longer a vast frontier in the United States, and there is no point crying over the fact."* [**The Ethics of Liberty**, p. 240] Unsurprisingly we also find Murray Rothbard commenting that Native Americans *"lived under a collectivistic regime that, for land allocation, was scarcely more just than the English governmental land grab."* [**Conceived in Liberty**, vol. 1, p. 187] That such a regime made for **increased** individual liberty and that it was precisely the independence from the landlord and bosses this produced which made enclosure and state land grabs such appealing prospects for the ruling class was lost on him.

Unlike capitalist economists, politicians and bosses at the time, Rothbard seemed unaware that this *"vast frontier"* (like the commons) was viewed as a major problem for maintaining labour discipline and appropriate state action was taken to reduce it by restricting free access to the land in order to ensure that workers were dependent on wage labour. Many early economists recognised this and advocated such action. Edward Wakefield was typical when he complained that *"where land is cheap and all are free, where every one who so pleases can easily obtain a piece of land for himself, not only is labour dear, as respects the labourer's share of the product, but the difficulty is to obtain combined labour at any price."* This resulted in a situation were few *"can accumulate great masses of wealth"* as workers *"cease ... to be labourers for hire; they ... become independent landowners, if not competitors with their former masters in the labour market."* Unsurprisingly, Wakefield urged state action to reduce this option and ensure that labour become cheap as workers had little choice but to seek a master. One key way was for the state to seize the land and then sell it to the population. This would ensure that *"no labourer would be able to procure land until he had worked for money"* and this *"would produce capital for the employment of more labourers."* [quoted by Marx, **Op. Cit.,** , p. 935, p. 936 and p. 939] Which is precisely what did occur.

At the same time that it excluded the working class from virgin land, the state granted large tracts of land to the privileged classes: to land speculators, logging and mining companies, planters, railroads, and so on. In addition to seizing the land and distributing it in such a way as to benefit capitalist industry, the *"government played its part in helping the bankers and hurting the farmers; it kept the amount of money – based in the gold supply — steady while the population rose, so there was less and less money in circulation. The farmer had to pay off his debts in dollars that were harder to get. The bankers, getting loans back, were getting dollars worth more than when they loaned them out — a kind of interest on top of interest. That was why so much of the talk of*

farmers' movements in those days had to do with putting more money in circulation." [Zinn, **Op. Cit.**, p. 278] This was the case with the Individualist Anarchists at the same time, we must add.

Overall, therefore, state action ensured the transformation of America from a society of independent workers to a capitalist one. By creating and enforcing the "land monopoly" (of which state ownership of unoccupied land and its enforcement of landlord rights were the most important) the state ensured that the balance of class forces tipped in favour of the capitalist class. By removing the option of farming your own land, the US government created its own form of enclosure and the creation of a landless workforce with little option but to sell its liberty on the "free market". They was nothing "natural" about it. Little wonder the Individualist Anarchist J.K. Ingalls attacked the "land monopoly" with the following words:

> *"The earth, with its vast resources of mineral wealth, its spontaneous productions and its fertile soil, the free gift of God and the common patrimony of mankind, has for long centuries been held in the grasp of one set of oppressors by right of conquest or right of discovery; and it is now held by another, through the right of purchase from them. All of man's natural possessions ... have been claimed as property; nor has man himself escaped the insatiate jaws of greed. The invasion of his rights and possessions has resulted ... in clothing property with a power to accumulate an income.*" [quoted by James Martin, **Men Against the State**, p. 142]

Marx, correctly, argued that *"the capitalist mode of production and accumulation, and therefore capitalist private property, have for their fundamental condition the annihilation of that private property which rests on the labour of the individual himself; in other words, the expropriation of the worker.*" [**Capital**, Vol. 1, p. 940] He noted that to achieve this, the state is used:

> *"How then can the anti-capitalistic cancer of the colonies be healed? . .. Let the Government set an artificial price on the virgin soil, a price independent of the law of supply and demand, a price that compels the immigrant to work a long time for wages before he can earn enough money to buy land, and turn himself into an independent farmer."* [**Op. Cit.**, p. 938]

Moreover, tariffs were introduced with *"the objective of manufacturing capitalists artificially"* for the *"system of protection was an artificial means of manufacturing manufacturers, or expropriating independent workers, of capitalising the national means of production and subsistence, and of forcibly cutting short the transition ... to the modern mode of production,"* to capitalism [**Op. Cit.**, p. 932 and pp. 921–2]

So mercantilism, state aid in capitalist development, was also seen in the United States of America. As Edward Herman points out, the *"level of government involvement in business in the United States from the late eighteenth century to the present has followed a U-shaped pattern: There was extensive government intervention in the pre-Civil War period (major subsidies, joint ventures with active government participation and direct government production), then a quasi-laissez faire period between the Civil War and the end of the nineteenth century [a period marked by "the aggressive use of tariff protection" and state supported railway construction, a key factor in capitalist expansion in the USA], followed by a gradual upswing of government intervention in the twentieth century, which accelerated after 1930.*" [**Corporate Control, Corporate Power**, p. 162]

Such intervention ensured that income was transferred from workers to capitalists. Under state protection, America industrialised by forcing the consumer to enrich the capitalists and increase their capital stock. *"According to one study, if the tariff had been removed in the 1830s 'about half the industrial sector of New England would have been bankrupted' ... the tariff became a near-permanent political institution representing government assistance to manufacturing. It kept price levels from being driven down by foreign competition and thereby shifted the distribution of income in favour of owners of industrial property to the disadvantage of workers and customers."* This protection was essential, for the *"end of the European wars in 1814 ... reopened the United States to a flood of British imports that drove many American competitors out of business. Large portions of the newly expanded manufacturing base were wiped out, bringing a decade of near-stagnation."* Unsurprisingly, the *"era of protectionism began in 1816, with northern agitation for higher tariffs."* [Richard B. Du Boff, **Accumulation and Power**, p. 56, p. 14 and p. 55] Combined with ready repression of the labour movement and government "homesteading" acts (see section F.8.5), tariffs were the American equivalent of mercantilism (which, after all, was above all else a policy of protectionism, i.e. the use of government to stimulate the growth of native industry). Only once America was at the top of the economic pile did it renounce state intervention (just as Britain did, we must note).

This is **not** to suggest that government aid was limited to tariffs. The state played a key role in the development of industry and manufacturing. As John Zerzan notes, the *"role of the State is tellingly reflected by the fact that the 'armoury system' now rivals the older 'American system of manufactures' term as the more accurate to describe the new system of production methods"* developed in the early 1800s. [**Elements of Refusal**, p. 100] By the middle of the nineteenth century *"a distinctive 'American system of manufactures' had emerged . .. The lead in technological innovation [during the US Industrial Revolution] came in armaments where assured government orders justified high fixed-cost investments in special-pursue machinery and managerial personnel. Indeed, some of the pioneering effects occurred in government-owned armouries."* Other forms of state aid were used, for example the textile industry *"still required tariffs to protect [it] from ... British competition."* [William Lazonick, **Competitive Advantage on the Shop Floor**, p. 218 and p. 219] The government also *"actively furthered this process [of 'commercial revolution'] with public works in transportation and communication."* In addition to this "physical" aid, *"state government provided critical help, with devices like the chartered corporation"* [Richard B. Du Boff, **Op. Cit.**, p. 15] As we noted in section B.2.5, there were changes in the legal system which favoured capitalist interests over the rest of society.

Nineteenth-century America also went in heavily for industrial planning – occasionally under that name but more often in the name of national defence. The military was the excuse for what is today termed rebuilding infrastructure, picking winners, promoting research, and co-ordinating industrial growth (as it still is, we should add). As Richard B. Du Boff points out, the "anti-state" backlash of the 1840s onwards in America was highly selective, as the general opinion was that *"[h]enceforth, if governments wished to subsidise private business operations, there would be no objection. But if public power were to be used to control business actions or if the public sector were to undertake economic initiatives on its own, it would run up against the determined opposition of private capital."* [**Op. Cit.**, p. 26]

State intervention was not limited to simply reducing the amount of available land or enforcing a high tariff. *"Given the independent spirit of workers in the colonies, capital understood that great profits required the use of unfree labour."* [Michael Perelman, **The Invention of Capitalism**, p.

246] It was also applied in the labour market as well. Most obviously, it enforced the property rights of slave owners (until the civil war, produced when the pro-free trade policies of the South clashed with the pro-tariff desires of the capitalist North). The evil and horrors of slavery are well documented, as is its key role in building capitalism in America and elsewhere so we will concentrate on other forms of obviously unfree labour. Convict labour in Australia, for example, played an important role in the early days of colonisation while in America indentured servants played a similar role.

Indentured service was a system whereby workers had to labour for a specific number of years usually in return for passage to America with the law requiring the return of runaway servants. In theory, of course, the person was only selling their labour. In practice, indentured servants were basically slaves and the courts enforced the laws that made it so. The treatment of servants was harsh and often as brutal as that inflicted on slaves. Half the servants died in the first two years and unsurprisingly, runaways were frequent. The courts realised this was a problem and started to demand that everyone have identification and travel papers.

It should also be noted that the practice of indentured servants also shows how state intervention in one country can impact on others. This is because people were willing to endure indentured service in the colonies because of how bad their situation was at home. Thus the effects of primitive accumulation in Britain impacted on the development of America as most indentured servants were recruited from the growing number of unemployed people in urban areas there. Dispossessed from their land and unable to find work in the cities, many became indentured servants in order to take passage to the Americas. In fact, between one half to two thirds of all immigrants to Colonial America arrived as indentured servants and, at times, three-quarters of the population of some colonies were under contracts of indenture. That this allowed the employing class to overcome their problems in hiring "help" should go without saying, as should its impact on American inequality and the ability of capitalists and landlords to enrich themselves on their servants labour and to invest it profitably.

As well as allowing unfree labour, the American state intervened to ensure that the freedom of wage workers was limited in similar ways as we indicated in section F.8.3. *"The changes in social relations of production in artisan trades that took place in the thirty years after 1790,"* notes one historian, *"and the ... trade unionism to which ... it gave rise, both replicated in important respects the experience of workers in the artisan trades in Britain over a rather longer period ... The juridical responses they provoked likewise reproduced English practice. Beginning in 1806, American courts consciously seized upon English common law precedent to combat journeymen's associations."* Capitalists in this era tried to *"secure profit ... through the exercise of disciplinary power over their employees."* To achieve this *"employers made a bid for legal aid"* and it is here *"that the key to law's role in the process of creating an industrial economy in America lies."* As in the UK, the state invented laws and issues proclamations against workers' combinations, calling them conspiracies and prosecuting them as such. Trade unionists argued that laws which declared unions as illegal combinations should be repealed as against the Constitution of the USA while *"the specific cause of trademens protestations of their right to organise was, unsurprisingly, the willingness of local authorities to renew their resort to conspiracy indictments to countermand the growing power of the union movement."* Using criminal conspiracy to counter combinations among employees was commonplace, with the law viewing a *"collective quitting of employment [as] a criminal interference"* and combinations to raise the rate of labour *"indictable at common law."* [Christopher L. Tomlins, **Law, Labor, and Ideology in the Early American Republic**, p. 113, p. 295, p. 159

and p. 213] By the end of the nineteenth century, state repression for conspiracy was replaced by state repression for acting like a trust while actual trusts were ignored and so laws, ostensibly passed (with the help of the unions themselves) to limit the power of capital, were turned against labour (this should be unsurprising as it was a capitalist state which passed them). [Howard Zinn, **A People's History of the United States**, p. 254]

Another key means to limit the freedom of workers was denying departing workers their wages for the part of the contract they had completed. This *"underscored the judiciary's tendency to articulate their approval"* of the hierarchical master/servant relationship in terms of its *"social utility: It was a necessary and desirable feature of the social organisation of work ... that the employer's authority be reinforced in this way."* Appeals courts held that *"an employment contract was an entire contract, and therefore that no obligation to pay wages existed until the employee had completed the agreed term."* Law suits *"by employers seeking damages for an employee's departure prior to the expiry of an agreed term or for other forms of breach of contract constituted one form of legally sanctioned economic discipline of some importance in shaping the employment relations of the nineteenth century."* Thus the boss could fire the worker without paying their wages while if the worker left the boss he would expect a similar outcome. This was because the courts had decided that the *"employer was entitled not only to receipt of the services contracted for in their entirety prior to payment but also to the obedience of the employee in the process of rendering them."* [Tomlins, **Op. Cit.**, pp. 278–9, p. 274, p. 272 and pp. 279–80] The ability of workers to seek self-employment on the farm or workplace or even better conditions and wages were simply abolished by employers turning to the state.

So, in summary, the state could remedy the shortage of cheap wage labour by controlling access to the land, repressing trade unions as conspiracies or trusts and ensuring that workers had to obey their bosses for the full term of their contract (while the bosses could fire them at will). Combine this with the extensive use of tariffs, state funding of industry and infrastructure among many other forms of state aid to capitalists and we have a situation were capitalism was imposed on a pre-capitalist nation at the behest of the wealthy elite by the state, as was the case with all other countries.

F.8.6 How did working people view the rise of capitalism?

The best example of how hated capitalism was can be seen by the rise and spread of the labour and socialist movements, in all their many forms, across the world. It is no coincidence that the development of capitalism also saw the rise of socialist theories. Nor was it a coincidence that the rising workers movement was subjected to extensive state repression, with unions, strikes and other protests being systematically repressed. Only once capital was firmly entrenched in its market position could economic power come to replace political force (although, of course, that always remained ready in the background to defend capitalist property and power).

The rise of unions, socialism and other reform movements and their repression was a feature of **all** capitalist countries. While America is sometime portrayed as an exception to this, in reality that country was also marked by numerous popular movements which challenged the rise of capitalism and the transformation of social relationships within the economy from artisanal self-management to capitalist wage slavery. As in other countries, the state was always quick to support the capitalist class against their rebellious wage slaves, using first conspiracy and

then anti-trust laws against working class people and their organisations. So, in order to fully understand how different capitalism was from previous economic systems, we will consider early capitalism in the US, which for many right-"libertarians" is **the** example of the "capitalism-equals-freedom" argument.

Early America was pervaded by artisan production — individual ownership of the means of production. Unlike capitalism, this system is **not** marked by the separation of the worker from the means of life. Most people did not have to work for another, and so did not. As Jeremy Brecher notes, in 1831 the *"great majority of Americans were farmers working their own land, primarily for their own needs. Most of the rest were self-employed artisans, merchants, traders, and professionals. Other classes — employees and industrialists in the North, slaves and planters in the South — were relatively small. The great majority of Americans were independent and free from anybody's command."* [**Strike!**, p. xxi] So the availability of land ensured that in America, slavery and indentured servants were the only means by which capitalists could get people to work for them. This was because slaves and servants were not able to leave their masters and become self-employed farmers or artisans. As noted in the last section this material base was, ironically, acknowledged by Rothbard but the implications for freedom when it disappeared was not. While he did not ponder what would happen when that supply of land ended and whether the libertarian aspects of early American society would survive, contemporary politicians, bosses, and economists did. Unsurprisingly, they turned to the state to ensure that capitalism grew on the grave of artisan and farmer property.

Toward the middle of the 19th century the economy began to change. Capitalism began to be imported into American society as the infrastructure was improved by state aid and tariff walls were constructed which allowed home-grown manufacturing companies to develop. Soon, due to (state-supported) capitalist competition, artisan production was replaced by wage labour. Thus "evolved" modern capitalism. Many workers understood, resented, and opposed their increasing subjugation to their employers, which could not be reconciled with the principles of freedom and economic independence that had marked American life and had sunk deeply into mass consciousness during the days of the early economy. In 1854, for example, a group of skilled piano makers hoped that *"the day is far distant when they [wage earners] will so far forget what is due to manhood as to glory in a system forced upon them by their necessity and in opposition to their feelings of independence and self-respect. May the piano trade be spared such exhibitions of the degrading power of the day [wage] system."* [quoted by Brecher and Costello, **Common Sense for Hard Times**, p. 26]

Clearly the working class did not consider working for a daily wage, in contrast to working for themselves and selling their own product, to be a step forward for liberty or individual dignity. The difference between selling the product of one's labour and selling one's labour (i.e. oneself) was seen and condemned (*"[w]hen the producer ... sold his product, he retained himself. But when he came to sell his labour, he sold himself ... the extension [of wage labour] to the skilled worker was regarded by him as a symbol of a deeper change."* [Norman Ware, **The Industrial Worker, 1840–1860**, p. xiv]). Indeed, one group of workers argued that they were *"slaves in the strictest sense of the word"* as they had *"to toil from the rising of the sun to the going down of the same for our masters — aye, masters, and for our daily bread."* [quoted by Ware, **Op. Cit.**, p. 42] Another group argued that *"the factory system contains in itself the elements of slavery, we think no sound reasoning can deny, and everyday continues to add power to its incorporate sovereignty, while the sovereignty of the working people decreases in the same degree."* [quoted by Brecher

and Costello, **Op. Cit.**, p. 29] For working class people, free labour meant something radically different than that subscribed to by employers and economists. For workers, free labour meant economic independence through the ownership of productive equipment or land. For bosses, it meant workers being free of any alternative to consenting to authoritarian organisations within their workplaces — if that required state intervention (and it did), then so be it.

The courts, of course, did their part in ensuring that the law reflected and bolstered the power of the boss rather than the worker. *"Acting piecemeal,"* summarises Tomlins, *"the law courts and law writers of the early republic built their approach to the employment relationship on the back of English master/servant law. In the process, they vested in the generality of nineteenth-century employers a controlling authority over the employees founded upon the pre-industrial master's claim to property in his servant's personal services."* Courts were *"having recourse to master/servant's language of power and control"* as the *"preferred strategy for dealing with the employment relation"* and so advertised their conclusion that *"employment relations were properly to be conceived of as generically hierarchical."* [**Op. Cit.**, p. 231 and p. 225] As we noted in last section the courts, judges and jurists acted to outlaw unions as conspiracies and force workers to work the full length of their contracts. In addition, they also reduced employer liability in industrial accidents (which, of course, helped lower the costs of investment as well as operating costs).

Artisans and farmers correctly saw this as a process of downward mobility toward wage labour and almost as soon as there were wage workers, there were strikes, machine breaking, riots, unions and many other forms of resistance. John Zerzan's argument that there was a *"relentless assault on the worker's historical rights to free time, self-education, craftsmanship, and play was at the heart of the rise of the factory system"* is extremely accurate. [**Elements of Refusal**, p. 105] And it was an assault that workers resisted with all their might. In response to being subjected to the wage labour, workers rebelled and tried to organise themselves to fight the powers that be and to replace the system with a co-operative one. As the printer's union argued, its members *"regard such an organisation [a union] not only as an agent of immediate relief, but also as an essential to the ultimate destruction of those unnatural relations at present subsisting between the interests of the employing and the employed classes ... when labour determines to sell itself no longer to speculators, but to become its own employer, to own and enjoy itself and the fruit thereof, the necessity for scales of prices will have passed away and labour will be forever rescued from the control of the capitalist."* [quoted by Brecher and Costello, **Op. Cit.**, pp. 27–28]

Little wonder, then, why wage labourers considered capitalism as a modified form of slavery and why the term *"wage slavery"* became so popular in the labour and anarchist movements. It was just reflecting the feelings of those who experienced the wages system at first hand and who created the labour and socialist movements in response. As labour historian Norman Ware notes, the *"term 'wage slave' had a much better standing in the forties [of the 19th century] than it has today. It was not then regarded as an empty shibboleth of the soap-box orator. This would suggest that it has suffered only the normal degradation of language, has become a* ***cliche****, not that it is a grossly misleading characterisation."* [**Op. Cit.**, p. xvf] It is no coincidence that, in America, the first manufacturing complex in Lowell was designed to symbolise its goals and its hierarchical structure nor that its design was emulated by many of the penitentiaries, insane asylums, orphanages and reformatories of the period. [Bookchin, **The Ecology of Freedom**, p. 392]

These responses of workers to the experience of wage labour is important as they show that capitalism is by no means "natural." The fact is the first generation of workers tried to avoid

wage labour is at all possible — they hated the restrictions of freedom it imposed upon them. Unlike the bourgeoisie, who positively eulogised the discipline they imposed on others. As one put it with respect to one corporation in Lowell, New England, the factories at Lowell were *"a new world, in its police it is **imperium in imperio**. It has been said that an absolute despotism, justly administered ... would be a perfect government ... For at the same time that it is an absolute despotism, it is a most perfect democracy. Any of its subjects can depart from it at pleasure . .. Thus all the philosophy of mind which enter vitally into government by the people ... is combined with a set of rule which the operatives have no voice in forming or administering, yet of a nature not merely perfectly just, but human, benevolent, patriarchal in a high degree."* Those actually subjected to this *"benevolent"* dictatorship had a somewhat different perspective. Workers, in contrast, were perfectly aware that wage labour was wage slavery — that they were decidedly **unfree** during working hours and subjected to the will of another. The workers therefore attacked capitalism precisely because it was despotism (*"monarchical principles on democratic soil"*) and thought they *"who work in the mills ought to own them."* Unsurprisingly, when workers did revolt against the benevolent despots, the workers noted how the bosses responded by marking *"every person with intelligence and independence ... He is a suspected individual and must be either got rid of or broken in. Hundreds of honest labourers have been dismissed from employment ... because they have been suspected of knowing their rights and daring to assert them."* [quoted by Ware, **Op. Cit.**, p. 78, p. 79 and p. 110]

While most working class people now are accustomed to wage labour (while often hating their job) the actual process of resistance to the development of capitalism indicates well its inherently authoritarian nature and that people were not inclined to accept it as "economic freedom." Only once other options were closed off and capitalists given an edge in the "free" market by state action did people accept and become accustomed to wage labour. As E. P. Thompson notes, for British workers at the end of the 18th and beginning of the 19th centuries, the *"gap in status between a 'servant,' a hired wage-labourer subject to the orders and discipline of the master, and an artisan, who might 'come and go' as he pleased, was wide enough for men to shed blood rather than allow themselves to be pushed from one side to the other. And, in the value system of the community, those who resisted degradation were in the right."* [**The Making of the English Working Class**, p. 599]

Opposition to wage labour and factory fascism was/is widespread and seems to occur wherever it is encountered. *"Research has shown"*, summarises William Lazonick, *"that the 'free-born Englishman' of the eighteenth century — even those who, by force of circumstance, had to submit to agricultural wage labour — tenaciously resisted entry into the capitalist workshop."* [**Competitive Advantage on the Shop Floor**, p. 37] British workers shared the dislike of wage labour of their American cousins. A *"Member of the Builders' Union"* in the 1830s argued that the trade unions *"will not only strike for less work, and more wages, but will ultimately **abolish wages**, become their own masters and work for each other; labour and capital will no longer be separate but will be indissolubly joined together in the hands of workmen and work-women."* [quoted by E. P. Thompson, **Op. Cit.**, p. 912] This perspective inspired the **Grand National Consolidated Trades Union** of 1834 which had the *"two-fold purpose of syndicalist unions – the protection of the workers under the existing system and the formation of the nuclei of the future society"* when the unions *"take over the whole industry of the country."* [Geoffrey Ostergaard, **The Tradition of Workers' Control**, p. 133] As Thompson noted, *"industrial syndicalism"* was a major theme of this time in the labour movement. *"When Marx was still in his teens,"* he noted, British trade unionists had *"developed,*

stage by stage, a theory of syndicalism" in which the *"unions themselves could solve the problem of political power"* along with wage slavery. This vision was lost *"in the terrible defeats of 1834 and 1835."* [**Op. Cit.**, p. 912 and p. 913] In France, the mutualists of Lyons had come to the same conclusions, seeking *"the formation of a series of co-operative associations"* which would *"return to the workers control of their industry."* Proudhon would take up this theme, as would the anarchist movement he helped create. [K. Steven Vincent, **Pierre-Jospeh Proudhon and the Rise of French Republican Socialism**, pp. 162–3] Similar movements and ideas developed elsewhere, as capitalism was imposed (subsequent developments were obviously influenced by the socialist ideas which had arisen earlier and so were more obviously shaped by anarchist and Marxist ideas).

This is unsurprising, the workers then, who had not been swallowed up whole by the industrial revolution, could make critical comparisons between the factory system and what preceded it. *"Today, we are so accustomed to this method of production [capitalism] and its concomitant, the wage system, that it requires quite an effort of imagination to appreciate the significance of the change in terms of the lives of ordinary workers ... the worker became **alienated** ... from the means of production and the products of his labour ... In these circumstances, it is not surprising that the new socialist theories proposed an alternative to the capitalist system which would avoid this alienation."* While wage slavery may seem "natural" today, the first generation of wage labourers saw the transformation of the social relationships they experienced in work, from a situation in which they controlled their own work (and so themselves) to one in which **others** controlled them, and they did not like it. However, while many modern workers instinctively hate wage labour and having bosses, without the awareness of some other method of working, many put up with it as "inevitable." The first generation of wage labourers had the awareness of something else (although a flawed and limited something else as it existed in a hierarchical and class system) and this gave then a deep insight into the nature of capitalism and produced a deeply radical response to it and its authoritarian structures. Anarchism (like other forms of socialism) was born of the demand for liberty and resistance to authority which capitalism had provoked in its wage slaves. With our support for workers' self-management of production, *"as in so many others, the anarchists remain guardians of the libertarian aspirations which moved the first rebels against the slavery inherent in the capitalist mode of production."* [Ostergaard, **Op. Cit.**, p. 27 and p. 90]

State action was required produce and protect the momentous changes in social relations which are central to the capitalist system. However, once capital **has** separated the working class from the means of life, then it no longer had to rely as much on state coercion. With the choice now between wage slavery or starving, then the appearance of voluntary choice could be maintained as economic power was/is usually effective enough to ensure that state violence could be used as a last resort. Coercive practices are still possible, of course, but market forces are usually sufficient as the market is usually skewed against the working class. However, the role of the state remains a key to understanding capitalism as a system rather than just specific periods of it. This is because, as we stressed in section D.1, state action is not associated only with the past, with the transformation from feudalism to capitalism. It happens today and it will continue to happen as long as capitalism continues.

Far from being a "natural" development, then, capitalism was imposed on a society by state action, by and on behalf of ruling elites. Those working class people alive at the time viewed it as *"unnatural relations"* and organised to overcome it. It is from such movements that all the many

forms of socialism sprang, including anarchism. This is the case with the European anarchism associated with Proudhon, Bakunin and Kropotkin as well as the American individualist anarchism of Warren and Tucker. The links between anarchism and working class rebellion against the autocracy of capital and the state is reflected not only in our theory and history, but also in our anarchist symbols. The Black Flag, for example, was first raised by rebel artisans in France and its association with labour insurrection was the reason why anarchists took it up as our symbol (see the appendix on "The Symbols of Anarchy"). So given both the history of capitalism and anarchism, it becomes obvious any the latter has always opposed the former. It is why anarchists today still seek to encourage the desire and hope for political **and** economic freedom rather than the changing of masters we have under capitalism. Anarchism will continue as long as these feelings and hopes still exist and they will remain until such time as we organise and abolish capitalism and the state.

Appendix — The Symbols of Anarchy

Introduction

Anarchism has always stood deliberately for a broad, and at times vague, political platform. The reasoning is sound; blueprints create rigid dogma and stifle the creative spirit of revolt. Along the same lines and resulting in the same problems, Anarchists have rejected the "disciplined" leadership that is found in many other political groupings on the Left. The reasoning for this is also sound; leadership based on authority is inherently hierarchical.

It seems to follow logically that since Anarchists have shied away from anything static, that we would also shy away from the importance of symbols and icons. Yet the fact is Anarchists have used symbolism in our revolt against the State and Capital, the most famous of which are the circled-A, the black flag and the red-and-black flag. This appendix tries to show the history of these three iconic symbols and indicate why they were taken up by anarchists to represent our ideas and movement.

Ironically enough, one of the original anarchist symbols was the ***red*** flag. As anarchist Communard Louise Michel put it, *"Lyon, Marseille, Narbonne, all had their own Communes, and like ours [in Paris], theirs too were drowned in the blood of revolutionaries. That is why our flags are red. Why are our red banners so terribly frightening to those persons who have caused them to be stained that colour?"* [**The Red Virgin: Memoirs of Louise Michel**, p. 65] March 18th, 1877, saw Kropotkin participate in a protest march in Berne which involved the anarchists *"carrying the red flag in honour of the Paris Commune"* for *"in Switzerland federal law prohibited public display of the red flag."* [Martin A. Miller, **Kropotkin**, p. 137] Anarchist historians Nicolas Walter and Heiner Becker note that *"Kropotkin always preferred the red flag."* [Peter Kropotkin, **Act for Yourselves**, p. 128] On Labour Day in 1899, Emma Goldman gave lectures to miners in Spring Valley, Illinois, which ended in a demonstration which she headed *"carrying a large red flag."* [**Living My Life**, vol. 1, p. 245] According to historian Caroline Waldron Merithew, the 300 marchers *"defied police orders to haul down the 'red flag of anarchy.'"* [**Anarchist Motherhood**, p. 236]

This should be unsurprising as anarchism is a form of socialism and came out of the general socialist and labour movements. Common roots would imply common imagery. However, as mainstream socialism developed in the nineteenth century into either reformist social democracy or the state socialism of the revolutionary Marxists, anarchists developed their own images of revolt based upon those raised by working class people in struggle. As will be shown, they come from the revolutionary anarchism most directly associated with the wider labour and socialist movements, i.e., the dominant, mainstream social anarchist tradition. As Nicholas Walter put it:

> *"[The] serious study of anarchism should be based on fact rather than fantasy, and concentrate on people and movements that actually used the word. However old and wide the ideas of anarchism may be ... no one called himself an anarchist before [Proudhon*

in] 1840, and no movement called itself anarchist before the 1870s … The actual anarchist movement was founded … by the anti-authoritarian sections of the First International … This was certainly the first anarchist movement, and this movement was certainly based on a libertarian version of the concept of the class struggle." [**The Anarchist Past and other essays**, pp. 60–1]

Unsurprisingly, the first anarchist symbols reflected the origins and ideas of this class struggle movement. Both the black and red-and-black flags were first used by revolutionary anarchists. The black flag was popularised in the 1880s by Louise Michel, a leading French communist-anarchist militant. From Europe it spread to America when the communist-anarchists of the **International Working People's Association** raised it in their struggle against capitalism before being taken up by other revolutionary class struggle anarchists across the globe. The red-and-black flag was first used by the Italian section of the First International and this had been the first to move from collectivist to communist-anarchism in October 1876. [Nunzio Pernicone, **Italian Anarchism, 1864–1892**, p. 111] From there, it spread to Mexico and was used by anarchist labour militants there before being re-invented by the Spanish anarcho-syndicalists in the 1930s. Like anarchism itself, the anarchist flags are a product of the social struggle against capitalism and statism.

We would like to point out that this appendix is partly based on Jason Wehling's 1995 essay **Anarchism and the History of the Black Flag**. Needless to say, this appendix does not cover all anarchists symbols. For example, recently the red-and-black flag has become complemented by the green-and-black flag of eco-anarchism (the symbolism of the green should need no explanation). Other libertarian popular symbols include the IWW inspired ***"Wildcat"*** (representing, of course, the spontaneity, direct action, solidarity and militancy of a wildcat strike), the ***"Black Rose"*** (inspired, no doubt, by the demand of striking IWW women workers in Lawrence, 1912, for not only bread, but for roses too) and the ironic ***"little black bomb"*** (among others). Here we concentrate on the three most famous ones.

1 What is the history of the Black Flag?

As is well known, the black flag is the symbol of anarchism. Howard Ehrlich has a great passage in his book **Reinventing Anarchy, Again** on why anarchists use it. It is worth quoting at length:

"Why is our flag black? Black is a shade of negation. The black flag is the negation of all flags. It is a negation of nationhood which puts the human race against itself and denies the unity of all humankind. Black is a mood of anger and outrage at all the hideous crimes against humanity perpetrated in the name of allegiance to one state or another. It is anger and outrage at the insult to human intelligence implied in the pretences, hypocrisies, and cheap chicaneries of governments … Black is also a colour of mourning; the black flag which cancels out the nation also mourns its victims the countless millions murdered in wars, external and internal, to the greater glory and stability of some bloody state. It mourns for those whose labour is robbed (taxed) to pay for the slaughter and oppression of other human beings. It mourns not only the death of the body but the crippling of the spirit under authoritarian and hierarchic systems; it

mourns the millions of brain cells blacked out with never a chance to light up the world. It is a colour of inconsolable grief.

"But black is also beautiful. It is a colour of determination, of resolve, of strength, a colour by which all others are clarified and defined. Black is the mysterious surrounding of germination, of fertility, the breeding ground of new life which always evolves, renews, refreshes, and reproduces itself in darkness. The seed hidden in the earth, the strange journey of the sperm, the secret growth of the embryo in the womb all these the blackness surrounds and protects.

"So black is negation, is anger, is outrage, is mourning, is beauty, is hope, is the fostering and sheltering of new forms of human life and relationship on and with this earth. The black flag means all these things. We are proud to carry it, sorry we have to, and look forward to the day when such a symbol will no longer be necessary." [*"Why the Black Flag?"*, Howard Ehrlich (ed.), **Reinventing Anarchy, Again**, pp. 31–2]

Here we discuss when and why anarchists first took up the black flag as our symbol.

There are ample accounts of the use of black flags by anarchists. Probably the most famous was Nestor Makhno's partisans during the Russia Revolution. Under the black banner, his army routed a dozen armies and kept a large portion of the Ukraine free from concentrated power for a good couple of years. On the black flag was embroidered *"Liberty or Death"* and *"The Land to the Peasant, The Factories to the Workers."* [Voline, **The Unknown Revolution**, pp. 607–10] In 1925, the Japanese anarchists formed the **Black Youth League** and, in 1945, when the anarchist federation reformed, their journal was named **Kurohata** (**Black Flag**). [Peter Marshall, **Demanding the Impossible**, pp. 525–6] In 1968, students carried black (and red) flags during the street fighting and General Strike in France, bringing the resurgence of anarchism in the 1960s into the view of the general public. The same year saw the Black Flag being raised at the American **Students for a Democratic Society** national convention. Two years later the British based magazine **Black Flag** was started and is still going strong. At the turn of the 21st century, the Black Flag was at the front of the so-called anti-globalisation protests. Today, if you go to any sizeable demonstration you will usually see the Black Flag raised by the anarchists present.

However, the anarchists' black flag originated much earlier than this. Louise Michel, famous participant in the Paris Commune of 1871, was instrumental in popularising the use of the Black Flag in anarchist circles. At a March 18th public meeting in 1882 to commemorate the Paris Commune she proclaimed that the *"red flag was no longer appropriate; [the anarchists] should raise the black flag of misery."* [Edith Thomas, **Louise Michel**, p. 191] The following year she put her words into action. According to anarchist historian George Woodcock, Michel flew the black flag on March 9, 1883, during demonstration of the unemployed in Paris, France. An open air meeting of the unemployed was broken up by the police and around 500 demonstrators, with Michel at the front carrying a black flag and shouting *"Bread, work, or lead!"* marched off towards the Boulevard Saint-Germain. The crowd pillaged three baker's shops before the police attacked. Michel was arrested and sentenced to six years solitary confinement. Public pressure soon forced the granting of an amnesty. [**Anarchism**, pp. 251–2] August the same year saw the publication of the anarchist paper **Le Drapeau Noir** (**The Black Flag**) in Lyon which suggests that it had become a popular symbol within anarchist circles. [*"Sur la Symbolique anarchiste"*, **Bulletin du CIRA**, no. 62, p. 2] However, anarchists had been using red-and-black flags a number of

years previously (see next section) so Michel's use of the colour black was not totally without precedence.

Not long after, the black flag made its way to America. Paul Avrich reports that on November 27, 1884, it was displayed in Chicago at an anarchist demonstration. According to Avrich, August Spies, one of the Haymarket martyrs, *"noted that this was the first occasion on which [the black flag] had been unfurled on American soil."* By January the following year, *"[s]treet parades and mass outdoor demonstrations, with red and black banners ... were the most dramatic form of advertisement"* for the revolutionary anarchist movement in America. April 1885 saw Lucy Parsons and Lizzie Holmes at the head of a protest march *"each bearing a flag, one black, the other red."* [**The Haymarket Tragedy**, p. 145, pp. 81–2 and p. 147] The Black Flag continued to be used by anarchists in America, with one being seized by police at an anarchist organised demonstration for the unemployed in 1893 at which Emma Goldman spoke. [**Emma Goldman: A Documentary History of the American Years**, vol. 1, p. 144] Twenty one years later, Alexander Berkman reported on another anarchist inspired unemployed march in New York which raised the black flag in *"menacing defiance in the face of parasitic contentment and self-righteous arrogance"* of the *"exploiters and well-fed idlers."* [*"The Movement of the Unemployed"*, **Anarchy! An Anthology of Emma Goldman's Mother Earth**, p. 341]

It seems that black flags did not appear in Russia until the founding of the **Chernoe Znamia** (***"black banner"***) movement in 1905. With the defeat of that year's revolution, anarchism went underground again. The Black Flag, like anarchism in general, re-emerged during the 1917 revolution. Anarchists in Petrograd took part in the February demonstrations which brought down Tsarism carrying black flags with *"Down with authority and capitalism!"* on them. As part of their activity, anarchists organised armed detachments in most towns and cities called *"Black Guards"* to defend themselves against counter-revolutionary attempts by the provisional government. As noted above, the Makhnovists fought Bolshevik and White dictatorship under Black Flags. On a more dreary note, February 1921 saw the end of black flags in Soviet Russia. That month saw Peter Kropotkin's funeral take place in Moscow. Twenty thousand people marched in his honour, carrying black banners that read: *"Where there is authority there is no freedom."* [Paul Avrich, **The Russian Anarchists**, p. 44, p. 124, p. 183 and p. 227] Only two weeks after Kropotkin's funeral march, the Kronstadt rebellion broke out and anarchism was erased from Soviet Russia for good. With the end of Stalinism, anarchism with its Black Flag re-emerged all across Eastern Europe, including Russia.

While the events above are fairly well known, as has been related, the exact origin of the black flag is not. What is known is that a large number of Anarchist groups in the early 1880s adopted titles associated with black. In July of 1881, the Black International was founded in London. This was an attempt to reorganise the Anarchist wing of the recently dissolved First International. In October 1881, a meeting in Chicago lead to the **International Working People's Association** being formed in North America. This organisation, also known as the **Black International**, affiliated to the London organisation. [Woodcock, **Op. Cit.**, pp. 212–4 and p. 393] These two conferences are immediately followed by Michel's demonstration (1883) and the black flags in Chicago (1884).

Thus it was around the early 1880s that anarchism and the Black Flag became inseparably linked. Avrich, for example, states that in 1884, the black flag *"was the new anarchist emblem."* [**The Haymarket Tragedy**, p. 144] In agreement, Murray Bookchin reports that *"in later years, the Anarchists were to adopt the black flag"* when speaking of the Spanish Anarchist movement

in 1870. [**The Spanish Anarchists**, p. 57] Walter and Heiner also note that *"it was adopted by the anarchist movement during the 1880s."* [Kropotkin, **Act for Yourselves**, p. 128]

Now the question becomes why, exactly, black was chosen. The Chicago *"Alarm"* stated that the black flag is *"the fearful symbol of hunger, misery and death."* [quoted by Avrich, **Op. Cit.**, p. 144] Bookchin asserts that anarchists were *"to adopt the black flag as a symbol of the workers misery and as an expression of their anger and bitterness."* [**Op. Cit.**, p. 57] Historian Bruce C. Nelson also notes that the Black Flag was considered *"the emblem of hunger"* when it was unfurled in Chicago in 1884. [**Beyond the Martyrs**, p. 141 and p. 150] While it *"was interpreted in anarchist circles as the symbol of death, hunger and misery"* it was *"also said to be the 'emblem of retribution'"* and in a labour procession in Cincinnati in January 1885, *"it was further acknowledged to be the banner of working-class intransigence, as demonstrated by the words 'No Quarter' inscribed on it."* [Donald C. Hodges, **Sandino's Communism**, p. 21] For Berkman, it was the *"symbol of starvation and desperate misery."* [**Op. Cit.**, p. 341] Louise Michel stated that the *"black flag is the flag of strikes and the flag of those who are hungry."* [**Op. Cit.**, p. 168]

Along these lines, Albert Meltzer maintains that the association between the black flag and working class revolt *"originated in Rheims [France] in 1831 ('Work or Death') in an unemployed demonstration."* [**The Anarcho-Quiz Book**, p. 49] He went on to assert that it was Michel's action in 1883 that solidified the association. The links from revolts in France to anarchism are even stronger. As Murray Bookchin records, in Lyon *"[i]n 1831, the silk-weaving artisans ... rose in armed conflict to gain a better **tarif**, or contract, from the merchants. For a brief period they actually took control of the city, under red and black flags – which made their insurrection a memorable event in the history of revolutionary symbols. Their use of the word **mutuelisme** to denote the associative disposition of society that they preferred made their insurrection a memorable event in the history of anarchist thought as well, since Proudhon appears to have picked up the word from them during his brief stay in the city in 1843–4."* [**The Third Revolution**, vol. 2, p. 157] Sharif Gemie confirms this, noting that a police report sent to the Lyon prefect that said: *"The silk-weavers of the Croix-Rousse have decided that tomorrow they will go down to Lyon, carrying a black flag, calling for work or death."* The revolt saw the Black Flag raised:

> *"At eleven a.m. the silk-weavers' columns descended the slops of the Croix-Rousse. Some carried black flags, the colour of mourning and a reminder of their economic distress. Others pushed loaves of bread on the bayonets of their guns and held them aloft. The symbolic force of this action was reinforced by a repeatedly-shouted slogan: 'bread or lead!': in other words, if they were not given bread which they could afford, then they were prepared to face bullets. At some point during the rebellion, a more eloquent expression was devised: '**Vivre en travaillant ou mourir en combattant**!' — 'Live working or die by fighting!'. Some witnesses report seeing this painted on a black flag."* [Sharif Gemie, **French Revolutions, 1815–1914**, pp. 52–53]

Kropotkin himself states that its use continued in the French labour movement after this uprising. He notes that the Paris Workers *"raised in June [1848] their black flag of 'Bread or Labour'"* [**Act for Yourselves**, p. 100] Black flags were also hung from windows in Paris on the 1st of March, 1871, in defiance of the Prussians marching through the city after their victory in the Franco-Prussian War. [Stewart Edwards, **The Communards of Paris, 1871**, p. 25]

The use of the black flag by anarchists, therefore, is an expression of their roots and activity in the labour movement in Europe, particularly in France. The anarchist adoption of the Black Flag

by the movement in the 1880s reflects its use as *"the traditional symbol of hunger, poverty and despair"* and that it was *"raised during popular risings in Europe as a sign of no surrender and no quarter."* [Walter and Becker, **Act for Yourselves**, p. 128] This is confirmed by the first anarchist journal to be called **Black Flag**: *"On the heights of the city [of Lyon] in la Croix-Rousse and Vaise, workers, pushed by hunger, raised for the first time this sign of mourning and revenge [the black flag], and made therefore of it the emblem of workers' demands."* [**Le Drapeau Noir**, no. 1, 12th August 1883] This was echoed by Louise Michel:

> *"How many wrathful people, young people, will be with us when the red and black banners wave in the wind of anger! What a tidal wave it will be when the red and black banners rise around the old wreck!*
>
> *"The red banner, which has always stood for liberty, frightens the executioners because it is so red with our blood. The black flag, with layers of blood upon it from those who wanted to live by working or die by fighting, frightens those who want to live off the work of others. Those red and black banners wave over us mourning our dead and wave over our hopes for the dawn that is breaking."* [**The Red Virgin: Memoirs of Louise Michel**, pp. 193–4]

The mass slaughter of Communards by the French ruling class after the fall of the Paris Commune of 1871 could also explain the use of the Black Flag by anarchists at this time. Black *"is the colour of mourning [at least in Western cultures], it symbolises our mourning for dead comrades, those whose lives were taken by war, on the battlefield (between states) or in the streets and on the picket lines (between classes)."* [Chico, *"letters"*, **Freedom**, vol. 48, No. 12, p. 10] Given the 25 000 dead in the Commune, many of them anarchists and libertarian socialists, the use of the Black Flag by anarchists afterwards would make sense. Sandino, the Nicaraguan libertarian socialist (whose use of the red-and-black colours we discuss below) also said that black stood for mourning (*"Red for liberty; black for mourning; and the skull for a struggle to the death"* [Donald C. Hodges, **Sandino's Communism**, p. 24]).

Regardless of other meanings, it is clear that anarchists took up the black flag in the 1880s because it was, like the red flag, a recognised symbol of working class resistance to capitalism. This is unsurprising given the nature of anarchist politics. Just as anarchists base our ideas on actual working class practice, we would also base our symbols on those created by that self-activity. For example, Proudhon as well as taking the term *"mutualism"* from radical workers also argued that co-operative *"labour associations"* had *"spontaneously, without prompting and without capital been formed in Paris and in Lyon... the proof of it [mutualism, the organisation of credit and labour] ... lies in current practice, revolutionary practice."* [**No Gods, No Masters**, vol. 1, pp. 59–60] He considered his ideas, in other words, to be an expression of working class self-activity. Indeed, according to K. Steven Vincent, there was *"close similarity between the associational ideal of Proudhon ... and the program of the Lyon Mutualists"* and that there was *"a remarkable convergence [between the ideas], and it is likely that Proudhon was able to articulate his positive program more coherently because of the example of the silk workers of Lyon. The socialist ideal that he championed was already being realised, to a certain extent, by such workers."* [**Pierre-Joseph Proudhon and the Rise of French Republican Socialism**, p. 164] Other anarchists have made similar arguments concerning anarchism being the expression of tendencies within working class struggle

against oppression and exploitation and so the using of a traditional workers symbol would be a natural expression of this aspect of anarchism.

Similarly, perhaps it is Louise Michel's comment that the Black Flag was the *"flag of strikes"* which could explain the naming of the **Black International** founded in 1881 (and so the increasing use of the Black Flag in anarchist circles in the early 1880s). Around the time of its founding congress Kropotkin was formulating the idea that this organisation would be a *"Strikers' International"* (**Internationale Greviste**) — it would be *"an organisation of resistance, of strikes."* [quoted by Martin A. Miller, **Kropotkin**, p. 147] In December 1881 he discussed the revival of the International Workers Association as a

Strikers' International for to *"be able to make the revolution, the mass of workers will have to organise themselves. Resistance and strikes are excellent methods of organisation for doing this."* He stressed that the *"strike develops the sentiment of solidarity"* and argued that the First International *"was born of strikes; it was fundamentally a strikers' organisation."* [quoted by Caroline Cahm, **Kropotkin and the Rise of Revolutionary Anarchism, 1872–1886**, p. 255 and p. 256]

A *"Strikers International"* would need the strikers flag and so, perhaps, the **Black International** got its name. This, of course, fits perfectly with the use of the Black Flag as a symbol of workers' resistance by anarchism, a political expression of that resistance.

However, the black flag did not instantly replace the red flag as the main anarchist symbol. The use of the red flag continued for some decades in anarchist circles. Thus we find Kropotkin writing in the early 1880s of *"anarchist groups ... rais[ing] the red flag of revolution."* As Woodcock noted, the *"black flag was not universally accepted by anarchists at this time. Many, like Kropotkin, still thought of themselves as socialists and of the red flag as theirs also."* [**Words of a Rebel**, p. 75 and p. 225] In addition, we find the Chicago anarchists using both black and red flags all through the 1880s. French Anarchists carried three red flags at the funeral of Louise Michel's mother in 1885 as well as at her own funeral in January 1905. [Louise Michel, **Op. Cit.**, p. 183 and p. 201] Anarchist in Japan, for example, demonstrated under red flags bearing the slogans *"Anarchy"* and *"Anarchist Communism"* in June, 1908. [John Crump, **Hatta Shuzo and Pure Anarchism in Interwar Japan**, p. 25] Three years later, the Mexican anarchists declared that they had *"hoisted the Red Flag on Mexico's fields of action"* as part of their *"war against Authority, war against Capital, and war against the Church."* They were *"fighting under the Red Flag to the famous cry of 'Land and Liberty.'"* [Ricardo Flores Magon, **Land and Liberty**, p. 98 and p. 100]

So for a considerable period of time anarchists used red as well as black flags as their symbol. The general drift away from the red flag towards the black must be placed in the historical context. During the 1880s the socialist movement was changing. Marxist social democracy was becoming the dominant socialist trend, with libertarian socialism going into relative decline in many areas. Thus the red flag was increasingly associated with the authoritarian and statist (and increasingly reformist) side of the socialist movement. In order to distinguish themselves from other socialists, the use of the black flag makes perfect sense as it was it an accepted symbol of working class revolt like the red flag.

After the Russian Revolution and its slide into dictatorship (first under Lenin, then Stalin) anarchist use of the red flag decreased as it no longer *"stood for liberty."* Instead, it had become associated, at worse, with the Communist Parties or, at best, bureaucratic, reformist and authoritarian social democracy. This change can be seen from the Japanese movement. As noted above, before the First World War anarchists there had happily raised the red flag but in the 1920s they unfurled the black flag. Organised in the **Kokushoku Seinen Renmei** (Black Youth League),

they published **Kokushoku Seinen** (Black Youth). By 1930, the anarchist theoretical magazine **Kotushoku Sensen** (Black Battlefront) had been replaced by two journals called **Kurohata** (Black Flag) and **Kuhusen** (Black Struggle). [John Crump, **Op. Cit.**, pp. 69–71 and p. 88]

According to historian Candace Falk, *"[t]hough black has been associated with anarchism in France since 1883, the colour red was the predominant symbol of anarchism throughout this period; only after the First World War was the colour black widely adopted."* [**Emma Goldman: A Documentary History of the American Years**, vol. 1, p. 208fn] As this change did not occur overnight, it seems safe to conclude that while anarchism and the black flag had been linked, at the latest, from the early 1880s, it did not become the definitive anarchist symbol until the 1920s (Carlo Tresca in America was still talking of standing *"beneath the red flag that is the immaculate flag of the anarchist idea"* in 1925. [quoted by Nunzio Pernicone, **Carlo Tresca: Portrait of a Rebel**, p. 161]). Before then, anarchists used both it and the red flag as their symbols of choice. After the Russian Revolution, anarchists would still use red in their flags, but only when combined with black. In this way they would not associate themselves with the tyranny of the USSR or the reformism and statism of the mainstream socialist movement.

2 Why the red-and-black flag?

The red-and-black flag has been associated with anarchism for some time. Murray Bookchin placed the creation of this flag in Spain:

> *"The presence of black flags together with red ones became a feature of Anarchist demonstrations throughout Europe and the Americas. With the establishment of the CNT, a single flag on which black and red were separated diagonally, was adopted and used mainly in Spain."* [**The Spanish Anarchists**, p. 57]

George Woodcock also stressed the Spanish origin of the flag:

> *"The anarcho-syndicalist flag in Spain was black and red, divided diagonally. In the days of the [First] International the anarchists, like other socialist sects, carried the red flag, but later they tended to substitute for it the black flag. The black-and-red flag symbolised an attempt to unite the spirit of later anarchism with the mass appeal of the International."* [**Anarchism**, p. 325fn]

According to Abel Paz, anarchist historian and CNT militant in the 1930s, the 1st of May, 1931, was *"the first time in history [that] the red and black flag flew over a CNT-FAI rally."* This was the outcome of an important meeting of CNT militants and anarchist groups to plan the May Day demonstrations in Barcelona. One of the issues to be resolved was *"under what flag to march."* One group was termed the *"Red Flag"* anarchists (who *"put greater emphasis on labour issues"*), the other *"Black Flag"* anarchists (who were *"more distant (at the time) from economic questions"*). However, with the newly proclaimed Republic there were *"tremendous opportunities for mass mobilisations"* which made disagreements on how much emphasis to place on labour issues *"meaningless."* This allowed an accord to be reached with its *"material expression"* being *"making the two flags into one: the black and red flag."* [**Durruti in the Spanish Revolution**, p. 206]

However, the red-and-black flag was used by anarchists long before 1931, indeed decades before the CNT was even formed. In fact, it, rather than the black flag, may well have been the first specifically anarchist flag.

The earliest recorded use of the red-and-black colours was during the attempted Bologna insurrection of August 1874 where participants were *"sporting the anarchists' red and black cockade."* [Nunzio Pernicone, **Italian Anarchism, 1864–1892**, p. 93] In April 1877, a similar attempt at provoking rebellion saw anarchists enter the small Italian town of Letino *"wearing red and black cockades"* and carrying a *"red and black banner."* These actions helped to *"captur[e] national attention"* and *"draw considerable notice to the International and its socialist programme."* [Nunzio Pernicone, **Op. Cit.**, pp. 124–5 and pp. 126–7] Significantly, another historian notes that the insurgents in 1874 were *"decked out in the red and black emblem of the International"* while three years later they were *"prominently displaying the red and black anarchist flag."* [T. R. Ravindranathan, **Bakunin and the Italians**, p. 208 and p. 228] Thus the black-and-red flag, like the black flag, was a recognised symbol of the labour movement (in this case, the Italian section of the First International) before becoming linked to anarchism.

The red-and-black flag was used by anarchists a few years later in Mexico. At an anarchist protest meeting on December 14th, 1879, at Columbus Park in Mexico City *"[s]ome five thousand persons gathered replete with numerous red-and-black flags, some of which bore the inscription 'La Social, Liga International del Jura.' A large black banner bearing the inscription 'La Social, Gran Liga International' covered the front of the speaker's platform."* The links between the Mexican and European anarchist movements were strong, as the *"nineteenth-century Mexican urban labour-movement maintained direct contact with the Jura branch of the ... European-based First International Workingmen's Association and at one stage openly affiliated with it."* [John M. Hart, **Anarchism and the Mexican Working Class, 1860–1931**, p. 58 and p. 17] One year after it was founded, the anarchist influenced **Casa del Obrero Mundial** organised Mexico's first May Day demonstration in 1913 and *"between twenty and twenty-five thousand workers gathered behind red and black flags"* in Mexico City. [John Lear, **Workers, Neighbors, and Citizens**, p. 236]

Augusto Sandino, the radical Nicaraguan national liberation fighter was so inspired by the example of the Mexican anarcho-syndicalists that he based his movement's flag on their red-and-black ones (the Sandinista's flag is divided horizontally, rather than diagonally). As historian Donald C. Hodges notes, Sandino's *"red and black flag had an anarcho-syndicalist origin, having been introduced into Mexico by Spanish immigrants."* Unsurprisingly, his flag was considered a *"workers' flag symbolising their struggle for liberation."* (Hodges refers to Sandino's *"peculiar brand of anarcho-communism"* suggesting that his appropriation of the flag indicated a strong libertarian theme to his politics). [**Intellectual Foundations of the Nicaraguan Revolution**, p. 49, p. 137 and p. 19]

This suggests that the red-and-black flag was rediscovered by the Spanish Anarchists in 1931 rather than being invented by them. However, the CNT-FAI seem to have been the first to bisect their flags diagonally black and red (but other divisions, such as horizontally, were also used). In the English speaking world, though, the use of the red-and-black flag by anarchists seems to spring from the world-wide publicity generated by the Spanish Revolution in 1936. With CNT-FAI related information spreading across the world, the use of the CNT inspired diagonally split red-and-black flag also spread until it became a common anarchist and anarcho-syndicalist symbol in all countries.

For some, the red-and-black flag is associated with anarcho-syndicalism more than anarchism. As Albert Meltzer put it, *"[t]he flag of the labour movement (not necessarily only of socialism) is red. The CNT of Spain originated the red-and-black of anarchosyndicalism (anarchism plus the labour movement)."* [**Anarcho-Quiz Book**, p. 50] Donald C. Hodges makes a similar point, when he states that *"[o]n the insignia of the Mexico's House of the World Worker [the Mexican anarcho-syndicalist union], the red band stood for the economic struggle of workers against the proprietary classes, and the black for their insurrectionary struggle."* [**Sandino's Communism**, p. 22]

This does not contradict its earliest uses in Italy and Mexico as those anarchists took it for granted that they should work within the labour movement to spread libertarian ideas. Therefore, it is not surprising we find movements in Mexico and Italy using the same flags. Both were involved in the First International and its anti-authoritarian off-spring. Both, like the Jura Federation in Switzerland, were heavily involved in union organising and strikes. Given the clear links and similarities between the collectivist anarchism of the First International (the most famous advocate of which was Bakunin) and anarcho-syndicalism, it is not surprising that they used similar symbols. As Kropotkin argued, *"Syndicalism is nothing other than the rebirth of the International — federalist, worker, Latin."* [quoted by Martin A. Miller, **Kropotkin**, p. 176] So a rebirth of symbols would not be a co-incidence.

Thus the red-and-black flag comes from the experience of anarchists in the labour movement and is particularly, but not exclusively, associated with anarcho-syndicalism. The black represents libertarian ideas and strikes (i.e. direct action), the red represents the labour movement. Over time association with anarcho-syndicalism has become less noted, with many non-syndicalist anarchists happy to use the red-and-black flag (many anarcho-communists use it, for example). It would be a good generalisation to state that social anarchists are more inclined to use the red-and-black flag than individualist anarchists just as social anarchists are usually more willing to align themselves with the wider socialist and labour movements than individualists (in modern times at least). However, both the red and black flags have their roots in the labour movement and working class struggle which suggests that the combination of both flags into one was a logical development. Given that the black **and** red flags were associated with the Lyon uprising of 1831, perhaps the development of the red-and-black flag is not too unusual. Similarly, given that the Black Flag was the *"flag of strikes"* (to quote Louise Michel — see above) its use with the red flag of the labour movement seems a natural development for a movement like anarchism and anarcho-syndicalism which bases itself on direct action and the importance of strikes in the class struggle.

So while associated with anarcho-syndicalism, the red-and-black flag has become a standard anarchist symbol as the years have gone by, with the black still representing anarchy and the red, social co-operation or solidarity. Thus the red-and-black flag more than any one symbol symbolises the aim of anarchism (*"Liberty of the individual and social co-operation of the whole community"* [Peter Kropotkin, **Act for Yourselves**, p. 102]) as well as its means (*"[t]o make the revolution, the mass of workers will have to organise themselves. Resistance and the strike are excellent means of organisation for doing this"* and *"the strike develops the sentiment of solidarity."* [Kropotkin, quoted by Caroline Cahm, **Kropotkin and the Rise of Revolutionary Anarchism: 1872–1186**, p. 255 and p. 256]).

3 Where does the circled-A come from?

The circled-A is, perhaps, even more famous than the Black and Red-and-Black flags as an anarchist symbol (probably because it lends itself so well to graffiti). According to Peter Marshall the *"circled-A"* represents Proudhon's maxim *"Anarchy is Order."* [**Demanding the Impossible** p. 558] Peter Peterson also adds that the circle is *"a symbol of unity and determination"* which *"lends support to the off-proclaimed idea of international anarchist solidarity."* [*"Flag, Torch, and Fist: The Symbols of Anarchism"*, **Freedom**, vol. 48, No. 11, pp. 8]

However, the origin of the "circled-A" as an anarchist symbol is less clear. Many think that it started in the 1970s punk movement, but it goes back to a much earlier period. According to Peter Marshall, *"[i]n 1964 a French group,* ***Jeunesse Libertaire****, gave new impetus to Proudhon's slogan 'Anarchy is Order' by creating the circled-A a symbol which quickly proliferated throughout the world."* [**Op. Cit.**, p. 445] This is not the earliest sighting of this symbol. On November 25 1956, at its foundation in Brussels, the **Alliance Ouvriere Anarchiste** (AOA) adopted this symbol. Going even further, a BBC documentary on the Spanish Civil War shows an anarchist militia member with a "circled-A" clearly on the back of his helmet. Other than this, there is little know about the "circled-A"s origin.

Today the circled-A is one of the most successful images in the whole field of political symbolising. Its *"incredible simplicity and directness led [it] to become the accepted symbol of the restrengthened anarchist movement after the revolt of 1968"* particularly as in many, if not most, of the world's languages the word for anarchy begins with the letter A. [Peter Peterson, **Op. Cit.**, p. 8]

Introduction to Volume 2

"Conquer or die — such is the dilemma that faces the ... peasants and workers at this historic moment ... But we will not conquer in order to repeat the errors of the past years, the error of putting our fate into the hands of new masters; we will conquer in order to take our destinies into our own hands, to conduct our lives according to our own will and our own conception of the truth."

Nestor Makhno[1]

Welcome to volume 2 of **An Anarchist FAQ** (**AFAQ**)!

If the core of volume 1 was based on outlining anarchist ideas and history as well as presenting the anarchist critique of authority, capitalism and statism, then this volume is focused around two threads. The first is the critique of Marxism, historically anarchism's main alternative within the socialist movement. The second is what anarchists aim for and how we get there.

Needless to say, the second theme is by far the more important as anarchism is more than just analysing what is wrong with the world, it also aims to change it.

First, though, we start with an account of individualist anarchism (section G). It is fair to say that individualist anarchism has generally been on the margin of accounts of anarchism. This, undoubtedly, reflects the fact it has been predominantly a North American movement and was always a small minority within the global anarchist movement. Even in the USA, it was eclipsed by social anarchism.

As such, it has been somewhat overlooked in accounts of anarchism and **AFAQ** seeks to correct that. Unfortunately, it has also to address claims that "anarcho"-capitalism is a form of individualist anarchism and so it spends some time refuting such assertions. We do so with a heavy heart, as this will tend to exaggerate the importance of that ideology and its influence but it needs to be done simply in order to counteract those ideologues and academics who seek to confuse the two either out of ignorance (for the latter) or self-interest (for the former). In addition, section G is shaped by the history of **AFAQ**, when it started as an anti-"anarcho"-capitalist FAQ rather than a pro-anarchist one. If it had been started as the pro-anarchist FAQ it has now become, that section would have been substantially different (most obviously, the material on "anarcho"-capitalism being placed in an appendix where it belongs).

This means that in some regards, section G can be considered as a continuation of section F (which is on why "anarcho"-capitalism is not a form of anarchism). Individualist anarchism ***is*** the form of anarchism closest to liberalism and, as a consequence, to "anarcho"-capitalism. However, similarities do not equate to the former being a (flawed, from an "anarcho"-capitalist perspective) forerunner of the latter. If this were the case then some would assert that social anarchism is a form of Marxism. There are overlaps, of course, but then again there are overlaps between individualist anarchism, Marxism and social anarchism. Yet, for all its differences with social anarchism, individualist anarchism shared a critique of capitalism and the state which has significant commonality.

Individualist anarchism is a unique political theory and it does it a disservice to reduce it to simply a flawed precursor of an ideology whose origins and aims are radically at odds with it. It is no coincidence that individualist anarchism found its home in the broader labour and socialist movements while propertarianism views these with disdain. Nor is it a coincidence that the main influences on individualist anarchism were labour, monetary and land reform movements plus

[1] quoted by Peter Arshinov, **The History of the Makhnovist Movement**, p. 58

the economics of Proudhon and other socialists while, for "anarcho"-capitalism, it is "Austrian" economics which developed, in part, precisely to combat such popular movements. This leads to fundamentally different analyses, strategies and aims that show beyond doubt that the two cannot be confused. The individualist anarchists cannot be considered as forerunners of propertarianism in any more than the most superficial terms. So it is a shame this needs to be discussed at all, but it has.

Ironically, a sadly unpublished article from the 1950s by the founder of that ideology, Murray Rothbard, has come to light which came to the same conclusion (inaccurately entitled, given the history of anarchist use of libertarian, **Are Libertarians 'Anarchists'?**). Ignoring the errors, distortions and inventions about anarchism Rothbard inflicts on the reader, this essay came to the following (correct!) conclusion: *"We must therefore conclude that we are* **not** *anarchists, and that those who call us anarchists are not on firm etymological ground, and are being completely unhistorical."* This was applicable to both the *"dominant anarchist doctrine ... of 'anarchist communism'" ("which has also been called 'collectivist anarchism,' 'anarcho-syndicalism,' and 'libertarian communism'*) as well as individualist anarchists, considered by Rothbard *"the best of them",* as **both** had *"socialistic elements in their doctrines."* He suggested that there were thinkers *"in that Golden Age of liberalism"* who had ideas *"similar"* to his ideology but these *"never referred to themselves as anarchists"* while *"all the anarchist groups ... possessed socialistic* **economic** *doctrines in common."* If only he had kept to that analysis and called his ideology something more accurate then this FAQ would have been much shorter!

Also significant is Rothbard's use of the term "libertarian communism" which indicates he was well aware of the traditional use of libertarian as an alternative to anarchist. Interestingly, while reminiscing about the origins of the so-called "libertarian" right in America Rothbard publicly acknowledged their stealing of the word libertarian from genuine anarchists:

> *"One gratifying aspect of our rise to some prominence is that, for the first time in my memory, we, 'our side,' had captured a crucial word from the enemy ... 'Libertarians' ... had long been simply a polite word for left-wing [sic!] anarchists, that is for anti-private property anarchists, either of the communist or syndicalist variety. But now we had taken it over ..."*[2]

Today, of course, propertarians shrilly denounce anarchists using the term libertarian in its original and correct meaning as attempting to appropriate *their* name and associate it with socialism! Oh, the irony...

Unlike the propertarians who are so busy degrading the good name "libertarian" and the memories of individualist anarchism, adherents of both schools of anarchism considered themselves socialists. Of course there *are* real differences between individualist and social anarchism, and we explore these. We show that attempts by some members of each school to excommunicate the others are, ultimately, pointless (in general, the individualists seemed keener to do that than the social anarchists but both sides had their intolerant ones). There is significant overlap between both sections of the movement and so it is perfectly possible for each to coexist happily in a free society as well as, on certain issues and tactics, to work fruitfully together in resisting capitalism and the state.[3]

[2] **The Betrayal of the American Right**, Ludwig von Mises Institute, p. 83

[3] I would also like to take the opportunity to thank individualist anarchist Shawn Wilbur for his valued input into section G and the suggestions he made after reading the first drafts sent to him. Without this help, and the

We then turn to discuss Marxism and its flaws (section H). To be honest, it is staggering that this section even needs to be written given that the anarchist critique of Marxism has been validated time and time again. It is like writing a book on evolution and spending a significant time refuting the claims of Lamarckian theory. Sadly, though, many radicals seem unable to grasp the facts of history, namely that the predictions made by anarchism as regards Marxism have come to pass. Bakunin was right: social democracy did become reformist and the dictatorship of the proletariat became the dictatorship ***over*** the proletariat.

This critique is not to suggest that anarchists should reject everything Marx argued.[4] In terms of his critique of capitalism, there is much that libertarians can agree with (undoubtedly because much of it was built on Proudhon's analysis!). In part, it is this analysis which ensures that Marxism remains alive as a distinct ideology in the radical movement rather than Marx's positive contributions being integrated along with others (such as Proudhon and Bakunin) into libertarian socialism. It is a powerful and, in large parts, a correct analysis of that system but in terms of constructive ideas on what socialism would be and how to achieve it, Marxism comes up as deeply flawed. So, as with anarchist thinkers, we should recognise the important and valid parts of Marx's contribution to the socialist movement while rejecting its negative aspects — particularly as many so-called "Marxist" positions were first expounded by anarchists!

In part, because as well as his critique of capitalism the other main reason for Marxism's continued existence is, undoubtedly, its apparent success. Needless to say, most Marxists are keen to forget that the first apparently successful Marxist movement was social democracy. Engels lavish praise for it is rarely mentioned these days, given social democracy's quick descent into reformism and, worse, explicit counter-revolution during the German revolution. Rather, it is the apparent success of Leninism[5] during the Russian Revolution that accounts for why so many radicals are attracted to it. As such, what Alexander Berkman termed **The Bolshevik Myth** is alive and well — and needs to be combated.

Suffice to say, the promises of Lenin's **State and Revolution** did not last the night and within six months there was a *de facto* party dictatorship presiding over a state capitalist economy (by early 1919, the need for party dictatorship in a revolution was considered a truism by all the leaders of the party). If that counts as a success, what would failure be? Luckily, unlike Berkman's generation, the numbers blinded by wishful thinking about "socialism" in Russia are fewer although we do have those who, while denouncing Stalin, seem incapable of seeing the obvious links with Lenin's regime and its ideological conceptions (most notably, but not limited to, its vanguardism). As we show in section H.6, the standard modern-day Leninist excuses for Bolshevik tyranny have nothing to recommend them — both in terms of theory and empirical evidence. So as well as presenting a theoretical critique of Marxism, we seek to root it in the experiences of Marxism in practice. This involves, in the main, focusing on the Social-Democratic movement, Bolshevism and the Russian Revolution.

---

numerous works of nineteenth century anarchism he has placed on-line, this section would not be as comprehensive as it has become.

[4] Nor, for that matter, that there are no libertarian Marxists. There are, as we indicated insection A.4.4 of volume 1 of **AFAQ**. Why they continue to call themselves Marxists while rejecting Marx's ideas on numerous key issues (and implicitly agreeing with Bakunin in the process) is a mystery.

[5] We are aware that many Marxists reject the suggestion that Leninism is actually Marxist — a position we show has some validity. We argue that it was not only anarchism which Lenin distorted in **State and Revolution** but also important aspects of the ideas of Marx and Engels on such key issues as the state (see section H.3.10, for example).

We also spend some time refuting numerous Marxist distortions of anarchist ideas. I've lost count of the times I have seen blatantly false claims about anarchism raised by Marxists. I'm not that surprised, as few Marxists actually bother to read the likes of Proudhon, Bakunin and Kropotkin. Instead, they simply repeat what other Marxists have claimed about anarchism (starting, of course, with Marx and Engels). This explains why section H.2 has so many quotes in it, simply to drive home what would be obvious to anyone familiar with anarchist theory and practice. A few quotes could be dismissed as selective, a multitude cannot. I'm sorry that has to be done, but the regularity of abysmally bad Marxist diatribes against anarchism means that it had to be done in such detail. Sadly, I'm sure that refuting these habitual false assertions in **AFAQ** it will not stop Marxists repeating them.

Marxist myths on anarchism also feeds into section G, given that many Marxists have been at pains to portray anarchism as being simply "anti-state" (in this, they share common-ground with the propertarians). Yet even a cursory glance of anarchist theory and history shows that it has *never* limited itself to just a critique of the state. As long as anarchism has been a named socio-economic theory we have directed our fire at both state ***and*** property. *Property is Theft!*, my new anthology of Proudhon's writings, shows how interlinked the anarchist opposition to the state and capitalism has been from the start. Thus we find Proudhon arguing that *"the capitalist principle"* and the *"governmental principle are one and the same principle"* and so *"the abolition of the exploitation of man by man and the abolition of government of man by man are one and the same formula."* Moreover, it is *"to protect this exploitation of man by man that the State exists"* Unsurprisingly, then, anarchists are *"simultaneously striving for the abolition of capital and of the State"* and *"if you do away with the former, you still have to do away with the latter, and* ***vice versa****."*[6]

So the notion of an anarchism which is simply anti-state is completely alien to our tradition. However, falsely limiting anarchism to purely opposition to the state does allow Marxists to portray their tradition as the only form of socialism and so exclude anarchism, by definition, from anti-capitalism.

After Marxism, we move onto more constructive and fruitful subjects, namely anarchist ideas of what a free society could be like (section I) and what we do in the here and now to bring it closer and to make our lives better (section J).

Section I is important, simply because it presents a rough outline of what anarchists have suggested would characterise a free society. So we discuss workers self-management, community self-government, economic and social federalism, anti-social behaviour in a free society, and a host of other issues. While many people, particularly Marxists, question the wisdom of discussing the future society (Marx's comment on "writing the cookbooks of the future" springs to mind[7]), anarchists have been more willing to sketch out a rough vision of what a free society could be like. This may come as a surprise for some (infatuated with Bakunin's pre-anarchist comment that *"the urge to destroy is a creative urge"*) but in reality anarchism has always been a constructive socio-economic theory and anarchist thinkers have always been more than willing to sketch what a free society *could* be.

[6] **Property is Theft!**, p. 496, p. 535, p. 503 and p. 506

[7] If Marx had been a bit more forthcoming then the likes of Stalin would have found it harder to label their nightmare regimes "socialist."

And that is the key, this is what anarchy *could* be like. As we are at pains to stress, we are not presenting a blueprint: it is a series of suggestions based on our critique of capitalism, anarchist principles and the experiences of the struggle against oppression as well as social revolutions that have taken place. This is important, as anarchists have never abstractly postulated ideal social organisations to the oppression of hierarchy but, rather, developed our ideas of what a free society could look like by critically analysing the current exploitative and oppression one as well as the self-activity and self-organisation of those resisting it.

This anti-utopian perspective has been a significant aspect of anarchism since Proudhon who (especially his **System of Economic Contradictions**) attacked utopian socialists like Fourier and Saint-Simon for presenting fantastical visions (and appealing for rich benefactors!) rather than studying tendencies within capitalism which could transcend it (particularly working class self-activity). Thus social transformation *"must not emanate from the powers that be; it ought to be SPONTANEOUS."* It must come *"from below"* as only this ensured change *"by the concerted action of the citizens, by the experience of the workers, by the progress and diffusion of enlightenment, revolution by the means of liberty."*[8] Echoing Proudhon, Kropotkin argued that *"the method followed by the anarchist thinker"* is *"entirely different from that followed by the utopists ... He studies human society as it is now and was in the past ... tries to discover its tendencies, past and present, its growing needs, intellectual and economic, and in his ideal he merely points out in which direction evolution goes."*[9] A key aspect of this is looking at the self-organisation and struggles of working class people, these being the means by which anarchists link the current to the future.

So we discuss in **AFAQ** the perennial issues of both transition and how the new world gestates within the old. As section I.2.3 shows in detail, anarchists have always stressed that the new world is created in our struggles against the old. The fight for freedom transforms those who take part as well as creating the organisations (such as community assemblies, workers' councils, factory committees and their federations) which will be the framework of a free society. So the IWW slogan of *"building a new world in the shell of the old"* has been a key aspect of anarchism for some time, with Proudhon proclaiming during the 1848 Revolution that *"a new society be founded in the heart of the old society"* based on *"a body representative of the proletariat be[ing] formed ... in opposition to the bourgeoisie's representation."*[10]

Which brings us nicely to the last section, on what do anarchists do? In section J we summarise how anarchists see social change happening, how we organise to influence the class struggle as well as the forms of organisations we create. There are substantial discussions on alternative forms of social organisation we advocate and how they are the embryonic forms of a free society we create while resisting the current oppressive one. Thus, for example, we discuss how the federations of workplace assemblies we urge to fight the bosses become the means by which co-operative production is organised in a free society while the neighbourhood assemblies created as a counter-power to the state become the means by which free individuals manage their communities.

We also outline why anarchists support direct action and reject voting ("political action") as the means of social change as well as the role of libertarians in social struggle and revolution as

[8] Proudhon, **Op. Cit.**, p. 325 and p. 398

[9] **Anarchism**, p. 47

[10] **Op. Cit.**, p. 321. Proudhon had made a similar call in 1846, arguing that *"an agricultural and industrial combination must be found by means of which power, today the ruler of society, shall become its slave"* as the state is *"inevitably enchained to capital and directed against the proletariat."* (pp. 225–6)

well as how we organise to influence both. As well as summarising our ideas on the important issues of how we organise and how we change the world, we take the time to refute some of the more common false claims against abstentionism and whether we are "a-political" or not. Suffice to say, the anarchist critique of electioneering has been validated (as can be seen by the numbers of ex-radical politicians and ex-socialist parties in the world). Our arguments on the transforming power of direct action, solidarity and working class self-organisation from below have, likewise, been vindicated time and time again.

It must also be noted that the sections within this volume have been slightly edited to ensure that it approximates volume 1 in size. This has involved trimming around a tenth of the material. I have tried to cut non-essential paragraphs and sub-sections to ensure that the core of the arguments remain intact. This means that, for example, section H.2 (which debunks various Marxist myths about anarchism) ends on section H.2.11 in print but goes to section H.2.14 on-line. This was done with a heavy heart.

Since volume 1 has been published, significant changes have occurred in the world. Neoliberalism has taken a battering as the inevitable consequences of its policies resolved themselves in economic crisis. While reality has struck a blow to that ideology, it is fair to say that it will survive — after all, the ideology is so unrealistic already why should mere reality impact on its beauty for the true believer? Not to mention, of course, the significant class interests expressed in it. One thing is true, unless working class people organise and resist then governments, political discourse, economies and economic ideology will simply continue on as before — and those who will pay the costs of the crisis will not be the ruling class that created it.

On a more positive note, section B.1 of **AFAQ** indicated how hierarchies of wealth and power adversely affect those subject to them. **The Spirit Level: Why More Equal Societies Almost Always Do Better** by Richard Wilkinson and Kate Pickett presents more evidence on this subject, noting that on almost every index of quality of life or wellness there is a strong correlation between a country's level of economic inequality and its social outcomes. Significantly, it is not just the poor that are adversely affected by inequality, but society as a whole. So more equal societies have less crime and smaller prison populations as well as consistently delivering other advantages such as better physical and mental health, lower rates of teenage pregnancy and obesity, and higher rates of literacy and social trust. All of which confirm the anarchist analysis of the harmful effects of inequality in wealth and power.

AFAQ has moved its main site location (although the various aliases we have remain the same).[11] As a result, it also has a blog in which we post supplemental material on anarchism and news about the FAQ itself (such as updates).[12] Notable postings include the 2008 article marking the 150th anniversary of the use of the term "libertarian" by anarchists (*150 years of libertarian*), a supplement to our appendix on anarchist symbols contained in volume 1 (*The Red Flag of Anarchy*) and an unfinished appendix to section C explaining classical economics from a socialist perspective.

Finally, on a personal note, I dedicate this volume, like the first, to my family. I hope that this work will help, however slightly, to make the world a better place for them and that my children will grow up in a freer, more sustainable, world. Whether they do or not really is up to us, the

[11] Namely: www.anarchistfaq.org, www.anarchismfaq.org, www.anarchyfaq.org and www.anarchistfaq.org.uk.

current generation. Are we up for the challenge? Are we ready to fight for freedom and equality? The answer to that lies in your hands.

Either you can read **AFAQ** and leave it at that or you can join in the struggle for freedom and equality. The anarchist movement is not perfect, nor does it have all the answers. However, it remains for all that our best chance of making the world a fit place for unique individuals to live and flourish in. The question is whether we will remain happy to keep surviving within capitalism or whether we will seek to transform ourselves and our world for the better. We may fail. We may not stop the slide towards increased authoritarianism and atomisation. One thing is sure, if we do not resist then that slide will accelerate.

And if we do resist? Well, we may well change the world…

Iain McKay
www.anarchistfaq.org.uk

Section G — Is individualist anarchism capitalistic?

The short answer is, no, it is not. While a diverse tendency, the individualist anarchists were opposed to the exploitation of labour, all forms of non-labour income (such as profits, interest and rent) as well as capitalist property rights (particularly in land). While aiming for a free market system, they considered laissez-faire capitalism to be based on various kinds of state enforced class monopoly which ensured that labour was subjected to rule, domination and exploitation by capital. As such it is deeply **anti**-capitalist and many individualist anarchists, including its leading figure Benjamin Tucker, explicitly called themselves socialists (indeed, Tucker often referred to his theory as ***"Anarchistic-Socialism"***).

So, in this section of our anarchist FAQ we indicate why the individualist anarchists cannot be classified as "ancestors" of the bogus libertarians of the "anarcho"-capitalist school. Rather, they must be classified as libertarian **socialists** due to their opposition to exploitation, critique of capitalist property rights and concern for equality, albeit being on the liberal wing of anarchist thought. Moreover, while all wanted to have an economy in which all incomes were based on labour, many also opposed wage labour, i.e. the situation where one person sells their labour to another rather than the product of that labour (a position which, we argue, their ideas logically imply). So while **some** of their ideas do overlap with those of the "anarcho"-capitalist school they are not capitalistic, no more than the overlap between their ideas and anarcho-communism makes them communistic.

In this context, the creation of "anarcho"-capitalism may be regarded as yet another tactic by capitalists to reinforce the public's perception that there are no viable alternatives to capitalism, i.e. by claiming that "even anarchism implies capitalism." In order to justify this claim, they have searched the history of anarchism in an effort to find some thread in the movement that can be used for this purpose. They think that with the individualist anarchists they have found such a thread. However, such an appropriation requires the systematic ignoring or dismissal of key aspects of individualist-anarchism (which, of course, the right-"libertarian" does). Somewhat ironically, this attempt by right-"libertarians" to exclude individualist anarchism from socialism parallels an earlier attempt by state socialists to do the same. Tucker furiously refuted such attempts in an article entitled *"Socialism and the Lexicographers"*, arguing that *"the Anarchistic Socialists are not to be stripped of one half of their title by the mere dictum of the last lexicographer."* [**Instead of a Book**, p. 365]

Nevertheless, in the individualists we find anarchism coming closest to "classical" liberalism and being influenced by the ideas of Herbert Spencer, a forefather of "libertarian" capitalism (of the minimal state variety). As Kropotkin summarised, their ideas were *"a combination of those of Proudhon with those of Herbert Spencer."* [**Anarchism**, p. 296] What the "anarcho"-capitalist is trying to is to ignore Proudhon's influence (i.e. the socialist aspect of their theories) which just leaves Spencer, who was a right-wing liberal. To reduce individualist anarchism so is to destroy what makes it a unique political theory and movement. While both Kropotkin and Tucker praised Spencer as a synthetic philosopher and social scientist, they were both painfully aware of the limitations in his socio-political ideas. Tucker considered his attacks on all forms of socialism (including Proudhon) as authoritarian as being, at best, misinformed or, at worse, dishonest. He also recognised the apologetic and limited nature of his attacks on state intervention, noting that *"amid his multitudinous illustrations ... of the evils of legislation, he in every instance cites some law passed ostensibly at least to protect labour, alleviating suffering, or promote the people's welfare. But never once does he call attention to the far more deadly and deep-seated evils growing out of the innumerable laws creating privilege and sustaining monopoly."* Unsurprisingly, he considered

Spencer as a *"champion of the capitalistic class."* [quoted by James J. Martin, **Men Against the State**, p. 240] As we will discuss in section G.3, it is likely that he would have drawn the same conclusion about "anarcho"-capitalism.

This does not mean that the majority thread within the anarchist movement is uncritical of individualist anarchism. Far from it! Social anarchists have argued that this influence of non-anarchist ideas means that while its *"criticism of the State is very searching, and [its] defence of the rights of the individual very powerful,"* like Spencer it *"opens ... the way for reconstituting under the heading of 'defence' all the functions of the State."* [Kropotkin, **Op. Cit.**, p. 297] This flows, social anarchists argue, from the impact of liberal principles and led some individualist anarchists like Benjamin Tucker to support contract theory in the name of freedom, without being aware of the authoritarian social relationships that could be implied by it, as can be seen under capitalism (other individualist anarchists were more aware of this contradiction as we will see). Therefore, social anarchists tend to think of individualist anarchism as an inconsistent form of anarchism, one which could become consistent by simply logically applying its own principles (see section G.4). On their part, many individualist anarchists simply denied that social anarchists where anarchists, a position other anarchists refute (see section G.2). As such, this section can also be considered, in part, as a continuation of the discussion begun in section A.3.

Few thinkers are completely consistent. Given Tucker's adamant anti-statism and anti-capitalism, it is likely that had he realised the authoritarian social relationships which contract theory tends to produce (and justify) when involving employing labour, he would have modified his views in such a way as to eliminate the contradiction (particularly as contracts involving wage labour directly contradicts his support for "occupancy and use"). It is understandable why he failed to do so, however, given the social context in which he lived and agitated. In Tucker's America, self-employment was still a possibility on a wide scale (in fact, for much of the nineteenth century it was the dominant form of economic activity). His reforms were aimed at making it easier for workers to gain access to both land and machinery, so allowing wage workers to become independent farmers or artisans. Unsurprisingly, therefore, he viewed individualist anarchism as a society of workers, not one of capitalists and workers. Moreover, as we will argue in section G.4.1, his love for freedom and opposition to usury logically implies artisan and co-operative labour — people selling the products of their labour, as opposed to the labour itself — which itself implies self-management in production (and society in general), not authoritarianism within the workplace (this was the conclusion of Proudhon as well as Kropotkin). Nevertheless, it is this inconsistency — the non-anarchist aspect of individualist anarchism — which right "libertarians" like Murray Rothbard select and concentrate on, ignoring the anti-capitalist context in which this aspect of individualist thought exists within. As David Wieck pointed out:

> *"Out of the history of anarchist thought and action Rothbard has pulled forth a single thread, the thread of individualism, and defines that individualism in a way alien even to the spirit of a Max Stirner or a Benjamin Tucker, whose heritage I presume he would claim — to say nothing of how alien is his way to the spirit of Godwin, Proudhon, Bakunin, Kropotkin, Malatesta, and the historically anonymous persons who through their thoughts and action have tried to give anarchism a living meaning. Out of this thread Rothbard manufactures one more bourgeois ideology."* [**Anarchist Justice**, pp. 227–228]

It is with this in mind that we discuss the ideas of people like Tucker. As this section of the FAQ will indicate, even at its most liberal, individualist, extreme anarchism was fundamentally **anti**-capitalist. Any concepts which "anarcho"-capitalism imports from the individualist tradition ignore both the theoretical underpinnings of their ideas as well as the social context of self-employment and artisan production within which those concepts arose, thus turning them into something radically different from what was intended by their originators. As we discuss in section G.1.4 the social context in which individualist anarchism developed is essential to understanding both its politics and its limitations (*"Anarchism in America is not a* ***foreign importation*** *but a product of the social conditions of this country and its historical traditions,"* although it is *"true that American anarchism was also influenced later by European ideas."* [Rudolf Rocker, **Pioneers of American Freedom**, p. 163]).

Saying that, it would be a mistake to suggest (as some writers have) that individualist anarchism can be viewed purely in American terms. While understanding the nature of American society and economy at the time is essential to understanding individualist anarchism, it would be false to imply that only individualist anarchism was the product of America conditions and subscribed to by Americans while social anarchism was imported from Europe by immigrants. After all, Albert and Lucy Parsons were both native-born Americans who became communist-anarchists while Emma Goldman and Alexander Berkman only become anarchists once they had arrived in America. Native-born Voltairine de Cleyre moved from individualist to communist anarchism. Josiah Warren may have been born in Boston, but he developed his anarchism after his experiences in a experimental community set up by Welsh socialist Robert Owen (who, in turn, was inspired by William Godwin's ideas). While Warren and Proudhon may have developed their ideas independently, American libertarians became aware of Proudhon and other European socialists as radical journals had correspondents in France during the 1848 revolution and partial translations of radical writings from Europe appeared as quickly as they could be transmitted and translated. Individualist anarchists like William Greene and Tucker were heavily influenced by the ideas of Proudhon and so imported aspects of European anarchism into American individualist anarchism while the likes of the French individualist E. Armand brought aspects of American anarchism into the European movement. Similarly, both Spooner and Greene had been members of the First International while individualist anarchists Joseph Labadie and Dyer Lum where organisers of the **Knights of Labor** union along with Albert and Lucy Parsons. Lum later joined the anarcho-communist inspired **International Working People's Association** (IWPA) and edited its English language paper (the **Alarm**) when Parson was imprisoned awaiting execution. All forms of anarchism were, in other words, a combination of European and American influences, both in terms of ideas and in terms of social experiences and struggles, even organisations.

While red-baiting and cries of "Un-American" may incline some to stress the "native-born" aspect of individualist anarchism (particularly those seeking to appropriate that tendency for their own ends), both wings of the US movement had native-born and foreign members, aspects and influences (and, as Rocker noted, the *"so-called white civilisation of [the American] continent is the work of European immigrants."* [**Op. Cit.**, p. 163]). While both sides tended to denounce and attack the other (particularly after the Haymarket events), they had more in common than the likes of Benjamin Tucker and Johann Most would have been prepared to admit and each tendency, in its own way, reflected aspects of American society and the drastic transformation it was going through at the time. Moreover, it was changes in American society which lead to the steady rise

of social anarchism and its eclipse of individualist anarchism from the 1880s onwards. While there has been a tendency to stress individualist tendency in accounts of American anarchism due to its unique characteristics, only those *"without a background in anarchist history"* would think *"that the individualist anarchists were the larger segment of the anarchist movement in the U.S. at the time. Nothing could be farther from the truth. The collectivist branch of anarchism was much stronger among radicals and workers during the late nineteenth century and early twentieth century than the individualist brand. Before the Civil War, the opposite would be true."* [Greg Hall, **Social Anarchism**, no. 30, pp. 90–91]

By the 1880s, social anarchism had probably exceeded the size of the "home-grown" individualists in the United States. The IWPA had some five thousand members at its peak with perhaps three times as many supporters. [Paul Avrich, **The Haymarket Tragedy**, p. 83] Its journals had an aggregate circulation of over 30,000. [George Woodcock, **Anarchism**, p. 395] In contrast, the leading individualist newspaper **Liberty** *"probably never had more than 600 to 1000 subscribers, but it was undoubtedly read by more than that."* [Charles H. Hamilton, *"Introduction"*, p. 1–19, **Benjamin R. Tucker and the Champions of Liberty**, Coughlin, Hamilton and Sullivan (eds.), p. 10] The repression after Haymarket took its toll and the progress of social anarchism was hindered for a decade. However, *"[b]y the turn of the century, the anarchist movement in America had become predominantly communist in orientation."* [Paul Avrich, **Anarchist Voices**, p. 5] As an added irony for those who stress the individualist nature of anarchism in America while dismissing social anarchism as a foreign import, the first American newspaper to use the name **"An-archist"** was published in Boston in 1881 by anarchists within the social revolutionary branch of the movement. [Paul Avrich, **The Haymarket Tragedy**, p. 57] Equally ironic, given the appropriation of the term by the American right, the first anarchist journal to use the term "libertarian" (**La Libertaire, Journal du Mouvement Social**) was published in New York between 1858 and 1861 by French communist-anarchist Joseph Déjacque. [Max Nettlau, **A Short History of Anarchism**, pp. 75–6]

All this is not to suggest that individualist anarchism does not have American roots nor that many of its ideas and visions were not significantly shaped by American social conditions and developments. Far from it! It is simply to stress that it did not develop in complete isolation of European anarchism during the latter half of the nineteenth century and that the social anarchism which overtook by the end of that century was also a product of American conditions (in this case, the transformation of a pre-capitalist society into a capitalist one). In other words, the rise of communist anarchism and the decline of individualist anarchism by the end of the nineteenth century reflected American society just as much as the development of the latter in the first place. Thus the rise of capitalism in America meant the rise of an anarchism more suitable to the social conditions and social relationships produced by that change. Unsurprisingly, therefore, individualist anarchism remains the minority trend in American anarchism to this day with such comrades as Joe Peacott (see his pamphlet **Individualism Reconsidered**), Kevin Carson (see his book **Studies in Mutualist Political Economy**) and Shawn Wilbur (who has painstakingly placed many rare early individualist and mutualist anarchist works onto the internet) keeping its ideas alive.

So like social anarchism, individualist anarchism developed as a response to the rise of capitalism and the transformation of American society this produced. As one academic put it, the *"early anarchists, though staunchly individualistic, did not entertain a penchant for ... capitalism. Rather, they saw themselves as socialists opposed to the state socialism of Karl Marx. The individ-*

ualist anarchists saw no contradiction between their individualist stance and their rejection of capitalism." She stresses that they were *"fervent anti-capitalists"* and thought that *"workers created value through their labour, a value appropriated by owners of businesses ... The individualist anarchists blamed capitalism for creating inhumane working conditions and for increasing inequalities of wealth. Their self-avowed 'socialism' was rooted in their firm belief in equality, material as well as legal."* This, however, did not stop her asserting that *"contemporary anarcho-capitalists are descendants of nineteenth-century individualist anarchists such as Josiah Warren, Lysander Spooner, and Benjamin Tucker."* [Susan Love Brown, pp. 99–128, *"The Free Market as Salvation from Government"*, **Meanings of the Market**, James G. Carrier (ed.), p. 104, p. 107, p. 104 and p. 103] Trust an academic to ignore the question of how related **are** two theories which differ on such a key issue as whether to be anti-capitalist or not!

Needless to say, some "anarcho"-capitalists are well aware of the fact that individualist anarchists were extremely hostile to capitalism while supporting the "free market." Unsurprisingly, they tend to downplay this opposition, often arguing that the anarchists who point out the anti-capitalist positions of the likes of Tucker and Spooner are quoting them out of context. The truth is different. In fact, it is the "anarcho"-capitalist who takes the ideas of the individualist anarchists from both the historical and theoretical context. This can be seen from the "anarcho"-capitalist dismissal of the individualist anarchists' "bad" economics as well as the nature of the free society wanted by them.

It is possible, no doubt, to trawl through the many issues of, say, **Liberty** or the works of individualist anarchism to find a few comments which may be used to bolster a claim that anarchism need not imply socialism. However, a few scattered comments here and there are hardly a firm basis to ignore the vast bulk of anarchist theory and its history as a movement. This is particularly the case when applying this criteria consistently would mean that communist anarchism, for example, would be excommunicated from anarchism simply because of the opinions of **some** individualist anarchists. Equally, it may be possible to cobble together all the non-anarchist positions of individualist anarchists and so construct an ideology which justified wage labour, the land monopoly, usury, intellectual property rights, and so on but such an ideology would be nothing more than a mockery of individualist anarchism, distinctly at odds with its spirits and aims. It would only convince those ignorant of the anarchist tradition.

It is not a fitting tribute to the individualist anarchists that their ideas are today being associated with the capitalism that they so clearly despised and wished to abolish. As one modern day Individualist Anarchist argues:

> *"It is time that anarchists recognise the valuable contributions of .. . individualist anarchist theory and take advantage of its ideas. It would be both futile and criminal to leave it to the capitalist libertarians, whose claims on Tucker and the others can be made only by ignoring the violent opposition they had to capitalist exploitation and monopolistic 'free enterprise' supported by the state."* [J.W. Baker, *"Native American Anarchism,"* pp. 43–62, **The Raven**, vol. 10, no. 1, pp. 61–2]

We hope that this section of the FAQ will go some way to explaining the ideas and contributions of individualist anarchism to a new generation of rebels. Given the diversity of individualist anarchism, it is hard to generalise about it (some are closer to classical liberalism than others, for example, while a few embraced revolutionary means of change such as Dyer Lum). However,

we will do our best to draw out the common themes of the movement, indicating where certain people differed from others. Similarly, there are distinct differences between European and American forms of mutualism, regardless of how often Tucker invoked Proudhon's name to justify his own interpretations of anarchism and we will indicate these (these differences, we think, justify calling the American branch individualist anarchism rather than mutualism). We will also seek to show why social anarchism rejects individualist anarchism (and vice versa) as well as giving a critical evaluation of both positions. Given the diverse nature of individualist anarchism, we are sure that we will not cover all the positions and individuals associated with it but we hope to present enough to indicate why the likes of Tucker, Labadie, Yarros and Spooner deserve better than to be reduced to footnotes in books defending an even more extreme version of the capitalism they spent their lives fighting.

G.1 Are individualist anarchists anti-capitalist?

To answer this question, it is necessary to first define what we mean by capitalism and socialism. While there is a tendency for supporters of capitalism (and a few socialists!) to equate it with the market and private property, this is not the case. It is possible to have both and not have capitalism (as we discuss in section G.1.1 and section G.1.2, respectively). Similarly, the notion that "socialism" means, by definition, state ownership and/or control, or that being employed by the state rather than by private capital is "socialism" is distinctly wrong. While some socialists have, undoubtedly, defined socialism in precisely such terms, socialism as a historic movement is much wider than that. As Proudhon put it, *"[m]odern Socialism was not founded as a sect or church; it has seen a number of different schools."* [**Selected Writings of Pierre-Joseph Proudhon**, p. 177]

As Proudhon, Bakunin, Kropotkin and Tucker all stressed, anarchism is one of those schools. For Kropotkin, anarchism was *"the no-government system of socialism."* [**Anarchism**, p. 46] Likewise, for Tucker, there were *"two schools of socialistic thought"*, one of which represented authority and the other liberty, namely *"State Socialism and Anarchism."* [**The Individualist Anarchists**, pp. 78–9] It was *"not Socialist Anarchism against Individualist Anarchism, but of Communist Socialism against Individualist Socialism."* [Tucker, **Liberty**, no. 129, p. 2] As one expert on Individualist Anarchism noted, Tucker *"looked upon anarchism as a branch of the general socialist movement."* [James J. Martin, **Men Against the State**, pp. 226–7] Thus we find Individualist anarchist Victor Yarros, like Tucker, talking about *"the position and teachings of the Anarchistic Socialists"* when referring to his ideas. [**Liberty**, no. 98, p. 5]

Part of problem is that in the 20th century, the statist school of socialism prevailed both within the labour movement (at least in English speaking countries or until fascism destroyed it in mainland Europe and elsewhere) and within the revolutionary movement (first as social democracy, then as Communism after the Russian Revolution). This lead, it should be noted, to anarchists not using the term "socialist" to describe their ideas as they did not want to be confused with either reformed capitalism (social democracy) or state capitalism (Leninism and Stalinism). As anarchism was understood as being inherently anti-capitalist, this did not become an issue until certain right-wing liberals started calling themselves "anarcho"-capitalists (somewhat ironically, these liberals joined with the state socialists in trying to limit anarchism to anti-statism and denying their socialist credentials). Another part of the problem is that many, particularly those in America, derive their notion of what socialism is from right-wing sources who are more than happy to agree with the Stalinists that socialism **is** state ownership. This is case with right-"libertarians", who rarely study the history or ideas of socialism and instead take their lead from such fanatical anti-socialists as Ludwig von Mises and Murray Rothbard. Thus they equate socialism with social democracy or Leninism/Stalinism, i.e. with state ownership of the means of life, the turning of part or the whole working population into employees of the government or state

regulation and the welfare state. In this they are often joined by social democrats and Marxists who seek to excommunicate all other kinds of socialism from the anti-capitalist movement.

All of which leads to some strange contradictions. If "socialism" **is** equated to state ownership then, clearly, the individualist anarchists are not socialists but, then, neither are the social anarchists! Thus if we assume that the prevailing socialism of the 20th century defines what socialism is, then quite a few self-proclaimed socialists are not, in fact, socialists. This suggests that socialism cannot be limited to state socialism. Perhaps it would be easier to define "socialism" as restrictions on private property? If so, then, clearly, social anarchists are socialists but then, as we will prove, so are the individualist anarchists!

Of course, not all the individualist anarchists used the term "socialist" or "socialism" to describe their ideas although many did. Some called their ideas Mutualism and explicitly opposed socialism (William Greene being the most obvious example). However, at root the ideas were part of the wider socialist movement and, in fact, they followed Proudhon in this as he both proclaimed himself a socialist while also attacking it. The apparent contradiction is easily explained by noting there are two schools of socialism, state and libertarian. Thus it is possible to be both a (libertarian) socialist and condemn (state) socialist in the harshest terms.

So what, then, is socialism? Tucker stated that *"the bottom claim of Socialism"* was *"that labour should be put in possession of its own,"* that *"the natural wage of labour is its product"* and *"interest, rent, and profit ... constitute the trinity of usury."* [**The Individualist Anarchists**, p. 78 and p. 80] This definition also found favour with Kropotkin who stated that socialism *"in its wide, generic, and true sense"* was an *"effort to **abolish** the exploitation of labour by capital."* [**Anarchism**, p. 169] For Kropotkin, anarchism was *"brought forth by the same critical and revolutionary protest which gave rise to Socialism in general"*, socialism aiming for *"the negation of Capitalism and of society based on the subjection of labour to capital."* Anarchism, unlike other socialists, extended this to oppose *"what constitutes the real strength of Capitalism: the State and its principle supports."* [**Environment and Evolution**, p. 19] Tucker, similarly, argued that Individualist anarchism was a form of socialism and would result in the *"emancipation of the workingman from his present slavery to capital."* [**Instead of a Book**, p. 323]

The various schools of socialism present different solutions to this exploitation and subjection. From the nationalisation of capitalist property by the state socialists, to the socialisation of property by the libertarian communists, to the co-operatives of mutualism, to the free market of the individualist anarchists, all are seeking, in one way or the other, to ensure the end of the domination and exploitation of labour by capital. The disagreements between them all rest in whether their solutions achieve this aim and whether they will make life worth living and enjoyable (which also explains why individualist and social anarchists disagree so much!). For anarchists, state socialism is little more than state **capitalism**, with a state monopoly replacing capitalist monopolies and workers being exploited by one boss (the state) rather than many. So all anarchists would agree with Yarrows when he argued that *"[w]hile **State** Socialism removes the disease by killing the patient, **no**-State Socialism offers him the means of recovering strength, health, and vigour."* [**Liberty**, no. 98, p. 5]

So, why are the individualist anarchists anti-capitalists? There are two main reasons.

Firstly, the Individualist Anarchists opposed profits, interest and rent as forms of exploitation (they termed these non-labour incomes ***"usury"***, but as Tucker stressed usury was *"but another name for the exploitation of labour."* [**Liberty**, no. 122, p. 4]). To use the words of Ezra Heywood, the Individualist Anarchists thought *"Interest is theft, Rent Robbery, and Profit Only Another Name*

for Plunder." [quoted by Martin Blatt, *"Ezra Heywood & Benjamin Tucker,"*, pp. 28–43, **Benjamin R. Tucker and the Champions of Liberty**, Coughlin, Hamilton and Sullivan (eds.), p. 29] Non-labour incomes are merely *"different methods of levying tribute for the use of capital."* Their vision of the good society was one in which *"the usurer, the receiver of interest, rent and profit"* would not exist and Labour would *"secure its natural wage, its entire product."* [Tucker, **The Individualist Anarchists**, p. 80, p. 82 and p. 85] This would also apply to dividends, *"since no idle shareholders could continue in receipt of dividends were it not for the support of monopoly, it follows that these dividends are no part of the proper reward of ability."* [Tucker, **Liberty**, no. 282, p. 2]

In addition, as a means of social change, the individualists suggested that activists start *"inducing the people to steadily refuse the payment of rents and taxes."* [**Instead of a Book** pp. 299–300] These are hardly statements with which capitalists would agree. Tucker, as noted, also opposed interest, considering it usury (exploitation and a *"crime"*) pure and simple and one of the means by which workers were denied the full fruits of their labour. Indeed, he looked forward to the day when *"any person who charges more than cost for any product [will] ... be regarded very much as we now regard a pickpocket."* This *"attitude of hostility to usury, in any form"* hardly fits into the capitalist mentality or belief system. [**Op. Cit.**, p. 155] Similarly, Ezra Heywood considered profit-taking *"an injustice which ranked second only to legalising titles to absolute ownership of land or raw-materials."* [James J. Martin, **Op. Cit.**, p. 111] Opposition to profits, rent or interest is hardly capitalistic — indeed, the reverse.

Thus the Individualist Anarchists, like the social anarchists, opposed the exploitation of labour and desired to see the end of capitalism by ensuring that labour would own what it produced. They desired a society in which there would no longer be capitalists and workers, only workers. The worker would receive the full product of his/her labour, so ending the exploitation of labour by capital. In Tucker's words, a free society would see *"each man reaping the fruits of his labour and no man able to live in idleness on an income from capital"* and so society would *"become a great hive of Anarchistic workers, prosperous and free individuals"* combining *"to carry on their production and distribution on the cost principle."* [**The Individualist Anarchists**, p. 276]

Secondly, the Individualist Anarchists favoured a new system of land ownership based on ***"occupancy and use."*** So, as well as this opposition to capitalist usury, the individualist anarchists also expressed opposition to capitalist ideas on property (particularly property in land). J.K. Ingalls, for example, considered that *"the private domination of the land"* originated in *"usurpation only, whether of the camp, the court or the market. Whenever such a domination excludes or deprives a single human being of his equal opportunity, it is a violation, not only of the public right, and of the social duty, but of the very principle of law and morals upon which property itself is based."* [quoted by Martin, **Op. Cit.**, p. 148f] As Martin comments, for Ingalls, *"[t]o reduce land to the status of a commodity was an act of usurpation, enabling a group to 'profit by its relation to production' without the expenditure of labour time."* [**Op. Cit.**, p. 148] These ideas are identical to Proudhon's and Ingalls continues in this Proudhonian *"occupancy and use"* vein when he argues that possession *"remains **possession**, and can never become **property**, in the sense of absolute dominion, except by positive statue [i.e. state action]. Labour can only claim **occupancy**, and can lay no claim to more than the usufruct."* Current property ownership in land were created by *"forceful and fraudulent taking"* of land, which *"could give no justification to the system."* [quoted by Martin, **Op. Cit.**, p. 149]

The capitalist system of land ownership was usually termed the ***"land monopoly"***, which consisted of *"the enforcement by government of land titles which do not rest upon personal occupancy*

and cultivation." Under anarchism, individuals would *"no longer be protected by their fellows in anything but personal occupancy and cultivation of land"* and so *"ground rent would disappear."* [Tucker, **The Individualist Anarchists**, p. 85] This applied to what was on the land as well, such as housing:

> *"If a man exerts himself by erecting a building on land which afterward, by the operation of the principle of occupancy and use, rightfully becomes another's, he must, upon demand of the subsequent occupant, remove from this land the results of his self-exertion, or, failing so to do, sacrifice his property therein."* [**Liberty**, no. 331, p. 4]

This would apply to both the land and what was on it. This meant that *"tenants would not be forced to pay ... rent"* nor would landlords *"be allowed to seize their property."* This, as Tucker noted, was a complete rejection of the capitalist system of property rights and saw anarchism being dependent on *"the Anarchistic view that occupancy and use should condition and limit landholding becom[ing] the prevailing view."* [**The Individualist Anarchists**, p. 162 and p. 159] As Joseph Labadie put it, socialism includes any theory *"which has for its object the* ***changing of the present status of property*** *and the relations one person or class holds to another. In other words, any movement which has for its aim the changing of social relations, of companionships, of associations, of powers of one class over another class, is Socialism."* [our emphasis, **Liberty**, no. 158, p. 8] As such, both social and individualist anarchists are socialists as both aimed at changing the present status of property.

It should also be noted here that the individualist anarchist ideal that competition in banking would drive interest to approximately zero is their equivalent to the social anarchist principle of free access to the means of life. As the only cost involved would be an administration charge which covers the labour involved in running the mutual bank, all workers would have access to "capital" for (in effect) free. Combine this with "occupancy and use" in terms of land use and it can be seen that both individualist and social anarchists shared a common aim to make the means of life available to all without having to pay a tribute to an owner or be dependent on a ruling capitalist or landlord class.

For these reasons, the Individualist Anarchists are clearly anti-capitalist. While an Individualist Anarchy would be a market system, it would not be a capitalist one. As Tucker argued, the anarchists realised *"the fact that one class of men are dependent for their living upon the sale of their labour, while another class of men are relieved of the necessity of labour by being legally privileged to sell something that is not labour... . And to such a state of things I am as much opposed as any one. But the minute you remove privilege... every man will be a labourer exchanging with fellow-labourers ... What Anarchistic-Socialism aims to abolish is usury ... it wants to deprive capital of its reward."* As noted above, the term *"usury,"* for Tucker, was simply a synonym for *"the exploitation of labour."* [**Instead of a Book**, p. 404 and p. 396]

The similarities with social anarchism are obvious. Like them, the individualist anarchists opposed capitalism because they saw that profit, rent and interest were all forms of exploitation. As communist-anarchist Alexander Berkman noted, *"[i]f the worker would get his due — that is, the things he produces or their equivalent — where would the profits of the capitalist come from? If labour owned the wealth it produced, there would be no capitalism."* Like social anarchists they opposed usury, to have to pay purely for access/use for a resource. It ensured that a *"slice of their daily labour is taken from [the workers] for the privilege of* ***using*** *these factories"* [**What is**

Anarchism?, p. 44 and p. 8] For Marx, abolishing interest and interest-bearing capital *"means the abolition of capital and of capitalist production itself."* [**Theories of Surplus Value**, vol. 3, p. 472] A position, incidentally, also held by Proudhon who maintained that *"reduction of interest rates to vanishing point is itself a revolutionary act, because it is destructive of capitalism."* [quoted by Edward Hyams, **Pierre-Joseph Proudhon: His Revolutionary Life, Mind and Works**, p. 188] Like many socialists, Individualist Anarchists used the term "interest" to cover all forms of surplus value: *"the use of money"* plus *"house-rent, dividends, or share of profits"* and having to *"pay a tax to somebody who owns the land." "In doing away with interest, the cause of inequality in material circumstances will be done away with."* [John Beverley Robinson, **The Individualist Anarchists**, pp. 144–5]

Given that Individualist Anarchism aimed to abolish interest along with rent and profit it would suggest that it is a socialist theory. Unsurprisingly, then, Tucker agreed with Marx's analysis on capitalism, namely that it lead to industry concentrating into the hands of a few and that it robbed workers of the fruits of the toil (for Francis Tandy it was a case of *"the Marxian theory of surplus value, upon which all Socialistic philosophy — whether State or Anarchistic — is necessarily based"* [**Op. Cit.**, no. 312, p. 3]). Tucker quoted a leading Marxist's analysis of capitalism and noted that *"Liberty endorses the whole of it, excepting a few phrases concerning the nationalisation of industry and the assumption of political power by working people."* However, he was at pains to argue that this analysis was first expounded by Proudhon, *"that the tendency and consequences of capitalistic production ... were demonstrated to the world time and time again during the twenty years preceding the publication of 'Das Kapital'"* by the French anarchist. This included *"the historical persistence of class struggles in successive manifestations"* as well as *"the theory that labour is the source and measure of value." "Call Marx, then, the father of State socialism, if you will,"* argued Tucker, *"but we dispute his paternity of the general principles of economy on which all schools of socialism agree."* [**Liberty**, no. 35, p. 2]

This opposition to profits, rent and interest as forms of exploitation and property as a form of theft clearly makes individualist anarchism anti-capitalist and a form of (libertarian) socialism. In addition, it also indicates well the common ground between the two threads of anarchism, in particular their common position to capitalism. The social anarchist Rudolf Rocker indicates well this common position when he argues:

> *"it is difficult to reconcile personal freedom with the existing economic system. Without doubt the present inequality of economic interests and the resulting class conflicts in society are a continual danger to the freedom of the individual ... [T]he undisturbed natural development of human personality is impossible in a system which has its root in the shameless exploitation of the great mass of the members of society. One cannot be free either politically or personally so long as one is in economic servitude of another and cannot escape from this condition. This was recognised by men like Godwin, Warren, Proudhon, Bakunin, [and women like Goldman and de Cleyre, we must add!] and many others who subsequently reached the conviction that the domination of man over man will not disappear until there is an end of the exploitation of man by man."* [**Nationalism and Culture**, p. 167]

There are other, related, reasons why the individualist anarchists must be considered left-wing libertarians rather than right-wing ones. Given their opposition to non-labour income, they saw

their proposals as having egalitarian implications. As regards equality, we discover that they saw their ideas as promoting it. Thus we find Tucker arguing that that the *"happiness possible in any society that does not improve upon the present in the matter of distribution of wealth, can hardly be described as beatific."* He was clearly opposed to *"the inequitable distribution of wealth"* under capitalism and equally clearly saw his proposals as a means of reducing it substantially. The abolition of those class monopolies which create interest, rent and profit would reduce income and wealth inequalities substantially. However, there was *"one exception, and that a comparatively trivial one"*, namely economic rent (the natural differences between different bits of land and individual labour). This *"will probably remain with us always. Complete liberty will very much lessen it; of that I have no doubt ... At the worst, it will be a small matter, no more worth consideration in comparison with the liberty than the slight disparity that will always exist in consequence of inequalities of skill."* [*"Why I am an Anarchist"*, pp. 132–6, **Man!**, M. Graham (ed.), pp. 135–6] Another individualist anarchist, John Beverley Robinson, agreed:

> *"When privilege is abolished, and the worker retains all that he produces, then will come the powerful trend toward equality of material reward for labour that will produce substantial financial and social equality, instead of the mere political equality that now exists."* [**Patterns of Anarchy**, pp. 278–9]

As did Lysander Spooner, who pointed out that the *"wheel of fortune, in the present state of things, is of such enormous diameter"* and *"those on its top are on so showy a height"* wjile *"those underneath it are in such a pit of debt, oppression, and despair."* He argued that under his system *"fortunes could hardly be represented by a wheel; for it would present no such height, no such depth, no such irregularity of motion as now. It should rather be represented by an extended surface, varied somewhat by inequalities, but still exhibiting a general level, affording a safe position for all, and creating no necessity, for either force or fraud, on the part of anyone to secure his standing."* Thus Individualist anarchism would create a condition *"neither of poverty, nor riches; but of moderate competency — such as will neither enervate him by luxury, nor disable him by destitution; but which will at once give him and opportunity to labour, (both mentally and physically) and stimulate him by offering him all the fruits of his labours."* [quoted by Stephan L. Newman, **Liberalism at Wit's End**, p. 72 and p. 73]

As one commentator on individualist anarchism, Wm. Gary Kline, correctly tsummarised:

> *"Their proposals were designed to establish true equality of opportunity ... and they expected this to result in a society without great wealth or poverty. In the absence of monopolistic factors which would distort competition, they expected a society of largely self-employed workmen with no significant disparity of wealth between any of them since all would be required to live at their own expense and not at the expense of exploited fellow human beings."* [**The Individualist Anarchists: A Critique of Liberalism**, pp. 103–4]

Hence, like social anarchists, the Individualist Anarchists saw their ideas as a means towards equality. By eliminating exploitation, inequality would soon decrease as wealth would no longer accumulate in the hands of the few (the owners). Rather, it would flow back into the hands of those who produced it (i.e. the workers). Until this occurred, society would see *"[o]n one side a dependent class of wage-workers and on the other a privileged class of wealth-monopolisers, each*

become more and more distinct from the other as capitalism advances." This has *"resulted in a grouping and consolidation of wealth which grows apace by attracting all property, no matter by whom produced, into the hands of the privileged, and hence property becomes a social power, an economic force destructive of rights, a fertile source of injustice, a means of enslaving the dispossessed."* [William Ballie, **The Individualist Anarchists**, p. 121]

Moreover, like the social anarchists, the Individualist Anarchists were aware that the state was not some neutral machine or one that exploited all classes purely for its own ends. They were aware that it was a vehicle of **class rule,** namely the rule of the capitalist class over the working class. Spooner thought that that *"holders of this monopoly [of the money supply] now rule and rob this nation; and the government, in all its branches, is simply their tool"* and that *"the employers of wage labour ... are also the monopolists of money."* [Spooner, **A Letter to Grover Cleveland**, p. 42 and p. 48] Tucker recognised that *"capital had so manipulated legislation"* that they gained an advantage on the capitalist market which allowed them to exploit labour. [**The Individualist Anarchists**, pp. 82–3] He was quite clear that the state was a **capitalist** state, with *"Capitalists hav[ing] placed and kept on the statute books all sorts of prohibitions and taxes"* to ensure a "free market" skewed in favour of themselves. [**Instead of a Book**, p. 454] A.H. Simpson argued that the Individualist Anarchist *"knows very well that the present State ... is simply the tool of the property-owning class."* [**The Individualist Anarchists**, p. 92] Thus both wings of the anarchist movement were united in their opposition to capitalist exploitation and their common recognition that the state was a tool of the capitalist class, used to allow them to exploit the working class.

Tucker, like other individualist anarchists, also supported labour unions, and although he opposed violence during strikes he recognised that it was caused by frustration due to an unjust system. Indeed, like social anarchists, he considered *"the labourer in these days [as] a soldier... His employer is ... a member of an opposing army. The whole industrial and commercial world is in a state of internecine war, in which the proletaires are massed on one side and the proprietors on the other."* The cause of strikes rested in the fact that *"before ... strikers violated the equal liberty of others, their own right to equality of liberty had been wantonly and continuously violated"* by the capitalists using the state, for the *"capitalists ... in denying [a free market] to [the workers] are guilty of criminal invasion."* [**Instead of a Book**, p. 460 and p. 454] *"With our present economic system,"* Tucker stressed, *"almost every strike is just. For what is justice in production and distribution? That labour, which creates all, shall have* ***all.****"* [**Liberty**, no. 19, p. 1]

Another important aspects of unions and strikes were that they represented both a growing class consciousness and the ability to change society. *"It is the power of the great unions to paralyse industry and* ***ignore*** *the government that has alarmed the political burglars,"* argued Victor Yarrows. This explained why unions and strikes were crushed by force as *"the State can have no rival, say the plutocrats, and the trades unions, with the sympathetic strike and boycott as weapons, are becoming too formidable."* Even defeated strikes were useful as they ensured that *"the strikers and their sympathisers will have acquired some additional knowledge of the essential nature of the beast, government, which plainly has no other purpose at present than to protect monopoly and put down all opposition to it." "There is such a thing as the solidarity of labour,"* Yarrows went on, *"and it is a healthy and encouraging sign that workmen recognise the need of mutual support and co-operation in their conflict with monopoly and its official and unofficial servants. Labour has to fight government as well as capital, 'law and order' as well as plutocracy. It cannot make the slightest movement against monopoly without colliding with some sort of 'authority', Federal, State,*

or municipal." The problem was that the unions *"have no clear general aims and deal with results rather than causes."* [**Liberty**, no. 291, p. 3]

This analysis echoed Tucker's, who applauded the fact that *"[a]nother era of strikes apparently is upon us. In all trades and in all sections of the country labour is busy with its demands and its protests. Liberty rejoices in them. They give evidence of life and spirit and hope and growing intelligence. They show that the people are beginning to know their rights, and, knowing, dare to maintain them. Strikes, whenever and wherever inaugurated, deserve encouragement from all true friends of labour."* [**Op. Cit.**, no. 19, p. 1] Even failed strikes were useful, for they exposed *"the tremendous and dangerous power now wielded by capital."* [**Op. Cit.**, no. 39, p. 1] The *"capitalists and their tools, the legislatures, already begin to scent the impending dangers of trades-union socialism and initiatory steps are on foot in the legislatures of several states to construe labour combinations as conspiracies against commerce and industry, and suppress them by law."* [**Op. Cit.**, no. 22, p. 3]

Some individualist anarchists, like Dyer Lum and Joseph Labadie, were union organisers while Ezra Heywood *"scoffed at supporters of the status quo, who saw no evidence of the tyranny on the part of capital, and who brought up the matter of free contract with reference to labourers. This argument was no longer valid. Capital controlled land, machinery, steam power, waterfalls, ships, railways, and above all, money and public opinion, and was in a position to wait out recalcitrancy at its leisure."* [Martin, **Op. Cit.**, p. 107] For Lum, *"behind the capitalist ... privilege stands as support"* and so social circumstances matter. *"Does liberty exist,"* he argued, *"where rent, interest, and profit hold the employee in economic subjection to the legalised possessor of the means of life? To plead for individual liberty under the present social conditions, to refuse to abate one jot of control that legalised capital has over individual labour, and to assert that the demand for restrictive or class legislation comes only from the voluntary associations of workmen [i.e., trade unions] is not alone the height of impudence, but a barefaced jugglery of words."* [**Liberty**, no. 101, p. 5]

Likewise, Tucker advocated and supported many other forms of non-violent direct action as well as workplace strikes, such as boycotts and rent strikes, seeing them as important means of radicalising the working class and creating an anarchist society. However, like social anarchists the Individualist Anarchists did not consider labour struggle as an end in itself — they considered reforms (and discussion of a *"fair wage"* and *"harmony between capital and labour"*) as essentially *"conservative"* and would be satisfied with no less than *"the abolition of the monopoly privileges of capital and interest-taking, and the return to labour of the full value of its production."* [Victor Yarros, quoted by Martin, **Op. Cit.**, p. 206f]

Therefore, it is clear that both social and Individualist Anarchists share much in common, including an opposition to capitalism. The former may have been in favour of free exchange but between equally situated individuals. Only given a context of equality can free exchange be considered to benefit both parties equally and not generate growing inequalities which benefit the stronger of the parties involved which, in turn, skews the bargaining position of those involved in favour of the stronger (also see section F.3).

It is unsurprising, therefore, that the individualist anarchists considered themselves as socialists. Like Proudhon, they desired a (libertarian) socialist system based on the market but without exploitation and which rested on possession rather than capitalist private property. With Proudhon, only the ignorant or mischievous would suggest that such a system was capitalistic. The Individualist Anarchists, as can be seen, fit very easily into Kropotkin's comments that *"the anarchists, in common with all socialists ... maintain that the now prevailing system of private ownership*

in land, and our capitalist production for the sake of profits, represent a monopoly which runs against both the principles of justice and the dictates of utility." [**Anarchism**, p. 285] While they rejected the communist-anarchist solution to the social question, they knew that such a question existed and was rooted in the exploitation of labour and the prevailing system of property rights.

So why is Individualist Anarchism and Proudhon's mutualism socialist? Simply because they opposed the exploitation of labour by capital and proposed a means of ending it. The big debate between social and individualist anarchists is revolves around whether the other school can **really** achieve this common goal and whether its proposed solution would, in fact, secure meaningful individual liberty for all.

G.1.1 What about their support of the free market?

Many, particularly on the "libertarian"-right, would dismiss claims that the Individualist Anarchists were socialists. By their support of the "free market" the Individualist Anarchists, they would claim, show themselves as really supporters of capitalism. Most, if not all, anarchists would reject this claim. Why is this the case?

This because such claims show an amazing ignorance of socialist ideas and history. The socialist movement has had a many schools, many of which, but not all, opposed the market and private property. Given that the right "libertarians" who make such claims are usually not well informed of the ideas they oppose (i.e. of socialism, particularly **libertarian** socialism) it is unsurprising they claim that the Individualist Anarchists are not socialists (of course the fact that many Individualist Anarchists argued they **were** socialists is ignored). Coming from a different tradition, it is unsurprising they are not aware of the fact that socialism is not monolithic. Hence we discover right-"libertarian" guru von Mises claiming that the *"essence of socialism is the entire elimination of the market."* [**Human Action**, p. 702] This would have come as something of a surprise to, say, Proudhon, who argued that *"[t]o suppress competition is to suppress liberty itself."* [**The General Idea of the Revolution**, p. 50] Similarly, it would have surprised Tucker, who called himself a socialist while supporting a freer market than von Mises ever dreamt of. As Tucker put it:

> *"**Liberty** has always insisted that Individualism and Socialism are not antithetical terms; that, on the contrary, the most perfect Socialism is possible only on condition of the most perfect Individualism; and that Socialism includes, not only Collectivism and Communism, but also that school of Individualist Anarchism which conceives liberty as a means of destroying usury and the exploitation of labour."* [**Liberty**, no. 129, p. 2]

Hence we find Tucker calling his ideas both *"Anarchistic Socialism"* and *"Individualist Socialism"* while other individualist anarchists have used the terms *"free market anti-capitalism"* and *"free market socialism"* to describe the ideas.

The central fallacy of the argument that support for markets equals support for capitalism is that many self-proclaimed socialists are not opposed to the market. Indeed, some of the earliest socialists were market socialists (people like Thomas Hodgskin and William Thompson, although the former ended up rejecting socialism and the latter became a communal-socialist). Proudhon, as noted, was a well known supporter of market exchange. German sociologist Franz

Oppenheimer expounded a similar vision to Proudhon and called himself a *"liberal socialist"* as he favoured a free market but recognised that capitalism was a system of exploitation. [*"Introduction"*, **The State**, p. vii] Today, market socialists like David Schweickart (see his **Against Capitalism** and **After Capitalism**) and David Miller (see his **Market, State, and community: theoretical foundations of market socialism**) are expounding a similar vision to Proudhon's, namely of a market economy based on co-operatives (albeit one which retains a state). Unfortunately, they rarely, if ever, acknowledge their debt to Proudhon (needless to say, their Leninist opponents do as, from their perspective, it damns the market socialists as not being real socialists).

It could, possibly, be argued that these self-proclaimed socialists did not, in fact, understand what socialism "really meant." For this to be the case, **other**, more obviously socialist, writers and thinkers would dismiss them as not being socialists. This, however, is not the case. Thus we find Karl Marx, for example, writing of *"the socialism of Proudhon."* [**Capital**, vol. 1, p. 161f] Engels talked about Proudhon being *"the Socialist of the small peasant and master-craftsman"* and of *"the Proudhon school of Socialism."* [Marx and Engels, **Selected Works**, p. 254 and p. 255] Bakunin talked about Proudhon's *"socialism, based on individual and collective liberty and upon the spontaneous action of free associations."* He considered his own ideas as *"Proudhonism widely developed and pushed right to these, its final consequences"* [**Michael Bakunin: Selected Writings**, p. 100 and p. 198] For Kropotkin, while Godwin was *"first theoriser of Socialism without government — that is to say, of Anarchism"* Proudhon was the second as he, *"without knowing Godwin's work, laid anew the foundations of Anarchism."* He lamented that *"many modern Socialists"* supported *"centralisation and the cult of authority"* and so *"have not yet reached the level of their two predecessors, Godwin and Proudhon."* [**Evolution and Environment**, pp. 26–7] These renown socialists did not consider Proudhon's position to be in any way anti-socialist (although, of course, being critical of whether it would work and its desirability if it did). Tucker, it should be noted, called Proudhon *"the father of the Anarchistic school of Socialism."* [**Instead of a Book**, p. 381] Little wonder, then, that the likes of Tucker considered themselves socialists and stated numerous times that they were.

Looking at Tucker and the Individualist anarchists we discover that other socialists considered them socialists. Rudolf Rocker stated that *"it is not difficult to discover certain fundamental principles which are common to all of them and which divide them from all other varieties of socialism. They all agree on the point that man be given the full reward of his labour and recognise in this right the economic basis of all personal liberty. They all regard the free competition of individual and social forces as something inherent in human nature ... They answered the socialists of other schools who saw in* ***free competition*** *one of the destructive elements of capitalist society that the evil lies in the fact we have too little rather than too much competition, since the power of monopoly has made competition impossible."* [**Pioneers of American Freedom**, p. 160] Malatesta, likewise, saw many schools of socialism, including *"anarchist or authoritarian, mutualist or individualist."* [**Errico Malatesta: His Life and Ideas**, p. 95]

Adolph Fischer, one of the Haymarket Martyrs and contemporary of Tucker, argued that *"every anarchist is a socialist, but every socialist is not necessarily an anarchist. The anarchists are divided into two factions: the communistic anarchists and the Proudhon or middle-class anarchists."* The former *"advocate the communistic or co-operative method of production"* while the latter *"do not advocate the co-operative system of production, and the common ownership of the means of production, the products and the land."* [**The Autobiographies of the Haymarket Martyrs**, p.

81] However, while not being communists (i.e. aiming to eliminate the market), he obviously recognised the Individualists Anarchists as fellow socialists (we should point out that Proudhon **did** support co-operatives, but they did not carry this to communism as do most social anarchists — as is clear, Fischer means communism by the term *"co-operative system of production"* rather than co-operatives as they exist today and Proudhon supported — see section G.4.2).

Thus claims that the Individualist Anarchists were not "really" socialists because they supported a market system cannot be supported. The simple fact is that those who make this claim are, at best, ignorant of the socialist movement, its ideas and its history or, at worse, desire, like many Marxists, to write out of history competing socialist theories. For example, Leninist David McNally talks of the *"anarcho-socialist Pierre-Joseph Proudhon"* and how Marx combated *"Proudhonian socialism"* before concluding that it was *"non-socialism"* because it has *"wage-labour and exploitation."* [**Against the Market**, p. 139 and p. 169] Of course, that this is not true (even in a Marxist sense) did not stop him asserting it. As one reviewer correctly points out, *"McNally is right that even in market socialism, market forces rule workers' lives"* and this is *"a serious objection. But it is not tantamount to capitalism or to wage labour"* and it *"does not have exploitation in Marx's sense (i.e., wrongful expropriation of surplus by non-producers)"* [Justin Schwartz, **The American Political Science Review**, Vol. 88, No. 4, p. 982] For Marx, as we noted in section C.2, commodity production only becomes capitalism when there is the exploitation of wage labour. This is the case with Proudhon as well, who differentiated between possession and private property and argued that co-operatives should replace capitalist firms. While their specific solutions may have differed (with Proudhon aiming for a market economy consisting of artisans, peasants and co-operatives while Marx aimed for communism, i.e. the abolition of money via state ownership of capital) their analysis of capitalism and private property were identical — which Tucker consistently noted (as regards the theory of surplus value, for example, he argued that *"Proudhon propounded and proved [it] long before Marx advanced it."* [**Liberty**, no. 92, p. 1])

As Tucker argued, *"the fact that State Socialism ... has overshadowed other forms of Socialism gives it no right to a monopoly of the Socialistic idea."* [**Instead of a Book**, pp. 363–4] It is no surprise that the authoritarian left and "libertarian" right have united to define socialism in such a way as to eliminate anarchism from its ranks – they both have an interest in removing a theory which exposes the inadequacies of their dogmas, which explains how we can have both liberty **and** equality and have a decent, free and just society.

There is another fallacy at the heart of the claim that markets and socialism do not go together, namely that all markets are capitalist markets. So another part of the problem is that the same word often means different things to different people. Both Kropotkin and Lenin said they were "communists" and aimed for "communism." However, it does not mean that the society Kropotkin aimed for was the same as that desired by Lenin. Kropotkin's communism was decentralised, created and run from the bottom-up while Lenin's was fundamentally centralised and top-down. Similarly, both Tucker and the Social-Democrat (and leading Marxist) Karl Kautsky called themselves a "socialist" yet their ideas on what a socialist society would be like were extremely different. As J.W. Baker notes, *"Tucker considered himself a socialist ... as the result of his struggle against 'usury and capitalism,' but anything that smelled of 'state socialism' was thoroughly rejected."* [*"Native American Anarchism,"* pp. 43–62, **The Raven**, vol. 10, no. 1, p. 60] This, of course, does not stop many "anarcho"-capitalists talking about "socialist" goals as if all socialists were Stalinists (or, at best, social democrats). In fact, "socialist anarchism" has included (and continues to include) advocates of truly free markets as well as advocates of a non-market

socialism which has absolutely nothing in common with the state capitalist tyranny of Stalinism. Similarly, they accept a completely ahistorical definition of "capitalism," so ignoring the massive state violence and support by which that system was created and is maintained.

The same with terms like "property" and the "free market," by which the "anarcho"-capitalist assumes the individualist anarchist means the same thing as they do. We can take land as an example. The individualist anarchists argued for an ***"occupancy and use"*** system of "property" (see next section for details). Thus in their "free market," land would not be a commodity as it is under capitalism and so under individualist anarchism absentee landlords would be considered as aggressors (for under capitalism they use state coercion to back up their collection of rent against the actual occupiers of property). Tucker argued that local defence associations should treat the occupier and user as the rightful owner, and defend them against the aggression of an absentee landlord who attempted to collect rent. An "anarcho"-capitalist would consider this as aggression **against** the landlord and a violation of "free market" principles. Such a system of "occupancy and use" would involve massive violations of what is considered normal in a capitalist "free market." Equally, a market system which was based on capitalist property rights in land would **not** be considered as genuinely free by the likes of Tucker.

This can be seen from Tucker's debates with supporters of laissez-faire capitalism such as Auberon Herbert (who, as discussed in section F.7.2, was an English minimal statist and sometimes called a forerunner of "anarcho"-capitalism). Tucker quoted an English critic of Herbert, who noted that *"When we come to the question of the ethical basis of property, Mr. Herbert refers us to 'the open market'. But this is an evasion. The question is not whether we should be able to sell or acquire 'in the open market' anything which we rightfully possess, but how we come into rightful possession."* [**Liberty**, no. 172, p. 7] Tucker rejected the idea *"that a man should be allowed a title to as much of the earth as he, in the course of his life, with the aid of all the workmen that he can employ, may succeed in covering with buildings. It is occupancy **and** use that Anarchism regards as the basis of land ownership, ... A man cannot be allowed, merely by putting labour, to the limit of his capacity and beyond the limit of his person use, into material of which there is a limited supply and the use of which is essential to the existence of other men, to withhold that material from other men's use; and any contract based upon or involving such withholding is as lacking in sanctity or legitimacy as a contract to deliver stolen goods."* [**Op. Cit.**, no. 331, p. 4]

In other words, an individualist anarchist would consider an "anarcho"-capitalist "free market" as nothing of the kind and vice versa. For the former, the individualist anarchist position on "property" would be considered as forms of regulation and restrictions on private property and so the "free market." The individualist anarchist would consider the "anarcho"-capitalist "free market" as another system of legally maintained privilege, with the free market distorted in favour of the wealthy. That capitalist property rights were being maintained by private police would not stop that regime being unfree. This can be seen when "anarcho"-capitalist Wendy McElroy states that *"radical individualism hindered itself ... Perhaps most destructively, individualism clung to the labour theory of value and refused to incorporate the economic theories arising within other branches of individualist thought, theories such as marginal utility. Unable to embrace statism, the stagnant movement failed to adequately comprehend the logical alternative to the state — a free market."* [*"Benjamin Tucker, **Liberty**, and Individualist Anarchism"*, pp. 421–434, **The Independent Review**, vol. II, No. 3, p. 433] Therefore, rather than being a source of commonality, individualist anarchism and "anarcho"-capitalism actually differ quite considerably on what counts as a genuinely free market.

So it should be remembered that "anarcho"-capitalists at best agree with Tucker, Spooner, et al on fairly vague notions like the "free market." They do not bother to find out what the individualist anarchists meant by that term. Indeed, the "anarcho"-capitalist embrace of different economic theories means that they actually reject the reasoning that leads up to these nominal "agreements." It is the "anarcho"-capitalists who, by rejecting the underlying economics of the mutualists, are forced to take any "agreements" out of context. It also means that when faced with obviously anti-capitalist arguments and conclusions of the individualist anarchists, the "anarcho"-capitalist cannot explain them and are reduced to arguing that the anti-capitalist concepts and opinions expressed by the likes of Tucker are somehow "out of context." In contrast, the anarchist can explain these so-called "out of context" concepts by placing them into the context of the ideas of the individualist anarchists and the society which shaped them.

The "anarcho"-capitalist usually admits that they totally disagree with many of the essential premises and conclusions of the individualist anarchist analyses (see next section). The most basic difference is that the individualist anarchists rooted their ideas in the labour theory of value while the "anarcho"-capitalists favour mainstream marginalist theory. It does not take much thought to realise that advocates of socialist theories and those of capitalist ones will naturally develop differing notions of what is and what should be happening within a given economic system. One difference that **has** in fact arisen is that the notion of what constitutes a "free market" has differed according to the theory of value applied. Many things can be attributed to the workings of a "free" market under a capitalist analysis that would be considered symptoms of economic unfreedom under most socialist driven analyses.

This can be seen if you look closely at the case of Tucker's comments that anarchism was simply *"consistent Manchesterianism."* If this is done then a simple example of this potential confusion can be found. Tucker argued that anarchists *"accused"* the Manchester men *"of being inconsistent,"* that while being in favour of laissez faire for *"the labourer in order to reduce his wages"* they did not believe *"in liberty to compete with the capitalist in order to reduce his usury."* [**The Individualist Anarchists**, p. 83] To be consistent in this case is to be something other — and more demanding in terms of what is accepted as "freedom" — than the average Manchesterian (i.e. a supporter of "free market" capitalism). By *"consistent Manchesterism"*, Tucker meant a laissez-faire system in which class monopolies did not exist, where capitalist private property in land and intellectual property did not exist. In other words, a free market purged of its capitalist aspects. Partisans of the capitalist theory see things differently, of course, feeling justified in calling many things "free" that anarchists would not accept, and seeing "constraint" in what the anarchists simply thought of as "consistency." This explains both his criticism of capitalism **and** state socialism:

> *"The complaint of the Archist Socialists that the Anarchists are bourgeois is true to this extent and no further — that, great as is their detestation for a bourgeois society, they prefer its partial liberty to the complete slavery of State Socialism."* [*"Why I am an Anarchist"*, pp. 132–6, **Man!**, M. Graham (ed.), p. 136]

It should be clear that a "free market" will look somewhat different depending on your economic presuppositions. Ironically, this is something "anarcho"-capitalists implicitly acknowledge when they admit they do not agree with the likes of Spooner and Tucker on many of their key premises and conclusions (but that does not stop them claiming — despite all that — that

their ideas are a modern version of individualist anarchism!). Moreover, the "anarcho"-capitalist simply dismisses all the reasoning that got Tucker there — that is like trying to justify a law citing Leviticus but then saying "but of course all that God stuff is just absurd." You cannot have it both ways. And, of course, the "anarcho"-capitalist support for non-labour based economics allow them to side-step (and so ignore) much of what anarchists — communists, collectivists, individualists, mutualists and syndicalists alike — consider authoritarian and coercive about "actually existing" capitalism. But the difference in economic analysis is critical. No matter what they are called, it is pretty clear that individualist anarchist standards for the freedom of markets are far more demanding than those associated with even the freest capitalist market system.

This is best seen from the development of individualist anarchism in the 20th century. As historian Charles A. Madison noted, it *"began to dwindle rapidly after 1900. Some of its former adherents joined the more aggressive communistic faction ... many others began to favour the rising socialist movement as the only effective weapon against billion-dollar corporations."* [*"Benjamin R. Tucker: Individualist and Anarchist,"* pp. 444–67, **The New England Quarterly**, Vol. 16, No. 3, pp. p. 464] Other historians have noted the same. *"By 1908,"* argued Eunice Minette Schuster *"the industrial system had fastened its claws into American soil"* and while the *"Individualist Anarchists had attempted to destroy monopoly, privilege, and inequality, originating in the lack of opportunity"* the *"superior force of the system which they opposed ... overwhelmed"* them. Tucker left America in 1908 and those who remained *"embraced either Anarchist-Communism as the result of governmental violence against the labourers and their cause, or abandoned the cause entirely."* [**Native American Anarchism**, p. 158, pp. 159–60 and p. 156] While individualist anarchism did not entirely disappear with the ending of **Liberty**, social anarchism became the dominant trend in America as it had elsewhere in the world.

As we note in section G.4, the apparent impossibility of mutual banking to eliminate corporations by economic competition was one of the reasons Voltairine de Cleyre pointed to for rejecting individualist anarchism in favour of communist-anarchism. This problem was recognised by Tucker himself thirty years after **Liberty** had been founded. In the postscript to a 1911 edition of his famous essay *"State Socialism and Anarchism"*, he argued that when he wrote it 25 years earlier *"the denial of competition had not effected the enormous concentration of wealth that now so gravely threatens social order"* and so while a policy of mutual banking might have stopped and reversed the process of accumulation in the past, the way now was *"not so clear."* This was because the tremendous capitalisation of industry now made the money monopoly a convenience, but no longer a necessity. Admitted Tucker, the *"trust is now a monster which ... even the freest competition, could it be instituted, would be unable to destroy"* as *"concentrated capital"* could set aside a sacrifice fund to bankrupt smaller competitors and continue the process of expansion of reserves. Thus the growth of economic power, producing as it does natural barriers to entry from the process of capitalist production and accumulation, had resulted in a situation where individualist anarchist solutions could no longer reform capitalism away. The centralisation of capital had *"passed for the moment beyond their reach."* The problem of the trusts, he argued, *"must be grappled with for a time solely by forces political or revolutionary,"* i.e., through confiscation either through the machinery of government *"or in denial of it."* Until this *"great levelling"* occurred, all individualist anarchists could do was to spread their ideas as those trying to *"hasten it by joining in the propaganda of State Socialism or revolution make a sad mistake indeed."* [quoted by James J. Martin, **Op. Cit.**, pp. 273–4]

In other words, the economic power of *"concentrated capital"* and *"enormous concentration of wealth"* placed an insurmountable obstacle to the realisation of anarchy. Which means that the abolition of usury and relative equality were considered **ends** rather than side effects for Tucker and if free competition could not achieve these then such a society would **not** be anarchist. If economic inequality was large enough, it meant anarchism was impossible as the rule of capital could be maintained by economic power alone without the need for extensive state intervention (this was, of course, the position of revolutionary anarchists like Bakunin, Most and Kropotkin in the 1870s and onwards whom Tucker dismissed as not being anarchists).

Victor Yarros is another example, an individualist anarchist and associate of Tucker, who by the 1920s had abandoned anarchism for social democracy, in part because he had become convinced that economic privilege could not be fought by economic means. As he put it, the most *"potent"* of the *"factors and forces [which] tended to undermine and discredit that movement"* was *"the amazing growth of trusts and syndicates, of holding companies and huge corporations, of chain banks and chain stores."* This *"gradually and insidiously shook the faith of many in the efficacy of mutual banks, co-operative associations of producers and consumers, and the competition of little fellows. Proudhon's plan for a bank of the people to make industrial loans without interest to workers' co-operatives, or other members, seemed remote and inapplicable to an age of mass production, mechanisation, continental and international markets."* [*"Philosophical Anarchism: Its Rise, Decline, and Eclipse"*, pp. 470–483, **The American Journal of Sociology**, vol. 41, no. 4, p. 481]

If the individualist anarchists shared the "anarcho"-capitalist position or even shared a common definition of "free markets" then the *"power of the trusts"* would simply not be an issue. This is because "anarcho"-capitalism does not acknowledge the existence of such power, as, by definition, it does not exist in capitalism (although as noted in section F.1 Rothbard himself proved critics of this assertion right). Tucker's comments, therefore, indicate well how far individualist anarchism actually is from "anarcho"-capitalism. The "anarcho"-capitalist desires free markets no matter their result or the concentration of wealth existing at their introduction. As can be seen, Tucker saw the existence of concentrations of wealth as a problem and a hindrance towards anarchy. Thus Tucker was well aware of the dangers to individual liberty of inequalities of wealth and the economic power they produce. Equally, if Tucker supported the "free market" above all else then he would not have argued this point. Clearly, then, Tucker's support for the "free market" cannot be abstracted from his fundamental principles nor can it be equated with a "free market" based on capitalist property rights and massive inequalities in wealth (and so economic power). Thus individualist anarchist support for the free market does not mean support for a **capitalist** "free market."

In summary, the "free market" as sought by (say) Tucker would not be classed as a "free market" by right-wing "libertarians." So the term "free market" (and, of course, "socialism") can mean different things to different people. As such, it would be correct to state that **all** anarchists oppose the "free market" by definition as all anarchists oppose the **capitalist** "free market." And, just as correctly, "anarcho"-capitalists would oppose the individualist anarchist "free market," arguing that it would be no such thing as it would be restrictive of property rights (**capitalist** property rights of course). For example, the question of resource use in an individualist society is totally different than in a capitalist "free market" as landlordism would not exist. This is a restriction on capitalist property rights and a violation of a capitalist "free market." So an individualist "free market" would not be considered so by right-wing "libertarians" due to the substantial differences

in the rights on which it would be based (with no right to capitalist private property being the most important).

All this means that to go on and on about individualist anarchism and it support for a free market simply misses the point. No one denies that individualist anarchists were (and are) in favour of a "free market" but this did not mean they were not socialists nor that they wanted the same kind of "free market" desired by "anarcho"-capitalism or that has existed under capitalism. Of course, whether their economic system would actually result in the abolition of exploitation and oppression is another matter and it is on this issue which social anarchists disagree with individualist anarchism **not** whether they are socialists or not.

G.1.2 What about their support of "private property"?

The notion that because the Individualist Anarchists supported "private property" they supported capitalism is distinctly wrong. This is for two reasons. Firstly, private property is not the distinctive aspect of capitalism — exploitation of wage labour is. Secondly, and more importantly, what the Individualist Anarchists meant by "private property" (or "property") was distinctly different than what is meant by theorists on the "libertarian"-right or what is commonly accepted as "private property" under capitalism. Thus support of private property does not indicate a support for capitalism.

On the first issue, it is important to note that there are many different kinds of private property. If quoting Karl Marx is not **too** out of place:

> *"Political economy confuses, on principle, two very different kinds of private property, one of which rests on the labour of the producer himself, and the other on the exploitation of the labour of others. It forgets that the latter is not only the direct antithesis of the former, but grows on the former's tomb and nowhere else.*
>
> *"In Western Europe, the homeland of political economy, the process of primitive accumulation is more of less accomplished ...*
>
> *"It is otherwise in the colonies. There the capitalist regime constantly comes up against the obstacle presented by the producer, who, as owner of his own conditions of labour, employs that labour to enrich himself instead of the capitalist. The contradiction of these two diametrically opposed economic systems has its practical manifestation here in the struggle between them."* [**Capital**, vol. 1, p. 931]

So, under capitalism, *"property turns out to be the right, on the part of the capitalist, to appropriate the unpaid labour of others, or its product, and the impossibility, on the part of the worker, of appropriating his own product."* In other words, property is not viewed as being identical with capitalism. *"The historical conditions of [Capital's] existence are by no means given with the mere circulation of money and commodities. It arises only when the owner of the means of production and subsistence finds the free worker available on the market, as the seller of his own labour-power."* Thus wage-labour, for Marx, is the necessary pre-condition for capitalism, **not** "private property" as such as *"the means of production and subsistence, while they remain the property of the immediate producer, are not capital. They only become capital under circumstances in which they serve at the same time as means of exploitation of, and domination over, the worker."* [**Op. Cit.**, p. 730, p. 264 and p. 938]

For Engels, *"[b]efore capitalistic production"* industry was *"based upon the private property of the labourers in their means of production"*, i.e., *"the agriculture of the small peasant"* and *"the handicrafts organised in guilds."* Capitalism, he argued, was based on capitalists owning *"**social** means of production only workable by a collectivity of men"* and so they *"appropriated ... the product of the **labour of others**."* Both, it should be noted, had also made this same distinction in the **Communist Manifesto**, stating that *"the distinguishing feature of Communism is not the abolition of property generally, but the abolition of bourgeois property."* Artisan and peasant property is *"a form that preceded the bourgeois form"* which there *"is no need to abolish"* as *"the development of industry has to a great extent already destroyed it."* This means that communism *"derives no man of the power to appropriate the products of society; all that it does is to deprive him of the power to subjugate the labour of others by means of such appropriation."* [Marx and Engels, **Selected Works**, p. 412, p. 413, p. 414, p. 47 and p. 49]

We quote Marx and Engels simply because as authorities on socialism go, they are ones that right-"libertarians" (or Marxists, for that matter) cannot ignore or dismiss. Needless to say, they are presenting an identical analysis to that of Proudhon in **What is Property?** and, significantly, Godwin in his **Political Justice** (although, of course, the conclusions drawn from this common critique of capitalism were radically different in the case of Proudhon). This is, it must be stressed, simply Proudhon's distinction between property and possession (see section B.3.1). The former is theft and despotism, the latter is liberty. In other words, for genuine anarchists, "property" is a ***social relation*** and that a key element of anarchist thinking (both social and individualist) was the need to redefine that relation in accord with standards of liberty and justice.

So what right-"libertarians" do when they point out that the individualist anarchists supported property is to misunderstand the socialist critique of capitalism. They, to paraphrase Marx, confuse two very different kinds of "property," one of which rests on the labour of the producers themselves and the other on the exploitation of the labour of others. They do not analyse the social relationships between people which the property in question generates and, instead, concentrate on **things** (i.e. property). Thus, rather than being interested in people and the relationships they create between themselves, the right-"libertarian" focuses on property (and, more often than not, just the word rather than what the word describes). This is a strange position for someone seeking liberty to take, as liberty is a product of social interaction (i.e. the relations we have and create with others) and not a product of things (property is not freedom as freedom is a relationship between people, not things). They confuse property with possession (and vice versa).

In pre-capitalist social environments, when property is directly owned by the producer, capitalist defences of private property can be used against it. Even John Locke's arguments in favour of private property could be used against capitalism. As Murray Bookchin makes clear regarding pre-capitalist society:

> *"Unknown in the 1640s, the non-bourgeois aspects of Locke's theories were very much in the air a century and a half later ... [In an artisan/peasant society] a Lockean argument could be used as effectively against the merchants ... to whom the farmers were indebted, as it could against the King [or the State]. Nor did the small proprietors of America ever quite lose sight of the view that attempts to seize their farmsteads and possessions for unpaid debts were a violation of their 'natural rights,' and from the 1770s until as late as the 1930s they took up arms to keep merchants and bankers from dispossessing them*

from land they or their ancestors had wrestled from 'nature' by virtue of their own labour. The notion that property was sacred was thus highly elastic: it could be used as effectively by pre-capitalist strata to hold on to their property as it could by capitalists strata to expand their holdings." [**The Third Revolution**, vol. 1, pp. 187–8]

The individualist anarchists inherited this perspective on property and sought means of ending the transformation of American society from one where labour-property predominated into one where capitalist private property (and so exploitation) predominated. Thus their opposition to state interference in the economy as the capitalists were using the state to advance this process (see section F.8.5).

So artisan and co-operative property is not capitalist. It does not generate relationships of exploitation and domination as the worker owns and controls their own means of production. It is, in effect, a form of socialism (a *"petit bourgeois"* form of socialism, to use the typical insulting Marxist phrase). Thus support for "private property" need not mean support for capitalism (as shown, for example, by the Individualist Anarchists). To claim otherwise is to ignore the essential insight of socialism and totally distort the socialist case against capitalism.

To summarise, from an anarchist (and Marxist) perspective capitalism is **not** defined by "property" as such. Rather, it is defined by private property, property which is turned into a means of exploiting the labour of those who use it. For most anarchists, this is done by means of wage labour and abolished by means of workers' associations and self-management (see next section for a discussion of individualist anarchism and wage labour). To use Proudhon's terminology, there is a fundamental difference between property and possession.

Secondly, and more importantly, what the Individualist Anarchists meant by "private property" (or "property") was distinctly different than what is meant by supporters of capitalism. Basically, the "libertarian" right exploit, for their own ends, the confusion generated by the use of the word "property" by the likes of Tucker to describe a situation of "possession." Proudhon recognised this danger. He argued that *"it is proper to call different things by different names, if we keep the name 'property' for the former [individual possession], we must call the latter [the domain of property] robbery, repine, brigandage. If, on the contrary, we reserve the name 'property' for the latter, we must designate the former by the term* ***possession*** *or some other equivalent; otherwise we should be troubled with an unpleasant synonym."* [**What is Property?**, p. 373] Unfortunately Tucker, who translated this work, did not heed Proudhon's words of wisdom and called possession in an anarchist society by the word "property" (but then, neither did Proudhon in the latter part of his life!)

Looking at Tucker's arguments, it is clear that the last thing Tucker supported was capitalist property rights. For example, he argued that *"property, in the sense of individual possession, is liberty"* and contrasted this with capitalist property. [**Instead of a Book**, p. 394] That his ideas on "property" were somewhat different than that associated with right-"libertarian" thinkers is most clearly seen with regards to land. Here we discover him advocating *"occupancy and use"* and rejecting the "right" of land owners to bar the landless from any land they owned but did not **personally** use. Rent was *"due to that denial of liberty which takes the shape of land monopoly, vesting titles to land in individuals and associations which do not use it, and thereby compelling the non-owning users to pay tribute to the non-using owners as a condition of admission to the competitive market."* Anarchist opposition of rent did *"not mean simply the freeing of unoccupied land. It means the freeing of all land not occupied* ***by the owner.*** *In other words, it means land*

ownership limited by occupancy and use." [Tucker, **The Individualist Anarchists**, p. 130 and p. 155] This would result in a *"system of occupying ownership ... accompanied by no legal power to collect rent."* [**Instead of a Book**, p. 325]

A similar position was held by John Beverley Robinson. He argued that there *"are two kinds of land ownership, proprietorship or property, by which the owner is absolute lord of the land, to use it or to hold it out of use, as it may please him; and possession, by which he is secure in the tenure of land which he uses and occupies, but has no claim upon it at all if he ceases to use it."* Moreover, *"[a]ll that is necessary to do away with Rent is to away with absolute property in land."* [**Patterns of Anarchy**, p. 272] Joseph Labadie, likewise, stated that *"the two great sub-divisions of Socialists"* (anarchists and State Socialists) both *"agree that the resources of nature — land, mines, and so forth — should not be held as private property and subject to being held by the individual for speculative purposes, that use of these things shall be the only valid title, and that each person has an equal right to the use of all these things. They all agree that the present social system is one composed of a class of slaves and a class of masters, and that justice is impossible under such conditions."* [**What is Socialism?**]

Thus the Individualist Anarchists definition of "property" differed considerably from that of the capitalist definition. As they themselves acknowledge. Robinson argued that *"the only real remedy is a change of heart, through which land using will be recognised as proper and legitimate, but land holding will be regarded as robbery and piracy."* [**Op. Cit.**, p. 273] Tucker, likewise, indicated that his ideas on "property" were not the same as existing ones when he argued that *"the present system of land tenure should be changed to one of occupancy and use"* and that *"no advocate of occupancy-and-use tenure of land believes that it can be put in force, until as a theory it has been as generally ... seen and accepted as the prevailing theory of ordinary private property."* [**Occupancy and Use verses the Single Tax**] Thus, for Tucker, anarchism is dependent on *"the Anarchistic view that occupancy and use should condition and limit landholding becom[ing] the prevailing view."* [**The Individualist Anarchists**, p. 159]

Based on this theory of "property" Tucker opposed landlords and rent, arguing that anarchy *"means the freeing of all land not occupied **by the owner**"* that is, *"land ownership limited by occupancy and use."* He extended this principle to housing, arguing that *"Anarchic associations"* would *"not collect your rent, and might not even evict your tenant"* and *"tenants would not be forced to pay you rent, nor would you be allowed to seize their property. The Anarchic Associations would look upon your tenants very much as they would look upon your guests."* [**Op. Cit.**, p. 155 and p. 162] In fact, individualist anarchism would *"accord the actual occupant and user of land the right to that which is upon the land, who left it there when abandoning the land."* [Tucker, **Liberty**, no. 350, p. 4]

In the case of land and housing, almost all Individualist Anarchists argued that the person who lives or works on it (even under lease) would be regarded *"as the occupant and user of the land on which the house stands, and as the owner of the house itself,"* that is they become *"the owner of both land and house as soon as he becomes the occupant."* [Tucker, **Occupancy and Use Versus the Single Tax**] For Tucker, occupancy and use was *"the Anarchistic solution of the land question"* as it allowed free access to land to all, to be *"enjoyed by the occupant without payment of tribute to a non-occupant."* This applied to what was on the land as well, for if A builds a house, and rents it to B, who lives or works in it under the lease then Tucker would *"regard B as the occupant and user of the land on which the house stands, and as **the owner of the house itself.**"* [**Liberty**, no. 308, p. 4]

Needless to say, the individualist anarchists were just as opposed to that mainstay of modern capitalism, the corporation. For Greene corporations *"disarrange our social organisation, and make the just distribution of the products of labour impossible."* [quoted by Wm. Gary Kline, **The Individualist Anarchists: A Critique of Liberalism**, p. 94] While opposing state attempts to limit trusts (it did not get to the root of the problem which lay in class privilege), Tucker took it for granted that *"corporate privileges are in themselves a wrong."* [**The Individualist Anarchists**, p. 129] Given that "occupancy and use" applies to what is on the land, it logically follows that for those workplaces with absentee owners (i.e., owners who hire managers to run them) then these are abandoned by their owners. By the "occupancy and use" criteria, the land and what is on it reverts to those actually using them (i.e., the workers in question). Corporations and shareowners, in other words, are extremely unlikely to exist in individualist anarchism.

Hence to claim that the Individualist Anarchists supported capitalist property rights is false. As can be seen, they advocated a system which differed significantly to the current system, indeed they urged the restriction of property rights to a form of possession. Unfortunately, by generally using the term "property" to describe this new system of possession they generated exactly the confusion that Proudhon foretold. Sadly, right-"libertarians" use this confusion to promote the idea that the likes of Tucker supported capitalist property rights and so capitalism. As Tucker argued, *"[d]efining it with Proudhon as the sum total of legal privileges bestowed upon the holder wealth, [individualist anarchism] agrees with Proudhon that property is robbery. But using the word in the commoner acceptation, as denoting the labour's individual possession of his product or of his proportional share of the joint product of himself and others, [it] holds that property is liberty."* [**Liberty**, no. 122, p. 4]

If, as it is sometimes suggested, the difference between a right "libertarian" is that they despise the state because it hinders the freedom of property while left libertarians condemn it because it is a bastion of property, it is worthwhile to note two important facts. Firstly, that individualist anarchism condemns the state because it protects the land monopoly, i.e., capitalist property rights in land and what is on it, rather than a system of "occupancy and use." Secondly, that all schools of anarchist oppose capitalism because it is based on the exploitation of labour, an exploitation which the state protects. Hence de Cleyre: *"I wish a sharp distinction made between the legal institution of property, and property in the sense that what a man definitely produces by his own labour is his own."* The inequality and oppressions of capitalism are *"the inevitable result of the whole politico-economic lie that man can be free and the institution of property continue to exist."* [**Exquisite Rebel**, p. 297] Given this, given these bastions of property against which the both the individualist and social anarchists turn their fire, it is obvious that both schools are left libertarians.

For these reasons it is clear that just because the Individualist Anarchists supported (a form of) "property" does not mean they are capitalists. After all, as we note in the section G.2 communist-anarchists recognise the necessity of allowing individuals to own and work their own land and tools if they so desire yet no one claims that they support "private property." Equally, that many of the Individualist Anarchists used the term "property" to describe a system of possession (or *"occupancy-and-use"*) should not blind us to the non-capitalist nature of that "property." Once we move beyond looking at the words they used to what they meant by those words we clearly see that their ideas are distinctly different from those of supporters of capitalism. In fact, they share a basic commonality with social anarchism (*"Property will lose a certain attribute which sanctifies it now. The absolute ownership of it — 'the right to use or abuse' will be abolished —*

and possession, use, will be the only title." [Albert R. Parsons, **Anarchism: Its Philosophy and Scientific Basis**, p. 173]). This should be unsurprising given the influence of Proudhon on both wings of the movement.

As Malatesta noted, recognising the *"the right of workers to the products of their own labour,"* demanding *"the abolition of interest"* and *"the division of land and the instruments of labour among those who wish to use them"* would be *"a socialist school different from [communist-anarchism], but it is still socialism."* It would be a *"mutualist"* socialism. [**At the Café**, p. 54 and p. 56] In other words, property need not be incompatible with socialism. It all depends on the type of property being advocated.

G.1.3 What about their support for wage labour?

As we have argued in section A.2.8 and elsewhere, a consistent anarchist must oppose wage labour as this is a form of hierarchical authority. While social anarchism has drawn this logical conclusion from anarchist principles, individualist anarchism has not. While many of its supporters have expressed opposition to wage labour along with other forms hierarchical organisation, some (like Tucker) did not. The question is whether supporting wage labour disqualifies them from the socialist movement or not.

Within individualist anarchism, there are two different positions on this matter. Some of them clearly opposed wage labour as inherently exploitative and saw their socio-economic ideas as a means of ending it. Others argued that it was not wage labour **as such** which was the problem and, as a consequence, they did not expect it to disappear under anarchy. So opposition to exploitation of labour was a universal thread in Individualist Anarchist thought, as it was in the social anarchist movement. However, opposition to wage slavery was a common, but not universal, thread within the individualist anarchist tradition. As we discuss in section G.4, this is one of the key reasons why social anarchists reject individualist anarchism, arguing that this makes it both inconsistent in terms of general anarchist principles as well in the principles of individualist anarchism.

Voltairine de Cleyre in her overview of anarchism put the difference in terms of individualist anarchism and mutualist anarchism. As she put it, the *"extreme individualists"* held that the *"essential institutions of Commercialism are in themselves good, and are rendered vicious merely by the interference by the State."* This meant *"the system of employer and employed, buying and selling, banking, and all the other essential institutions of Commercialism"* would exist under their form of anarchism. Two key differences were that property in land would be modified so that it could be *"held by individuals or companies for such time and in such allotments as they use only"* and that *"wages would rise to the full measure of the individual production, and forever remain there"* as *"bosses would be hunting for men rather than men bosses."* In other words, land would no longer owned as under capitalism and workers would no longer be exploited as profit, interest and rent could not exist and the worker would get the full product of his or her labour in wages. In contrast, mutualist anarchism *"is a modification of the program of Individualism, laying more emphasis upon organisation, co-operation and free federation of the workers. To these the trade union is the nucleus of the free co-operative group, which will obviate the necessity of an employer ... The mutualist position on the land question is identical with that of the Individualists."* The *"material factor which accounts for such differences as there are between Individualists and Mutualists"* was

due to the former being intellectual workers and so *"never know[ing] directly the oppressions of the large factory, nor mingled with workers' associations. The Mutualists had; consequently their leaning towards a greater Communism."* [*"Anarchism"*, **Exquisite Rebel**, p. 77 and p. 78]

Next, we must clarify what is meant by ***"wage labour"*** and the related term ***"wages system."*** They are not identical. Marx, for example, corrected the Gotha Programme's *"abolition of the wage system"* by saying *"it should read: system of wage labour"* (although that did not stop him demanding *"the ultimate abolition of the wages system"* elsewhere). [Marx and Engels, **Selected Works**, p. 324 and p. 226] The difference lies in whether there is communism (distribution according to need) or socialism (distribution according to work done), as in Marx's (in)famous difference between a lower and higher phase of communism. It is the difference between a distribution of goods based on deeds and one based on needs and Kropotkin famous polemic *"The collectivist Wages System"* rests on it. He argued that the wages system was based on *"renumeration to each according to the time spent in producing, while taking into account the productivity of his labour"*. In other words: *"To each according to his deeds."* [**The Conquest of Bread**, p. 162 and p. 167] Such a wages system could exist in different forms. Most obviously, and the focus of Kropotkin's critique, it could be a regime where the state owned the means of production and paid its subjects according to their labour (i.e., state socialism). It could also refer to a system of artisans, peasants and co-operatives which sold the product of their labour on a market or exchanged their goods with others based on labour-time notes (i.e., associational socialism).

This should not be confused with wage labour, in which a worker sells their labour to a boss. This results in a hierarchical social relationship being created in which the worker is the servant of the employer. The employer, as they own the labour of the worker, also keeps the product of said labour and as we argued in section C.2, this places the boss is in a position to get the worker to produce more than they get back in wages. In other words, wage labour is based on oppression and can result in exploitation as the bosses control both the production process (i.e., the labour of the workers) and the goods it produces. It is this which explains socialist opposition to wage labour — it is the means by which labour is exploited under capitalism (anarchist opposition to wage labour includes this but also extends it to include its denial of freedom to those subject to workplace hierarchy).

So for the purposes of this discussion ***"wage labour"*** refers to hierarchical social relationships **within** production while ***"wages system"*** refers to how goods are distributed once they are produced. Thus you can have a wages system without wage labour but not wage labour without a wages system. Communist-anarchists aim for the abolition of both wage labour and the wages system while mutualist-anarchists only aim to get rid of the first one.

The problem is that the terms are sometimes mixed up, with "wages" and "wages system" being confused with "wage labour." This is the case with the nineteenth century American labour movement which tended to use the term "wages system" to refer to wage labour and the expression *"abolition of the wages system"* to refer to the aim of replacing capitalism with a market system based on producer co-operatives. This is reflected in certain translations of Proudhon. Discussing the *"workmen's associations"* founded in France during the 1848 revolution, Proudhon noted that *"the workmen, in order to dispense with middlemen . .. , capitalists, etc., ... have had to work a little more, and get along with less wages."* So he considered workers associations as paying "wages" and so, obviously, meant by "wages" labour income, **not** wage labour. The term "wage labour" was translated as "wages system," so we find Proudhon arguing that the *"workmen's associations"* are *"a protest against the wage system"* and a *"denial of the rule of cap-*

italists." Proudhon's aim was *"Capitalistic and proprietary exploitation, stopped everywhere, the wage system abolished, equal and just exchange guaranteed."* [**The General Idea of the Revolution**, pp. 89–90, p. 98 and p. 281] This has been translated as *"Capitalist and landlord exploitation halted everywhere, wage-labour abolished."* [quoted by John Ehrenberg, **Proudhon and his Age**, p. 116]

We are sorry to belabour this point, but it is essential for understanding the anarchist position on wage labour and the differences between different schools of socialism. So before discussing the relation of individualist anarchism to wage labour we needed to clarify what is meant by the term, particularly as some people use the term wages to mean any kind of direct payment for labour and so wage labour is sometimes confused with the wages system. Similarly, the terms wage labour and wages systems are often used interchangeably when, in fact, they refer to different things and abolition the wages system can mean different things depending on who is using the expression.

So after this unfortunately essential diversion, we can now discuss the position of individualist anarchism on wage labour. Unfortunately, there is no consistent position on this issue within the tradition. Some follow social anarchism in arguing that a free society would see its end, others see no contradiction between their ideas and wage labour. We will discuss each in turn.

Joshua King Ingalls, for example, praised attempts to set up communities based on libertarian principles as *"a demonstration ... that none need longer submit to the tyranny and exactions of the swindler and speculator in the products of others toil. The example would be speedily followed by others who would break away from the slavery of wages, and assert their independence of capital."* [*"Method of Transition for the Consideration of the True Friends of Human Rights and Human Progress,"* **Spirit of the Age**, Vol. I, No. 25, pp. 385–387] The *"present relation of 'Capital and Labor' is ... really a mixed relation between contract and status; held by fiction of law as one of 'freedom of contract,' while it retains potentially all the essential features of serfdom. Industrially and economically, the relation is substantially the same as that which existed between the chattel and his owner, and the serf and his lord."* Ingalls pointed to *"the terrible fear of being 'out of a job,' which freedom of contract means to a wage-worker."* [*"Industrial Wars and Governmental Interference,"* **The Twentieth Century**, September 6, 1894, pp. 11–12] *"To reward capital,"* he argued, *"is a direct inversion of natural right, as the right of man must be acknowledged paramount to that of property ... Any system, securing a premium to capital, however small, must result in the want, degradation and servitude of one class, and in bestowing unearned wealth and power upon another."* [*"Man and Property, their Rights and Relations,"* **Spirit of the Age**, vol. I, no. 8, pp. 114–116] Like Proudhon, he recognised that joint productive activity resulted in an output greater than that possible by the same number of people working in isolation, an output monopolised by those who owned the workplace or land in question:

> *"That the operation of any wealth increasing enterprise is co-operative needs only stating ... and its logic in division of the product of the conjoint labour, can only be frustrated by the fiction that the worker has contracted away his share of the increase by accepting wages. But, being dispossessed of his common right to land, and to opportunity to use the common materials and forces, he can make no equitable contract and cannot be lawfully thus concluded ... The only pretence which prevents this distribution, is the plea that the worker in accepting wages, has tacitly contracted away his share of the increase, has made a sale of his interest. Even this subterfuge fails logically however,*

> *whenever the operators reduce the rate of compensation without the full concurrence of the co-operative workers, and their just claim to joint ownership obtains again. It is altogether too late, to urge that this is a mere matter of exchange; so much money, so much labour-; and that the operator may lay off and take on whom he pleases. It never was, as economists teach, a matter of exchange, but one of co-operative endeavour."* [*"Industrial Wars and Governmental Interference,"* **The Twentieth Century**, September 6, 1894, pp. 11–12]

Unsurprisingly given this analysis he saw the need to replace wage labour (which he called *"false and immoral"*) with a better system: *"the adoption of honesty in our useful industries, and a reciprocal system of exchange, would unfold a grand and universal cooperative movement, seems so clear to me."* [*"The Wage Question"*, **The American Socialist**, Vol. 2, No. 38, p. 298] This would result in a boost to economic activity:

> *"No one, say they, will do anything but for profits. But the man who works for wages has no profits; and is not only destitute of this stimulus, but his labour product is minus the profits of the capitalist, landlord, and forestaller. A rational economy would seem to require, that if any one received extra inducement to act, it should be that one who did the most labourious and repulsive work. It is thus seen, that while exorbitant profits afford an unnatural stimulus, in mere wages we have an inadequate motive to action."* [*"Labor, Wages, And Capital. Division Of Profits Scientifically Considered"*, **Brittan's Quarterly Journal**, No. I, pp. 66–79]

The land monopoly was *"the foundation of class dominion and of poverty and industrial subjection."* [quoted by Bowman N. Hall, *"Joshua K. Ingalls, American Individualist: Land Reformer, Opponent of Henry George and Advocate of Land Leasing, Now an Established Mode"*, pp. 383–96, **American Journal of Economics and Sociology**, Vol. 39, No. 4, p. 387] Without access to land, people would have no option to sell their liberty to others and, as such, the abolition of slavery and wage labour were related:

> *"The right to life involves the right to land to live and labour upon. Commercial ownership of land which enables one to exclude another from it, and thus enforces involuntary idleness, is as destructive of human freedom as ownership of the person, enforcing involuntary service ... Liberation of the slaves would bring their labour in more direct competition with our over-crowded and poorly paid wage-workers. I did not offer this as a reason against the abolition of chattel slavery, but as a reason why the friends of emancipation from chattel slavery should unite with the friends for the emancipation of the wage worker, by restoring him the right to land, for the production of the means of life ... The real issue was between the rights of labour and the rights of ownership."* [quoted by Bowman N. Hall, **Op. Cit.**, p. 385]

This analysis was a common theme in pre-civil war libertarian circles. As historian James J. Martin noted, *"[t]o men like Warren and Evens chattel slavery was merely one side of a brutal situation, and although sympathetic with its opponents, refused to take part in the struggle [against slavery] unless it was extended to a wholesale attack on what they termed 'wage slavery' in the states where Negro slavery no longer existed."* [**Men Against the State**, p. 81] Such a view, we

may add, was commonplace in radical working class journals and movements of the time. Thus we find George Henry Evans (who heavily influenced Individualist Anarchists like Warren and Ingalls with the ideas of land reform based on *"occupancy and use"*) writing:

> *"I was formally, like yourself, sir, a very warm advocate of the abolition of (black) slavery. This was before I saw that there was white slavery. Since I saw this, I have materially changed my views as to the means of abolishing Negro slavery. I now see clearly, I think, that to give the landless black the privilege of changing masters now possessed by the landless white, would hardly be a benefit to him in exchange for his surety of support in sickness and old age, although he is in a favourable climate."* [quoted by Martin, **Op. Cit.**, p. 81f]

Ingalls, likewise, *"considered the only 'intelligent' strike [by workers as] one which would be directed against wage work altogether."* For Lysander Spooner, liberty meant that the worker was entitled to *"all the fruits of his own labour"* and argued that this *"might be feasible"* only when *"every man [was] own employer or work for himself in a direct way, since working for another resulted in a portion being diverted to the employer."* [Martin, **Op. Cit.**, p. 153 and p. 172] To quote Spooner:

> *"When a man knows that he is to have **all** the fruits of his labour, he labours with more zeal, skill, and physical energy, than when he knows — as in the case of one labouring for wages — that a portion of the fruits of his labour are going to another... In order that each man may have the fruits of his own labour, it is important, as a general rule, that each man should be his own employer, or work directly for himself, and not for another for wages; because, in the latter case, a part of the fruits of his labour go to his employer, instead of coming to himself ... That each man may be his own employer, it is necessary that he have materials, or capital, upon which to bestow his labour."* [**Poverty: Its Illegal Causes and Legal Cure**, p. 8]

Wage labour had a negative impact on those subject to it in terms of their personal development. *"The mental independence of each individual would be greatly promoted by his pecuniary independence,"* Spooner argued. *"Freedom of thought, and the free utterance of thought, are, to a great degree, suppressed ... by their dependence upon the will and favour of others, for that employment by which they must obtain their daily bread. They dare not investigate, or if they investigate, dare not freely avow and advocate those moral, social, religious, political, and economical truths, which alone calm rescue them from their degradation, lest they should thereby sacrifice their bread by stirring the jealousy of those out whom they are dependent, and who derive their power, wealth, and consequence from the ignorance and servitude of the poor."* [**Op. Cit.**, p. 54] As we argued in section B.1, all forms of hierarchy (including wage labour) distorts the personality and harms the individual psychologically.

Spooner argued that it was state restrictions on credit and money (the *"money monopoly"* based on banks requiring specie to operate) as the reason why people sell themselves to others on the labour market. As he put it, *"a monopoly of money ... . put[s] it wholly out of the power of the great body of wealth-producers to hire the capital needed for their industries; and thus compel them ... — by the alternative of starvation — to sell their labour to the monopolists of money ... [who] plunder all the producing classes in the prices of their labour."* Spooner was well aware that it was

capitalists who ran the state (*"the employers of wage labour ... are also the monopolists of money"*). In his ideal society, the *"amount of money capable of being furnished .. . is so great that every man, woman, and child... could get it, and go into business for himself, or herself — either singly, or in partnerships — and be under no necessity to act as a servant, or sell his or her labour to others. All the great establishments, of every kind, now in the hands of a few proprietors, but employing a great number of wage labourers, would be broken up; for few, or no persons, who could hire capital, and do business for themselves, would consent to labour for wages for another."* [**A Letter to Grover Cleveland**, p. 20, p. 48 and p. 41]

As Eunice Minette Schuster noted, Spooner's *"was a revolt against the industrial system"*, a *"**return** to **pre-industrial** society."* He *"would destroy the factory system, wage labour ... by making every individual a small capitalist, an independent producer"* and *"turn the clock of time backwards, not forward."* This position seems to have been a common one, for *"the early American Individualists aimed to return . .. to an economic system where everyone would be a small, independent proprietor."* [**Native American Anarchism**, p. 148, pp. 151–2 and p. 157] As another commentator on individualist anarchism also noted, *"the dominant vision of the future was obviously that of a relatively modest scale of production ... underpinned by individual, self-employed workers"* and so the individualist anarchists *"expected a society of largely self-employed workmen with no significant disparity of wealth between any of them."* [Wm. Gary Kline **The Individualist Anarchists**, p. 95 and p. 104]

This is not to say that all the individualist anarchists ignored the rise of large scale industrial production. Far from it. Tucker, Greene and Lum all recognised that anarchism had to adjust to the industrial system and proposed different solutions for it. Greene and Lum followed Proudhon and advocated co-operative production while Tucker argued that mutual banks could result in a non-exploitative form of wage labour developing.

William Greene pronounced that *"[t]here is no device of the political economists so infernal as the one which ranks labour as a commodity, varying in value according to supply and demand ... To speak of labour as merchandise is treason; for such speech denies the true dignity of man ... Where labour is merchandise in fact ... there man is merchandise also, whether in England or South Carolina."* This meant that, *"[c]onsidered from this point of view, the price of commodities is regulated not by the labour expended in their production, but by the distress and want of the labouring class. The greater the distress of the labourer, the more willing will he be to work for low wages, that is, the higher will be the price he is willing to give for the necessaries of life. When the wife and children of the labourer ask for bread, and he has none to give them, then, according to the political economists, is the community prosperous and happy; for then the rate of wages is low, and commodities command a high price in labour."* [**Mutual Banking**, pp. 49–50 and p. 49]

Greene's alternative was co-operation in production, consumption and exchange. *"The triple formula of practical mutualism"*, he argued, was *"the associated workshop"* for production, the *"protective union store"* for consumption and the *"the Mutual Bank"* for exchange. All three were required, for *"the Associated Workshop cannot exist for a single day without the Mutual Bank and the Protective Union Store."* Without mutual banking, the productive co-operatives would not survive as it would not gain access to credit or at a high rate (*"How do you advance the cause of labour by putting your associated neck under the heel of capital? Your talk about 'the emancipation of labour' is wind and vapour; labour cannot be emancipated by any such process."*) Thus the *"Associated Workshop ought to be an organisation of personal credit. For what is its aim and purpose? Is it not the emancipation of the labourer from all dependence upon capital and capitalists?"* [**Op.**

Cit., p. 37, p. 34, p. 35 and p. 34] The example of the Mondragon co-operative complex in the Basque country confirms the soundness of Greene's analysis.

Here we see a similar opposition to the commodification of labour (and so labourers) within capitalism that also marks social anarchist thought. As Rocker notes, Greene *"emphasised more strongly the* ***principle of association*** *than did Josiah Warren and more so than Spooner had done."* He had a *"strong sympathy for the* ***principle of association.*** *In fact, the theory of Mutualism is nothing less that co-operative labour based on the cost principle."* He also *"rejected . .. the designation of labour as a* ***commodity****"* and *"constantly endeavoured to introduce his ideas into the youthful labour movement .. . so as to prevent the social problem being regarded by labour as only a question of wages."* [**Pioneers of American Freedom**„ p. 108, p. 109, pp. 111–2 and p. 112] This support for producers' associations alongside mutual banks is identical to Proudhon's ideas — which is unsurprising as Greene was a declared follower of the French anarchist. Martin also indicates Greene's support for co-operation and associative labour and its relation to the wider labour movement:

> *"Coming at a time when the labour and consumer groups were experimenting with 'associated workshops' and 'protective union stores,' Greene suggested that the mutual bank be incorporated into the movement, forming what he called 'complementary units of production, consumption, and exchange ... the triple formula of practical mutualism.'"* [**Op. Cit.**, pp. 134–5]

Dyer Lum was another individualist anarchist who opposed wage labour and supported co-operative production. Like Greene, Lum took an active part in the labour movement and was a union organiser. As he put it, the Knights of Labor aimed to work for the *"abolishment of the wage-system"* as well as the right of life requiring the right to the means of living. Dyer, while rejecting their infatuation with political action, had *"the fullest sympathy"* for their aims and supported their economic measures. [**Liberty**, no. 82, p. 7] Unsurprisingly, as one historian notes, *"Lum began to develop an ideology that centred on the labour reformers' demand: 'The Wage System must go!'"* He joined *"the ideological path of labour reformers who turned to a radicalised laissez-faire explanation of wage slavery."* [Frank H. Brooks, *"Ideology, Strategy, and Organization: Dyer Lum and the American Anarchist Movement"*, pp. 57–83, **Labor History**, vol. 34, No. 1, p. 63 and p. 67] Like the communist-anarchists of the IWPA, for Lum trade unions were both the means of fighting capitalism and the way to abolish wage labour:

> *"Anarchists in Chicago tended to be much more sympathetic to class organisation, specifically unions, because they had many contacts to local unions and the Knights of Labor. The issue was not resolved at the founding conference of the IWPA, but the Chicago anarchists did manage to get a resolution passed stating that 'we view in trades unions based upon progressive principles — the abolition of the wages-system — the corner-stone of a better society structure than the present one.'*
>
> *"Lum agreed wholeheartedly with this resolution, particularly the phrase 'abolition of the wages-system.' This phrase not only confirmed the ideological link between anarchism and labour reform, but also paralleled similar language in the declaration of principles of the Knights of Labor. By 1886, Lum had joined the Knights and he urged other anarchists, particularly individualists, to support their struggles. Lum continued*

> *to be involved with organised labour for the next seven years, seeing unions as a practical necessity in the struggle against class politics and state repression."* [Brooks, **Op. Cit.**, pp. 70–1]

However, *"[d]espite the similarity between the evolution of Lum's strategy and that of the revolutionary anti-statist socialists in the IWPA, his analysis of 'wage slavery' was considerably more individualistic."* [Brooks, **Op. Cit.**, p. 66] Lum saw it as resulting primarily from state interference in the economy which reduced the options available to working class people. With a genuine free market based on free land and free credit workers would work for themselves, either as independent producers or in co-operatives (*"where capital seeks labour ... where authority dissolves under the genial glow of liberty, and necessity for wage-labour disappears."* [Dyer D. Lum, contained in Albert Parsons, **Anarchism**, p. 153]). Thus a key element of *"Lum's anarchism was his mutualist economics, an analysis of 'wage slavery' and a set of reforms that would 'abolish the wage system.'"* [Brooks, **Op. Cit.**, p. 71] Voltairine de Cleyre, in her individualist anarchist days, concurred with her mentor Lum, arguing for a *"complete international federation of labour, whose constituent groups shall take possession of land, mines, factories, all the instruments of production, issue their own certificates of exchange, and, in short, conduct their own industry without regulative interference from law-makers or employers."* [**The Voltairine de Cleyre Reader**, p. 6]

European individualist anarchists, it should be noted had a similar perspective. As mentioned in section A.3.1, Frenchman E. Armand argued that *"ownership of the means of production and free disposal of his produce"* was *"the quintessential guarantee of the autonomy of the individual"* but only as long as *"the proprietor does not transfer it to someone else or reply upon the services of someone else in operating it."* [*"Mini-Manual of the Anarchist Individualist"*, pp. 145–9, **Anarchism**, Robert Graham (ed.), p. 147] Another French individualist anarchist, Ernest Lesigne, argued that in a free society, *"there should be no more proletaires"* as *"everybody"* would be *"proprietor."* This would result in *"The land to the cultivator. The mine to the miner. The tool to the labourer. The product to the producer."* [quoted approvingly by Tucker, **Instead of a Book**, p. 17 and p. 18] Lesigne considered *"co-operative production"* as *"a solution to the great problem of social economy, — the delivery of products to the consumer at cost"* and as a means of producers to *"receive the value of your product, of your effort, without having to deal with a mass of hucksters and exploiters."* [**The Individualist Anarchists**, p. 123]

In other words, many individualist anarchists envisioned a society without wage labour and, instead, based upon peasant, artisan and associated/co-operative labour (as in Proudhon's vision). In other words, a **non**-capitalist society or, more positively, a (libertarian) socialist one as the workers' own and control the means of production they use. Like social anarchists, they opposed capitalist exploitation, wage slavery and property rights. However, not all individualist anarchists held this position, a notable exception being Benjamin Tucker and many of his fellow contributors of **Liberty**. Tucker asserted against the common labour movement and social anarchist equation of capitalism with wage slavery that *"[w]ages is not slavery. Wages is a form of voluntary exchange, and voluntary exchange is a form of Liberty."* [**Liberty**, no. 3, p. 1]

The question how is, does this support of wage labour equate to support for capitalism? The answer to that depends on whether you see such a system as resulting in the exploitation of labour. If socialism is, to requote Kropotkin, *"understood in its wide, generic, and true sense"* as *"an effort to **abolish** the exploitation of labour by capital"* then even those Individualist Anarchists who support wage labour must be considered as socialists due to their opposition to usury. It is

for this reason we discover Rudolf Rocker arguing that Stephan P. Andrews was *"one of the most versatile and significant exponents of libertarian socialism"* in the USA in spite of his belief that *"the specific cause of the economic evil [of capitalism] is founded not on the existence of the wage system"* but, rather, on the exploitation of labour, *"on the unjust compensation of the worker"* and the usury that *"deprives him of a part of his labour."* [**Op. Cit.**, p. 85 and pp. 77–8] His opposition to exploitation meant he was a socialist, an opposition which individualist anarchism was rooted in from its earliest days and the ideas of Josiah Warren:

> *"The aim was to circumvent the exploitation inherent in capitalism, which Warren characterised as a sort of 'civilised cannibalism,' by exchanging goods on co-operative rather than supply and demand principles."* [J.W. Baker, *"Native American Anarchism,"* pp. 43–62, **The Raven**, vol. 10, no. 1, p. 51]

So should not be implied that the term socialist is restricted simply to those who oppose wage labour. It should be noted that for many socialists, wage labour is perfectly acceptable — as long as the state is the boss. As Tucker noted, State Socialism's *"principle plank"* is *"the confiscation of **all** capital by the State"*, so stopping *"the liberty of those non-aggressive individuals who are thus prevented from carrying on business for themselves or assuming relations between themselves as employer and employee if they prefer, and who are obliged to become employees of the State against their will."* [**Instead of a Book**, p. 378] Of course, such a position is not a very good form of socialism which is why anarchists have tended to call such schemes state-capitalism (an analysis which was confirmed once the Soviet Union was created, incidentally). If state bureaucrats own and control the means of production, it would not come as too great a surprise if they, like private bosses, did so to maximise their incomes and minimise that of their employees.

Which explains why the vast majority of anarchists do not agree with Tucker's position. Individualist anarchists like Tucker considered it as a truism that in their society the exploitation of labour could not exist. Thus even if some workers did sell their liberty, they would still receive the full product of their labour. As Tucker put it, *"when interest, rent and profit disappear under the influence of free money, free land, and free trade, it will make no difference whether men work for themselves, or are employed, or employ others. In any case they can get nothing but that wage for their labour which free competition determines."* [**Op. Cit.**, p. 274] Whether this could actually happen when workers sell their liberty to an employer is, of course, where other anarchists disagree. The owner of a workplace does not own simply his (labour) share of the total product produced within it. He (and it usually is a he) owns everything produced while workers get their wages. The employer, therefore, has an interest in getting workers to produce as much as they can during the period they are employed. As the future price of the commodity is unknown, it is extremely unlikely that workers will be able to accurately predict it and so it is unlikely that their wages will always equal the cost price of the product. As such, the situation that an individual worker would get his "natural" wage would be unlikely and so they would be exploited by their employer. At best, it could be argued that in the long run wages will rise to that level but, as Keynes noted, in the long run we are all dead and Tucker did not say that the free market would end exploitation eventually. So individual ownership of large-scale workplaces would not, therefore, end exploitation.

In other words, if (as Tucker argued) individualist anarchism desires *"[n]ot to abolish wages, but to make **every** man dependent upon wages and to secure every man his **whole** wages"* then

this, logically, can only occur under workers control. We discuss this in more detail in section G.4.1, where we also indicate how social anarchists consider Tucker's position to be in a basic contradiction to anarchist principles. Not only that, as well as being unlikely to ensure that labour received its full product, it also contradicts his own principle of ***"occupancy and use"***. As such, while his support for non-exploitative wage labour does not exclude him from the socialist (and so anarchist) movement, it does suggest an inconsistent anarchism, one which can (fortunately) be easily made consistent by bringing it fully in line with its own stated ideals and principles.

Finally, we must note that there is a certain irony in this, given how keenly Tucker presented himself as a follower of Proudhon. This was because Proudhon agreed with Tucker's anarchist opponents, arguing continually that wage labour needed to be replaced by co-operative production to end exploitation and oppression in production. Proudhon and his followers, in the words of one historian, thought workers *"should be striving for the abolition of salaried labour and capitalist enterprise."* This was by means of co-operatives and their *"perspective was that of artisan labour ... The manager/employer (patron) was a superfluous element in the production process who was able to deny the worker just compensation for his labour merely by possessing the capital that paid for the workshop, tools, and materials."* [Julian P. W. Archer, **The First International in France, 1864–1872**, p. 45] As Frank H. Brooks put it, *"Lum drew from the French anarchist Proudhon . .. a radical critique of classical political economy and ... a set of positive reforms in land tenure and banking ... Proudhon paralleled the native labour reform tradition in several ways. Besides suggesting reforms in land and money, Proudhon urged producer cooperation."* [**Op. Cit.**, p. 72] We discuss this aspect of Proudhon's ideas in section G.4.2.

So, to conclude, it can be seen that individualist anarchists hold two positions on wage labour. Some are closer to Proudhon and the mainstream anarchist tradition than others while a few veer extremely close to liberalism. While all are agreed that their system would end the exploitation of labour, some of them saw the possibility of a non-exploitative wage labour while others aimed for artisan and/or co-operative production to replace it. Suffice to say, while few social anarchists consider non-exploitative wage labour as being very likely it is the opposition to non-labour income which makes individualist anarchism socialist (albeit, an inconsistent and flawed version of libertarian socialism).

G.1.4 Why is the social context important in evaluating Individualist Anarchism?

When reading the work of anarchists like Tucker and Warren, we must remember the social context of their ideas, namely the transformation of America from a pre-capitalist to a capitalist society. The individualist anarchists, like other socialists and reformers, viewed with horror the rise of capitalism and its imposition on an unsuspecting American population, supported and encouraged by state action (in the form of protection of private property in land, restricting money issuing to state approved banks using specie, government orders supporting capitalist industry, tariffs, suppression of unions and strikes, and so on). In other words, the individualist anarchists were a response to the social conditions and changes being inflicted on their country by a process of *"primitive accumulation"* (see section F.8).

The non-capitalist nature of the early USA can be seen from the early dominance of self-employment (artisan and peasant production). At the beginning of the 19th century, around 80%

of the working (non-slave) male population were self-employed. The great majority of Americans during this time were farmers working their own land, primarily for their own needs. Most of the rest were self-employed artisans, merchants, traders, and professionals. Other classes — employees (wage workers) and employers (capitalists) in the North, slaves and planters in the South — were relatively small. The great majority of Americans were independent and free from anybody's command — they owned and controlled their means of production. Thus early America was, essentially, a pre-capitalist society. However, by 1880, the year before Tucker started **Liberty**, the number of self-employed had fallen to approximately 33% of the working population. Now it is less than 10%. [Samuel Bowles and Herbert Gintis, **Schooling in Capitalist America**, p. 59] As the US Census described in 1900, until about 1850 *"the bulk of general manufacturing done in the United States was carried on in the shop and the household, by the labour of the family or individual proprietors, with apprentice assistants, as contrasted with the present system of factory labour, compensated by wages, and assisted by power."* [quoted by Jeremy Brecher and Tim Costello, **Common Sense for Hard Times**, p. 35] Thus the post-civil war period saw *"the factory system become general. This led to a large increase in the class of unskilled and semi-skilled labour with inferior bargaining power. Population shifted from the country to the city ... It was this milieu that the anarchism of Warren-Proudhon wandered."* [Eunice Minette Schuster, **Native American Anarchism**, pp. 136–7]

It is **only** in this context that we can understand individualist anarchism, namely as a revolt against the destruction of working-class independence and the growth of capitalism, accompanied by the growth of two opposing classes, capitalists and proletarians. This transformation of society by the rise of capitalism explains the development of **both** schools of anarchism, social and individualist. *"American anarchism,"* Frank H. Brooks argues, *"like its European counterpart, is best seen as a nineteenth century development, an ideology that, like socialism generally, responded to the growth of industrial capitalism, republican government, and nationalism. Although this is clearest in the more collectivistic anarchist theories and movements of the late nineteenth century (Bakunin, Kropotkin, Malatesta, communist anarchism, anarcho-syndicalism), it also helps to explain anarchists of early- to mid-century such as Proudhon, Stirner and, in America, Warren. For all of these theorists, a primary concern was the 'labour problem' — the increasing dependence and immiseration of manual workers in industrialising economies."* [*"Introduction"*, **The Individualist Anarchists**, p. 4]

The Individualist Anarchists cannot be viewed in isolation. They were part of a wider movement seeking to stop the capitalist transformation of America. As Bowles and Ginitis note, this *"process has been far from placid. Rather, it has involved extended struggles with sections of U.S. labour trying to counter and temper the effects of their reduction to the status of wage labour."* The rise of capitalism *"marked the transition to control of work by nonworkers"* and *"with the rise of entrepreneurial capital, groups of formerly independent workers were increasingly drawn into the wage-labour system. Working people's organisations advocated alternatives to this system; land reform, thought to allow all to become an independent producer, was a common demand. Worker co-operatives were a widespread and influential part of the labour movement as early as the 1840s ... but failed because sufficient capital could not be raised."* [**Op. Cit.**, p. 59 and p. 62] It is no coincidence that the issues raised by the Individualist Anarchists (land reform via *"occupancy-and-use"*, increasing the supply of money via mutual banks and so on) reflect these alternatives raised by working class people and their organisations. Little wonder Tucker argued that:

"Make capital free by organising credit on a mutual plan, and then these vacant lands will come into use ... operatives will be able to buy axes and rakes and hoes, and then they will be independent of their employers, and then the labour problem will solved." [**Instead of a Book**, p. 321]

Thus the Individualist Anarchists reflect the aspirations of working class people facing the transformation of an society from a pre-capitalist state into a capitalist one. Changing social conditions explain why Individualist Anarchism must be considered socialistic. As Murray Bookchin noted:

"Th[e] growing shift from artisanal to an industrial economy gave rise to a gradual but major shift in socialism itself. For the artisan, socialism meant producers' co-operatives composed of men who worked together in small shared collectivist associations, although for master craftsmen it meant mutual aid societies that acknowledged their autonomy as private producers. For the industrial proletarian, by contrast, socialism came to mean the formation of a mass organisation that gave factory workers the collective power to expropriate a plant that no single worker could properly own. These distinctions led to two different interpretations of the 'social question' ... The more progressive craftsmen of the nineteenth century had tried to form networks of co-operatives, based on individually or collectively owned shops, and a market knitted together by a moral agreement to sell commodities according to a 'just price' or the amount of labour that was necessary to produce them. Presumably such small-scale ownership and shared moral precepts would abolish exploitation and greedy profit-taking. The class-conscious proletarian ... thought in terms of the complete socialisation of the means of production, including land, and even of abolishing the market ***as such****, distributing goods according to needs rather than labour ... They advocated* ***public*** *ownership of the means of production, whether by the state or by the working class organised in trade unions."* [**The Third Revolution**, vol. 2, p. 262]

So, in this evolution of socialism we can place the various brands of anarchism. Individualist anarchism is clearly a form of artisanal socialism (which reflects its American roots) while communist anarchism and anarcho-syndicalism are forms of industrial (or proletarian) socialism (which reflects its roots in Europe). Proudhon's mutualism bridges these extremes, advocating as it does artisan socialism for small-scale industry and agriculture and co-operative associations for large-scale industry (which reflects the state of the French economy in the 1840s to 1860s). With the changing social conditions in the US, the anarchist movement changed too, as it had in Europe. Hence the rise of communist-anarchism in addition to the more native individualist tradition and the change in Individualist Anarchism itself:

"Green emphasised more strongly the ***principle of association*** *than did Josiah Warren and more so than Spooner had done. Here too Proudhon's influence asserts itself... In principle there is essentially no difference between Warren and Proudhon. The difference between them arises from a dissimilarity of their respective environments. Proudhon lived in a country where the sub-division of labour made co-operation in social production essential, while Warren had to deal with predominantly small individual producers. For this reason Proudhon emphasised the* ***principle of association*** *far more*

than Warren and his followers did, although Warren was by no means opposed to this view." [Rudolf Rocker, **Pioneers of American Freedom**, p. 108]

As noted in section A.3, Voltairine de Cleyre subscribed to a similar analysis, as does another anarchist, Peter Sabatini, more recently:

> "The chronology of anarchism within the United States corresponds to what transpired in Europe and other locations. An organised anarchist movement imbued with a revolutionary collectivist, then communist, orientation came to fruition in the late 1870s. At that time, Chicago was a primary centre of anarchist activity within the USA, due in part to its large immigrant population…
>
> "The Proudhonist anarchy that Tucker represented was largely superseded in Europe by revolutionary collectivism and anarcho-communism. The same changeover occurred in the US, although mainly among subgroups of working class immigrants who were settling in urban areas. For these recent immigrants caught up in tenuous circumstances within the vortex of emerging corporate capitalism, a revolutionary anarchy had greater relevancy than go slow mutualism." [**Libertarianism: Bogus Anarchy**]

Murray Bookchin argued that the development of communist-anarchism *"made it possible for anarchists to adapt themselves to the new working class, the industrial proletariat, … This adaptation was all the more necessary because capitalism was now transforming not only European [and American] society but the very nature of the European [and American] labour movement itself."* [**Op. Cit.**, p. 259] In other words, there have been many schools of socialism, all influenced by the changing society around them. As Frank H. Brooks notes, *"before Marxists monopolised the term, socialism, was a broad concept, as indeed Marx's critique of the 'unscientific' varieties of socialism in the **Communist Manifesto** indicated. Thus, when Tucker claimed that the individualist anarchism advocated in the pages of **Liberty** was socialist, he was not engaged in obfuscation or rhetorical bravado."* [*"Libertarian Socialism"*, pp. 75–7, **The Individualist Anarchists**, p. 75]

Looking at the society in which their ideas developed (rather than ahistorically projecting modern ideas backward) we can see the socialist core of Individualist Anarchism. It was, in other words, an un-Marxian form of socialism (as was mutualism and communist-anarchism). Thus, to look at the Individualist Anarchists from the perspective of "modern socialism" (say, communist-anarchism or Marxism) means to miss the point. The social conditions which produced Individualist Anarchism were substantially different from those existing today (and those which produced communist-anarchism and Marxism) and so what was a possible solution to the *"social problem"* **then** may not be one suitable **now** (and, indeed, point to a different kind of socialism than that which developed later). Moreover, Europe in the 1870s was distinctly different than America (although, of course, the USA **was** catching up). For example, there was still vast tracks of unclaimed land (once the Native Americans had been removed, of course) available to workers. In the towns and cities, artisan production *"remained important … into the 1880s"* [David Montgomery, **The Fall of the House of Labour**, p. 52] Until the 1880s, the possibility of self-employment was a real one for many workers, a possibility being hindered by state action (for example, by forcing people to buy land via Homestead Acts, restricting banking to those with specie, suppressing unions and strikes and so on – see section F.8.5). Little wonder

that Individualist Anarchism was considered a real solution to the problems generated by the creation of capitalism in the USA and that, by the 1880s, Communist Anarchist became the dominant form of anarchism. By that time the transformation of America was nearing completion and self-employment was no longer a real solution for the majority of workers.

This social context is essential for understanding the thought of people like Greene, Spooner and Tucker. For example, as Stephen L. Newman points out, Spooner *"argues that every man ought to be his own employer, and he envisions a world of yeoman farmers and independent entrepreneurs."* [**Liberalism at Wit's End**, p. 72] This sort of society was in the process of being destroyed when Spooner was writing. Needless to say, the Individualist Anarchists did not think this transformation was unstoppable and proposed, like other sections of US labour, various solutions to problems society faced. Given the commonplace awareness in the population of artisan production and its advantages in terms of liberty, it is hardly surprising that the individualist anarchists supported "free market" solutions to social problems. For, given the era, this solution implied workers' control and the selling of the product of labour, not the labourer him/herself. Unsurprisingly, therefore, the *"greatest part [of* ***Liberty****'s readers] proves to be of the professional/intellectual class: the remainder includes independent manufacturers and merchants, artisans and skilled workers ... The anarchists' hard-core supporters were the socio-economic equivalents of Jefferson's yeoman-farmers and craftsworkers: a freeholder-artisan-independent merchant class allied with freethinking professionals and intellectuals. These groups — in Europe as well as in America — had socio-economic independence, and through their desire to maintain and improve their relatively free positions, had also the incentive to oppose the growing encroachments of the capitalist State."* [Morgan Edwards, *"Neither Bombs Nor Ballots:* ***Liberty*** *& the Strategy of Anarchism"*, pp. 65–91, **Benjamin R. Tucker and the Champions of Liberty**, Coughlin, Hamilton and Sullivan (eds.), p. 85]

Individualist anarchism is obviously an aspect of a struggle between the system of peasant and artisan production of early America and the state encouraged system of capitalism. Indeed, their analysis of the change in American society from one of mainly independent producers into one based mainly upon wage labour has many parallels with Karl Marx's analysis of *"primitive accumulation"* in the Americas and elsewhere presented in chapter 33 of **Capital** (*"The Modern Theory of Colonization"*). It is this process which Individualist Anarchism protested against, the use of the state to favour the rising capitalist class. So the social context the individualist anarchists lived in must be remembered. America at the times was a predominantly rural society and industry was not as developed as it is now wage labour would have been minimised. As Wm. Gary Kline argues:

> *"Committed as they were to equality in the pursuit of property, the objective for the anarchist became the construction of a society providing equal access to those things necessary for creating wealth. The goal of the anarchists who extolled mutualism and the abolition of all monopolies was, then, a society where everyone willing to work would have the tools and raw materials necessary for production in a non-exploitative system ... the dominant vision of the future society ... [was] underpinned by individual, self-employed workers."* [**The Individualist Anarchists: A Critique of Liberalism**, p. 95]

This social context helps explain why some of the individualist anarchists were indifferent to the issue of wage labour, unlike most anarchists. A limited amount of wage labour within a

predominantly self-employed economy does not make a given society capitalist any more than a small amount of governmental communities within an predominantly anarchist world would make it statist. As Marx put it, in such socities *"the separation of the worker from the conditions of labour and from the soil ... does not yet exist, or only sporadically, or on too limited a scale ... Where, amongst such curious characters, is the 'field of abstinence' for the capitalists? ... Today's wage-labourer is tomorrow's independent peasant or artisan, working for himself. He vanishes from the labour-market — but not into the workhouse."* There is a *"constant transformation of wage-labourers into independent producers, who work for themselves instead of for capital"* and so *"the degree of exploitation of the wage-labourer remain[s] indecently low."* In addition, the *"wage-labourer also loses, along with the relation of dependence, the feeling of dependence on the abstemious capitalist."* [**Op. Cit.**, pp. 935–6] Within such a social context, the anti-libertarian aspects of wage labour are minimised and so could be overlooked by otherwise sharp critics of authoritarianism as Tucker and Andrews.

Therefore Rocker was correct when he argued that Individualist Anarchism was *"above all ... rooted in the peculiar social conditions of America which differed fundamentally from those of Europe."* [**Op. Cit.**, p. 155] As these conditions changed, the viability of Individualist Anarchism's solution to the social problem decreased (as acknowledged by Tucker in 1911, for example — see section G.1.1). Individualist Anarchism, argued Morgan Edwards, *"appears to have dwindled into political insignificance largely because of the erosion of its political-economic base, rather than from a simple failure of strategy. With the impetus of the Civil War, capitalism and the State had too great a head start on the centralisation of economic and political life for the anarchists to catch up. This centralisation reduced the independence of the intellectual/professional and merchant artisan group that were the mainstay of the **Liberty** circle."* [**Op. Cit.**, pp. 85–6] While many of the individualist anarchists adjusted their own ideas to changing social circumstances, as can be seen by Greene's support for co-operatives (*"the principle of association"*) as the only means of ending exploitation of labour by capital, the main forum of the movement (**Liberty**) did not consistently subscribe to this position nor did their support for union struggles play a major role in their strategy. Faced with another form of anarchism which supported both, unsurprisingly communist-anarchism replaced it as the dominant form of anarchism by the start of the 20th century in America.

If these social conditions are not taken into account then the ideas of the likes of Tucker and Spooner will be distorted beyond recognition. Similarly, by ignoring the changing nature of socialism in the face of a changing society and economy, the obvious socialistic aspects of their ideas will be lost. Ultimately, to analyse the Individualist Anarchists in an a-historic manner means to distort their ideas and ideals. Moreover, to apply those ideas in a non-artisan economy without the intention of radically transforming the socio-economic nature of that society towards one based on artisan production one would mean to create a society distinctly different than one they envisioned (see section G.3 for further discussion).

G.2 Why do individualist anarchists reject social anarchism?

As noted in the last section, the individualist anarchists considered themselves as anti-capitalists and many called themselves mutualists and socialists. It may be objected that they opposed the more obviously socialist types of anarchism like communist-anarchism and, as a consequence, should be considered as supporters of capitalism. This is not the case as can be seen from **why** they rejected communist-anarchism. The key thing to remember is that capitalism does not equal the market. So while the individualist anarchists advocated a market economy, it *"is evident from their writings that they rejected both capitalism and communism — as did Proudhon."* [Brian Morris, *"Global Anti-Capitalism"*, pp. 170–6, **Anarchist Studies**, vol. 14, no. 2, p. 175]

It should noted that while Tucker came to excommunicate non-individualist forms of anarchism from the movement, his initial comments on the likes of Bakunin and Kropotkin were very favourable. He reprinted articles by Kropotkin from his paper **La Revolte**, for example, and discussed *"the Anarchistic philosophy, as developed by the great Proudhon and actively propagated by the heroic Bakunin and his successors on both sides of the Atlantic."* [**Liberty**, no. 26, p. 3] After the rise of the IWPA in the early 1880s and the Haymarket police riot of 1886, Tucker changed his position. Now it was a case that the *"Anarchistic social ideal"* was *"utterly inconsistent with that of those Communists who falsely call themselves Anarchists while at the same time advocating a **regime** of Archism fully as despotic as that of the State Socialists themselves."* For Tucker, real anarchists did not advocate, like communist anarchists, *"forcible expropriation"* nor *"force as a revolutionary agent and authority as a safeguard of the new social order."* [**The Individualist Anarchists**, pp. 88–9] As will become clear, Tucker's summation of communist-anarchism leaves a lot to be desired. However, even after the break between individualist and communist anarchism in America, Tucker saw that both had things in common as both were socialists:

> *"To be sure, there is a certain and very sincere comradeship that must exist between all honest antagonists of the exploitation of labour, but the word comrade cannot gloss over the vital difference between so-called Communist-Anarchism and Anarchism proper."* [**Liberty**, no. 172, p. 1]

Social anarchists would agree with Tucker in part, namely the need not to gloss over vital differences between anarchist schools but most reject Tucker's attempts to exclude other tendencies from *"Anarchism proper."* Instead, they would agree with Kropotkin and, while disagreeing with certain aspects of the theory, refuse to excommunicate him from the anarchist movement. As we discuss in section G.2.5, few anarchists agreed with Tucker's sectarianism at the time and communist-anarchism was, and remains, the dominant tendency within anarchism.

It is these disagreements to which we now turn. It should be stressed, though, that the individualist anarchists, while tending to excommunicate social anarchism, also had many inclusive moments and so it makes these objections often seem petty and silly. Yes, there was certainly

pettiness involved and it worked both ways and there was a certain amount of tit-for-tat, just as there is now (although to a much lesser degree these days). Anarchist-communist opposition to what some of them sadly called *"bourgeois anarchism"* was a fact, as was individualist anarchist opposition to communist-anarchism. Yet this should not blind us to what both schools had in common. However, if it were not for some opponents of anarchism (particularly those seeking to confuse libertarian ideas with propertarian ones) dragging these (mostly resolved) disagreements back into the light of day this section would be a lot shorter. As it is, covering these disagreements and showing how they could be resolved is a useful task — if only to show how individualist and communist anarchism are not as alien as some make out.

There were four main objections made to communist-anarchism by the individualists. Firstly, that communist-anarchism was compulsory and any compulsory system could not be anarchist. Secondly, that a revolution would be imposing anarchism and so contradicted its principles. Thirdly, that distribution by need was based on altruism and, consequently, unlikely to succeed. Fourthly, that the communist-anarchists are determining how a free society would be organised which is authoritarian. Needless to say, communist-anarchists rejected these claims as being false and while we have already sketched these arguments, objections and replies in section A.3.1 it is worthwhile to repeat (and expand on) them here as these disagreements are sometimes highlighted by those who fail to stress what both schools have in common and, consequently, distort the debates and issues involved.

We will discuss these objections in the following sections.

G.2.1 Is communist-anarchism compulsory?

Some individualist anarchists argued that communist-anarchists wanted to force everyone to be communists and, as such, this proved they were not anarchists. This objection is, ironically, both the most serious **and** the easiest to refute. As Tucker noted, *"to eliminate the compulsory element from Communism is to remove, in the view of every man who values liberty above aught else, the **chief** objection to it."* [**Liberty**, no. 122, p. 5] For Henry Appleton, there was *"a class of ranting enthusiasts who falsely call themselves Anarchists"* who advocated both violence and *"levelling". "All Communism,"* he asserted, *"under whatever guise, is the natural enemy of Anarchism and a Communist sailing under the flag of Anarchism is as false a figure as could be invented."* Yet, ironically, A. H. Simpson disproved that particular claim for while attacking communism he ended by stating his *"argument applies only to aggressive Communists"* and that *"[v]oluntary Communism can exist and, if successful, flourish under Anarchy."* So, apparently, **some** kinds of communism are compatible with anarchism after all! Victor Yarrows, likewise, pointed to *"two different schools"* of communists, those who support *"voluntary Communism, which they intend to reach by the Anarchistic method"* and those who *"plot the forcible suppression of the entire system"* of private property. Only the former was *"voluntary or Anarchistic Communism."* [**The Individualist Anarchists**, pp. 89–90, p. 94, p. 95 and p. 96]

This, it should be noted, is more than enough to disprove any claims that genuine anarchists cannot be communists.

So, the question is whether communist-anarchists are in favour of forcing people to be communists. If their communism is based on voluntary association then, according to the Individualist Anarchists themselves, it is a form of anarchism. Unsurprisingly, we discover that communist-

anarchists have long argued that their communism was voluntary in nature and that working people who did not desire to be communists would be free not to be.

This position can be found in Kropotkin, from his earliest writings to his last. Thus we discover him arguing that an anarchist revolution *"would take care not to touch the holding of the peasant who cultivates it himself ... without wage labour. But we would expropriate all land that was not cultivated by the hands of those who at present possess the land."* This was compatible with communism because libertarian communists aimed at *"the complete expropriation of all those who have the means of exploiting human beings; the return to the community of the nation of everything that in the hands of anyone can be used to exploit others."* Following Proudhon's analysis, private property was different from individual possession and as long as *"social wealth remains in the hands of the few who possess it today"* there would be exploitation. Instead, the aim was to see such social wealth currently monopolised by the capitalist class *"being placed, on the day of the revolution, at the free disposition of all the workers."* This would *"create the situation where each person may live by working freely, without being forced to sell his work and his liberty to others."* [**Words of a Rebel**, p. 214, pp. 207–8, p. 207 and p. 208] If someone desired to work outside of the commune, then that was perfectly compatible with this aim.

This position was followed in later works. The *"scope of Expropriation,"* Kropotkin argued was clear and would only *"apply to everything that enables any man — be he financier, mill-owner, or landlord — to appropriate the product of others' toil."* Thus only those forms of property based on wage labour would be expropriated. In terms of housing, the same general rule applies (*"the expropriation of dwellings contains the whole social revolution"*). Kropotkin explicitly discusses the man who *"by dint of privation has contrived to buy a house just large enough to hold his family. And we are going to deprive him of his hard-earned happiness, to turn him into the street! Certainly not ... Let him work in his little garden, too."* Anarchist-communism *"will make the lodger understand that he need not pay his former landlord any more rent. Stay where you are, but rent free."* [**The Conquest of Bread**, p. 61, p. 95, pp. 95–6 and p. 96]

Which, incidentally, was **exactly** the same position as Tucker (see section G.1.2) and so Kropotkin's analysis of the land monopoly was identical:

> *"when we see a peasant who is in possession of just the amount of land he can cultivate, we do not think it reasonable to turn him off his little farm. He exploits nobody, and nobody would have the right to interfere with his work. But if he possesses under the capitalist law more than he can cultivate himself, we consider that we must not give him the right of keeping that soil for himself, leaving it uncultivated when it might be cultivated by others, or of making others cultivate it for his benefit."* [**Act for Yourselves**, p. 104]

For Kropotkin, communism *"must be the work of all, a natural growth, a product of the constructive genius of the great mass. Communism cannot be imposed from above; it could not live even for a few months if the constant and daily co-operation of all did not uphold it. It must be free."* [**Anarchism**, p. 140]

Malatesta agreed. Anarchism, he stressed, *"cannot be imposed, both on moral grounds in regard to freedom, as well as because it is impossible to apply 'willy nilly' a regime of justice for all. It cannot be imposed on a minority by a majority. Neither can it be imposed by a majority on one or more minorities."* Thus *"anarchists who call themselves communists"* do so *"not because they wish*

to impose their particular way of seeing things on others" but because *"they are convinced, until proved wrong, that the more human beings are joined in brotherhood, and the more closely they co-operate in their efforts for the benefit of all concerned, the greater is the well-being and freedom which each can enjoy." Imposed communism,"* he stressed, *"would be the most detestable tyranny that the human mind could conceive. And free and voluntary communism is ironical if one has not the right and the possibility to live in a different regime, collectivist, mutualist, individualist — as one wishes, always on condition that there is no oppression or exploitation of others."* He agreed with Tucker that *"State communism, which is authoritarian and imposed, is the most hateful tyranny that has ever afflicted, tormented and handicapped mankind."* [**Errico Malatesta: His Life and Ideas**, p. 21, p. 34, p. 103 and p. 34]

Therefore, arguing that the land and machinery should be common property does **not** preclude individuals possessing it independently of communes as both are rooted in individual possession (or "occupancy and use") rather than private property. The key anarchist difference between property and possession explains any perceived contradiction in the communist position. Thus we find Kropotkin arguing that a communist-anarchist society is one *"without having the soil, the machinery, the capital in short, in the hands of private owners. We all believe that free organisations of workers would be able to carry on production on the farm and on the factory, as well, and probably much better, than it is conducted now under the individual ownership of the capitalist."* The commune *"shall take into possession of all the soil, the dwelling-houses, the manufactures, the mines and the means of communication."* [**Act for Yourselves**, p. 103 and p. 104]

This in no way contradicts his argument that the individuals will not be forced to join a commune. This is because the aim of anarchist-communism is, to quote another of Kropotkin's works, to place *"the product reaped or manufactured at the disposal of all, leaving to each the liberty to consume them as he pleases in his own home."* [**The Place of Anarchism in the Evolution of Socialist Thought**, p. 7] Thus individual ownership meant individual ownership of resources used by others rather than individual possession of resources which individuals used. This can be seen from his comment that *"some poor fellow"* who *"has contrived to buy a house just large enough to hold his family"* would not be expropriated by the commune (*"by all means let him stay there"*) while also asserting *"[w]ho, then, can appropriate for himself the tiniest plot of ground in such a city, without committing a flagrant injustice?"* [**Conquest of Bread**, p. 90]

Kropotkin's opposition to private appropriation of land can only be understood in context, namely from his discussion on the *"abolition of rent"* and the need for *"free dwellings"*, i.e. the end of landlordism. Kropotkin accepted that land could and would be occupied for personal use — after all, people need a place to live! In this he followed Proudhon, who also argued that *"Land cannot be appropriated"* (Chapter 3, part 1 of **What is Property?**). For the French anarchist, the land *"is limited in amount"* and so *"it ought not to be appropriated"* (*"let any living man dare change his right of territorial possession into the right of property, and I will declare war upon him, and wage it to the death!"*). This meant that *"the land is indispensable to our existence, — consequently a common thing, consequently insusceptible of appropriation."* Overall, *"labour has no inherent power to appropriate natural wealth."* [**What is Property?**, p. 106, p. 107 and p. 116] Proudhon, it is well known, supported the use of land (and other resources) for personal use. How, then, can he argue that the *"land cannot be appropriated"*? Is Proudhon subject to the same contradiction as Kropotkin? Of course not, once we take into account the fundamental difference between private property and possession, appropriation and use which underlies both individualist **and** communist anarchism. As Malatesta argued:

> *"Communism is a free agreement: who doesn't accept it or maintain it remains outside of it ... Everyone has* ***the right to land, to the instruments of production*** *and all the advantages that human beings can enjoy in the state of civilisation that humanity has reached. If someone does not want to accept a communist life and the obligations that it supposes, it is their business. They and those of a like mind will come to an agreement ... [They] will have* ***the same rights as the communists*** *over the natural wealth and accumulated products of previous generations ... I have always spoken of free agreement, of free communism. How can there be liberty without a possible alternative?"* [our emphasis, **At the café**, pp. 69–70]

Compare this to individualist anarchist Stephen Byington's comment that *"[t]hose who wish to unite in the communistic enjoyment of their labour will be free to do so; those who wish to hold the products of their labour as private property will be equally free to do so."* [quoted by Wm. Gary Kline, **The Individualist Anarchists: A Critique of Liberalism**, p. 93] The similarities are as obvious as between Proudhon's and Kropotkin's arguments.

The same, it must be stressed, can be said of the *"Chicago Anarchists"* whom Tucker labelled as authoritarians. Thus we find Albert Parsons, for example, denouncing that kind of private property which allows exploitation to happen. The key problem was that *"the necessary means for the existence of all has been appropriated and monopolised by a few. The land, the implements of production and communication, the resources of life, are now held as private property, and its owners exact tribute from the propertyless"* (*"Wealth is power"*). The aim of communist-anarchism was to ensure the *"[f]ree access to the means of production [which] is the natural right of every man able and willing to work."* This implied that *"[a]ll organisation will be voluntary with the sacred right forever reserved for each individual 'to think and to rebel.'"* This meant that as far as the *"final outcome"* of social change was involved *"many disciples of anarchism believe [it] will be communism — the common possession of the resources of life and the productions of united labour. No anarchist is compromised by this statement, who does not reason out the future outlook in this way."* [**Anarchism: Its Philosophy and Scientific Basis**, p. 97, p. 99, p. 96 ,p. 174 and pp. 174–5] This did not exclude mutualism or individualist anarchism:

> *"Many expedients will be tried by which a just return may be awarded the worker for his exertions. The time check or labour certificate, which will be honoured at the store-houses hour for hour, will no doubt have its day. But the elaborate and complicated system of book-keeping this would necessitate, the impossibility of balancing one man's hour against another's with accuracy, and the difficulty in determining how much more one man owed natural resources, condition, and the studies and achievements of past generations, than did another, would, we believe, prevent this system from obtaining a thorough and permanent establishment. The mutual banking system ... may be in operation in the future free society. Another system, more simple ... appears the most acceptable and likely to prevail. Members of the groups ... if honest producers ... will be honoured in any other group they may visit, and given whatever is necessary for their welfare and comfort."* [**Op. Cit.**, p. 175]

As we discuss in section G.4, this was the same conclusion that Voltairine de Cleyre reached three decades later. This was rooted in a similar analysis of property as Proudhon and Tucker,

namely *"possession"* or *"occupancy and use"*: *"The workshops will drop into the hands of the workers, the mines will fall to the miners, and the land and all other things will be controlled by those who posses and use them. There will be, there can then be no title to anything aside from its possession and use."* The likes of Parsons supported communism was not because of an opposition between "communism" and "occupancy and use" but rather, like Kropotkin, because of *"the utter impossibility of awarding to each an exact return for the amount of labour performed will render absolute communism a necessity sooner or later."* [**Op. Cit.**, p. 105 and p. 176] So while capitalism *"expropriates the masses for the benefit of the privileged class ... socialism teaches how all may possess property ... [and] establish a universal system of co-operation, and to render accessible to each and every member of the human family the achievements and benefits of civilisation which, under capitalism, are being monopolised by a privileged class."* [August Spies, contained in Parsons, **Op. Cit.**, pp. 63–4]

All of which indicates that Tucker did not really understand communist-anarchism when he argued that communism is *"the force which compels the labourer to pool his product with the products of all and forbids him to sell his labour or his products."* [**Instead of a Book**, p. 400] Rather, communist-anarchists argue that communism must be free and voluntary. In other words, a communist-anarchist society would not "forbid" anything as those who are part of it must be in favour of communism for it to work. The option of remaining outside the communist-anarchist society is there, as (to requote Kropotkin) expropriation would *"apply to everything that enables any man [or woman] ... to appropriate the product of others' toil."* [**The Conquest of Bread**, p. 61] Thus communist-anarchism would "forbid" exactly what Individualist Anarchism would "forbid" — property, not possession (i.e. any form of "ownership" not based on "occupancy and use").

Tucker, at times, admits that this is the case. For example, he once noted that *"Kropotkin says, it is true, that he would allow the individual access to the land; but he proposes to strip him of capital entirely, and as he declares a few pages further on that without capital agriculture is impossible, it follows that such access is an empty privilege not at all equivalent to the liberty of individual production."* [quoted by George Woodcock and Ivan Avakumovic, **The Anarchist Prince**, p. 279] However, as two biographers of Kropotkin note, Tucker *"partly misinterprets his opponent, as when he suggests that the latter's idea of communist anarchism would **prevent** the individual from working on his own if he wished (a fact which Kropotkin always explicitly denied, since the basis of his theory was the voluntary principle)."* [Woodcock and Avakumovic, **Op. Cit.**, p. 280] To quote Kropotkin himself:

> *"when we see a Sheffield cutler, or a Leeds clothier working with their own tools or handloom, we see no use in taking the tools or the handloom to give to another worker. The clothier or cutler exploit nobody. But when we see a factory whose owners claim to keep to themselves the instruments of labour used by 1,400 girls, and consequently exact from the labour of these girls ... profit ... we consider that the people ... are fully entitled to take possession of that factory and to let the girls produce ... for themselves and the rest of the community .. . and take what they need of house room, food and clothing in return."* [**Act for Yourselves**, p. 105]

So Kropotkin argued that a communist-anarchist revolution would **not** expropriate the tools of self-employed workers who exploited no-one. Malatesta also argued that in an anarchist society *"the peasant [is free] to cultivate his piece of land, alone if he wishes; free is the shoe maker to remain*

at his last or the blacksmith in his small forge." Thus these two very famous communist-anarchists also supported "property" but they are recognised as obviously socialists. This apparent contradiction is resolved when it is understood that for communist-anarchists (like all anarchists) the abolition of property does not mean the end of possession and so *"would not harm the independent worker whose real title is possession and the work done"* unlike capitalist property. [Malatesta, **Op. Cit.**, p. 103] Compare this with Yarros' comment that *"[s]mall owners would not suffer from the application of the 'personal use' principle, while large owners, who have come into possession of the landed property, or the capital with which they purchased the landed property, by means that equal liberty could not sanction, would have no principle to base any protest on."* [**Liberty**, no. 197, p. 2] In other words, **all** anarchists (as we argue in section B.3) oppose private property but support possession (we return to this issue in section I.6.2 as it is an all too common fallacy).

G.2.2 Is communist-anarchism violent?

Having shown that communist-anarchist is a valid form of anarchism even in terms of individualist anarchism in the last section, it is now necessary to discuss the issue of methods, i.e., the question of revolution and violence. This is related to the first objection, with Tucker arguing that *"their Communism is another State, while my voluntary cooperation is not a State at all. It is a very easy matter to tell who is an Anarchist and who is not. Do you believe in any form of imposition upon the human will by force?"* [**Liberty**, no. 94, p. 4] However, Tucker was well aware that the state imposed its will on others by force and so the question was whether revolution was the right means of ending its oppression.

To a large degree, discussion on the question of revolution was clouded by the fact it took place during the height of the *"propaganda by the deed"* period in anarchist history (see section A.2.18). As George Woodcock noted, a *"cult of violence ... marked and marred"* the IWPA and alienated the individualist anarchists. [**Anarchism**, p. 393] Johann Most was the focus for much of this rhetoric (see Paul Avrich's **The Haymarket Tragedy**, particularly the chapter entitled *"Cult of Dynamite"*). However, the reason why talk of dynamite found an audience had nothing to do with anarchism but rather because of the violence regularly directed against striking workers and unions. As we discuss more fully in section G.3.1, strikes were habitually repressed by violence (by the state or by the employer's private police). The massive 1877 strike wave, for example, saw the **Chicago Times** urge the use of hand grenades against strikers while employers organised *"private guards and bands of uniformed vigilantes"* which *"roamed the streets, attacking and dispersing groups of workers.* Business leaders concluded that *"the chief lesson of the strike as the need for a stronger apparatus of repression"* and presented the city of Chicago with two Gatling guns to aid that task. *"The erection of government armouries in the centres of American cities dates from this period."* This repression and the vitriolic ruling class rhetoric used *"set a pattern for the future and fuelled the hatreds and passions without which the Haymarket tragedy would not have occurred."* [Paul Avrich, **The Haymarket Tragedy**, p. 33 and p. 35]

Given this general infatuation with dynamite and violence which this state and employer violence provoked, the possibility for misunderstanding was more than likely (as well as giving the enemies of anarchism ample evidence to demonise it while allowing the violence of the system they support to be downplayed). Rather than seeing communist-anarchists as thinking a revolution was the product of mass struggle, it was easy to assume that by revolution they meant

acts of violence or terrorism conducted by a few anarchists on behalf of everyone else (this false perspective is one which Marxists to this day tend to repeat when dismissing anarchism). In such a situation, it is easy to see why so many individualist anarchists thought that a small group of anarchists sought to impose communism by means of violence. However, this was not the case. According to Albert Parsons, the communist-anarchists argued that the working class *"will be driven to use [force] in self-defence, in self-preservation against those who are degrading, enslaving and destroying them."* [**The Autobiographies of the Haymarket Martyrs**, p. 46] As August Spies put it, *"[t]o charge us with an attempt to overthrow the present system on or about May 4th, and then establish anarchy, is too absurd a statement, I think, even for a political office-holder to make ... Only mad men could have planned such a brilliant scheme."* Rather, *"we have predicted from the lessons history teaches, that the ruling classes of to-day would no more listen to the voice of reason than their predecessors; that they would attempt by brute force to stay the wheel of progress."* [contained in Parsons, **Anarchism: Its Philosophy and Scientific Basis**, p. 55] Subsequent events have proven that Spies and Parsons had a point!

Thus arguments about violence should not result in the assumption that the individualist anarchists were pacifists as the subject usually is not violence as such but rather assassinations and attempts of minorities to use violence to create "anarchy" by destroying the state on behalf of the general population. *"To brand the policy of terrorism and assassination as immoral is ridiculously weak,"* argued Tucker. *"**Liberty** does not assume to set any limit on the right of an invaded individual to choose his own methods of defence. The invader, whether an individual or a government forfeits all claim to consideration from the invaded. This truth is independent of the character of the invasion."* This meant that the *"right to resist oppression by violence is beyond doubt. But its exercise would be unwise unless the suppression of free thought, free speech, and a free press were enforced so stringently that all other means of throwing it off had become hopeless."* Ultimately, though, the *"days of armed revolution have gone by. It is too easily put down."* [**Instead of a Book**, p. 430, p. 439 and p. 440]

Except for a small group of hard-core insurrectionists, few social anarchists think that violence should be the first recourse in social struggle. The ultra-revolutionary rhetoric associated with the 1883–6 period is not feature of the anarchist movement in general and so lessons have been learned. As far as strategy goes, the tactics advocated by social anarchists involve the same ones that individualist anarchists support, namely refusal of obedience to all forms of authority. This would include workplace, rent and tax strikes, occupations, protests and such like. Violence has always been seen as the last option, to be used only in self-defence (or, sometimes, in revenge for greater acts of violence by oppressors). The problem is that any effective protest will result in the protesters coming into conflict with either the state or property owners. For example, a rent strike will see the agents of the property owner trying to evict tenants, as would a workers strike which occupied the workplace. Similarly, in the Seattle protests in 1999 the police used force against the non-violent protesters blocking the roads long before the Black Bloc started breaking windows (which is, in itself, non-violent as it was directed against corporate property, not people — unlike the police action). Unless the rebels simply did what they were told, then any non-violent protest could become violent — but only because private property ultimately rests on state violence, a fact which becomes obvious when people refuse to acknowledge it and its privileges (*"There is only one law for the poor, to wit: Obey the rich."* [Parsons, **Op. Cit.**, p. 97]). Thus Adolph Fischer, one of the Haymarket Martyrs:

> *"Would a peaceful solution of the social question be possible, the anarchists would be the first ones to rejoice over it.*
>
> *"But is it not a fact that on occasion of almost every strike the minions of the institutions of private property — militia, police, deputy sheriffs; yes, even federal troops — are being called to the scenes of conflict between capital and labour, in order to protect the interests of capital? ... What peaceful means should the toilers employ? There is, for example, the strike? If the ruling classes want to enforce the 'law' they can have every striker arrested and punished for 'intimidation' and conspiracy. A strike can only be successful if the striking workingmen prevent their places being occupied by others. But this prevention is a crime in the eyes of the law. Boycott? In several states the 'courts of justice' have decided that the boycott is a violation of the law, and in consequence thereof, a number of boycotts have had the pleasure of examining the inner construction of penitentiaries 'for 'conspiracy' against the interests of capital."* [**The Autobiographies of the Haymarket Martyrs**, pp. 85–6]

Some individualist anarchists did agree with this position. Dyer Lum, for example, *"supported revolutionary violence on practical and historical grounds. Practically speaking, Lum did not believe that 'wage slavery' could be ended by non-violence because capitalists would surely use force to resist."* [Frank H. Brooks, *"Ideology, Strategy, and Organization: Dyer Lum and the American Anarchist Movement"*, pp. 57–83, **Labor History**, vol. 34, No. 1, p. 71] Spooner's rhetoric could be as violent sounding as Johann Most at his worse and he called upon the subjects of the British Empire to rise in revolt (see his pamphlet **Revolution**). Equally, many social anarchists are pacifists or believe that anarchism can come about by means of reform and not revolution. Thus the reform/revolution divide does not quite equal the individualist/social anarchist divide, although it is fair to say that most individualist anarchists were and are reformists.

So, it must be stressed that most individualist anarchists did not oppose revolution **as such**. Rather they considered it as both unlikely to succeed and unnecessary. They rejected revolutionary expropriation *"not because we deem such expropriation unjust, invasive, criminal, but solely because we are we are convinced that there is a better, safer, and wiser way for labour to pursue with a view to emancipation."* With mutual banks, they argued, it became possible *"for labour to gradually lift itself into the position to command its full share of wealth, and absorb in the shape of wages all that is now alienated from it in the forms of profit, interest proper, and monopoly rent."* [Yarrows, **Liberty**, no. 171, p. 5] As such, their aims were the same as communist-anarchism (namely to end exploitation of labour and the abolition of the state) but their means were different. Both, however, were well aware that the capitalism could not be ended by political action (i.e., voting). *"That the privileged class"*, argued William Bailie *"will submit to expropriation, even if demanded at the ballot-box, is a delusion possible only to him who knows not the actual situation confronting the people of this country."* [*"The Rule of the Monopolists"*, **Liberty**, no. 368, p. 4]

However, there was one area of life that was excluded from their opposition to expropriation: the land. As Yarros put it, *"the Anarchists' position on the land question, which involves the dispossession of present landlords and the entire abolition of the existing system of land tenure ... They wish to expropriate the landlords, and allow the landless to settle on land which does not now belong to them."* This *"[o]ne exception ... we are compelled to make"* involved *"believ[ing] that the landless **will**, individually and for the purpose of occupying ownership, take possession of the land not per-*

*sonally occupied and used by landlord, and **will** protect each other in the possession of such lands against any power hostile to them."* [**Op. Cit.**, no. 171, p. 4 and p. 5]

Yet as subsequent history has shown, landlords are just as likely to organise and support violent counter-revolutionary movements in the face of land reform as are industrial capitalists. Both sections of the capitalist class supported fascists like Mussolini, Franco and Pinochet in the face of even moderate attempts at expropriation by either reformist governments or the peasants themselves. So as the history of land reform shows, landlords are more than willing to turn to death squads and fascism to resist it. To suggest that squatting land would provoke less capitalist violence than, say, expropriating workplaces simply cannot be supported in the light of 20th century history. The choice, then, is simply to allow the landlords and capitalists to keep their property and try to but it back from them or use political or revolutionary means to expropriate them. Communist-anarchists thought that the mutual banks would not work and so supported expropriation by means of a mass revolt, a social revolution.

As such, communist-anarchists are not revolutionaries by choice but rather because they do not think capitalism can be reformed away nor that the ruling class will freely see their power, property and privileges taken from them. They reject the mutualist and individualist anarchist suggestion that mutual banks could provide enough credit to compete capitalism away and, even if it could, the state would simply outlaw it. This perspective does **not** imply, as many enemies of anarchist suggest, that social anarchists always seek to use violence but rather that we are aware that the state and capitalists will use violence against any effective protest. So, the methods social anarchists urge — strikes, occupations, protests, and so forth — are all inherently non-violent but resistance by the state and capitalist class to these acts of rebellion often results in violence (which is dutifully reported as violence by the rebels, not the powerful, in the media). That the capitalist class will use violence and force to maintain its position *"is demonstrated in every strike which threatens their power; by every lock-out, by every discharge; by every black-list."* [Parsons, **Anarchism: Its Philosophy and Scientific Basis**, p. 105] Ultimately, the workings of capitalism itself provokes resistance to it. Even if no anarchist participated in, or help organise, strikes and protests they would occur anyway and the state would inevitably intervene to defend "law and order" and "private property" — as the history of every class system proves. So communist-anarchism does not produce the class war, the class war produces communist-anarchism.

In addition, Tucker thought that a violent revolution would not succeed for without an awareness of anarchist ideals in the general public, the old system would soon return. *"If government should be abruptly and entirely abolished tomorrow,"* he argued, *"there would probably ensue a series of physical conflicts about land and many other things, ending in reaction and a revival of the old tyranny."* [**Instead of a Book**, p. 329] Almost all revolutionary anarchists would agree with his analysis (see section A.2.16). Such anarchists have always seen revolution as the end of a long process of self-liberation and self-education through struggle. All anarchists reject the idea that all that was required was to eliminate the government, by whatever means, and the world would be made right. Rather, we have seen anarchism as a social movement which, like anarchy itself, requires the participation of the vast majority to be viable. Hence anarchist support for unions and strikes, for example, as a means of creating more awareness of anarchism and its solutions to the social question (see section J.1). This means that communist-anarchists do not see revolution as imposing anarchism, but rather as an act of self-liberation by a people sick of being ruled by others and act to free themselves of tyranny.

So, in summary, in terms of tactics there is significant overlap between the strategies advocated by both social and individualist anarchists. The key difference is that the former do not think that the latter's mutual banks make expropriation unnecessary while the individualist anarchists think that expropriation of capital would provoke the state into attacking and it would be unlikely that the rebels would win. Both, however, can agree that violence should only be used in self-defence and that for most of the time it is not required as other forms of resistance are far more effective.

G.2.3 Does communist-anarchism aim to destroy individuality?

Then there is the desirability of communism as such. A. H. Simpson argued that *"Anarchism is egoism; Communism is altruism"* and altruism in any form will involve *"the duty of the individual to sacrifice himself to God, the State, the community, the 'cause' of anything, superstition that always makes for tyranny. This idea, whether under Theocracy or Communism, will result in the same thing — always authority."* He did, though, argue that in a free society people who *"desire to have their individuality submerged in the crowd"* would be free to set up their own communes. [**The Individualist Anarchists**, p. 92 and p. 94] This flows from Joshua Warren's experiences on Robert Owen's co-operative community **New Harmony** and the conclusions he drew from its collapse. Warren essentially began the individualist anarchist tradition by concluding that any sort of collective emphasis was bound to fail because it prevented people from sufficiently addressing individual concerns, since supposed collective concerns would inevitably take their place. The failure of these communities was rooted in a failure to understand the need for individual self-government. Thus, for Warren, it *"seemed that the differences of opinion, tastes, and purposes **increased** just in proportion to the demand for conformity"* and so it *"appeared that it was nature's own inherent law of diversity that had conquered us ... Our 'united interests' were directly at war with the individualities of persons and circumstances."* [quoted by George Woodcock, **Anarchism**, p. 390] Thus, property within the limits of occupancy and use, and within an economy dominated by the cost principle or some close equivalent, had to be a necessary protection for the individual from both the potential tyranny of the group (communism) and from inequalities in wealth (capitalism).

In return, communist-anarchists would agree. *"Phalansteries,* argued Kropotkin, *"are repugnant to millions of human beings."* While most people feel *"the necessity of meeting his [or her] fellows for the pursue of common work ... it is not so for the hours of leisure"* and such communities *"do not take this into account."* Thus a commune system does not imply communal living (although such arrangements *"can please some"*). Rather it was a case of *"isolated apartments ... Isolation, alternating with time spent in society, is the normal desire of human nature."* [**The Conquest of Bread**, pp. 123–4] Kropotkin in his discussion on why intentional communities like that of Owen's failed repeated many of Warren's points and stressed that they were based on the authoritarian spirit and violated the need for individual liberty, isolation and diversity (see his **Small Communal Experiments and Why They Fail**). The aim of communist-anarchism is to create a communist society based on individual liberty and freely joined functional groups. It does not aim to burden individuals with communal issues beyond those required by said groupings. Thus self-managed communities involve managing only those affairs which truly rest in joint needs, with the interests of individuals and other groups only being discussed if they are

harming others and other means of resolving disputes have failed. Whether this can actually happen, of course, will be discovered in a free society. If it did not, the communist-anarchists would be the first to seek alternative economic and social arrangements which guaranteed liberty.

It should also go without saying that no communist-anarchist sought a system by which individuals would have their personality destroyed. As Kropotkin stressed:

> *"Anarchist Communism maintains that most valuable of all conquests — individual liberty — and moreover extends it and gives it a solid basis – economic liberty — without which political liberty is delusive; it does not ask the individual who has rejected god, god the king, and god the parliament, to give himself unto himself a god more terrible than any of the preceding — god the Community, or to abdicate upon its alter his independence, his will, his tastes, and to renew the vow of asceticism which he formally made before the crucified god. It says to him, on the contrary, 'No society is free so long as the individual is not so! Do not seek to modify society by imposing upon it an authority which shall make everything right; if you do you will fail ... abolish the conditions which allow some to monopolise the fruit of labour of others.'"* [**The Place of Anarchism in Socialistic Evolution**, pp. 14–5]

Of course, denying that communist-anarchists seek such a regime is not the same as saying that such a regime would not be created by accident. Unsurprisingly, communist-anarchists have spent some time arguing that their system would not be subject to such a degeneration as its members would be aware of the danger and act to stop it (see, for example, section I.5.6). The key to understanding communist-anarchism is to recognise that it is based on free access. It does not deny an individual (or even a group of individuals) the ability to work their own land or workplace, it simply denies them the ability to exclude others from it unless they agree to be their servant first. The sharing of the products of labour is considered as the means to reduce even more any authority in society as people can swap workplaces and communities with ease, without worrying about whether they can put food on their table or not.

Of course, there is slight irony to Simpson's diatribe against communism in that it implicitly assumes that private property is not a god and that individuals should respect it regardless of how it impacts on them and their liberty. Would it not be altruism of the worse kind if working class people did not simply take the land and capital they need to survive rather than sell their labour and liberty to its owners? So why exclude private property (even in a modified form) from individualist anarchist scorn? As we argue in section G.6 this was Max Stirner's position and, fundamentally, the communist-anarchist one too. Communist-anarchists oppose private property as it generates relationships of authority and these harm those subject to them and, as a consequence, they argue that it is in the **self**-interest of the individuals so oppressed to expropriate private property and share the whole world.

The issue of sharing and what it implied also caused some individualist anarchists to oppose it. Henry Appleton argued that *"all communism rests upon an artificial attempt to level things, as against a social development resting upon untrammelled individual sovereignty."* The *"true Anarchist ... is opposed to all manner of artificial levelling machines. How pitiful the ignorance which accuses him of wanting to level everything, when the very integral thought of Anarchism is opposed to levelling!"* [**The Individualist Anarchists**, p. 89] However, as we have indicated in section A.2.5, all genuine anarchists, **including communist-anarchists**, are opposed to making

or treating people as if they were identical. In fact, the goal of communist-anarchism has always been to ensure and protect the natural diversity of individuals by creating social conditions in which individuality can flourish. The fundamental principle of communism is the maxim ***"from each according to their abilities, to each according to their needs."*** There is nothing there about *"levelling"* or (which amounts to the same thing), *"equality of outcome."* To make an obvious point: *"If one person need medical treatment and another is more fortunate, they are not to be granted an equal amount of medical care, and the same is true of other human needs.* Hence Chomsky talks of the *"authentic left"* who recognise that individuals *"will differ in their aspirations, their abilities, and their personal goals"* and seek a society which allows that diversity to fully flourish. [**The Chomsky Reader**, p. 191 and p. 192] In the words of Rudolf Rocker:

> *"a far greater degree of economic equality ... would ... be no guarantee against political and social oppression. Economic equality alone is not social liberation. It is just this which Marxism and all the other schools of authoritarian Socialism have never understood. Even in prison, in the cloister, or in the barracks one finds a fairly high degree of economic equality, as all the inmates are provided with the same dwelling, the same food, the same uniform, and the same tasks ... [this was] the vilest despotism ... the human being was merely the automation of a higher will, on whose decisions he had not the slightest influence. It was not without reason that Proudhon saw in a 'Socialism' without freedom the worst form of slavery. The urge for social justice can only develop properly and be effective, when it grows out of man's sense of personal freedom and is based on that. In other words* ***Socialism will be free, or it will not be at all****. In its recognition of this lies the genuine and profound justification for the existence of Anarchism."* [**Anarcho-Syndicalism**, p. 14]

Therefore, anarchists *"demand the abolition of all economic monopolies and the common ownership of the soil and all other means of production, the use of which must be available to all without distinction; for personal and social freedom is conceivable only on the basis of equal economic advantages for everybody.* [**Op. Cit.**, p. 11] As Kropotkin stressed, anarchists recognise that there are two types of communism, libertarian and authoritarian and *"our communism, is not that of the authoritarian school: it is anarchist communism, communism without government, free communism. It is a synthesis of the two chief aims pursued by humanity since the dawn of its history — economic freedom and political freedom."* It is based on *"everybody, contributing for the common well-being to the full extent of his [or her] capacities .. . enjoy[ing] also from the common stock of society to the fullest possible extent of his [or her] needs."* Thus it is rooted in individual tastes and diversity, on *"putting the wants of the individual* ***above*** *the valuation of the services he [or she] has rendered, or might render, to society."* Thus communism was *"the best basis for individual development and freedom"* and so *"the full expansion of man's faculties, the superior development of what is original in him, the greatest fruitfulness of intelligences, feeling and will."* It would ensure the *"most powerful development of individuality, of individual originality."* The *"most powerful development of individuality, of individual originality ... can only be produced when the first needs of food and shelter are satisfied"* and this was why *"communism and anarchism"* are *"a necessary complement to one another."* [**Anarchism**, p. 61, p. 59, p. 60 and p. 141]

So, communist-anarchists would actually agree with individualist anarchists like Simpson and oppose any notion of *"levelling"* (artificial or otherwise). The aim of libertarian communism is to

increase diversity and individuality, **not** to end it by imposing an abstract equality of outcome or of consumption that would utter ignore individual tastes or preferences. Given that communist-anarchists like Kropotkin and Malatesta continually stressed this aspect of their ideas, Simpson was simply confusing libertarian and authoritarian forms of communism for polemical effect rather than presenting a true account of the issues at hand.

A firmer critique of communist-anarchism can be found when Tucker argued that *"Kropotkinian anarchism means the liberty to eat, but not to cook; to drink, but not to brew; to wear, but not to spin; to dwell, but not to build; to give, but not to sell or buy; to think, but not to print; to speak, but not to hire a hall; to dance, but not to pay the fiddler."* [quoted by George Woodcock and Ivan Avakumovic, **Op. Cit.**, p. 279] Yet even this contains a distortion, as it is clear that communist-anarchism is based on the assumption that members of a communist society **would** have to contribute (if physically able, of course) to the common resources in order to gain access to them. The notion that Kropotkin thought that a communist society would only take into account *"to each according to their needs"* while ignoring *"from each according to their abilities"* seems hard to square with his published arguments. While it is true that individual contributions would not be exactly determined, it is false to suggest that communist-anarchism ignores the obvious truism that in order to consume you first need to produce. Simply put, if someone seeks to live off the work of others in a free society those within it would be asked to leave and provide for themselves. By their actions, they have shown that they do not want to live in a communist commune and those who do wish to live as communists would feel no particular need to provide for those who do not (see section I.4.14).

This can be seen when Tucker quoted **Freedom** saying that *"in the transitional revolutionary period communities and individuals may be obliged in self-defence to make it their rule that 'He who will not work neither shall he eat.' It is not always possible for us to act up to our principles and ... expediency may force us to confine our Communism to those who are willing to be our brothers and equals."* Somewhat incredibly, Tucker stated *"I am not quite clear as to the meaning of this, and would ask to be enlightened on the question whether those objectionable individuals are to be let alone to live in their own way, or whether the State Socialistic plan would be pursued in dealing with them."* [**Liberty**, no. 149, p. 1] Clearly, his anti-communism got in the way of any attempt to build bridges or acknowledge that communist-anarchists had no desire (as noted above) to force people to be communists nor to have the "communism" of those unwilling (rather than unable) to contribute imposed on them!

G.2.4 What other reasons do individualists give for rejecting communist-anarchism?

The other differences are not as major. Some individualist anarchists took umbrage because the communist-anarchists predicted that an anarchist society would take a communal form, so prescribing the future development of a free society in potentially authoritarian ways. As James Martin summarised, it was Tucker's *"belief that 'in all subsequent social co-operation no manner of organisation or combination whatsoever shall be binding upon any individual without his consent,' and to decide in advance upon a communal structure violated this maxim from the start."* [**Men Against the State**, p. 222] Others took umbrage because the communist-anarchists refused to spell out in sufficient detail exactly how their vision would work.

Communist-anarchists reply in four main ways. Firstly, the individualist anarchists themselves predicted roughly how they thought a free society would look and function, namely one on individual ownership of production based around mutual banks. Secondly, communist-anarchists presented any vision as one which was consistent with libertarian principles, i.e., their suggestions for a free society was based on thinking about the implication of anarchist principles in real life. There seemed little point in advocating anarchism if any future society would be marked by authority. To not discuss how a free society could work would result in authoritarian solutions being imposed (see section I.2.1). Thirdly, they were at pains to link the institutions of a free society to those already being generated within capitalism but in opposition to its hierarchical nature (see section I.2.3). Fourthly, presenting more than a sketch would be authoritarian as it is up to a free people to create their own society and solve their problems themselves (see section I.2).

Clearly, A. H. Simpson was wrong when he asserted that communist-anarchists argued thusly: *"Abolish private property by instituting compulsory Communism, and the State will go."* No communist-anarchist has ever argued for compulsory communism. Somewhat ironically, Simpson went on to argue that *"difference between Communism and Anarchy is plainly observable in their methods. Abolish the State . .. that bulwark of the robber system ... says the Anarchist. Abolish private property, the source of all evil and injustice, parent of the State, says the Communist."* [**The Individualist Anarchists**, p. 92] Yet communist-anarchists do **not** subscribe to the position of abolishing private property first, **then** the state. As we note when refuting the opposite assertion by Marxists in section H.2.4, anarchists like Kropotkin and Malatesta followed Bakunin in arguing that **both** needed to be abolished at the same time. Kropotkin, for example, did not divide economic and political issues, for him it was a case of *"the political and economic principles of Anarchism."* [**Anarchism**, p. 159]

This unity of economic and political aspects of anarchism exists within Individualist Anarchism too, but it is hidden by the unfortunately tendency of its supporters of discussing certain forms of private property as state enforced monopolies. So to a large degree many of the disagreements between the two schools of anarchism were rooted in semantics. Thus we find William Bailie arguing that the anarchist-communist *"assumption that rent and interest are due to private property is not proven"* as *"both rent and interest are the result of monopoly, of restricted individual liberty."* [**Liberty**, no. 261, p. 1] In other words, rent is caused because the state enforces property rights which the individualist anarchists disagree with. Thus when individualist anarchists argue they seek to get rid of the state, they **also** mean the end of capitalist property rights (particularly in land). That this can lead to confusion is obvious as, in the usual sense of the word, rent **is** caused by private property. The communists-anarchists, in contrast, generally used the term "private property" and "property" in the same way that Proudhon used it in 1840, namely property which allows its owner to exploit the labour of another. As such, they had no problem with those who laboured by themselves on their own property.

The lack of a market in communist-anarchism led some individualist anarchists like William Bailie to argue that it *"ignores the necessity for any machinery to adjust economic activities to their ends."* Either its supporters *"exalt a chaotic and unbalanced condition"* or they will produce an *"insufferable hierarchy."* [**The Individualist Anarchists**, p. 116] Thus, to use modern terms, either communist-anarchists embrace central planning or their system simply cannot produce goods to meet demand with over-production of unwanted goods and under-production of desired ones. Needless to say, communist-anarchists argue that it is possible to bring the demand and produc-

tion of goods into line without requiring centralised planning (which would be inefficient and a dire threat to individual freedom — Kropotkin's arguments against state capitalism were proved right in Soviet Russia). It would require a system of horizontal links between self-managed workplaces and the transmission of appropriate information to make informed decisions (see section I for a discussion of some possibilities).

Another objection to communist-anarchism was raised by Proudhon during his debates with the state communists of his time who also raised the slogan *"from each according to their abilities, to each according to their needs."* For Proudhon, wages in the sense of payment for labour would still exist in a anarchist society. This was because of two main reasons. Firstly, rewarding labour for its actual work done would be a great incentive in ensuring that it was efficiently done and meet the consumers requirements. Secondly, he considered communism as being potentially authoritarian in that society would determine what an individual should contribute and consume. As he put it:

> *"Who then shall determine the capacity? who shall be the judge of the needs?*
>
> *"You say that my capacity is 100: I maintain that it is only 90. You add that my needs are 90: I affirm that they are 100. There is a difference between us of twenty upon needs and capacity. It is, in other words, the well-known debate between* ***demand*** *and* ***supply****. Who shall judge between the society and me?*
>
> *"If the society persists, despite my protests, I resign from it, and that is all there is to it. The society comes to an end from lack of associates.*
>
> *"If, having recourse to force, the society undertakes to compel me; if it demands from me sacrifice and devotion, I say to it: Hypocrite! you promised to deliver me from being plundered by capital and power; and now, in the name of equality and fraternity, in your turn, you plunder me. Formerly, in order to rob me, they exaggerated my capacity and minimised my needs. They said that products cost me so little, that I needed so little to live! You are doing the same thing. What difference is there then between fraternity and the wage system?"* [**The General Idea of the Revolution**, pp. 96–7]

Yet even here Proudhon shows the libertarian communist solution to this possible problem, namely free association. If there were a conflict between individuals within a free commune in terms of their contributions and consumption then the individual is free to leave (and, conversely, the commune is free to expel an individual). Said individuals can seek another communist commune and join it or, conversely, work for themselves in their present location. Ultimately, free association means the freedom **not** to associate and libertarian communism is rooted in that truism. Thus, communist-anarchists would agree with the French anarchism when he *"conclude[d] that a single association can never include all the workmen in one industry, nor all industrial corporations, nor,* ***a fortiori****, a nation of 36 millions of men; therefore that the principle of association does not offer the required solution."* [**Op. Cit.**, p. 85] Like Proudhon, communist-anarchists base their anarchism on federations of associations and communes, with these federations and associations formed as and when they were required for joint activity. Thus the federation of communist communes and workplaces would play a similar role as Proudhon's *"agro-industrial federation,"* namely to end *"wage labour or economic servitude"* and *"to protect"* against *"capitalist and financial feudalism, both within them and from the outside"* as well as ensuring *"increasing*

equality" and the *"application of application on the largest possible scale of the principles of mutualism"* and *"economic solidarity."* [**The Principle of Federation**, p. 70 and p. 71]

The key difference, of course, between Proudhon's mutualism and Kropotkin's communism was (as latter stressed) that the former supported payment for labour in terms of money or labour-cheques while the latter argued that this would be a modification of the wages system rather than its total abolition. Yet by divorcing payment for labour from its consumption, Proudhon argued that communism, like monopoly, made it difficult to determine exactly the costs involved in producing goods. The French anarchist argued that there was no way of knowing the real cost of anything produced outside the market. This could be seen from monopolies within capitalism:

> *"How much does the tobacco sold by the administration cost? How much is it worth? You can answer the first of these questions: you need only call at the first tobacco shop you see. But you can tell me nothing about the second, because you have no standard of comparison and are forbidden to verify by experiment the items of cost of administration.... Therefore the tobacco business, made into a monopoly, necessarily costs society more than it brings in; it is an industry which, instead of subsisting by its own product, lives by subsidies."* [**System of Economical Contradictions**, pp. 232–3]

Communist-anarchists reply by noting that the price of something is not independent of the degree of monopoly of an industry and so natural barriers to competition can skew prices. Equally, competition can be a race to the bottom and that competitors can undermine their own working conditions and enjoyment of life in order to gain an advantage (or, more often, simply survive) on the market. As we argue in section I.1.3, markets have a tendency to undermine equality and solidarity and, over time, erode the basis of a free society.

As an aside, Proudhon's argument has obvious similarities with von Mises' much later attack on communism which is usually called the "socialist calculation argument" (see section I.1.1). As discussed in section I.1.2, von Mises' argument was question begging in the extreme and our critique of that applies equally to Proudhon's claims. As such, communist-anarchists argue that market prices usually do **not** reflect the real costs (in terms of their effects on individuals, society and the planet's ecology) – even those prices generated by non-capitalist markets. Moreover, due to Proudhon's opposition to rent and interest, his own argument could be turned against mutualism and individualist anarchism as followers of von Mises have done. Without rent and interest, they argue, there is no way of identifying how much land or credit is worth and so resource use will be inefficient. Of course, this assumes that capitalist definitions of efficiency and "cost" are the only valid ones which is not the case. So, arguing that markets are required to correctly value goods and services is a two-edged sword, argue communist-anarchists.

One of the joys of Proudhon is that he provides material to critique both Kropotkin's communist-anarchism **and** Tucker's individualist anarchism for while opposed to communism he was equally opposed to wage labour, as we indicate in section G.4.2 (as such, those who quote Proudhon's attacks on communism but fail to note his attacks on wage slavery are extremely dishonest). Under mutualism, there would not be wage labour. Rather than employers paying wages to workers, workers would form co-operatives and pay themselves a share of the income they collectively produced. As Robert Graham put it, *"[t]hat both Tucker and Bakunin could claim Proudhon as their own illustrates the inherent ambiguity and elusiveness of his thought ... With his death, that synthesis broke down into its conflicting parts."* [*"Introduction"*, Pierre-Joseph

Proudhon, **The General idea of the Revolution**, p. xxxi] Social anarchism emphasised the self-management, associational and federalist aspects of Proudhon's ideas along with his critique of private property while individualist anarchism tended to stress his support for possession, "wages" (i.e., labour income), competition and markets.

G.2.5 Do most anarchists agree with the individualists on communist-anarchism?

No, far from it. Most anarchists in the late nineteenth century recognised communist-anarchism as a genuine form of anarchism and it quickly replaced collectivist anarchism as the dominant tendency.

So few anarchists found the individualist solution to the social question or the attempts of some of them to excommunicate social anarchism from the movement convincing. Across the world, including in America itself, communist anarchism became the bulk of the movement (social anarchism is the *"mainstream of anarchist theory"* and in the *"historical anarchist movement"* where anarcho-communism and anarcho-syndicalism have been *"predominating."* [John Clark, **The Anarchist Moment**, p. 143]). That is still the situation to this day, with individualist anarchism being a small part of the movement (again, it mostly exists in America and, to an even lesser degree, Britain). Moreover, with the notable exception of Johann Most, most leading communist-anarchists refused to respond in kind and recognised individualist anarchism as a form of anarchism (usually one suited to conditions in pre-industrial America). Kropotkin, for example, included Individualist Anarchism in his 1911 account of Anarchism for the **Encyclopaedia Britannica** as well as his pamphlet **Modern Science and Anarchism**.

It should also be stressed that not all individualist anarchists followed Tucker's lead in refusing to call communist anarchism a form of anarchism. Joseph Labadie, Dyer Lum and Voltairine de Cleyre (when she was an individualist), for example, recognised the likes of Albert and Lucy Parsons, Kropotkin, Goldman and Berkman as fellow anarchists even if they disagreed with some of their methods and aspects of their preferred solution to the social problem. For Labadie, *"[o]ne may want liberty to advance the interests of Communism, another to further the cause of individualism"* and so nothing can *"stand in the way of uniting with other Anarchists who believe in Communism to get more liberty"* [**The Individualist Anarchists**, p. 260 and p. 262] Today, few (if any) individualist anarchists try to excommunicate other anarchists from the movement, thankfully leaving the diatribes and sectarianism of a few individuals in the nineteenth century where they belong.

Suffice to say, an account of anarchism which excluded social anarchism would be a very short work indeed and, unsurprisingly, all serious accounts of anarchism concentrate on social anarchism, its thinkers and its organisations. Which, unfortunately, ensures that the diversity and richness of individualist anarchism is somewhat lost, as are its social roots and context (which, in turn, allows some academics to confuse individualist anarchism with "anarcho"-capitalism based on a superficial analysis of words like "property" and "markets"). This predominance of social anarchism is reflected in the movements journals.

While some of its admirers stress that **Liberty** was the longest lasting American anarchist paper, in fact a social anarchist paper has that claim to fame. **Fraye Arbeter Shtime** (**The Free Voice of Labour**) was a Yiddish language anarchist periodical which was first published in 1890

and lasted until 1977. This was followed by the Italian anarchist paper **L'Adunata dei Refrattari** which was published between 1922 and 1971. So when James Martin stated that **Liberty** was *"the longest-lived of any radical periodical of economic or political nature in the nation's history"* in 1953 he was wrong. [**Men Against the State**, p. 208] In terms of the English language, the London based communist-anarchist journal **Freedom** has existed (in various forms) from 1886 and so beats any claim made for **Liberty** as being the longest lasting English language anarchist journal by several decades. The anarcho-syndicalist **Black Flag**, another British based journal, began publication in 1971 and was still being published over 30 years later. As far as the longest running US-based anarchist journal, that title now goes to the social anarchist magazine **Anarchy: A Journal of Desire Armed** which was founded in 1980 and is still going strong. This is, we stress, not to diminish **Liberty** and its achievement but simply to put it into the context of the wider movement and the fact that, outside of America, social anarchism **is** the anarchist movement (and even within America, social anarchism was and is the bulk of it).

In summary, then, while individualist anarchism opposed communist-anarchism much of this opposition was rooted in misunderstandings and, at times, outright distortion. Once these are corrected, it becomes clear that both schools of anarchism share significant ideas in common. This is unsurprisingly, given the impact of Proudhon on both of them as well as their common concerns on the social question and participation in the labour and other popular movements. As both are (libertarian) socialists inspired by many of the same intellectual and social influences, this should come as no surprise. That a few individualist and communist anarchists tried to deny those common influences should not blind us to them or the fact that both schools of anarchism are compatible.

Ultimately, though, anarchism should be wide enough and generous enough to include both communist and individualist anarchism. Attempts to excommunicate one or the other seem petty given how much each has in common and, moreover, given that both are compatible with each other as both are rooted in similar perspectives on possession, capitalist property rights and voluntary association. Once the differences in terminology are understood, the differences are not impossible to reconcile.

G.3 Is "anarcho"-capitalism a new form of individualist anarchism?

No. As Carole Pateman once pointed out, *"[t]here has always been a strong radical individualist tradition in the USA. Its adherents have been divided between those who drew anarchist, egalitarian conclusions, and those who reduced political life to the capitalist economy writ large, to a series of exchanges between unequally situated individuals."* [**The Problem of Political Obligation**, p. 205] What right-"libertarians" and "anarcho"-capitalists do is to confuse these two traditions, ignoring fundamental aspects of individualist anarchism in order to do so. Thus anarchist Peter Sabatini:

> *"in those rare moments when [Murray] Rothbard (or any other [right-wing] Libertarian) does draw upon individualist anarchism, he is always highly selective about what he pulls out. Most of the doctrine's core principles, being decidedly anti-Libertarianism, are conveniently ignored, and so what remains is shrill anti-statism conjoined to a vacuous freedom in hackneyed defence of capitalism. In sum, the 'anarchy' of Libertarianism reduces to a liberal fraud."* [**Libertarianism: Bogus Anarchy**]

As class struggle anarchist Benjamin Franks notes individualist anarchism *"has similarities with, but is not identical to, anarcho-capitalism."* [**Rebel Alliances**, p. 44] For Colin Ward, while the *"mainstream"* of anarchist propaganda *"has been **anarchist-communism**"* there are *"several traditions of **individualist anarchism**"*, including that associated with Max Stirner and *"a remarkable series of 19th-century American figures"* who *"differed from free-market liberals in their absolute mistrust of American capitalism, and in their emphasis on mutualism."* Ward was careful to note that by the *"late 20th century the word 'libertarian' . .. was appropriated by a new group of American thinkers"* and so *"it is necessary to examine the modern individualist 'libertarian' response from the standpoint of the anarchist tradition."* It was found to be wanting, for while Rothbard was *"the most aware of the actual anarchist tradition among the anarcho-capitalist apologists"* he may have been *"aware of a tradition, but he is singularly unaware of the old proverb that freedom for the pike means death for the minnow."* The individualist anarchists were *"busy social inventors exploring the potential of autonomy."* The *"American 'libertarians' of the 20th century are academics rather than social activists, and their inventiveness seems to be limited to providing an ideology for untrammelled market capitalism."* [**Anarchism: A Short Introduction**, pp. 2–3, p. 62, p. 67, and p. 69]

In this section we will sketch these differences between the genuine libertarian ideas of Individualist Anarchism and the bogus "anarchism" of right-"libertarian" ideology. This discussion builds upon our general critique of "anarcho"-capitalism we presented in section F. However, here we will concentrate on presenting individualist anarchist analysis of "anarcho"-capitalist positions rather than, as before, mostly social anarchist ones (although, of course, there are significant overlaps and similarities). In this way, we can show the fundamental differences between

the two theories for while there are often great differences between specific individualist anarchist thinkers all share a vision of a free society distinctly at odds with the capitalism of their time as well as the "pure" system of economic textbooks and right-"libertarian" dreams (which, ironically, so often reflects the 19th century capitalism the individualist anarchists were fighting).

First it should be noted that some "anarcho"-capitalists shy away from the term, preferring such expressions as "market anarchist" or "individualist anarchist." This suggests that there is some link between their ideology and that of Tucker and his comrades. However, the founder of "anarcho"-capitalism, Murray Rothbard, refused that label for, while *"strongly tempted,"* he could not do so because *"Spooner and Tucker have in a sense pre-empted that name for their doctrine and that from that doctrine I have certain differences."* Somewhat incredibly Rothbard argued that on the whole politically *"these differences are minor,"* economically *"the differences are substantial, and this means that my view of the consequences of putting our more of less common system into practice is very far from theirs."* [*"The Spooner-Tucker Doctrine: An Economist's View"*, pp. 5–15, **Journal of Libertarian Studies**, vol. 20, no. 1, p. 7]

What an understatement! Individualist anarchists advocated an economic system in which there would have been very little inequality of wealth and so of power (and the accumulation of capital would have been minimal without profit, interest and rent). Removing this social and economic basis would result in **substantially** different political regimes. In other words, politics is not isolated from economics. As anarchist David Wieck put it, Rothbard *"writes of society as though some part of it (government) can be extracted and replaced by another arrangement while other things go on before, and he constructs a system of police and judicial power without any consideration of the influence of historical and economic context."* [**Anarchist Justice**, p. 227]

Unsurprisingly, the political differences he highlights **are** significant, namely *"the role of law and the jury system"* and *"the land question."* The former difference relates to the fact that the individualist anarchists *"allow[ed] each individual free-market court, and more specifically, each free-market jury, totally free rein over judicial decision."* This horrified Rothbard. The reason is obvious, as it allows real people to judge the law as well as the facts, modifying the former as society changes and evolves. For Rothbard, the idea that ordinary people should have a say in the law is dismissed. Rather, *"it would not be a very difficult task for Libertarian lawyers and jurists to arrive at a rational and objective code of libertarian legal principles and procedures."* [**Op. Cit.**, pp. 7–8] Of course, the fact that *"lawyers"* and *"jurists"* may have a radically different idea of what is just than those subject to their laws is not raised by Rothbard, never mind answered. While Rothbard notes that juries may defend the people against the state, the notion that they may defend the people against the authority and power of the rich is not even raised. That is why the rich have tended to oppose juries as well as popular assemblies. Unsurprisingly, as we indicated in section F.6.1, Rothbard wanted laws to be made by judges, lawyers, jurists and other "libertarian" experts rather than jury judged and driven. In other words, to exclude the general population from any say in the law and how it changes. This hardly a *"minor"* difference! It is like a supporter of the state saying that it is a *"minor"* difference if you favour a dictatorship rather than a democratically elected government. As Tucker argued, *"it is precisely in the tempering of the rigidity of enforcement that one of the chief excellences of Anarchism consists .. . under Anarchism all rules and laws will be little more than suggestions for the guidance of juries, and that all disputes ... will be submitted to juries which will judge not only the facts but the law, the justice of the law, its applicability to the given circumstances, and the penalty or damage to be inflicted because of its infraction .. . under Anarchism the law ... will be regarded as **just** in proportion to*

its flexibility, instead of now in proportion to its rigidity." [**The Individualist Anarchists**, pp. 160–1] In others, the law will evolve to take into account changing social circumstances and, as a consequence, public opinion on specific events and rights. Tucker's position is fundamentally **democratic** and evolutionary while Rothbard's is autocratic and fossilised.

This is particularly the case if you are proposing an economic system which is based on inequalities of wealth, power and influence and the means of accumulating more. As we note in section G.3.3, one of individualist anarchists that remained pointed this out and opposed Rothbard's arguments. As such, while Rothbard may have subscribed to a system of competing defence companies like Tucker, he expected them to operate in a substantially different legal system, enforcing different (capitalist) property rights and within a radically different socio-economic system. These differences are hardly *"minor"*. As such, to claim that "anarcho"-capitalism is simply individualist anarchism with "Austrian" economics shows an utter lack of understanding of what individualist anarchism stood and aimed for.

On the land question, Rothbard opposed the individualist position of *"occupancy and use"* as it *"would automatically abolish all rent payments for land."* Which was precisely **why** the individualist anarchists advocated it! In a predominantly rural economy, as was the case during most of the 19th century in America, this would result in a significant levelling of income and social power as well as bolstering the bargaining position of non-land workers by reducing the numbers forced onto the labour market (which, as we note in section F.8.5, was the rationale for the state enforcing the land monopoly in the first place). He bemoans that landlords cannot charge rent on their *"justly-acquired private property"* without noticing that is begging the question as anarchists deny that this is *"justly-acquired"* land in the first place. Unsurprising, Rothbard considered *"the proper theory of justice in landed property can be found in John Locke"*, ignoring the awkward fact that the first self-proclaimed anarchist book was written **precisely** to refute that kind of theory and expose its anti-libertarian implications. His argument simply shows how far from anarchism his ideology is. For Rothbard, it goes without saying that the landlord's *"freedom of contract"* tops the worker's freedom to control their own work and live and, of course, their right to life. [**Op. Cit.**, p. 8 and p. 9]

For anarchists, *"the land is indispensable to our existence, consequently a common thing, consequently insusceptible of appropriation."* [Proudhon, **What is Property?**, p. 107] Tucker looked forward to a time when capitalist property rights in land were ended and *"the Anarchistic view that occupancy and use should condition and limit landholding becomes the prevailing view."* This *"does not simply mean the freeing of unoccupied land. It means the freeing of all land not occupied* ***by the owner****"* and *"tenants would not be forced to pay you rent, nor would you be allowed to seize their property. The Anarchic associations would look upon your tenants very much as they would look upon your guests."* [**The Individualist Anarchists**, p. 159, p. 155 and p. 162] The ramifications of this position on land use are significant. At its most basic, what counts as force and coercion, and so state intervention, are fundamentally different due to the differing conceptions of property held by Tucker and Rothbard. If we apply, for example, the individualist anarchist position on land to the workplace, we would treat the workers in a factory as the rightful owners, on the basis of occupation and use; at the same time, we could treat the share owners and capitalists as aggressors for attempting to force their representatives as managers on those actually occupying and using the premises. The same applies to the landlord against the tenant farmer. Equally, the outcome of such differing property systems will be radically different — in terms of inequalities of wealth and so power (with having others working for them, it is unlikely that

would-be capitalists or landlords would get rich). Rather than a *"minor"* difference, the question of land use fundamentally changes the nature of the society built upon it and whether it counts as genuinely libertarian or not.

Tucke was well aware of the implications of such differences. Supporting a scheme like Rothbard's meant *"departing from Anarchistic ground,"* it was *"Archism"* and, as he stressed in reply to one supporter of such property rights, it opened the door to other authoritarian positions: *"Archism in one point is taking him to Archism is another. Soon, if he is logical, he will be an Archist in all respects."* It was a *"fundamentally foolish"* position, because it *"starts with a basic proposition that must be looked upon by all consistent Anarchists as obvious nonsense." "What follows from this?"* asked Tucker. *"Evidently that a man may go to a piece of vacant land and fence it off; that he may then go to a second piece and fence that off; then to a third, and fence that off; then to a fourth, a fifth, a hundredth, a thousandth, fencing them all off; that, unable to fence off himself as many as he wishes, he may hire other men to do the fencing for him; and that then he may stand back and bar all other men from using these lands, or admit them as tenants at such rental as he may choose to extract."* It was *"a theory of landed property which all Anarchists agree in viewing as a denial of equal liberty."* It is *"utterly inconsistent with the Anarchistic doctrine of occupancy and use as the limit of property in land."* [**Liberty**, No. 180, p. 4 and p. 6] This was because of the dangers to liberty capitalist property rights in land implied:

> *"I put the right of occupancy and use above the right of contract ... principally by my interest in the right of contract. Without such a preference the theory of occupancy and use is utterly untenable; without it ... it would be possible for an individual to acquire, and hold simultaneously, virtual titles to innumerable parcels of land, by the merest show of labour performed thereon ... [This would lead to] the virtual ownership of the entire world by a small fraction of its inhabitants ... [which would see] the right of contract, if not destroyed absolutely, would surely be impaired in an intolerable degree."* [**Op. Cit.**, no. 350, p. 4]

Clearly a position which Rothbard had no sympathy for, unlike landlords. Strange, though, that Rothbard did not consider the obvious liberty destroying effects of the monopolisation of land and natural resources as *"rational grounds"* for opposing landlords but, then, as we noted in section F.1 when it came to private property Rothbard simply could not see its state-like qualities — even when he pointed them out himself! For Rothbard, the individualist anarchist position involved a *"hobbling of land sites or of optimum use of land ownership and cultivation and such arbitrary misallocation of land injures all of society."* [Rothbard, **Op. Cit.**, p. 9] Obviously, those subject to the arbitrary authority of landlords and pay them rent are not part of *"society"* and it is a strange coincidence that the interests of landlords just happen to coincide so completely with that of *"all of society"* (including their tenants?). And it would be churlish to remind Rothbard's readers that, as a methodological individualist, he was meant to think that there is no such thing as *"society"* — just individuals. And in terms of these individuals, he clearly favoured the landlords over their tenants and justifies this by appealing, like any crude collectivist, to an abstraction (*"society"*) to which the tenants must sacrifice themselves and their liberty. Tucker would not have been impressed.

For Rothbard, the nineteenth century saw *"the establishment in North America of a truly libertarian land system."* [**The Ethics of Liberty**, p. 73] In contrast, the Individualist Anarchists attacked

that land system as the *"land monopoly"* and looked forward to a time when *"the libertarian principle to the tenure of land"* was actually applied [Tucker, **Liberty**, no. 350, p. 5] So given the central place that "occupancy and use" lies in individualist anarchism, it was extremely patronising for Rothbard to assert that *"it seems ... a complete violation of the Spooner-Tucker 'law of equal liberty' to prevent the legitimate owner from selling his land to someone else."* [*"The Spooner-Tucker Doctrine: An Economist's View"*, **Op. Cit.**, p. 9] Particularly as Tucker had explicitly addressed this issue and indicated the logical and common sense basis for this so-called "violation" of their principles. Thus "occupancy and use" was *"the libertarian principle to the tenure of land"* because it stopped a class of all powerful landlords developing, ensuring a real equality of opportunity and liberty rather than the formal "liberty" associated with capitalism which, in practice, means selling your liberty to the rich.

Somewhat ironically, Rothbard bemoaned that it *"seems to be a highly unfortunate trait of libertarian and quasi-libertarian groups to spend the bulk of their time and energy emphasising their most fallacious or unlibertarian points."* [**Op. Cit.**, p. 14] He pointed to the followers of Henry George and their opposition to the current land holding system and the monetary views of the individualist anarchists as examples (see section G.3.6 for a critique of Rothbard's position on mutual banking). Of course, both groups would reply that Rothbard's positions were, in fact, both fallacious and unlibertarian in nature. As, indeed, did Tucker decades before Rothbard proclaimed his private statism a form of "anarchism." Yarros' critique of those who praised capitalism but ignored the state imposed restrictions that limited choice within it seems as applicable to Rothbard as it did Herbert Spencer:

> *"A system is voluntary when it is voluntary all round ... not when certain transactions, regarded from certain points of view, appear Voluntary. Are the circumstances which compel the labourer to accept unfair terms law-created, artificial, and subversive of equal liberty? That is the question, and an affirmative answer to it is tantamount to an admission that the present system is not voluntary in the true sense."* [**Liberty**, no. 184, p. 2]

So while "anarcho"-capitalists like Walter Block speculate on how starving families renting their children to wealthy paedophiles is acceptable *"on libertarian grounds"* it is doubtful that any individualist anarchist would be so blasé about such an evil. [*"Libertarianism vs. Objectivism: A Response to Peter Schwartz,"* pp. 39–62, **Reason Papers**, Vol. 26, Summer 2003, p. 20] Tucker, for example, was well aware that liberty without equality was little more than a bad joke. *"If,"* he argued, *"after the achievement of all industrial freedoms, economic rent should prove to be the cause of such inequalities in comfort that an effective majority found themselves at the point of starvation, they would undoubtedly cry, 'Liberty be damned!' and proceed to even up; and I think that at that stage of the game they would be great fools if they didn't. From this it will be seen that I am no[t] ... a stickler for absolute equal liberty under all circumstances."* Needless to say, he considered this outcome as unlikely and was keen to *"[t]ry freedom first."* [**Liberty**, no. 267, p. 2 and p. 3]

The real question is why Rothbard considered this a **political** difference rather than an economic one. Unfortunately, he did not explain. Perhaps because of the underlying **socialist** perspective behind the anarchist position? Or perhaps the fact that feudalism and monarchism was based on the owner of the land being its ruler suggests a political aspect to propertarian ideology best left unexplored? Given that the idea of grounding rulership on land ownership

receded during the Middle Ages, it may be unwise to note that under "anarcho"-capitalism the landlord and capitalist would, likewise, be sovereign over the land **and** those who used it? As we noted in section F.1, this is the conclusion that Rothbard does draw. As such, there **is** a political aspect to this difference, namely the difference between a libertarian social system and one rooted in authority.

Ultimately, *"the expropriation of the mass of the people from the soil forms the basis of the capitalist mode of production."* [Marx, **Capital**, vol. 1, p. 934] For there are *"two ways of oppressing men: either directly by brute force, by physical violence; or indirectly by denying them the means of life and this reducing them to a state of surrender."* In the second case, government is *"an organised instrument to ensure that dominion and privilege will be in the hands of those who ... have cornered all the means of life, first and foremost the land, which they make use of to keep the people in bondage and to make them work for their benefit."* [Malatesta, **Anarchy**, p. 21] Privatising the coercive functions of said government hardly makes much difference.

As such, Rothbard was right to distance himself from the term individualist anarchism. It is a shame he did not do the same with anarchism as well!

G.3.1 Is "anarcho"-capitalism American anarchism?

Unlike Rothbard, some "anarcho"-capitalists are more than happy to proclaim themselves "individualist anarchists" and so suggest that their notions are identical, or nearly so, with the likes of Tucker, Ingalls and Labadie. As part of this, they tend to stress that individualist anarchism is uniquely American, an indigenous form of anarchism unlike social anarchism. To do so, however, means ignoring not only the many European influences on individualist anarchism itself (most notably, Proudhon) but also downplaying the realities of American capitalism which quickly made social anarchism the dominant form of Anarchism in America. Ironically, such a position is deeply contradictory as "anarcho"-capitalism itself is most heavily influenced by a European ideology, namely "Austrian" economics, which has lead its proponents to reject key aspects of the indigenous American anarchist tradition.

For example, "anarcho"-capitalist Wendy McElroy does this in a short essay provoked by the Seattle protests in 1999. While Canadian, her rampant American nationalism is at odds with the internationalism of the individualist anarchists, stating that after property destruction in Seattle which placed American anarchists back in the media social anarchism *"is not American anarchism. Individualist anarchism, the indigenous form of the political philosophy, stands in rigorous opposition to attacking the person or property of individuals."* Like an ideological protectionist, she argued that *"Left [sic!] anarchism (socialist and communist) are foreign imports that flooded the country like cheap goods during the 19th century."* [**Anarchism: Two Kinds**] Apparently Albert and Lucy Parsons were un-Americans, as was Voltairine de Cleyre who turned from individualist to communist anarchism. And best not mention the social conditions in America which quickly made communist-anarchism predominant in the movement or that individualist anarchists like Tucker proudly proclaimed their ideas socialist!

She argued that *"[m]any of these anarchists (especially those escaping Russia) introduced lamentable traits into American radicalism"* such as *"propaganda by deed"* as well as a class analysis which *"divided society into economic classes that were at war with each other."* Taking the issue of *"propaganda by the deed"* first, it should be noted that use of violence against

person or property was hardly alien to American traditions. The Boston Tea Party was just as *"lamentable"* an attack on *"property of individuals"* as the window breaking at Seattle while the revolution and revolutionary war were hardly fought using pacifist methods or respecting the *"person or property of individuals"* who supported imperialist Britain. Similarly, the struggle against slavery was not conducted purely by means Quakers would have supported (John Brown springs to mind), nor was (to use just one example) Shay's rebellion. So *"attacking the person or property of individuals"* was hardly alien to American radicalism and so was definitely **not** imported by *"foreign"* anarchists.

Of course, anarchism in American became associated with terrorism (or *"propaganda by the deed"*) due to the Haymarket events of 1886 and Berkman's assassination attempt against Frick during the Homestead strike. Significantly, McElroy makes no mention of the substantial state and employer violence which provoked many anarchists to advocate violence in self-defence. For example, the great strike of 1877 saw the police opened fire on strikers on July 25th, killing five and injuring many more. *"For several days, meetings of workmen were broken up by the police, who again and again interfered with the rights of free speech and assembly."* The **Chicago Times** called for the use of hand grenades against strikers and state troops were called in, killing a dozen strikers. *"In two days of fighting, between 25 and 50 civilians had been killed, some 200 seriously injured, and between 300 and 400 arrested. Not a single policeman or soldier had lost his life."* This context explains why many workers, including those in reformist trade unions as well as anarchist groups like the IWPA, turned to armed self-defence ("violence"). The Haymarket meeting itself was organised in response to the police firing on strikers and killing at least two. The Haymarket bomb was thrown after the police tried to break-up a peaceful meeting by force: *"It is clear then that ... it was the police and not the anarchists who were the perpetrators of the violence at the Haymarket."* All but one of the deaths and most of the injuries were caused by the police firing indiscriminately in the panic after the explosion. [Paul Avrich, **The Maymarket Tragedy**, pp. 32–4, p. 189, p. 210, and pp. 208–9] As for Berkman's assassination attempt, this was provoked by the employer's Pinkerton police opening fire on strikers, killing and wounding many. [Emma Goldman, **Living My Life**, vol. 1, p. 86]

In other words, it was **not** foreign anarchists or alien ideas which associated anarchism with violence but, rather, the reality of American capitalism. As historian Eugenia C. Delamotte puts it, *"the view that anarchism stood for violence ... spread rapidly in the mainstream press from the 1870s"* because of *"the use of violence against strikers and demonstrators in the labour agitation that marked these decades — struggles for the eight-hour day, better wages, and the right to unionise, for example. Police, militia, and private security guards harassed, intimidated, bludgeoned, and shot workers routinely in conflicts that were just as routinely portrayed in the media as worker violence rather than state violence; labour activists were also subject to brutal attacks, threats of lynching, and many other forms of physical assault and intimidation ... the question of how to respond to such violence became a critical issue in the 1870s, with the upswelling of labour agitation and attempts to suppress it violently."* [**Voltairine de Cleyre and the Revolution of the Mind**, pp. 51–2]

Joseph Labadie, it should be noted, thought the *"Beastly police"* got what they deserved at Haymarket as they had attempted to break up a peaceful public meeting and such people should *"go at the peril of their lives. If it is necessary to use dynamite to protect the rights of free meeting, free press and free speech, then the sooner we learn its manufacture and use ... the better it will be for the toilers of the world."* The radical paper he was involved in, the **Labor Leaf**, had previously argued that *"should trouble come, the capitalists will use the regular army and militia to shoot down*

those who are not satisfied. It won't be so if the people are equally ready." Even reformist unions were arming themselves to protect themselves, with many workers applauding their attempts to organise union militias. As worker put it, *"[w]ith union men well armed and accustomed to military tactics, we could keep Pinkerton's men at a distance ... Employers would think twice, too, before they attempted to use troops against us ... Every union ought to have its company of sharpshooters."* [quoted by Richard Jules Oestreicher, **Solidarity and Fragmentation**, p. 200 and p. 135]
